Mr. MONDELL. There was a view developed possibly at the time this was erected that these stations should be erected at various places, not to be used as car headquarters, but as a separate and distinct establishment.

Mr. CARTER. Let me read what this building is from data prepared by the bureau:

> This building, as stated in the bill, is built of brick, two stories with basement, all commodious and complete, finished in first-class style and work. It contains a large smoke or practice room for rescue training, observation hall, reading and lecture room, repair room, and office for the man in charge. In addition to the ordinary finishing and furnishings it has a complete system of electrical wiring, the best and most up-to-date gas and water plumbing, and a complete heating plant, with large boiler and fixtures.

Mr. Holmes told the Committee on Public Buildings and Grounds that when the Bureau of Mines was organized in 1910 the miners and the mine operators of the McAlester district were the first to respond in any kind of assistance to his bureau. He needed a building, he went there, and he could not secure one in McAlester, which is centrally located in the Choctaw coal district. The miners and mine operators, by personal subscription, provided for the erection of this building, but they did not raise enough money with which to build it, lacking something over $5,000, and that money was borrowed by the operators and the miners, a mortgage being given on the building and lot. Now, the operators and miners propose to turn the property over, which is worth $10,000 or $12,000, to the Federal Government, if the Government will only pay the $5,500 mortgage on that property.

The SPEAKER pro tempore (Mr. ALEXANDER). Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, as I understand, this building is one that is put up by the local people, the local people being lessees of Indian coal lands, where they raised $6,500 to put up a building, which now has a mortgage on it of $5,500, and which is now used by the Government at a rental of $40 a month?

Mr. CARTER. The lot and building cost about $11,500.

Mr. MANN. The Indians are all paid for this coal, are they not?

Mr. CARTER. They are supposed to be, but they are not. The money is placed in the United States Treasury, and can not be drawn out until Congress appropriates.

Mr. MANN. It is not proposed to draw any of it out through this bill?

Mr. CARTER. No.

Mr. MANN. The money to be paid here is to come out of the General Treasury?

Mr. CARTER. Yes, sir.

Mr. MANN. What is the reason these people got cold feet?

Mr. CARTER. The mine operators and miners?

Mr. MANN. The people who contributed this money to erect this building. Is the statement in the report correct, that they have not been as prosperous as they hoped to be?

Mr. CARTER. There may be some truth in that. The oil and gas development somewhat interfered with coal sales, and labor troubles ensued.

Mr. MANN. I can very readily understand that these people in the prosperous and hopeful days of 1910 could easily see a way of raising $11,000 or $12,000 to build an institution and present it to the Government. But that fall there was a frost, a killing frost. A Democratic majority was elected to the House of Representatives, and yet they hoped that the evil might pass away, and so they put a mortgage on the property and paid interest and waited until after the election of 1912. And then there was a freeze, and then they gave up. [Laughter.] Then they said, "We are not prosperous. Where before we were willing to contribute out of our private means to aid the Government in this, the Government through its policies has deprived us of the means of doing it, and now we asked you to pay for this out of the General Treasury." While I doubt the propriety of doing it, still, understanding the difficulties or obstacles which confront these noble and generous gentlemen whom you are trying to put out of business, I shall not object to taking it out of the Treasury.

Mr. CARTER. I shall not object to the gentleman taking that view if he just will not object to my bill.

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none.

Mr. NORTON. Mr. Speaker, reserving the right to object——

The SPEAKER pro tempore. The Chair did not hear objection.

Mr. NORTON. I was on the floor.

The SPEAKER pro tempore. The gentleman from North Dakota reserves the right to object.

Mr. NORTON. I would like to ask the gentleman a question. Does the gentleman think that this building should be on the railroad?

Mr. CARTER. Perhaps it should be, and I think it is.

Mr. NORTON. I want to say to the gentleman that Mr. Manning, of the Bureau of Mines, has made a personal investigation of this matter—has been down and looked over this building. He tells me that the building is about two or three blocks from the railroad, and that it is not on any spur or any sidetrack of a railroad, but that it is on a trolley line. I thought I would tell the gentleman that.

Mr. MANN. It came very near getting on a sidetrack here.

Mr. MONDELL. Reserving the right to object, I am glad we have the information from the gentleman from North Dakota [Mr. NORTON] that I sought from the gentleman from Oklahoma [Mr. CARTER]. It seems that the building is not on or near the railroad. While I regret that fact, I think the circumstances are such that we should take the building over and pay for it, that situation to the contrary notwithstanding, particularly in view of the situation which has just been outlined by the gentleman from Illinois [Mr. MANN]. The gentleman has just made an inquiry as to whether this was the beginning only of taking up deficits that have fallen upon the American people or have come to them by reason of this Democratic administration, and if this was simply an entering wedge. Does the gentleman hope to go on from this to relieve every citizen or combination of citizens that have already found themselves in financial difficulty since 1910?

Mr. MANN. Will the gentleman from Wyoming yield?

Mr. CARTER. The gentleman can take it as he pleases, so long as he lets us pass the bill.

Mr. MANN. The gentleman knows the present condition of the calendar. Gentlemen on that side have arranged bumpers in every direction, and bills like this can only pass by unanimous consent. But after this Congress that side of the House will not have anything to say about it.

Mr. MONDELL. All of which is very true. But I was about to say, Mr. Speaker, that while, in my opinion, we should purchase this building, I am inclined to the view that we should not, in further investments of this sort, make them in buildings some distance from the railroad tracks——

Mr. CARTER. Let me say to the gentleman——

Mr. MONDELL. And buildings not directly associated with the headquarters of the car.

Mr. CARTER. Let me say this to the gentleman: The gentleman from North Dakota [Mr. NORTON] has just spoken of this building being on the trolley line. The trolley line passes through the coal region. It would give just as efficient service on the trolley line as on a railroad line.

Mr. MONDELL. It is some distance from the car line. The rescue car is more and more coming to be recognized as the one

essential thing in this rescue work, and therefore all supply stations, all stations for the exercise of the crew, all stations where the crew may for a time have temporary quarters away from the car, should be located so as to be readily and quickly accessible to the car.

Mr. CARTER. That would be so in this case. This is on the trolley line.

Mr. MONDELL. It is some distance away. It would be like stationing the personnel of a fire station some four or five blocks away from the apparatus which they are to operate.

Mr. CARTER. Oh, I will say to the gentleman that the railroad cars can be switched right off onto the trolley line.

Mr. MONDELL. They do not sidetrack the car. They do not run the rescue car on this trolley line.

Mr. CARTER. There is no reason why they should not. They run freight cars and coal cars right on the trolley line.

Mr. NORTON. I will say to the gentleman that I have asked the officer at the department if it would be necessary for this building to be on the railroad track or on a siding, and he said not. He said it was to be used for the storing of the mine rescue equipment rather than to be used for the mine rescue car, and that it was not necessary for the mine rescue car to run up to the building. I do not know how much he knows about it, but I presume he knows a good deal about it.

Mr. CARTER. He knows all about it.

Mr. STEPHENS of Texas. Mr. Speaker, I desire to state, if I am permitted, that this line is 30 or 40 miles long. It runs right through the heart of this mining district to the town of Hartshorn.

Mr. CARTER. The trolley line, on which cars have a 15 or 30 minute schedule.

Mr. STEPHENS of Texas. Yes; and it would be of much more service to those coal miners on this trolley line than anywhere else.

Mr. MONDELL. The gentleman does not understand that the mine rescue car would be run on the trolley line?

Mr. MANN. It is known that this building at McAlester is of no value to the Government. We will give it back to the city in a few years after we have accepted it.

Mr. FOSTER. Is this building now so constructed that the car can be run into the building?

Mr. CARTER. I could not say as to that.

Mr. FOSTER. Or is it just for the storing of the apparatus to be used?

Mr. CARTER. The gentleman knows more about mine rescue stations than I. This is the only one I have ever had any experience with.

Mr. FOSTER. As was suggested by the gentleman from Wyoming [Mr. MONDELL], there are stations where they store the apparatus. Then they have what they call movable stations. That is where the car has a home, but has to be moved around over certain districts. If this building is only for the purpose of storing certain apparatus, I think it is not the best for the Government to buy the building.

Mr. MANN. That is all it is to be used for.

Mr. FOSTER. Then I think this bill ought to go over until it can be looked up.

Mr. CARTER. This bill has been rejected from the calendar once before. It has been on the calendar for several months. I hope the gentleman from Illinois [Mr. FOSTER] will not object to it.

Mr. FOSTER. Let me give the gentleman this illustration: In the State of Illinois we have what is called a station at Champaign, at the State university. There is no car there. They have some apparatus that has to be taken out. The State of Illinois has established three movable stations. That is, the State has purchased three cars that are in use, going from mining camp to mining camp over the State, and instructing the miners. That is the important work. Those stations are not the important work.

Mr. WILLIS. Mr. Speaker, will the gentleman yield for a question?

Mr. FOSTER. Yes.

Mr. WILLIS. Can the gentleman tell how many of these rescue stations there are in the United States?

Mr. FOSTER. Eight.

Mr. WILLIS. Where are they located?

Mr. FOSTER. I can not give the gentleman the locations just now. I think the Government has one that has been donated in Alabama and one in the State of Washington. The others have not been donated.

Mr. WILLIS. Can the gentleman tell us——

Mr. CARTER. They have one at Birmingham, Ala., and one at Norton, Va., one at Pittsburgh, Pa., and one at Jellico, Tenn.

Mr. FOSTER. What does the gentleman mean?

Mr. WILLIS. Then there are three in the country.

Mr. FOSTER. What does the gentleman mean?

Mr. CARTER. Mine-rescue-station buildings.

Mr. FOSTER. You mean the buildings?

Mr. CARTER. Yes.

Mr. FOSTER. I could not tell you how many we have.

Mr. MANN. They have more than three.

Mr. CARTER. There is one at Pittsburgh.

Mr. MANN. There is one out West somewhere.

Mr. FOSTER. The gentleman refers to buildings that the Government owns, not to stations that are established.

Mr. CARTER. The gentleman is correct about that.

Mr. MANN. I refer to the buildings. The Government is authorized to build a building, but it is not authorized to buy land. Where the sites have been donated, they have built buildings.

Mr. FOSTER. That may have been done.

Mr. WILLIS. There are four places where the Government owns the plant, separate from the cars. How many of those rescue cars are there now?

Mr. CARTER. There are eight.

Mr. FOSTER. I think there are eight in the United States.

Mr. MANN. And there is this one where we rent this building?

Mr. CARTER. There may be other buildings that are rented now, but there are four, I think, that the Government owns.

Now, permit me to say that the veins of coal in this vicinity are the most gaseous and explosive in the Southwest. There are many large mines in close proximity to this station. I should judge that not less than five or six thousand miners are employed within a radius of 15 or 18 miles, and mostly along this trolley line. McAlester is a prosperous, growing city in the center of the mining district, and this property may cost much more in the future.

Mr. FOSTER. I hope the gentleman will let this go over.

Mr. CARTER. I trust the gentleman from Illinois will not object. It will be difficult to get this bill through at this session of Congress if it is not passed to-day. I have had it up with the gentleman several times and have gone into it thoroughly. Here is a case where some gentlemen actually paid out their money with no hope of personal reward or benefit, but they have paid out the money for the building of a public institution for the Federal Government, upon the understanding, clearly manifest from this correspondence, that they would be paid for the buildings which would eventually be taken over by the Government.

Mr. MANN. What! Does the gentleman mean to say that Dr. Holmes agreed with these parties that they would be paid?

Mr. CARTER. I do not know that there was any agreement——

Mr. MANN. Because if that is so, that is very important.

Mr. FOSTER. I think the gentleman is mistaken about that. The Government was to take it as a gift.

Mr. CARTER. I may be mistaken about that, but that is what I gather from reading the correspondence. This letter says:

> During the year of 1910 there was created a Bureau of Mines, and a mine rescue station was located at this place. As there was no building available for such work, the coal operators took it upon themselves to secure funds necessary for the purchase of a site and the erection of a suitable building.
>
> Through the donations of miners, mine operators, and business men throughout the mining district there was collected something like $6,000; a site was purchased and the building constructed. The total cost of this was about $10,000, which left a deficit of $4,000, to take care of which a number of the mine operators secured a loan from the local banks, which they are still carrying.
>
> Upon the completion of the building the committee in charge agreed to deed same to the Government, provided it would assume this indebtedness. This had the indorsement of Dr. Holmes, Chief of the Bureau of Mines—

That is what I got my impression from—

but on investigation it was found that there was no law permitting the Government to accept the offer.

Mr. MANN. That is the pending bill?

Mr. CARTER. Yes; but that was in 1910.

Mr. MADDEN. When they were able to raise money.

Mr. MANN. If the indebtedness was $4,000, how do they get the amount now up to $5,500?

Mr. CARTER. I think I can explain that to the gentleman. I thought I had explained it to him the other day.

Mr. MANN. We have been paying them $40 a month, and that is certainly enough to pay the interest.

Mr. CARTER. Interest has accumulated on the amount borrowed.

Mr. MANN. How could it accumulate when we are paying $40 a month rent for the building?

Mr. CARTER. I can explain that if the gentleman will give me an opportunity.

Mr. MANN. Forty dollars a month would more than take care of the interest on $4,000.

Mr. MADDEN. That would be 12 per cent on $4,000.

Mr. CARTER. The mine operators—the owners of the property—simply offer to convey it to the United States for a sum sufficient to pay the debt. This would give the Government property well worth $10,000 to $12,000.

Mr. MANN. The gentleman read a statement in the letter that the indebtedness on this building was originally $4,000. Now, it is stated in the bill at $5,500. How could it be increased, and how was it increased except by interest? And if it was interest, why should not the rent we have been paying pay the interest?

Mr. CARTER. I am frank to say that I think a part of that is interest, though I do not say how much.

Mr. MANN. We have been paying rent enough to pay the interest.

Mr. CARTER. I assume that——

Mr. MADDEN. If we were paying 6 per cent it would amount to only $960 for the four years.

Mr. CARTER. What I want to say to the gentleman is this: This building really is now considered worth $10,000 to $12,000 by the Bureau of Mines, according to their own statement.

Mr. MANN. We do not care what the building is worth. We can get one man to say it is worth $15,000 and the next one, equally competent, to say it is worth $7,500, and another man probably would say it was worth $5,000.

Mr. FOSTER. Let me ask the gentleman from Oklahoma, Does the Government get title to the ground upon which this building stands?

Mr. CARTER. Yes; it does.

Mr. FOSTER. And the opportunity to get in there with their cars?

Mr. CARTER. Yes. It has been stated here that the trolley line runs right by the station.

Mr. FOSTER. My reason for asking is this: The Government takes these cars. They cost about $1,500 to $2,000 apiece. The car is of more practical use than the station; so if we put a lot of money into buying these stations it will take that much money away from the amount that we can spend for cars, which is not a good thing, because the cars are the important part of the mine rescue work.

Mr. WILLIS. Will the gentleman yield for a question?

Mr. FOSTER. Yes.

Mr. WILLIS. Just what work is done at these stations anyhow? Are they simply storage places?

Mr. FOSTER. That is about all. They may train some miners there.

Mr. WILLIS. The actual work is done in the car?

Mr. FOSTER. The stations are not movable. It is found that the miners will not travel a great way in order to get this instruction. Now, the car goes into a mining camp where there are several hundred miners working, and they are instructed with this car, which has all the apparatus, and in that way the car does the good by going to the men instead of trying to get the men to go a long distance to take instruction at the station.

Mr. WILLIS. In this mine rescue work the car is the important thing.

Mr. FOSTER. By all means; the car is the important thing, and is taken from place to place to instruct the miners.

Mr. MONDELL. Let me suggest that the Bureau of Mines is coming to realize the importance of having a headquarters station for every car, a central station located near its field of operations, a headquarters station where the car is held in actual service. The greater part of the time, of course, it is in actual service here and there in the various mines—one week in this mine and another week in that mine, and so on—but when not in actual service in the field it is at the headquarters station. The bureau believes there should be at each headquarters station a small building—a frame building is considered satisfactory—for the storage of surplus equipment, and possibly one room that can be used to demonstrate, where there will be a little more space than there is on the car. And then it would be an excellent thing to have a second story, in which there could be two or three rooms for the men assigned to the car, a place where they could sleep when the car was at headquarters and give them some relief from the continual life on the car. That sort of a station could be built for from $1,000 to $1,500.

That is one sort of a station that we ought to have. When you build expensive stations back at a distance from the car you are liable to build up there another branch or organization not correlated with the car service, and instead of getting a beneficial use of the building, if you had a considerable number of them, the effect on the service might be unfortunate. I think this is an exception to the general rule. This building was erected in good faith by people who wanted to help the Government and wanted a car station at McAlester.

Mr. FOSTER. I think the gentleman from Wyoming states the proposition plainly. The great trouble has been that the Government has not sufficient cars to cover the whole territory in the United States and give the instruction to the miners. For instance, they are taking up the question of perfecting electric lamps so as to get rid entirely of lamps that are dangerous. The other day in West Virginia the mine explosion there may have been caused by an open light, or one supposed to be safe but was not, coming in contact with gases. If they can impress on the miners the importance of these things, which they can only do by going into the camp with the cars, it is hoped that in a reasonable time they will be able to avoid a good many of these accidents.

Mr. COOPER. Will the gentleman yield?

Mr. FOSTER. Certainly.

Mr. COOPER. The gentleman said that this mine explosion in West Virginia was caused by an open light?

Mr. FOSTER. It may not have been an open light, but it was not one of the latest improved electric lamps, as they are not yet so perfected as to be in general use, but it is hoped they will soon be.

Mr. COOPER. Was it stationary or to be carried about?

Mr. FOSTER. I do not know. They are manufacturing a small electric light which gives more light than the old safety lamp—a little electric lamp carried by the miner—and the use of which entails absolutely no danger of igniting gas in a mine. A part of the work of the rescue cars is to instruct the miners in all these safety devices and to impress on them the importance of always using the utmost care. The miners and operators are both anxious to get this instruction, and it is very important for the safety of the lives of the miners.

Mr. MANN. Mr. Speaker, I ask for the regular order.

The SPEAKER pro tempore. Is there objection to the consideration of the bill?

There was no objection.

Mr. CARTER. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER pro tempore. The gentleman from Oklahoma asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

Mr. KINDEL, by unanimous consent, was given leave to extend his remarks in the RECORD.

INCOME TAX ON RAILROADS IN ALASKA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 9770) to levy and collect an income tax on railroads in Alaska, and for other purposes.

The Clerk read the bill, as follows:

Be it enacted, etc., That in addition to the normal income tax of 1 per cent there shall be levied and collected 4 per cent on the net annual income of all railroad corporations doing business in Alaska, on business done in Alaska, which shall be computed and collected in the manner provided in the act of Congress approved October 3, 1913, entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," the proceeds of which tax when collected shall be paid to the treasurer of Alaska and be applicable to general Territorial purposes. So much of the provisions of the act of Congress approved March 3, 1899, entitled "An act to define and punish crimes in the District of Alaska and to provide a code of criminal procedure for said district," or acts amendatory thereof as impose a license tax of $100 per mile per annum on railroads operated in Alaska is hereby repealed, and all penalties for nonpayment thereof are hereby remitted.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. I reserve the right to object. This bill is to exempt railroads in Alaska from taxes until that country becomes populated so that they have some income from which to pay taxes. As the report shows—and I compliment the gentleman from Virginia [Mr. WATSON] for the very extensive report he has submitted—there are several railroads up there that have not been able to pay the existing license fee of $100 per mile supposed to be in lieu of personal property tax. Can the gentleman from Virginia inform the House what is the rate of taxation on personal property in general—not on railroads—of the inhabitants of Alaska? How do they raise funds to meet the expenses of the government?

Mr. WATSON. Until very recently there has been no local taxation in the Territory of Alaska. The Territorial Legisla-

ture has only recently been organized, and, except during the past year, there has been no attempt on the part of any local legislative body to impose any system of taxation. All of the revenue raised in the Territory of Alaska has been raised by acts of Congress itself, all of which, and more besides, has been expended in the Territory, because the local revenues have been inadequate for the expenses of the government.

Mr. STAFFORD. In the enabling act Congress vested authority in the Territorial Legislature to originate the form of taxation.

Mr. WATSON. Under the act of 1912.

Mr. STAFFORD. By this bill we take away the authority and say that so long as the railroads have no income they are not subject to taxation.

Mr. WATSON. That is not exactly the state of the case.

Mr. STAFFORD. It is the effect of it, is it not?

Mr. WATSON. In 1899, before there were any railroads in Alaska, Congress provided a civil and criminal code for the Territory. Although it was a remarkable place in which to put such a provision, it did, in the criminal code enacted for the Territory, incorporate a revenue-license tax for railroads in Alaska. Under the organic act to which the gentleman refers, passed in 1912, a Territorial legislature was provided for; but in that organic act it was expressly provided that the legislature should not have jurisdiction to tax railroads until five years after the passage of that law.

Mr. STAFFORD. In other words, merely suspended taxation for five years, and then they are to have full power of taxation?

Mr. WATSON. A fair statement of the case is, Congress has heretofore exercised the power, and reserved the right to exercise it exclusively for five years after the passage of that act.

Mr. STAFFORD. It is already the existing statute that the tax levy should be $100 per mile——

Mr. WATSON. That is true.

Mr. STAFFORD. For the license tax.

Mr. WATSON. That is correct.

Mr. STAFFORD. According to the report, there are certain railroads that are defunct there. As we all know, in the consideration of the Alaska railroad bill it was brought out that there was no income whatsoever; and I assume there are very few railroads up there that have any income, or will have for quite a number of years to come; so by this bill you virtually exempt the railroads from taxation, and take away from the Territorial legislature the right to levy any taxation whatsoever on the railroads except this provision of 4 per cent on their net income.

Mr. WATSON. Mr. Speaker, I will reply to the gentleman by saying there is nothing in this bill which affects in any way the jurisdiction of the Territorial legislature to tax railroads in Alaska.

Mr. STAFFORD. Why, here Congress is repealing——

Mr. WATSON. An act of Congress.

Mr. STAFFORD (continuing). An existing law which levies a license fee of $100 per mile per annum on the railroads that are operating in Alaska.

Mr. WATSON. The gentleman will discover, upon reflection, that it repeals a prior act of Congress, and that the Territorial legislature never has had the right to levy taxes upon railroads in Alaska.

Mr. STAFFORD. But it will have power to provide that in five years——

Mr. WATSON. It will do it in 1917, but there is nothing in this act to prevent it.

Mr. STAFFORD. I appreciate the gentleman's view, of which I was not aware when I rose. Does the gentleman, then, contend, even if we exempt these railroads from taxation for the coming four years—I suppose one year has already passed—that at the expiration of that time the Territorial legislature will have the right to levy taxes on the railroads, and that they would have full authority to levy the rate——

Mr. WATSON. Unquestionably, Mr. Speaker.

Mr. WILLIS. Will the gentleman yield?

Mr. WATSON. Certainly.

Mr. WILLIS. Has the gentleman that enabling or organic act? If so, I would like to have the language on this subject just at this point.

Mr. WATSON. I will read it to the gentleman.

Mr. WILLIS. So we will see just what it says about the authority of the legislature to tax the railroads.

Mr. WATSON. The gentleman from Ohio desires to have the organic act?

Mr. WILLIS. Pertaining to the taxation of railroads.

Mr. WATSON. Touching the taxation of railroads by the Territorial Legislature?

Mr. WILLIS. Yes, sir.

Mr. WATSON. It reads as follows: The gentleman understands this is in a general clause:

> No tax shall be levied for Territorial purposes in excess of 1 per cent upon the assessed valuation of property therein in any one year; nor shall any incorporated town or municipality levy any tax, for any purpose, in excess of 2 per cent of the assessed valuation of property within the town in any one year: *Provided*, That the Congress reserves the exclusive power from five years from the date of the approval of this act to fix and impose any tax or taxes upon railways or railway property in Alaska, and no acts or laws passed by the Legislature of Alaska providing for a county form of government therein shall have any force or effect until it shall be submitted to and approved by the affirmative action of Congress; and all laws passed, or attempted to be passed, by such legislature in said Territory inconsistent with the provisions of this section shall be null and void.

Mr. WILLIS. If this bill becomes a law at the end of the five-year period the legislature will have authority to tax the railroads in Alaska, and all this does is simply to change virtually the taxation of $100 per mile per annum to 4 per cent on the net income for this five-year period?

Mr. WATSON. That is true.

Mr. STAFFORD. I can hardly agree with that statement, perhaps not in direct language, but there is nothing to limit the provision to the five-year period. Here you have language authorizing Congress to determine the tax so far as railroads are concerned for five years, and the tax by this bill is 4 per cent on their net income. Now, I think there ought to be some saving clause in this act so the Territorial legislature will know Congress is not attempting to arrogate to itself at the expiration of the five-year period the right to determine what the taxation policy should be toward its railroads.

Mr. WATSON. Mr. Speaker, so far as the taxation of railroads in Alaska is concerned, there is scarcely a possibility of the collection of these penalties which we undertake to release the railroads from the payment of under this bill. The truth of it is every country on the face of the earth except our own instead of taxing the railroads in pioneer conditions has actually given Government aid. We all know the railroads in Alaska have not made anything. There has been no profit in their operations. The truth of it is, with our system of conservation, we have placed the railroads in such a situation that it will be impossible for them to receive profits from their operations.

Mr. MANN. Will the gentleman yield for a question?

Mr. WATSON. Yes.

Mr. MANN. If there are no profits in the operation, what is the net annual income of a business which has no profits?

Mr. WATSON. Absolutely nothing, Mr. Speaker.

Mr. STAFFORD. Four times x—and x is an unknown quantity.

Mr. WILLIS. Four times zero.

Mr. MANN. And the only effect of this bill is to repeal the $100 license. It does not really put any tax on anybody.

Mr. WATSON. I will say to the gentleman from Illinois that there are three railroads in Alaska that have defaulted in the payment of this tax. Under the provisions of the law of 1899, if a railroad undertakes to operate without the payment in advance of this tax, it incurs a penalty for the first day's operation of twice the amount of the tax, and for the second day's operation of three times, or treble, the amount of the tax; and the consequence is that there is one railroad, only 45 miles long, running from Fairbanks to the mines, which by operating during a portion of the year 1913 has incurred penalties approximating $5,000,000.

Mr. MANN. Is that one of the roads we want?

Mr. WATSON. That is one of the roads we do not want.

Mr. STAFFORD. That road is going to be a feeder for the Government system.

Mr. WATSON. That will be a feeder to the system.

Mr. MANN. I am not in favor of the license law. We have had it up here half a dozen times. Does not the gentleman think a railroad ought to pay some tax?

Mr. WATSON. Mr. Speaker, if you could get blood out of turnips, I should say yes.

Mr. MANN. Do we not tax turnips, whether we collect the tax or not?

Mr. WATSON. We may tax them, but we do not collect the tax.

Mr. MANN. Do we collect the tax?

Mr. WATSON. I think not.

Mr. MANN. We had the House the other day in the frame of mind—and it will be in the same frame of mind soon again—that it wanted to collect a tax on the note overdue and which a man would not pay. It proposes to collect a nominal tax on it in the District of Columbia. That is on intangible property.

But here is tangible property. Ought not the railroads to pay something in the way of taxes anywhere?

Mr. WATSON. I can answer the gentleman from Illinois by suggesting this to him, that the moment the road begins to operate without paying the tax, it will incur the additional penalty to which I have referred. Now, three of these roads have already suspended operations.

Mr. MANN. The gentleman does not need to make any argument to me in favor of repealing the present license system.

Mr. WATSON. I was trying to answer the gentleman's question and to tell him that these roads in Alaska confront a very practical and a very critical condition. They have no profits, partly due to Government activity in that field. There is no prospect of their having any. To prescribe a nominal tax, which we all know would be unjust, because they could not pay it, as there are no profits, would serve no useful purpose.

Mr. MANN. I can remember when some of these bills under which these railroads were built were passed, and I said then in the House that men with good sense and money ought not, in my judgment, to invest in these railroads in Alaska, because it was perfectly evident they would not pay; but if men with money, whether they had good sense or not, were determined to invest it in the railroads there and pay some tax on it, very well. Now, those men who had the money, having invested it there and having property there, want to have all taxation against them removed.

Mr. WATSON. Penalties, not taxation.

Mr. MANN. All taxes.

Mr. WATSON. No.

Mr. MANN. I beg the gentleman's pardon. Here is a bill that repeals all taxes against them except 4 per cent on the net annual income, and there is no net annual income, and will not be as long as they pay interest on their bonds, and can not be.

Mr. WATSON. I will say to the gentleman that the question as to whether we relieve the tax or not is a question which, I expect, will have to be adjudicated by the courts before it can be answered with certainty.

Mr. MANN. They do not pay taxes in any other way now except the license fee.

Mr. WATSON. They do this: They pay an income tax now of 1 per cent.

Mr. MANN. That is an income tax to the Government of the United States. That is not on the annual income, though.

Mr. WATSON. What is it on?

Mr. MANN. The gentleman will find that is apart from the operation. The net annual income would take out of it the interest on the bonds; but they do not take that out when it comes to the income tax.

Mr. CULLOP. Mr. Speaker, I would like to ask the gentleman from Illinois a question. If this bill would pass, would the effect of it be an inducement to these railroads to never have a net income?

Mr. MANN. I doubt whether they need any inducement. [Laughter.]

Mr. CULLOP. But if they could by good business management have a net income, would not this be an inducement for them to simply handle the earnings of the road so as to never have a net income? They could pay it out in officers' salaries and one thing and another so as to never have a net income to be taxed, and it would only be by legislation or the passage of a law that would enable the local government ever collecting any tax from them whatever.

Mr. BORLAND. Will the gentleman yield?

Mr. WATSON. With pleasure.

Mr. BORLAND. As I understand it, at the end of five years, in the act of 1912, the Territorial legislature will have plenary power to tax these railroads?

Mr. WATSON. That is true.

Mr. BORLAND. And this bill will have no effect except to relieve the situation during the time the Territorial legislature has jurisdiction over them?

Mr. MANN. I do not remember that provision. What is it?

Mr. WATSON. In the organic act.

Mr. MANN. You mean the act creating the Territorial legislature?

Mr. WATSON. The act creating the Territorial legislature says that until the lapse of five years it shall not have authority to levy a tax on railroads.

Mr. BORLAND. After five years they shall have plenary power.

Mr. MANN. I think they have the power to do it anyway. We have put a license fee upon them in lieu of all taxation. They would not have the power to put on any additional taxes.

Mr. WATSON. For Territorial purposes or local purposes; no.

Mr. MANN. For any purpose.

Mr. WATSON. I think that would be so.

Mr. STAFFORD. Would not this act be supplemental to the enabling act, and would it not properly be considered as a determination by the Congress of the question of taxation of railroads as provided in the enabling act?

Mr. WATSON. Mr. Speaker, at the earnest solicitation of three governors of Alaska, at the request of the Territorial legislature, with the approval, after careful consideration, of the Secretary of the Interior, and in accordance with what I believe to be the views of the Department of Justice, your Committee on Territories has undertaken to deal, not with a theoretical question of taxation, but with the practical question of providing transportation in the Territory of Alaska. That is the whole object of this bill.

Mr. STAFFORD. I have no objection at all, and I do not think others here have any objection, to the provision that would relieve them of the penalty imposed for default in the payment of this tax; but I think it is a serious question whether we should adopt the policy of exempting the railroads of Alaska from taxation, and that is what this bill purposes in the present provision.

Now, there are certain railroads in Alaska—those of the Guggenheims and others—that have been paying this $100 per mile franchise tax. They are able to pay it. If that is not the proper method, why not devise some method that would be proper for the payment of a tax by these railroads, and not exempt all these railroads from taxation for many years to come?

Mr. WATSON. The two railroads that are now paying the $100 per mile tax will, in one instance, pay more and in another equally as much as it now pays under the present law.

Mr. STAFFORD. Does not the gentleman think it is a very heavy burden on the bondholders and stockholders of these six railroads in Alaska, which to-day may be defunct by reason of exploitation on the part of their backers, that the total sum each year for railroad taxes would be $45,000? But you are exempting them entirely under the scope of your bill.

Mr. WATSON. Mr. Chairman, the two railroads that have operated in Alaska will continue to pay taxes, and probably pay more taxes than they do now. The White Pass & Yukon Railroad, which runs 20 miles in the Territory, will pay more under this bill than it has paid under the present law. As to the Guggenheim road, to which the gentleman refers, which runs from Cordova to the copper mines, we have no means of ascertaining certainly whether it will pay more or not. It is believed that the general freight traffic of that road does not pay any profit; but, inasmuch as its owners haul their own ores, the railroad, on the whole, is a profitable piece of property to them. But if they hauled somebody else's ore and not their own, the probabilities are that the rate of taxation here prescribed for the net income would amount to more than $100 per annum per mile.

Now, those are the only two roads, Mr. Speaker, that continuously operate in Alaska. There is another road leading out from Fairbanks which has had an intermittent operation. The net profit during the last year, according to the statements issued, was about $2,000. The gentleman will see that under the conditions which have existed in recent years in that Territory naturally there would be no profit. The prospect is that there will be no profit for that road for the incoming year. The other roads have suspended operations, one of them directly as the result of an attempt to collect this penalty.

Mr. BORLAND. Mr. Speaker, I ask for the regular order.

Mr. STAFFORD. Just before the gentleman does that, permit me to say that from my reading of this bill I think there should be some provision inserted that will make it certain that this will not overcome or supersede the provision in the enabling act granting to the Territorial legislature the authority and right to levy a tax four years hence. I will suggest that the gentleman ask unanimous consent to have this bill go over for two weeks without prejudice, so that I can examine the enabling act and prepare the amendment.

Mr. WATSON. If the gentleman will allow me, I want to say to him that if he will reflect for a moment he will realize that no matter what authority may be delegated to the Territorial legislature in Alaska, Congress can always repossess itself of it.

Mr. STAFFORD. That is the very purpose of this amendment—to make it clear that we are not superseding that original provision.

Mr. WATSON. Surely the gentleman can not suppose that the Congress, in enacting this bill, is stripping itself of any authority?

Mr. STAFFORD. No; but Congress moves very slowly in the matter of the taxation of railroads in Alaska. When we once adopt a policy, we are not likely to change it.

Mr. WATSON. This is intended to provide for a very critical and temporary emergency in Alaska. I would not appeal to the gentleman personally, but on patriotic grounds I would appeal to him not to object.

Mr. STAFFORD. It will be only two weeks before it will come up again.

Mr. WATSON. If this goes over for two weeks, a Mexican war may be upon us by that time.

Mr. MANN. The gentleman can call it up on a Wednesday when the committee is reached.

Mr. STAFFORD. We will likely be here until August or September, anyway.

Mr. MANN. The gentleman can call it up on the Wednesday call.

Mr. WICKERSHAM. We will not reach it.

Mr. WATSON. We will not reach it in a long time.

Mr. MANN. That is not the fault of this side of the House. That side of the House put in a buffer, to allow no more Calendar Wednesday business to be transacted.

Mr. STAFFORD. I suggest to the gentleman that he ask unanimous consent to let it go over without prejudice, so that we can look it up.

Mr. BORLAND. Mr. Speaker, I call for the regular order.

Mr. STAFFORD. If the gentleman does not wish to have it passed over, I will have to object.

The SPEAKER. Is there objection?

Mr. STAFFORD. I object, Mr. Speaker.

The SPEAKER. The gentleman from Wisconsin objects. The bill will be stricken from the calendar, and the Clerk will call the next bill.

IOWA INDIANS OF OKLAHOMA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 13519) for the relief of the Iowa Indians of Oklahoma.

The bill was read, as follows:

Be it enacted, etc., That jurisdiction is hereby conferred upon the Court of Claims to hear and determine and render judgment in all claims of the tribe of Iowa Indians of Oklahoma against the United States, with the right of appeal by either party to the Supreme Court of the United States for the determination of the amount, if any, which may be legally or equitably due said tribe of Indians under any treaties or laws of Congress or under unexecuted stipulations or agreements between the representatives of the United States and said tribe of Indians, or for the failure of the United States to pay any money which may be legally or equitably due said tribe of Indians. A petition in behalf of said Indians shall be filed in the Court of Claims within one year after the passage of this act, and the Iowa Tribe of Indians shall be the party plaintiff and the United States the party defendant, and the petition may be verified by the attorney employed by the said Iowa Tribe of Indians, to prosecute their claim under this act, under any contract approved by the Commissioner of Indian Affairs and the Secretary of the Interior, as provided by law, upon information and belief as to the facts alleged in said petition. Upon the final determination of the cause the Court of Claims shall decree such fees as the court shall find to be reasonably due to be paid to the attorney or attorneys employed by said tribe of Indians, and the same shall be paid out of any sum or sums of money found due said Iowa Tribe of Indians: *Provided*, That in no case shall the fees decreed by said court be in excess of the amount stipulated in the approved contract: *Provided further*, That all necessary expenses attending the securing of evidence and prosecuting said case shall be paid by the Secretary of the Treasury out of any judgment obtained in favor of said Indians upon an itemized account of said expenses.

Mr. WATSON. Mr. Speaker, with the consent of the gentleman from Wisconsin [Mr. STAFFORD], I want to ask unanimous consent that calendar No. 105, the Alaska bill, which was objected to just now, be put on the calendar and not lose its place.

Mr. MANN. I shall object. I stated before that I would have to object to that when a bill has been upon the Unanimous Consent Calendar only once.

The SPEAKER. Is there objection to the present consideration of the bill just reported?

Mr. MANN. Reserving the right to object, I notice that last year the committee, instead of reporting this bill favorably, recommended that it be referred to the Court of Claims for a finding of facts. This year the committee report the bill. Have they secured any additional facts beyond what they had last year?

Mr. MURRAY of Oklahoma. I understood that this bill was reported once before, but that it went off on an objection in a former Congress. As to what was done in the past Congress I can not say that I know.

Mr. MANN. In the last Congress the bill was introduced, and then the committee reported House resolution 773 for the purpose of referring the bill to the Court of Claims under the Tucker Act for a finding of facts. That did not pass. This year without any finding of facts and without any additional information, so far as the report discloses, they reported in the bill. Does the gentleman recall how much is involved?

Mr. MURRAY of Oklahoma. Yes; I will state that these Indians had a total of 207,000 acres of land. They allotted 8,000 acres; 12,000 acres were cut out for schools in Oklahoma, and 20 acres for common use. These Indians are seeking to get the difference between 38 cents an acre and the $1.25 an acre received by all the other tribes.

Mr. MANN. We passed a bill to-day involving two or three million dollars, to be paid to some Indians to whom we did not owe anything. An objection was made to another bill that proposed to pay all the way from $3,000,000 to $10,000,000 to some other Indians to whom we did not owe anything. Now, here is a bill to pay the difference between 38 cents, which we paid under an agreement, and the $1.25 which the Indians now think we ought to have been willing to pay. Nobody claims that we owe them anything.

Mr. MURRAY of Oklahoma. I will state for the benefit of the gentleman that this tribe of Indians were the most docile of any of the prairie tribes. When the Government got ready to break up Oklahoma Territory and open it to settlement they naturally went to the Indians with whom they could reach an agreement most quickly. They went to the Iowa Tribe of Indians. The gentleman will remember that there are two tribes, one in Kansas and Nebraska and the other in Oklahoma, and they made a trade with the Indians, to give them 80 acres apiece for allotments, with the provision that they would buy the remaining land for 38 cents an acre, and with the further understanding "if the United States gives any other tribe any more, the United States will give the same amount to you."

They went across the river, to the adjoining lands of the Pawnees, and gave them 160 acres each for allotments instead of 80 acres, as in the case of the Iowas. They used the treaty with the Iowas to prise down the Pawnees and got their land for $1.25 an acre. They went to the Kickapoos and made a trade with them, and gave them 40 cents an acre and allotments of 160 acres. Then Congress later paid the Kickapoos the difference between 40 cents and $1.25. Then the commissioners went to the Sacs and Foxes, in the same county, and gave them $1.25 an acre and an allotment of 160 acres each. This tribe of Iowa Indians was used by the Government to make all of these various trades, and they got no more than 80 acres each. Their land was along the river, and the land allotted to the chief of that tribe. I understand, for the most part was washed away and covered up by white sand. They claim that the Government ought to be just with them and give them the difference between 38 cents an acre and $1.25 an acre, which the other Indians receive.

Mr. MANN. Now, here is the fact of it: The Government sent a commission to them——

Mr. MURRAY of Oklahoma. Yes.

Mr. MANN. That commission went to these Indians and agreed to pay them 38 cents an acre for the unallotted lands.

Mr. MURRAY of Oklahoma. Yes.

Mr. MANN. According to the statement of the Indians these same men agreed to give them as much as they gave to any other Indians.

Mr. MURRAY of Oklahoma. Yes.

Mr. MANN. And then on the same trip, immediately across the river, and in bad faith, acting as consummate liars, they gave the other Indians $1.25 an acre.

Mr. MURRAY of Oklahoma. You might call it that.

Mr. MANN. If the claim of the Indians is correct, that is what they did; but I am not willing to assume, just because some aged Indians now think they did not get enough money a generation or two ago, that the men who dealt with them were all consummate liars, engaged in perpetrating a deliberate fraud upon these Indians.

Mr. MURRAY of Oklahoma. I think they call it diplomacy.

Mr. STAFFORD. Will the gentleman yield?

Mr. MURRAY of Oklahoma. Yes.

Mr. STAFFORD. Does not the report also show that the other bands are not on all fours, in that the Iowa Band, when transferred from Nebraska to this reservation in the Indian Territory, were not given absolute fee-simple title, but the Government reserved the right to locate on that reservation any other Indians they saw fit?

Mr. MURRAY of Oklahoma. That is true.

Mr. STAFFORD. As to the Kickapoos, they had absolute title, and as the former Assistant Secretary states in his report on a similar bill:

In view of the above facts it does not appear to the department that the Iowa Tribe in Oklahoma has any valid claim against the United States in relation to the agreement of May 20, 1890.

Is it not highly probable that these three commissioners took that into consideration in allowing only 80 acres to this tribe?

Mr. MURRAY of Oklahoma. What the gentleman says about the fee-simple title is true of the Kansas Indians and is true of all the tribes.

Mr. STAFFORD. I challenge that.

Mr. MURRAY of Oklahoma. The Five Civilized Tribes were the only tribes that had the title in fee simple. The Kickapoos in Kansas never got any fee-simple title.

Mr. MANN. The commissioners who represented the United States are now dead, I think; all of them.

Mr. MURRAY of Oklahoma. I do not know.

Mr. MANN. Does the gentleman think there would be any difficulty on the part of any real, lively Indian claim agent or attorney in proving any kind of an oral agreement that he wanted to by aged people now on the other side when the men on our side are all dead and it being impossible to call them as witnesses?

Mr. MURRAY of Oklahoma. No; I will state that the record, as I understand, will show sufficient to prove the claims of these Indians. They will be supported by oral testimony, the testimony of a man who has just gone out of office, a United States attorney, not an attorney in this case, who has nothing to do with the case, but he will prove a connecting link between the Government and the Indians sufficient to make out a case.

Mr. CULLOP. Will the gentleman yield?

Mr. MURRAY of Oklahoma. Yes.

Mr. CULLOP. I would like to call attention to some language in the bill, line 8, beginning at the word "which"—

Which may be legally or equitably due said tribe of Indians under any treaty or laws of Congress or under any stipulations or agreements, whether written or oral——

Mr. MURRAY of Oklahoma. Read on.

Mr. CULLOP (reading):

Entered into between said tribe of Indians and the United States or its authorized representatives—

Now, then, that would leave it, if these agents of the United States are dead, open for anyone to come in and set up an oral agreement about which there might be the greatest kind of a dispute and open the door for the greatest kind of fraud. You are letting this rest on the recollection or the memory of some individual to come in and say whether he has a claim against the United States Government or not.

Mr. MURRAY of Oklahoma. No; not individually. It will be the whole tribe.

Mr. CULLOP. You are leaving it to recollection. Years have elapsed, and yet you allow these men to come in and give their recollection of what was said years and years ago. With that language in the bill I do not think the gentleman should insist upon it.

Mr. MURRAY of Oklahoma. If the gentleman thinks that language should go out, I will agree to it.

Mr. CULLOP. The word "oral" should be stricken out and not allow a matter of this importance to rest on what took place 20 or 25 years ago.

Mr. MURRAY of Oklahoma. The Indians do not claim that they will prove their case by oral testimony. The oral testimony will be incidental to the record.

Mr. CULLOP. But that is not this proposition.

Mr. MURRAY of Oklahoma. Well, I am willing that it be stricken out.

Mr. CULLOP. On this proposition they could come in and base their case on some oral agreement that they claimed took place between the Indian tribe and some representative of the Government. It certainly would not be wise legislation to pass an act which would open the door to so many abuses as this would.

Mr. STAFFORD. Will the gentleman yield?

Mr. MURRAY of Oklahoma. Yes.

Mr. STAFFORD. In the interim when this bill is next considered I wish to direct the gentleman's attention to what I stated of the other tribes, that they had a better title to the lands, as will be found on page 6, which reads as follows:

The Sac and Fox own the reservation without question under the treaty, they having by treaty bought and paid for it.

Does not that fact show, so far as the Iowa Indians are concerned——

Mr. MURRAY of Oklahoma. The gentleman may know more about Oklahoma Territory than I do.

Mr. STAFFORD. Oh, no; nothing of the sort. I know only what is contained in this report.

Mr. MURRAY of Oklahoma. Let me tell the gentleman the truth about it. All of the Oklahoma Territory, with the exception of the strip known as Beaver County, or No Man's Land, between Kansas and Texas, originally was bought and paid for and a fee-simple title given to each of the Five Civilized Tribes. That was the northwest territory, similar to the northwest territory under all of the thirteen Colonies. The Government made an agreement with the Five Civilized Tribes to settle tribes on the land and not a single one owned the title to it. The Government made a treaty with the Five Civilized Tribes, first, by which they agreed that they might be opened up to settlement, and then they in return made an agreement to reserve allotments to the various little tribes, totaling about 16,000 individuals. That is true about every one of them. None of them under it ever took a fee-simple title and they never paid the Five Civilized Tribes for it.

Mr. MANN. Mr. Speaker, I think this bill will have to have more debate than it can well receive under conditions surrounding the Unanimous Consent Calendar, and I object.

Mr. MURRAY of Oklahoma. Will the gentleman allow it to go over without prejudice?

Mr. MANN. What is the use?

Mr. MURRAY of Oklahoma. The gentleman is so fair.

Mr. MANN. If the gentleman says that to me twice I will object. I do not pretend to have any element of fairness. If I did, I would insist on its going off the calendar.

Mr. MURRAY of Oklahoma. Mr. Speaker, I ask unanimous consent that the bill be passed without prejudice.

The SPEAKER. Is there objection?

There was no objection.

GORDON W. NELSON.

Mr. CHANDLER of New York. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. CHANDLER of New York. Mr. Speaker, I rise to ask unanimous consent to take from the Speaker's table Senate bill 5445 and substitute it for House bill 7781. The Senate bill was passed by the Senate this morning and House bill 7781 was reported unanimously from the Committee on Immigration of the House a few days ago and is now on the Private Calendar. The necessity for action at this time is simply this: These bills are identical and look to the relief of Gordon W. Nelson, a midshipman at Annapolis. Nelson entered the Naval Academy in 1910, an alien. The law as it existed at that time provided for a six years' course, four years at the academy and two years at sea. It is perfectly legal, according to the advices we have, to have an alien midshipman in the Navy, but it was against the law then and it is against the law now to have an alien commissioned, and in 1912 the law was changed so as to provide a course of four years instead of six. Nelson, not knowing anything of the passage of the law, took no steps toward naturalizing himself, and when the law of 1912 was passed sufficient time was not allowed before his graduation in 1914 for him to naturalize himself. He can not be commissioned without a special act of Congress, and this bill is to authorize the President to commission him an ensign conditionally. This bill provides for a conditional commission to be granted by the President, by and with the advice and consent of the Senate, and that he shall graduate and receive his commission as ensign in 1914, conditioned upon the fact that he completes naturalization on or before January 1, 1915.

The SPEAKER. Let us see what the parliamentary status of this is. This has passed the Senate?

Mr. CHANDLER of New York. To-day.

The SPEAKER. And the House committee has reported an identical bill.

Mr. CHANDLER of New York. Yes, sir.

The SPEAKER. The gentleman from New York asks unanimous consent to take from the Speaker's table Senate bill 5445 and substitute it for H. R. 7781.

Mr. MANN. For consideration is the request of the gentleman.

The SPEAKER. For consideration, a similar bill being reported on the calendar. Is there objection? [After a pause.] The Chair hears none, and the Clerk will report the bill.

The Clerk read as follows:

A bill (S. 5445) for the relief of Gordon W. Nelson.

Be it enacted, etc., That the President be, and he is hereby, authorized to commission, by and with the advice and consent of the Senate, Gordon W. Nelson an ensign in the United States Navy on the date of his graduation after the four years' course at the Naval Academy, to take rank as an ensign with the other members of his class according to their standing as determined by their final multiples for the four years' course at the Naval Academy: *Provided*, That unless the said Gordon W. Nelson becomes a citizen of the United States on or before January 1, 1915, he shall on said date cease to be an officer of the Navy.

The bill was ordered to be read a third time, was read the third time, and passed.

The SPEAKER. Without objection, the House bill will lie on the table.

There was no objection.

On motion of Mr. CHANDLER of New York, a motion to reconsider the vote by which the bill was passed was laid on the table.

ENROLLED BILLS PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that they had this day presented to the President for his approval bills of the following titles:

H. R. 3468. An act for the relief of the heirs of the late Samuel H. Donaldson; and

H. R. 2314. An act for the relief of Allen Edward O'Toole and others, who sustained damage by reason of accident at Rock Island Arsenal.

CLERICAL ASSISTANTS FOR THE VOCATIONAL EDUCATION COMMISSION.

Mr. HUGHES of Georgia. Mr. Speaker, I ask unanimous consent to call up Senate joint resolution 142 for immediate action, and I hope there will be no objection.

The SPEAKER. What is the number on the calendar?

Mr. HUGHES of Georgia. It is a joint resolution authorizing the Vocational Education Commission to employ stenographers and clerks.

The SPEAKER. What is the number on the calendar?

Mr. HUGHES of Georgia. On the Union Calendar the number is 188, on the Unanimous Consent Calendar 141, and it is Senate joint resolution 142.

The SPEAKER. The Clerk will report the resolution.

Mr. HARDY. Mr. Speaker, I would like to know, for I have been waiting to find out, if we are going to depart from the regular order in regard to the calling of bills on the Unanimous Consent Calendar?

The SPEAKER. We are not, except in cases where there are matters of emergency. The bill just passed, unless it is passed now, is no good, and this joint resolution is to pay people money for which the Chair understands they are suffering, and they ought to have it.

Mr. HUGHES of Georgia. Mr. Speaker, it is an emergency measure, I will state to my friend, and I hope he will not object to it.

Mr. HARDY. I will not object.

Mr. MANN. Mr. Speaker, reserving the right to object, I do not know whether that point is reached yet.

The SPEAKER. No; it has not been reached yet. The Clerk will report the joint resolution.

The Clerk read as follows:

Joint resolution (S. J. Res. 142) authorizing the Vocational Education Commission to employ such stenographic and clerical assistants as may be necessary, etc.

Resolved, etc., That the commission to consider the need and report a plan for national aid to vocational education provided for in the joint resolution approved January 20, 1914, is furthermore authorized to employ such stenographic and clerical assistants, and to have printed such of the testimony taken before the commission and reports of the commission, as the commission may deem advisable, the total expenditures of said commission not in any event to exceed the amount of $15,000 heretofore appropriated for the expense of said commission.

The SPEAKER. Is there objection?

Mr. MANN. Reserving the right to object, I believe this bill is on the Unanimous Consent Calendar lower down?

Mr. HUGHES of Georgia. Yes, sir; it is.

Mr. MANN. If this bill should be considered now, might I ask my friend from Alabama if he intends to move that the House adjourn?

Mr. UNDERWOOD. I will state to the gentleman from Illinois I was waiting on the patience of the House, but I would like to submit this proposition to the gentleman from Illinois and the House: There is a bill here in reference to the election of United States Senators by the people, and I think it is quite important that it should get through. It is a Senate matter and relates to their people, and I would like to have an opportunity for the gentleman from Missouri to call it up this afternoon, if there is no serious objection.

Mr. MANN. That would not be possible for this reason: We had the other day on the Wednesday Calendar quite a contest as to whether we would blockade the entire calendar. We on our side of the House opposed that, but I will not put the responsibility upon the gentleman from Georgia [Mr. BARTLETT], who, I think, if I am not mistaken, openly stated in the House that he wanted to prevent the consideration of the bill to which the gentleman from Alabama now refers, and I would not be willing to have that done in his absence.

Mr. ANDERSON. Mr. Speaker, if the gentleman will permit, there is on this entire calendar only one little bridge bill, in which two gentlemen from Missouri are interested [laughter]——

The SPEAKER. Let us get rid of this thing first.

Mr. RUCKER. Mr. Speaker, I hope the gentleman from Illinois will not make any objection to this.

Mr. MANN. I would not be willing to take advantage of the House, when there is such a small number here, on a bill of that kind. I think the bill ought to pass, however, I will say to the gentleman.

Mr. RUCKER. If there was any objection to the bill, I would not bring it up, but I do not think there is any objection to it.

Mr. MANN. The gentleman knows there was quite an objection here the other day, and when we had a roll call, the issue being whether a bill should be considered or not or whether we preferred to go ahead and block the calendar with the codification bill, the majority of the House preferred to block the calendar and prevent that bill from being reached.

Mr. RUCKER. But a great many Members came in while the roll was being called and did not know what the issue was.

Mr. MANN. I was not responsible for that. I tried my best to tell them what the issue was.

The SPEAKER. The gentleman from Georgia [Mr. HUGHES] has a resolution. Is there objection to its consideration?

Mr. MANN. Mr. Speaker, I am not going to object if we are not going ahead with the rest of the calendar.

Mr. UNDERWOOD. The gentleman from Illinois [Mr. MANN] realizes, of course, it is too late to send for a quorum, and if he desires to raise the question of no quorum——

Mr. MANN. That is another question. I do not object to this on that account.

Mr. UNDERWOOD. The gentleman from Missouri [Mr. RUCKER] wants to be given leave to print, I understand. That is all there is——

The SPEAKER. Is there objection to the consideration of the resolution of the gentleman from Georgia [Mr. HUGHES]? [After a pause.] The Chair hears none. The Clerk will report the resolution.

The Clerk read as follows:

Joint resolution (S. J. Res. 142) authorizing the Vocational Education Commission to employ such stenographic and clerical assistants as may be necessary, etc.

Resolved, etc., That the commission to consider the need and report a plan for national aid to vocational education provided for in the joint resolution approved January 20, 1914, is furthermore authorized to employ such stenographic and clerical assistants, and to have printed such of the testimony taken before the commission and reports of the commission, as the commission may deem advisable, the total expenditures of said commission not in any event to exceed the amount of $15,000 heretofore appropriated for the expenses of said commission.

The SPEAKER. The question is on the third reading of the Senate joint resolution.

The resolution was read a third time; and having been read a third time was passed.

On motion of Mr. HUGHES of Georgia, a motion to reconsider the vote by which the resolution was agreed to was laid on the table.

Mr. RUCKER. Mr. Speaker, I ask unanimous consent for the present consideration of the resolution which I send to the Clerk's desk.

The SPEAKER. The Clerk will report the resolution.

Mr. MANN. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Illinois makes the point of order that there is no quorum, and, evidently, there is not.

ADJOURNMENT.

Mr. UNDERWOOD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 48 minutes p. m.) the House adjourned until Tuesday, May 5, 1914, at 12 o'clock noon.

EXECUTIVE COMMUNICATION.

Under clause 2 of Rule XXIV, a letter from the Secretary of the Treasury, transmitting copy of communication of the Attorney General submitting a supplemental estimate of appropriation in the sum of $14,675 for rent of court rooms, United States courts, for the fiscal year ending June 30, 1915 (H. Doc. No. 909); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. ANSBERRY, from the Committee on Ways and Means, to which was referred the bill (H. R. 6433) to relocate the headquarters of the customs district of Florida, reported the same without amendment, accompanied by a report (No. 613), which said bill and report were referred to the House Calendar.

Mr. LEWIS of Maryland, from the Committee on War Claims, to which was referred the bill (H. R. 9628) to refund to the corporate authorities of Frederick City, Md., the sum of $200,000 exacted of them by the Confederate Army under Gen. Jubal Early, July 9, 1864, under penalty of burning said city, reported the same with amendment, accompanied by a report (No. 614), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. FLOYD of Arkansas, from the Committee on the Judiciary, to which was referred the bill (H. R. 2167) to amend an act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911, reported the same without amendment, accompanied by a report (No. 615), which said bill and report were referred to the House Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 5535) granting a pension to Eliza J. Gay; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 14568) granting an increase of pension to L. R. Clayton; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 14874) granting a pension to Carson E. Newhard; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 15943) granting a pension to William M. Wilson; Committee on Invalid Pension discharged, and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. DAVENPORT: A bill (H. R. 16264) to provide for the erection of a public building at Pawnee, Okla.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 16265) to require the carriers of passengers for hire to establish an interstate rate which shall not exceed the combination of local rates; to the Committee on Interstate and Foreign Commerce.

Also, a bill (H. R. 16266) to provide for the erection of a public building at Pawhuska, Okla.; to the Committee on Public Buildings and Grounds.

By Mr. KEATING: A bill (H. R. 16267) providing for the retirement of certain officers who have served in the Philippine Scouts; to the Committee on Military Affairs.

By Mr. TAGGART: A bill (H. R. 16268) for the remodeling, alteration, and repair of the post-office building at Fort Scott, Kans.; to the Committee on Public Buildings and Grounds.

By Mr. SPARKMAN: A bill (H. R. 16269) to regulate the taking or catching of sponges in the waters of the Gulf of Mexico and the Straits of Florida, outside of State jurisdiction; the landing, delivering, curing, selling, or possession of the same; providing means of enforcement of the same, and for other purposes; to the Committee on the Merchant Marine and Fisheries.

By Mr. FREAR: Concurrent resolution (H. Con. Res. 38) directing the Interstate Commerce Commission to investigate river and harbor improvements and to report thereon; to the Committee on Rivers and Harbors.

By Mr. FOSTER: Joint resolution (H. J. Res. 260) authorizing the Joint Committee on Printing to have printed 2,000 copies of the hearings on the Colorado coal strike before the subcommittee of the Committee on Mines and Mining; to the Committee on Printing.

By Mr. AINEY: Resolution (H. Res. 502) authorizing and directing the Committee on Foreign Affairs, or a subcommittee thereof, to inquire, investigate, and ascertain and report whether any persons, associations, or corporations domiciled or owing allegiance to the United States have heretofore been or are now engaged in fomenting, inciting, encouraging, or financing any rebellion, insurrection, or other flagrant belligerent disorder in Mexico; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ALLEN: A bill (H. R. 16270) granting an increase of pension to Harriet J. Bromwell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16271) granting an increase of pension to Nancy Gould; to the Committee on Invalid Pensions.

By Mr. BELL of Georgia: A bill (H. R. 16272) granting an increase of pension to Martha Allison; to the Committee on Pensions.

Also, a bill (H. R. 16273) granting an increase of pension to Eliza Ann McDonald; to the Committee on Pensions.

Also, a bill (H. R. 16274) granting an increase of pension to Mary E. Nickelson; to the Committee on Pensions.

Also, a bill (H. R. 16275) granting an increase of pension to Sarah Jane Smith; to the Committee on Pensions.

By Mr. CLARK of Missouri: A bill (H. R. 16276) granting an increase of pension to John T. Hetherlin; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16277) granting an increase of pension to Daniel Williams; to the Committee on Invalid Pensions.

By Mr. ESCH: A bill (H. R. 16278) granting a pension to Adelaide Doty; to the Committee on Invalid Pensions.

By Mr. FRENCH: A bill (H. R. 16279) granting an increase of pension to Benjamin F. Coplen; to the Committee on Invalid Pensions.

By Mr. HAWLEY: A bill (H. R. 16280) granting a pension to Margaret L. Estep; to the Committee on Invalid Pensions.

By Mr. HILL: A bill (H. R. 16281) for the relief of John L. Seargeant; to the Committee on War Claims.

By Mr. KENNEDY of Connecticut: A bill (H. R. 16282) granting an increase of pension to Marrieta Parks Silvernail; to the Committee on Invalid Pensions.

By Mr. KETTNER: A bill (H. R. 16283) granting a pension to Martha L. Rummell; to the Committee on Pensions.

Also, a bill (H. R. 16284) granting an increase of pension to Levi M. Dort; to the Committee on Invalid Pensions.

By Mr. McANDREWS: A bill (H. R. 16285) granting a pension to Andrew J. Haslam; to the Committee on Pensions.

By Mr. POWERS: A bill (H. R. 16286) granting a pension to Lillie Guffey; to the Committee on Pensions.

Also, a bill (H. R. 16287) granting a pension to Samp Huddleston; to the Committee on Pensions.

Also, a bill (H. R. 16288) granting a pension to Iven Sawyers; to the Committee on Pensions.

Also, a bill (H. R. 16289) granting an increase of pension to Elizabeth R. Stephens; to the Committee on Pensions.

Also, a bill (H. R. 16290) for the relief of the estate of McKenza Smallwood, deceased; to the Committee on War Claims.

By Mr. RAINEY: A bill (H. R. 16291) granting an increase of pension to Richard B. Winn; to the Committee on Invalid Pensions.

By Mr. SELLS: A bill (H. R. 16292) granting a pension to George A. Stanberry; to the Committee on Pensions.

By Mr. SAMUEL W. SMITH: A bill (H. R. 16293) granting an increase of pension to Orrin J. Wells; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Memorial of sundry citizens of Chicago, Ill., Gardiner, Me., and Fort Hall, Idaho, protesting against the practice of polygamy in the United States; to the Committee on the Judiciary.

Also (by request) memorial of the Gloversville (N. Y.) Socialist Party, protesting against the Colorado strike outrages; to the Committee on the Judiciary.

Also, papers to accompany House bill 16263, granting an increase of pension to Thomas Haggard; to the Committee on Invalid Pensions.

SENATE.

TUESDAY, *May 5, 1914.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, Thou hast put an image of Thyself in our human minds. The unity we find in all nature has its rise in our thought of God. The sequence of history comes out of that transcript of the divine nature in our own minds. We find ourselves self-determining and self-conscious. We, too, exist and are free. Into the great field of human service we have brought our living personality and are delivering the forces of our lives as best we can for the uplift of humanity. May Thy blessing abide with us, giving to us not only the power and the inspiration of Thy spirit, but giving to us motives to lead us in the path of success, that our lives may be owned and used of God for the benefit of our fellow men. For Christ's sake. Amen.

The VICE PRESIDENT resumed the chair.

The Secretary proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. LEA of Tennessee and by unanimous consent, the further reading was dispensed with and the Journal was approved.

CALLING OF THE ROLL.

Mr. KERN. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hollis	Overman	Stone
Bankhead	Hughes	Page	Sutherland
Brady	Kenyon	Perkins	Swanson
Brandegee	Kern	Pittman	Thomas
Bristow	Lea, Tenn.	Robinson	Thompson
Bryan	Lee, Md.	Root	Tillman
Burleigh	Lippitt	Saulsbury	Townsend
Burton	Lodge	Shafroth	Vardaman
Chamberlain	McLean	Sheppard	Warren
Chilton	Martin, Va.	Simmons	Weeks
Clapp	Martine, N. J.	Smith, Ga.	West
Clark, Wyo.	Nelson	Smith, Md.	Williams
Cummins	Norris	Smith, S. C.	
Goff	O'Gorman	Smoot	
Gore	Oliver	Sterling	

Mr. SHEPPARD. I wish to announce the necessary absence of my colleague [Mr. CULBERSON], and to state that he is paired with the Senator from Delaware [Mr. DU PONT].

Mr. SMOOT. I desire to announce the unavoidable absence of the senior Senator from Kentucky [Mr. BRADLEY], and also the junior Senator from Wisconsin [Mr. STEPHENSON].

The VICE PRESIDENT. Fifty-seven Senators have answered to the roll call. There is a quorum present. The presentation of petitions and memorials is in order.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the following bill and joint resolutions:

S. 5445. An act for the relief of Gordon W. Nelson;

S. J. Res. 97. Joint resolution authorizing the President to extend invitations to foreign Governments to participate in the International Congress of Americanists; and

S. J. Res. 142. Joint resolution authorizing the Vocational Education Commission to employ such stenographic and clerical assistants as may be necessary, etc.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 3988. An act for the purchase of a building and lot as a mine-rescue station at McAlester, Okla.;

H. R. 10832. An act to amend section 2 of an act approved March 2, 1907, entitled "An act providing for the allotment and distribution of Indian tribal funds" (34 Stat. L., 1221 and 1222);

H. R. 10833. An act authorizing the Secretary of the Interior to lease for grazing and agricultural purposes unallotted lands within Indian reservations established by act of Congress or Executive order;

H. R. 10846. An act to authorize the Secretary of the Interior to use in the purchase of live stock, seeds, and agricultural equipment moneys appropriated to fulfill treaty obligations;

H. R. 11246. An act for the restoration of annuities to the Medawakanton and Wahpakoota (Santee) Sioux Indians, declared forfeited by the act of February 16, 1863;

H. R. 11740. An act to amend an act entitled "An act creating a legislative assembly in the Territory of Alaska and conferring legislative power thereon, and for other purposes," approved August 24, 1912;

H. R. 12291. An act to increase the limit of cost for the extension, remodeling, and improvement of the Pensacola (Fla.) post office and courthouse, and for other purposes; and

H. R. 13770. An act to consolidate certain forest lands in the Sierra National Forest and Yosemite National Park, Cal.

ENROLLED BILL SIGNED.

The message further announced that the Speaker of the House had signed the enrolled bill (S. 5031) quieting title to lot 44 in square 172 in the city of Washington, and it was thereupon signed by the Vice President.

PETITIONS AND MEMORIALS.

Mr. LEA of Tennessee presented a memorial of sundry citizens of Knoxville, Tenn., remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. LEE of Maryland present memorials of sundry citizens of Maryland, remonstrating against national prohibition, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Maryland, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a petition of the Baltimore Conference of the Methodist Episcopal Church, held at Cumberland, Md., praying for the establishment of national censorship of motion pictures, which was referred to the Committee on Education and Labor.

Mr. KENYON presented petitions of sundry citizens of the State of Iowa, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of the State of Iowa, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committtee on the Judiciary.

He also presented a memorial of sundry citizens of the State of Iowa, remonstrating against the enactment of legislation to compel the observance of Sunday as a day of rest in the District of Columbia, which was referred to the Committee on the District of Columbia.

Mr. McLEAN presented a petition of the Equal Franchise League of New Canaan, Conn., praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which was ordered to lie on the table.

Mr. CHAMBERLAIN presented petitions of sundry citizens of the State of Oregon, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of the State of Oregon, praying for the enactment of legislation to prohibit immoral or indecent songs from being copyrighted, which was referred to the Committee on Education and Labor.

Mr. CLAPP presented a petition of sundry citizens of the State of Minnesota, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which was referred to the Committee on the Judiciary.

Mr. JONES presented petitions of sundry citizens of Port Orchard, Sunnyside, Sumas, Lynden, Ferndale, and North Yakima, all in the State of Washington, praying for the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Seattle, Spokane, Bellingham, Hoquiam, Tacoma, Ellensburg, Aberdeen, Olympia, and King County, all in the State of Washington, remonstrating against the adoption of an amendment to the Constitution to prohibit the manufacture, sale, and importation of intoxicating beverages, which were referred to the Committee on the Judiciary.

Mr. PAGE presented a memorial of sundry citizens of the State of Vermont, remonstrating against the enactment of legislation to compel the observance of Sunday as a day of rest in the District of Columbia, which was referred to the Committee on the District of Columbia.

Mr. BRANDEGEE presented a petition of the Equal Franchise League of New Canaan, Conn., praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which was ordered to lie on the table.

HOSPITAL SHIP FOR AMERICAN FISHERIES.

Mr. WORKS, from the Committee on Fisheries, to which was referred the bill (S. 1732) providing for the establishment of a hospital ship in connection with the American fisheries, asked to be discharged from its further consideration and that it be referred to the Committee on Public Health and National Quarantine, which was agreed to.

MEMORIAL OF BATTLE OF PLATTSBURGH.

Mr. ROOT. Mr. President, I reported from the Committee on the Library the other day the bill (S. 3662) to promote the erection of a memorial in conjunction with the celebration of the centenary of the Battle of Plattsburgh during the year 1914, in commemoration of the one hundredth anniversary of Macdonough's victory in the naval battle fought in the War of 1812, the last naval engagement between English-speaking peoples, and I asked that it be put upon the calendar. That was an inadvertence upon my part. It was the intention of the committee that the bill should be referred to the Committee on Appropriations, and I will ask that it be taken from the calendar and referred to that committee.

The VICE PRESIDENT. Without objection, that action will be taken.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. THOMAS:

A bill (S. 5478) granting an increase of pension to Lizzie Nelson (with accompanying papers);

A bill (S. 5479) granting an increase of pension to Delia Curry (with accompanying papers); and

A bill (S. 5480) granting an increase of pension to John Pace (with accompanying papers); to the Committee on Pensions.

By Mr. SHAFROTH:

A bill (S. 5481) granting an increase of pension to Martin V. B. Eisenbarger; to the Committee on Pensions.

By Mr. THOMPSON:

A bill (S. 5482) granting an increase of pension to John Collier (with accompanying papers); and

A bill (S. 5483) granting a pension to Frank West (with accompanying papers); to the Committee on Pensions.

By Mr. WALSH:

A bill (S. 5484) modifying and amending the act providing for the disposal of the surplus unallotted lands within the Blackfeet Indian Reservation, Mont.; to the Committee on Indian Affairs.

By Mr. CHAMBERLAIN:

A bill (S. 5485) granting an increase of pension to Edwin P. Kyle (with accompanying papers); to the Committee on Pensions.

By Mr. WARREN:

A bill (S. 5486) granting a pension to Elizabeth C. Miller (with accompanying papers); to the Committee on Pensions.

By Mr. O'GORMAN:

A bill (S. 5487) to supplement and amend an act entitled "An act to authorize the New York and New Jersey Bridge Cos. to construct and maintain a bridge across the Hudson River between New York City and the State of New Jersey," approved June 7, 1894; to the Committee on Commerce.

A bill (S. 5488) for the relief of the widow and minor children of Michael Gumb, deceased (with accompanying papers); to the Committee on Claims.

AMENDMENTS TO APPROPRIATION BILLS.

Mr. BRYAN (for Mr. FLETCHER) submitted an amendment intended to be proposed to the river and harbor appropriation bill, which was referred to the Committee on Commerce and ordered to be printed.

Mr. RANSDELL submitted an amendment proposing to increase the salary of the chief clerk, office of the Surgeon General of Public Health Service, from $2,000 to $2,500 per annum, intended to be proposed by him to the legislative, etc., appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

NATIONAL FARM-LAND BANKS.

Mr. TOWNSEND. I submit an amendment which I intend to propose to House bill 12585, to establish national farm-land banks. I submit it by request, and ask that it be printed and, together with some papers in connection with it, referred to the proper committee.

The VICE PRESIDENT. The amendment will be printed and, with the accompanying papers, referred to the Committee on Banking and Currency.

AFFAIRS IN MEXICO.

Mr. LIPPITT. I submit the resolution which I send to the desk, and ask unanimous consent for its immediate consideration.

The VICE PRESIDENT. The Secretary will read the resolution.

The resolution (S. Res. 349) was read, as follows:

Resolved, That the President be requested, if not incompatible with the public interest, to inform the Senate whether there is any foundation for the following statement which appeared in the Washington Post of May the 5th:

"PRESIDENT MAY AID GEN. VILLA TO BECOME THE NEXT RULER OF MEXICO.

"The President is endeavoring to obtain all the light he can on the Villa-Carranza relationship and upon Villa's character. The possibility of a crisis calling for decision on the part of the American Government as between the two men is recognized. There are some among the President's advisers who believe that the better policy for the United States to pursue in meeting the situation that will follow the passing of Huerta is to see that a military leader of proven strength is placed in power at Mexico city, rather than a political leader of the Carranza type.

"PEACE THE CHIEF CONCERN.

"These men argue that the chief concern of the United States must necessarily be peace in Mexico. As they see it, the President will be in far better position to claim success for his policy if he can show

a Mexico brought to peace by the iron hand of Villa than if the Mexican capital presents the spectacle of dissension in the name of constitutionalism. Whether there is reason or not, they fear that a Carranza régime would be a repetition of the Madero experience.

"Since Carranza uttered what was construed here as a defiance of the United States following the dispatch of the Atlantic Fleet to Mexican waters, administration leaders have become convinced that he can not be relied upon to follow Washington dictation or advice, and they believe there must be some measure of direction from here if a new Mexican Government is to get on its feet.

"STRONG MEN NEEDED.

"The strongest influence in inducing them to favor Villa, despite his bad record is, however, the conviction that what Mexico most needs is a man who by force of arms can keep down revolution and restore peace throughout the land, and no questions asked about the constitution and constitutionalism. They think Villa may prove another Porfirio Diaz.

"It is this consideration that has brought Villa to the fore as the American 'hope.'

"The chief concern of the very active confidential agency maintained by the Carranzistas in Washington is to head off this pro-Villa movement."

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

Mr. STONE. Mr. President, I do not know just why this editorial should be dignified by the Senator from Rhode Island by having it read into the RECORD.

Mr. LIPPITT. If the Senator will excuse me just a moment, it is not an editorial; it is a news item.

Mr. STONE. Well, whatever it is, I do not think it ought to have been presented at this particular time; but, of course, the Senator can judge as to that from his own standpoint. At all events, I shall object to the present consideration of the resolution.

The VICE PRESIDENT. The resolution goes over under the rule.

Mr. LODGE. In this connection I should like to have printed in the RECORD an extract from the Daily Telegraph, of London, of the 15th of April, 1914, which gives some account of Francisco Villa, with names of persons and places and dates, and ask that it lie over with the resolution submitted by the Senator from Rhode Island [Mr. LIPPITT].

The VICE PRESIDENT. In the absence of objection, that action will be taken.

Mr. MCCUMBER. Mr. President, the editorial referred to by the Senator from Massachusetts, I presume, is a very short one; it is upon somewhat of a live topic, and might be of interest to the Senate. I therefore ask unanimous consent that it may be read, in order that we may know what it is.

The VICE PRESIDENT. Is there objection?

Mr. STONE and Mr. LEA of Tennessee. I object.

The VICE PRESIDENT. Objection is made.

Mr. LODGE. If there is objection, I will ask that the extract be returned to me, and I will find time to read it. I understood that consent was given to print it in the RECORD.

The VICE PRESIDENT. Unanimous consent was given, and then the Senator from Massachusetts withdrew the article.

Mr. LODGE. The Senator from North Dakota [Mr. MCCUMBER] asked that it be read, and permission was refused. Under those circumstances, I suppose it will not be printed in the RECORD, and therefore I shall take occasion in the course of the debate to read it.

Mr. SMITH of Georgia. I understood that unanimous consent was given to print it in the RECORD.

Mr. LODGE. Unanimous consent was given, but the Senator from North Dakota asked that it be read.

The VICE PRESIDENT. There is no doubt about the fact that unanimous consent was given to print it in the RECORD.

Mr. LODGE. The Senator from North Dakota asked that it be read, but objection was made.

Mr. HUGHES. Mr. President, did the Senator from Massachusetts ask that it be read? I understood that he simply wanted it printed in the RECORD and that some other Senator asked that it might be read.

Mr. LODGE. I asked that it be printed in the RECORD and consent was given, and then the Senator from North Dakota asked that it be read.

Mr. HUGHES. I did not object to the request of the Senator from Massachusetts.

Mr. LODGE. The article is very short, and I can see no objection to its being read. The reading would not take five minutes.

Mr. HUGHES. If the Senator from Massachusetts desires it read, I do not think there will be any objection.

Mr. LEA of Tennessee. I objected, although I will not object if the Senator from Massachusetts desires it to be read.

Mr. LODGE. Then I ask that it may be read.

Mr. STONE. That is a very long article.

Mr. LODGE. It is a short article, and I can read it in a few moments.

Mr. STONE. I was judging from its appearance.

Mr. LODGE. Very well; if the Senator insists that I shall read it myself, I will do so.

Mr. STONE. The Senator can read it if he wishes.

Mr. LODGE. Of course, I can read it if I wish.

Mr. STONE. The Senator need not grow impatient about it.

Mr. LODGE. But it seems to me such a waste of time——

Mr. STONE. I think it is a waste of time, and therefore I objected to its being read.

Mr. LODGE. When the Senator hears the article, he will find that it is not a waste of time to read it.

Mr. STONE. I have no objection to its being put into the RECORD without reading.

Mr. POINDEXTER. Mr. President, if the Senator from Massachusetts will allow me, I understand this article gives some account of the life of Pancho Villa?

Mr. LODGE. It is an account taken from a London paper of Villa's life and of some of the things he has done, giving names, places, and dates—information which, as I recall, has not been presented heretofore with any thoroughness.

Mr. POINDEXTER. Of course, Mr. President——

Mr. LODGE. I do not understand that the article reflects on anyone connected with the present administration, for I do not assume that Villa is yet connected with it, or that it is treasonable or disrespectful to say anything in regard to him.

Mr. POINDEXTER. Mr. President——

Mr. LODGE. I beg the Senator's pardon.

Mr. POINDEXTER. It is not my purpose to object. It is a matter of a good deal of interest, I think, and there has been much said on this general subject matter; but I should like to inquire of the Senator from Missouri, the chairman of the Committee on Foreign Relations, whether or not it is true, as reported, that the State Department has had prepared a sort of official life of Villa for the information of Senators? I noticed such a statement, I think, in this morning's paper.

Mr. STONE. Mr. President, I saw something of the kind in a newspaper, and that is all I know about it. I call for the regular order.

The VICE PRESIDENT. Morning business is closed.

PANAMA CANAL TOLLS.

Mr. GOFF. Mr. President, I ask the indulgence of the Senate for a moment merely to give notice that on Friday next, the 8th instant, after the conclusion of the routine morning business, I shall ask permission to submit a few observations on Panama Canal tolls.

MANIFESTS OF VESSELS IN COLUMBIA RIVER.

Mr. LANE. Mr. President, I have in charge a bill which has been favorably reported upon by the Committee on Commerce, but it has not been reached in regular order upon the calendar. It is a short bill. There is no objection to it that I know of. If possible, I should like to get it through. I ask unanimous consent for the immediate consideration of the bill (S. 3886) to repeal sections 2588, 2589, and 2590 of the Revised Statutes of the United States.

Mr. SMOOT. Let it be read.

The VICE PRESIDENT. The Secretary will read the bill.

The Secretary read the bill, as follows:

Be it enacted, etc., That sections 2588, 2589, and 2590 of the Revised Statutes of the United States be, and the same hereby are, repealed.

Mr. CLARK of Wyoming. What is the purpose of the bill?

Mr. LANE. I will state for the information of the Senate that all ships coming into the port of Portland, Oreg., first pass Astoria, another port at the mouth of the river. Under an old law they are compelled to stop there and make a report to the local customhouse officer. In the early days there was a customhouse officer there, but at this time he is merely a deputy of the customhouse officer at Portland, Oreg. It detains ships two or three hours, or may do so. If they were allowed to proceed on up the river it would save delay, which is expensive. When the canal is completed the Hamburg-American Line and other companies with which you are all familiar are going to put on lines of steamers. They have entered a protest against having to stop a large steamer for a purpose which, they claim, produces no good end. The Chamber of Commerce of Portland, Oreg., wrote me a letter, which I have in my hand, asking me to have the law repealed. I took the matter up with the Treasury Department, and they said they had no objection to it and it ought to be done.

Mr. CLARK of Wyoming. Is there a letter accompanying the bill?

Mr. LANE. I have a letter in my office from the department, but there is a letter here from the Chamber of Commerce of Portland which explains it.

Mr. CLARK of Wyoming. I should like to have the letter from the department read.

Mr. LANE. Then the bill may go over until to-morrow that I may bring to the Senate the letter from the department.

Mr. PERKINS. The letter from the department is printed in the report.

Mr. LANE. There is a report from the Committee on Commerce. The committee reported the bill favorably after a full investigation. The report was made by the senior Senator from California [Mr. PERKINS], who has been engaged for a lifetime in that line of business and knows exactly the effect of the restriction much better than I do.

Mr. BRISTOW. The Senator from California states that the letter referred to is in the report of the committee.

Mr. CLARK of Wyoming. I should like to hear the letter read, because I have an idea that possibly the repeal of these three sections of the statute may affect vessels other than those the Senator mentions, which are bound solely to Portland, Oreg.

Mr. LANE. It is a local statute, if the Senator pleases.

Mr. CLARK of Wyoming. It is a United States statute.

Mr. LANE. The statute applies locally to that port. I ask that the letter may be read.

The VICE PRESIDENT. The Secretary will read the letter.

The Secretary read as follows:

TREASURY DEPARTMENT,
OFFICE OF ASSISTANT SECRETARY,
Washington, January 28, 1914.

The CHAIRMAN COMMITTEE ON COMMERCE,
United States Senate.

SIR: I have the honor to acknowledge the reference by your committee, dated the 23d instant, of S. 3886, a bill to repeal sections 2588, 2589, and 2590 of the Revised Statutes of the United States.

These sections require the master of a vessel entering the Columbia River, bound for Portland, Oreg., to exhibit his papers to the collector at the port of Astoria and take on board an inspector, and also, when bound to sea, to leave a copy of his manifest at Portland.

This procedure entails delay and expense and does not in any way tend to increase the protection to the revenue, and I recommend that the proposed legislation be enacted.

By direction of the Secretary.

Respectfully, CHARLES S. HAMLIN,
Assistant Secretary.

Mr. LANE. I ask the Senator from Wyoming if that letter removes his objection to the bill?

Mr. CLARK of Wyoming. I do not know that I have any objection to it.

Mr. LANE. It is merely a local matter, and, so far as I know, applies only to those two ports. The Treasury Department has recommended the passage of the bill, and the object is merely to facilitate commerce.

Mr. SMOOT. I suggest to the Senator that an amendment should be made to the bill by inserting, in line 5, after the words "United States," the words "relative to manifests of vessels," so that the object of the bill may be stated in the bill itself. That is generally the rule in passing bills repealing certain statutes. If the Senator has no objection, I will offer that amendment.

Mr. LANE. I have no objection if it in no wise interferes with the purpose of the bill.

Mr. SMOOT. No; it will be no interference whatever. I propose to insert, after the words "United States," the words "relative to manifests of vessels," and the bill will then read:

That sections 2588, 2589, and 2590 of the Revised Statutes of the United States, relative to manifests of vessels, be, and the same hereby are, repealed.

Mr. LANE. I will accept that amendment.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered as in Committee of the Whole.

The VICE PRESIDENT. The amendment submitted by the Senator from Utah will be stated.

The SECRETARY. In line 5, after the words "United States," insert a comma and the words "relative to manifests of vessels."

Mr. LANE. Mr. President, would that amendment still compel the stopping of vessels there for some other purpose?

Mr. SMOOT. No, Mr. President. The sections named will be repealed. The amendment provides for a particular reference to the subject of the sections named in the bill. It will not change the effect of the Senator's bill.

Mr. CLARK of Wyoming. Mr. President, of course the result of the passage of this bill will be virtually to abolish Astoria as a port of entry.

Mr. LANE. No.

Mr. CLARK of Wyoming. If the Senator will read section 2590 of the Revised Statutes, which this bill proposes to repeal, he will see that substantially it will do so, except that a vessel loaded entirely with goods for Astoria will stop. Section 2590 reads:

SEC. 2590. When a vessel shall arrive at Astoria, in the district of Oregon, from sea, having merchandise on board for that place and also for Portland, in the district of Willamette, such vessel shall enter at Astoria and discharge such portion of her cargo as is destined for that place, whereupon the collector shall cause her hatches to be closed and sealed, and shall then permit her to proceed to Portland in charge of a customs officer.

The effect of the Senator's bill would be to repeal that section of the Revised Statutes and the two preceding sections. It seems to me, upon a cursory examination, that goods bound for Astoria would pass Astoria, proceed to Portland, enter there, and be reshipped to Astoria. If the Senator from Oregon is satisfied with that condition, of course, it being a local matter, I have no objection. I have not any question, however, but that would be the operation of the bill if passed.

Mr. LANE. There is merely a deputy there, and the main port has been placed at Portland, Oreg. A majority of the vessels which come in go on through.

Mr. CLARK of Wyoming. Is there not a customhouse at Astoria?

Mr. LANE. There was in the past.

Mr. CLARK of Wyoming. Is there not one now?

Mr. LANE. With a deputy in charge of it; yes.

Mr. CLARK of Wyoming. The United States collects customs dues there?

Mr. LANE. We formerly had a customhouse at Portland, another one at Coos Bay, another one at Astoria, and another one at Yaquina. They have all been consolidated and merged into one under an Executive order by President Taft.

Mr. CLARK of Wyoming. But the Senator from Oregon concedes the fact, as I understand, that a vessel with goods for Astoria on board, under his proposed law would pass Astoria, go to Portland, make entry of the goods there, and then they would be compelled to reship to Astoria. As I have said, however, this is a local matter, and I shall not object to it.

Mr. LANE. What the Senator from Wyoming says may be true, and yet, as a matter fact, the great bulk of the shipping goes on to Portland, but under the present law all vessels have to stop at Astoria, involving considerable delay. There would be more harm done by leaving the law as it is, as I understand, than there would be by making a change, which would facilitate the transportation of the freight of the entire Columbia River country.

Mr. CLARK of Wyoming. Of course I have no earthly objection to the local desire in this matter.

Mr. LANE. I will state for the information of the Senator from Wyoming that I have had correspondence with people living at Astoria, and on presenting to them the claim of the Hamburg-American Line and the petition of the Chamber of Commerce of Portland I have had no serious protests against the proposition, and in some cases have had a concurrence in the idea—an assent to it.

I think the measure is all right. If I did not think so, I would not present it. I do not know just what effect the amendment of my friend from Utah [Mr. SMOOT], who lives far from the sea, although near very salty water, will have on the bill. I would rather have the opinion of the Senator from California [Mr. PERKINS] than that of the Senator from Utah, the Senator from California being more closely associated with that line of work. I do not know whether the proposition of the Senator from Utah will not still compel vessels to be held up at Astoria, though it looks so innocuous on its face.

Mr. SMOOT. Mr. President, I will assure the Senator from Oregon that the amendment will have no effect whatever on the bill as introduced by the Senator, with the exception of stating in the bill the object of the sections of the law referred to. They are relative to the manifests of vessels. That is what the law refers to, and that is all the amendment provides.

Mr. LANE. The Senator from Utah has been able to qualify on a good many different subjects since I came here; but I had sort of sidetracked him in my own mind in matters concerning the sea, having been around that portion of the globe, I think, more than he. He may be right about this matter, but I would much prefer, if it would suit the Senator just as well, to have him withdraw his amendment and let the bill pass in its present form.

Mr. SMOOT. I do not care anything about the matter, only I say that every bill which has passed in the Senate since I have been here repealing or amending a statute of the United States has always stated the substance of the statute proposed to be repealed or amended, and this bill does not do so. Of course, if the Senator from Oregon desires that I withdraw the amendment, I am perfectly willing to withdraw it, and I ask unanimous consent that it be withdrawn.

Mr. LANE. Inasmuch as this measure has been in the hands of my old seafaring friend, the Senator from California [Mr. PERKINS], and has met with his approbation, I had rather rest on his judgment than on that of a Senator from the interior salty shores of the great Salt Lake. I prefer to have the bill go through as I introduced it. Will the Senator from Utah withdraw his amendment?

Mr. SMOOT. I have asked unanimous consent to withdraw the amendment.

The VICE PRESIDENT. In the absence of objection, the amendment is withdrawn.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

HOUSE BILLS REFERRED.

The following bills were severally read twice by their title and referred to the Committee on Public Buildings and Grounds:

H. R. 3988. An act for the purchase of a building and lot as a mine rescue station at McAlester, Okla.; and

H. R. 12291. An act to increase the limit of cost for the extension, remodeling, and improvement of the Pensacola (Fla.) post office and courthouse, and for other purposes.

The following bills were severally read twice by their title and referred to the Committee on Indian Affairs:

H. R. 10832. An act to amend section 2 of an act approved March 2, 1907, entitled "An act providing for the allotment and distribution of Indian tribal funds" (34 Stats. L., 1221, 1222);

H. R. 10833. An act authorizing the Secretary of the Interior to lease for grazing and agricultural purposes unallotted lands within Indian reservations established by act of Congress or Executive order;

H. R. 10846. An act to authorize the Secretary of the Interior to use in the purchase of live stock, seeds, and agricultural equipment moneys appropriated to fulfill treaty obligations; and

H. R. 11246. An act for the restoration of annuities to the Medawakanton and Wahpakoota (Santee) Sioux Indians, declared forfeited by the act of February 16, 1863.

H. R. 11740. An act to amend an act entitled "An act creating a legislative assembly in the Territory of Alaska and conferring legislative power thereon, and for other purposes," approved August 24, 1912, was read twice by its title and referred to the Committee on Territories.

H. R. 13770. An act to consolidate certain forest lands in the Sierra National Forest, Cal., was read twice by its title and referred to the Committee on Public Lands.

PANAMA CANAL TOLLS.

Mr. O'GORMAN. Mr. President, I ask that the canal tolls bill be temporarily laid before the Senate, so that the senior Senator from Missouri [Mr. STONE] may have an opportunity to address himself to that subject.

The VICE PRESIDENT. Is there any objection?

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 14385) to amend section 5 of an act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone, approved August 24, 1912.

Mr. STONE. Mr. President, the senior Senator from Wisconsin [Mr. LA FOLLETTE] has given notice that he would address the Senate during the morning hour to-day on a bill in which he is interested. He has sent me word, however, that he is not quite ready to proceed and has stated that it would be an accommodation to him if I should go on in advance.

Mr. President, ordinarily when I am addressing the Senate I do not object to interruptions, but I do not feel physically able to engage in a running debate or controversy which might be prolonged indefinitely. So I would rather proceed without interruption, for I think even that will tax my strength, and, unless some Senator feels impelled by some overmastering impulse to "butt in," I will pursue the course I have indicated.

Mr. President, among other things I wish to advert to at this time, and upon which I desire to express my opinion, is that clause of the last Baltimore platform which relates to tolls on coastwise vessels passing through the Panama Canal; and perhaps I had as well dispose of that now in the first instance. During my recent protracted illness it was impossible for me to keep myself fully advised as to the progress made in Congress on the proposal to repeal the free-toll provision of the act of 1912—the Panama Canal administration act. It has been only since my convalescence that I have been able to employ the sources of information at my command to inform myself of the trend of events. During the last several weeks of that convalescence I have scanned the CONGRESSIONAL RECORD with some regularity, glancing through many speeches on the tolls question, and reading some of them in full. I have been astonished to find that a number of Democrats in both Houses, and among them some quite eminent gentlemen, have found themselves embarrassed by the canal-tolls clause of the platform to which I have referred. Now, Mr. President, I am myself a firm believer in keeping the obligation resting on all men to observe the declarations set forth in their party platforms and to keep the faith. I think I am as ardent an advocate of that policy as any other Democrat. Nevertheless, I am unable to see why anyone should be embarrassed by this clause in the Baltimore platform, for according to my view there is nothing in it that should occasion embarrassment. It seems to me those Senators and Members of the House who have been beset with difficulties because of the platform have taken a superficial view of that pronouncement, not going to the root of the matter, and that they have forgotten or overlooked the circumstances surrounding the adoption of the platform, and have thus allowed themselves to be misled and to form an ill-considered judgment. I voted for free tolls when that question was before the Senate in 1912; I expect at this time to vote to repeal that provision of that law; and I am now going to show, as I think I clearly can, that in doing this I do not in any degree stultify myself, or even subject myself to the criticism of inconsistency. Let me state, however, that I do not justify my present course with any pretense of having changed my opinion, for I have not changed my opinion in the least in any respect.

ACT 1912, AND SUBSIDIES.

Mr. President, let me state this question as I understand it, and as it appeared to me three years ago, and as it appears to me now. In 1912 this country was engaged upon the stupendous task of constructing the Panama Canal at an enormous expense. We were constructing it across territory which had been acquired by the United States for canal purposes, and over which territory we were then as now exercising practical sovereignty. For some time there had been a widespread discussion in this country, in and out of Congress, as to the policy this Government should adopt with respect to tolls on vessels of American registration and flying the American flag. That discussion culminated in the legislative proposition introduced in Congress to allow a part of our seagoing merchant vessels, namely, vessels engaged in coastwise traffic, to pass through the canal without the payment of tolls. As this proposition assumed form and potency Great Britain stepped in and filed with our State Department a formal and earnest protest against the enactment of any law exempting any American vessel from the payment of tolls, holding that such a statute would be an unlawful discrimination in favor of American ships. This protest was based on the Hay-Pauncefote treaty, made between the United States and Great Britain. The British contention was that under the terms of that treaty the United States could not lawfully allow any exclusive favor to American vessels or make any discrimination whatever on their account as against the vessels of other nations. Our State Department joined issue with the British Government on that contention. That issue involved the construction of the Hay-Pauncefote treaty. On that issue I absolutely agreed with the interpretation placed on the treaty by our Government. I was fully convinced in my own mind that the United States had the right, under the very terms of the treaty itself, and without violating either the letter or spirit of that convention, to allow our coastwise vessels to pass through the canal free of tolls.

I speak not now of any question of power or policy, but only of our naked right under the treaty to exempt our coastwise vessels from toll exactions. More than that, I was equally convinced that the United States had the right under the treaty to exempt not only our coastwise trade vessels from the payment of tolls, but also to exempt our over-sea vessels from the payment of tolls. That was my conviction in 1912, and it is my conviction to-day. As to whether we should exempt any class of American vessels from the payment of tolls, I then regarded, and now regard, as a purely domestic question with which foreign nations justly and lawfully have nothing to do. That was the contention of our Government in 1912 so far as coastwise vessels were concerned. There was, therefore, a sharp and clearly defined international issue raised between Great Britain and the United States. I will not review the arguments pro and con presented at that time; that is unnecessary; it answers my purpose now merely to state the issue and the conclusion whether the United States had a lawful right under the treaty to discriminate in favor of its coastwise vessels with respect to tolls. We said, "Yes"; Great Britain

said, "No." I regarded that issue as one of transcendent and far-reaching importance, for it involved to a certain degree our sovereign right and power over the canal. When I came to determine my course and cast my vote on the bill pending in 1912 I found myself confronted with two distinctly antagonistic propositions with which I was compelled to deal. First, the vote I should cast would represent my judgment and decision on the international issue involving the construction of the treaty. The lawmaking power of this country, Congress and the President, were about to deliver to the world their verdict and judgment on the interpretation of the treaty, thereby defining our position, so far as Congress could define it, as to the right of the United States to exercise a sovereign control over the canal with respect to our purely domestic shipping; and with my profound conviction on that question I was obliged, in the very nature of things, to support the pending legislation. That was one of the questions I had to meet at that time. The other was the subsidy question involved in the legislation. I knew that in voting for that law I was voting for a bill granting a subsidy to our coastwise vessels; and I knew also full well that the Democratic Party was thoroughly committed to a policy of opposition to all forms of subsidies, direct or indirect, to our merchant marine, or any part of it, or to any kind of legislation that would impose a tax burden on the American people in the interest of shipbuilders and shipowners. That was and for years had been a historic party policy—a policy proclaimed years before and repeated from time to time in different national platforms. For example, as late as 1908, at the Denver convention, the last convention held prior to that at Baltimore, the platform contained this declaration:

> We believe in the upbuilding of the American merchant marine without new or additional burdens upon the people and without bounties from the Public Treasury.

Again, in 1904, the St. Louis convention inserted this declaration in its platform:

> We denounce the ship-subsidy bill recently passed by the United States Senate as an iniquitous appropriation of public funds for private purposes and a wasteful, illogical, and useless attempt to overcome by subsidy the obstructions raised by Republican legislation to the growth and development of American commerce on the sea. We favor the upbuilding of a merchant marine without new or additional burdens upon the people and without bounties from the Public Treasury.

It will be observed that this convention specifically denounced a subsidy bill which had recently theretofore passed a Republican Senate. That bill, which passed the Senate March 17, 1902, granted subsidies for carrying mails, and also granted direct subsidies based on the tonnage of vessels entering American ports. The Democrats in Congress opposed that measure. During my service here as a member of the Commerce Committee and on the floor of the Senate I have opposed subsidy legislation on more than one occasion, as did all Democrats. That was our party attitude in Congress. These quotations I have made from the platforms of 1904 and 1908 are enough to disclose the established doctrine of the Democratic Party on the subject of ship subsidies. I knew all about this party doctrine when I cast my vote for free tolls in 1912. I confess that the situation in which I then found myself was in the beginning somewhat embarrassing to me, but on due reflection I solved the question of my duty and discharged that duty in the end without embarrassment. There were, as I have said, two propositions involved. One of these related to an international question involving an important American right which another country was disputing and antagonizing. The other of these two questions was a domestic question relating to our domestic policy, and which concerned our own country alone. If the international issue had not been present in 1912, and if the only question before Congress had been the allowance of free tolls to coastwise vessels I would have voted "No" on the passage of the bill, instead of voting "Yea." But it seemed clear to me that in the circumstances of the situation I should for the time being subordinate and put aside the domestic question and cast my vote so as to assert the right of the United States under the treaty to exercise its own pleasure with respect to assessing tolls on our coastwise vessels. After settling the international question, after disposing of that, so far as we were concerned by passing that law, I felt that we could at any time thereafter take up the domestic question involved and dispose of that as we might see fit to do. Upon this theory I cast my vote in 1912.

But now, Mr. President, we are here to-day to deal with the tolls question from the other standpoint, that of treating it as a question with which we are alone concerned. It is now proposed to repeal that provision of the act of 1912 exempting American coastwise ships from the payment of tolls. That is now a question of our own, with which foreign nations have nothing to do. We have now taken up this question on our own initiative. No foreign country is making any effort or in any wise attempting to exercise an influence, so far as I know, intended to affect the legislation upon which we are now engaged. We answered the protest of Great Britain through the act of 1912, thereby asserting our dissent to the British contention and our unhampered right to exempt from tolls our coastwise shipping if we so desired, and since then that Government has taken no further action nor made any further protest in the premises. So far as I am advised all foreign Governments have been standing aloof with hands off since the passage of the act of 1912. I believe it to be true that some foreign Governments, how many I know not, do not coincide with our construction of the Hay-Pauncefote treaty, but none so far as I know has taken any formal action in the premises since 1912. True it is that in the course of the present debate some Senators and Representatives have declared that the exemption provision of the law of 1912 should be repealed because in their opinion it is in conflict with the Hay-Pauncefote treaty and that its enactment did in some sense involve the good faith and honor of this Nation. But that is being said here in Congress and in American and foreign newspapers, and not by foreign Governments. As to that contention, by whomsoever made, I absolutely dissent, for I still believe that the act of 1912 asserted no right to which we are not lawfully entitled within the very terms of the treaty. No foreign Government is now asking us to repeal this law; no foreign Government has filed or presented any protest since its enactment. I stand by what we did in 1912 as being within our right. But now, on my own account and for my own reasons, and without reference to the opinion or contention of any other man, I stand ready to vote to repeal the free tolls provision—in other words, the subsidy provision of the act of 1912—because I am opposed to that provision as being an unwise and vicious economic policy and because the Democratic Party has wisely committed itself against the policy of subsidizing.

On the merits of the pending question I can find no satisfactory reason why the American people should grant a subsidy of millions to this special interest, the coastwise merchant fleet, which now enjoys under our laws an absolute monopoly of the enormous traffic carried on along the coasts of all the seas bordering this continent. None but American vessels can enter into this coastwise business; it is a monopoly enjoyed by the American ships engaging in it. The construction of the canal has cost the American people $400,000,000, and it will require millions annually to maintain and operate it. Every vessel passing through the canal will entail an expense. Why should these already favored ships be permitted to utilize this waterway without contributing a farthing toward its maintenance or toward the expense of passing them through from sea to sea, or toward the creation of a fund for the gradual reimbursement of the Public Treasury for the enormous outlay it has been put to in the construction of the canal? I feel that the United States has already gone far enough in granting legislative favors and privileges to coastwise vessels. The corporations operating these vessels have not shown any great appreciation of the favors already bestowed upon them. I hear talk now to the effect that transcontinental railroads are backing the movement for the repeal of the free-tolls provision. So far nothing has come to me to convince me that this statement is true. But I heard something the other day down at Norfolk, near which city I was recreating for several weeks, that would seem to prove that there is some kind of combination between the Atlantic coastwise vessels and the railroads south of the Potomac River.

I was informed from such trustworthy sources that I assert it to be a fact, that these coastwise ships refuse to convey any passenger from Norfolk to any port south of that city. They will not carry any person from Norfolk to Charleston, or Savannah, or Jacksonville, or any other point on the South Atlantic coast. I was told of one man who purchased a ticket at Baltimore for one of the southern cities I have named. From Baltimore he went to Norfolk by rail, intending to take the boat at that point, but the boat's officers refused to allow him to go aboard. This looks very much like a ship-railroad combination. No; Mr. President, I see no good reason why this subsidy should be given to the owners of these ships; and if it is given it will be a subsidy pure and simple. No man will deny that it is a subsidy. That is admitted on all sides. For example, in the correspondence held between Secretary Knox and representatives of the British Government on the subject of these canal tolls, I find this expression in a letter sent by our Secretary to our embassy at London to be shown to Sir Edward Grey, the British Secretary of State for Foreign Affairs, namely:

> The exemption of the coastwise trade from tolls—

Said Secretary Knox—

or the refunding of tolls collected from the coastwise trade is merely a subsidy granted by the United States to that trade, and the loss resulting from not collecting or from refunding those tolls will fall solely upon the United States.

I also find the following in a letter addressed by the British Embassy at Washington to our Secretary of State:

The proposal to exempt all American shipping from the payment of the tolls would, in the opinion of His Majesty's Government, involve an infraction of the treaty, nor is there in their opinion any difference in principle between charging tolls only to refund them and remitting tolls altogether. The result is the same in either case.

I also find the following in a letter addressed by the British Secretary for Foreign Affairs to the British ambassador at Washington to be shown to Secretary Knox:.

If the United States exempts certain classes of ships from the payment of tolls the result would be a form of subsidy to those vessels which His Majesty's Government consider the United States are debarred by the Hay-Pauncefote treaty from making.

I could add numerous expressions of like kind and to the same effect from men of such distinction and learning as to entitle them to be regarded as authority. But that would be useless, as no one, I take it, will join issue with what I have quoted, or for a moment contend that the exemption of our vessels from tolls would not be in effect the exact equivalent of collecting tolls and then refunding them.

BALTIMORE PLATFORM.

Now, Mr. President, this brings me directly to the Baltimore platform, and to the consideration of that clause of the platform which seems to occasion embarrassment to some Democrats in Congress. That canal-tolls clause of that document is in this language:

We favor the exemption from toll of American ships engaged in coastwise trade passing through the canal.

Mr. President, in determining the correct significance and meaning of that declaration we should look not alone at the phraseology of this resolution, separate and apart from every other consideration, but it is necessary that we should consider it in connection with the whole platform, and in the light of such historical data as may bear upon the subject treated in that resolution. Examining the platform we find under the appropriate heading, "Merchant marine," four resolutions relating to that subject. The first of these is in this language:

We believe in fostering by constitutional regulation of commerce the growth of a merchant marine which shall develop and strengthen the commercial ties which bind us to our sister Republics of the south, but without imposing additional burdens upon the people and without bounties or subsidies from the Public Treasury.

Here we find that the convention reaffirmed the old, historic doctrine of the Democratic Party against granting bounties or subsidies from the Public Treasury to the merchant marine. Almost immediately following this declaration just quoted, and under the same heading, we find the resolution relating to the exemption of coastwise vessels from the payment of tolls. If we should stop there without further inquiry we should be apparently confronted by two declarations, one almost immediately following the other, in direct and irreconcilable conflict with each other. Mr. President, I assume that the gentleman who wrote the platform and the convention which adopted it did so with their eyes open, conscious of what they were doing, and that they did not understand or believe that they were stultifying themselves, nor did they intend to stultify themselves, by perpetrating any such absurdity. Undoubtedly the platform committee and the convention consciously and deliberately intended to assert, as they did, the party opposition to bounties and subsidies. for the resolution in which that was done announced nothing new, but merely repeated and reasserted an old doctrine of the Democratic Party. The convention never intended to say that it favored a subsidy, temporary or permanent, to be paid out of the Public Treasury to the merchant marine or to any part of it. Such a thing as that is absolutely unthinkable. If that were not so, then the convention not only stultified itself by adopting two distinctly antagonistic resolutions, but one of these resolutions would have been a radical and complete reversal of the long-established policy of the party.

I repeat, Mr. President, that the convention never intended to do any such thing as that, and did not, in fact, do any such thing as that. All the convention meant to do by the resolution respecting free tolls was to approve what Congress had done, and especially what Democratic Senators and Representatives had done, in voting to pass the law of 1912. We all know that the free-tolls provision of that act is in direct contravention of the Democratic policy. I have already spoken sufficiently upon that subject and will not further elaborate it. The Baltimore convention desired to put the seal of its approval upon the course taken by the Congress in registering its solemn interpretation of the Hay-Pauncefote treaty to the effect that the United States had the right to pass American vessels without the payment of tolls if it so desired; but the convention did not mean and could not have intended to reverse the party doctrine of antagonism to subsidies, and to commit the party to the policy of granting subsidies. In the same platform the convention approved and applauded the efficiency, economy, and constructive work of the Democrats in Congress. It specifically approved of numerous measures passed by the Democratic House of Representatives and advocated by Democrats in the Senate, such as the bill relating to tariff taxation, to the admission of Arizona and New Mexico, to the submission of a constitutional amendment for the popular election of Senators, to prevent the abuse of the writ of injunction, to the passage of an 8-hour law for workmen on public works, and other bills which had been acted upon by the House. With a like purpose and in the same line of thought, the convention adopted the resolution, under a proper caption, with respect to the nonpayment of tolls by coastwise vessels. It was in that spirit and with that meaning that the resolution about tolls was incorporated in the platform, and for no other reason.

WAS CONVENTION DELEGATE.

Mr. President, I was a delegate to the Baltimore convention. I heard the platform read and concurred in adopting it. I did not understand, or for one moment imagine, that the tolls resolution was intended to commit the Democratic Party to the policy of subsidizing American ships—a policy which had been distinctly denounced in the preceding resolution. Both resolutions were embodied in the same group of resolutions and under the same caption. I understood then, as I do now, that the convention only meant to uphold and indorse the act of Congress in asserting the right of the Government of the United States to regulate the question of tolls on coastwise vessels according to its own untrammeled judgment. Surely no Democrat will contend that the convention intended to commit the Democratic Party to the policy of ship subsidies, and certainly not to make subsidies a fixed and permanent party policy. If we can not now safely and consistently repeal the coastwise tolls provision of the act of 1912 because of what happened three years ago, or because of this platform declaration, then we have tied our hands as with a Gordian knot, and we will be forever powerless to rid ourselves of it unless we cleave it with a sword. If that be true, then we have reversed our historic position on the question of subsidies and become, in the twinkling of an eye, the boldest, most arrant, and uncompromising advocates of subsidies. I utterly repudiate the notion that the Democratic Party has placed itself in any such pitiable condition.

It may be that the resolution might have been, and I think could have been, so phrased as not to leave the meaning of the convention in doubt or even open to quibble, but there can be no reasonable doubt as to what the convention intended to do. Mr. President, I have no question that I am absolutely right in my construction of the platform. There are a number of Senators here who were delegates to that convention, and some who were members of the committee on resolutions and platform. Among the Senators who served on that committee I recall the Senator from Indiana [Mr. KERN], who reported the platform to the convention; the Senator from Montana [Mr. WALSH]; and the Senator from New York [Mr. O'GORMAN], now chairman of the Senate committee having charge of the pending bill, and who is exerting his great powers to defeat this measure. No doubt there are other Senators here who served on that platform committee. I am bound to assume that at least these Senators who helped to write the platform knew what was in it and had a clear conception of its meaning. They at least must have understood just what was meant by the first resolution written under the head of "Merchant marine." They at least must have understood that when that resolution emphatically declaring against the payment of bounties or subsidies was written it reasserted, and was intended to reassert, the oft-proclaimed doctrine of the party. There could be but one interpretation, one possible meaning, to that declaration.

Then, Mr. President, I would like to know if any of these Senators had it in his mind deliberately to follow that declaration against subsidies with another resolution in favor of subsidies? Did they intend to commit any such gross inconsistency, any such astounding abortion as that? I can not believe it. Did any Senator here who represented his State in that convention intend in one breath to declare against subsidies to ships and in the next breath to declare in favor of subsidies to ships? Did anyone intend to perpetrate an act so inde-

fensible or intend to take part in any such discreditable double-dealing as that? I do not believe it. If my understanding and construction of this platform be not true, then this part of the platform is incongruous and contradictory, if not absolutely contemptible. And now having said this much on this subject I dismiss it.

IRISH AMERICANS.

Mr. President, I turn now to another phase of the discussion had on this bill which attracted my attention while recuperating amid agreeable, albeit sedate, environments in Virginia. Looking on from that distance I was amused as I watched the antics of those who resorted to the antiquated and now almost harmless trick of twisting the knotted tail of the British lion, and especially so as I observed the heroic and desperate waste of energy in the process.

It was apparent that all these spectacular and ferocious attacks on the old Lion's rear defenses, and all the fusillades of eloquence fired at him by inflammatory congressional orators, and all the extravagant expenditure of space devoted to him by wild tomcat newspaper romancers, had altogether but one chief inspiration and purpose. That purpose was to stir afresh the ancient and justly inherited hostility of the Irish people toward England for wrongs suffered through centuries of oppression. Whatever the effect might be on others it was evident that these Lion hunters believed that the Irish in America would certainly rise in tumultuous protest whenever the charge was made that the British Government was seeking to overreach and obtain some undue advantage over the United States. I looked on all this without alarm because I have long since learned that the Irish are a pretty hard lot to fool. They are an impulsive people and quick in resentment, and they have an old and deep sense of grievous wrong inbred in their very blood. But they are a sensible people also, with a keen appreciation of what is true and false, and right and wrong. Whoever undertakes to fool the Irish assumes a difficult task. It will not do for any man in this day and generation to rest his cause on a mere appeal to the national prejudice of the Irish people. The case must be presented to them on its merits. Irish Americans will weigh this bill on its merits. The great majority of them will pass upon the merits of this measure just as if the Hay-Pauncefote treaty had been made between the United States and France or Germany instead of Great Britain, and just as if France or Germany instead of Great Britain had presented the protest against the pending legislation of 1912. They would not have this Government settle a great international question on some sentimental ground that did not touch the merits of the question itself.

That is the kind of opinion I have of the intelligence, worth, and patriotism of the Irish people. I have no appeal to make to the Irish-American that is not addressed to him in common with all his fellow citizens. Moreover, I can not believe that the Irish people in America, or in Ireland itself, are inimical and hostile to the present Government of Great Britain. Home rule, with better land laws and improved industrial and social conditions, has been a paramount issue in Ireland ever since the days of Gladstone and Parnell, and even long before that date. The present Liberal Government, with Asquith at its head, supported by such men as Lloyd-George and Winston Churchill, is engaged in a great and noble struggle to bestow upon Ireland the semi-sovereignty of home rule, and through that to give to Ireland new and infinitely greater opportunities for national development and progress. The Irish representatives in Parliament are allied with the Liberal leaders in this movement, which now seems nearer success than ever before. The landlord tories of England and the malcontents of Ulster are striving in every way possible to thwart the Asquith government and to obstruct the march toward a more liberal rule in Ireland, even threatening civil war to check and defeat it. I can not believe that any friend of Ireland in America would assail the present government in London merely because of some senseless and unfounded clamor that England was reaching out a hand against the United States, striking in some way at our sovereignty, or attempting by force or artifice to usurp some just right of this country. Questions of difference may and will arise between this country and Great Britain as they arise between this country and other nations. It is wholly improbable, however, that any question will arise between this country and Great Britain that can not be settled by diplomacy, and it is wholly impossible that any question should arise that could be settled by any threat of force.

Mr. President, I am sure in my own mind that there is no class of American citizens of any origin whose judgment can be swayed or seriously influenced through any apprehension that any other country on the globe may overreach us by diplomacy or overawe us through fear. Those who are dreaming of an impetuous outburst of Irish opposition to the pending measure because of England's relation to it will awake in due time to a grievous disappointment.

ATTACKS ON PRESIDENT.

Mr. President, in this connection and as apropos to what I have said, I wish to add that all this rigmarole we see in certain news publications insinuating that the President is traitorously or timorously sacrificing the honor and interests of our people and that he is weakly disposed to surrender some part of the just sovereignty of this Republic to Great Britain or to any other nation is so absurd as to be unworthy of respectful notice. Every man of sound judgment must know that. The President is an able, scholarly, and patriotic American. He is a man of great learning, of high conceptions, blessed with a clear head and a courageous heart. The American people can not for one moment be made to believe that the welfare and the highest interests of this Republic will not be zealously guarded and wisely guided under his administration. The longer he serves the people and the better they know him the greater will be their faith in him and in his devoted purpose and great capacity to perform efficient and patriotic service. Therefore I am not much disturbed by the lurid flabbergast daily displayed under appalling headlines in newspapers hostile to the President and his administration. The job they have undertaken of discrediting the administration and the Democratic Party is so ferociously overdone that their structure of billingsgate and mendacity falls of its own weight and will become utterly stale and profitless. It is funny how even smart men are sometimes so beset with a kind of moral or mental splenitis as to do things so foolish that normal human beings wonder if the poor fellows have lost their reason and whether their judgment has indeed fled to brutish beasts. For a while well-meaning men may sometimes be rattled by the flash and roar of assault, and, like ships at sea, may list a little, but in good time the ballast of common sense will usually so shift as to right them on their keels.

It is not unusual to find men, spurred on by personal or partisan considerations, who desperately strive to stampede their countrymen by noisy arraignment and loud alarums, willing, as they have little to lose, to take a gambler's chance on winning. But, Mr. President, I think it safe to say that the bugaboos now stalking the land are not of such character and dimensions nor of such frightful mien as to chill the blood of adversaries and put honest men to inglorious rout. To me my path of duty is clear, and I see nothing along the way to fill my mind with dread or doubt.

SIMMONS AMENDMENT.

Mr. President, a word more and I am done. The Senator from North Carolina [Mr. SIMMONS], a member of the committee reporting the bill, proposes an amendment declaring in effect that the passage of this bill shall not be construed as waiving any right the United States may have under any treaty whatsoever to which the United States may be a party. I have no special objection to that amendment, although I consider it wholly immaterial and unnecessary. Perhaps it might be incorporated in the bill as a concession to those who may really entertain some apprehension that the repeal of the law allowing free tolls might in some inscrutable way be construed by somebody as a waiver of our rights to enact such legislation as that of 1912 if we so desired. For myself, I have no such apprehension. If we pass this bill, we would have a law of Congress regulating a purely domestic matter of our own with respect to our administration of the canal. It would be no business of other nations to construe our statutes or interpret our purposes. I shall not object to this amendment, if it is insisted upon, although I regard it as of little consequence.

Mr. LODGE. Mr. President, I have listened with great interest, as I am sure everyone else has done, to the very able speech of the Senator from Missouri [Mr. STONE]. I know well he will pardon me if I say that his discussion in regard to the Democratic platform leaves my emotions personally well within control; but to the rest of his argument I have listened with great pleasure, and I am very glad to feel that he and I are going to vote the same way on this question.

Of course, it is impossible to cover all the points on this question of the canal tolls; but there is one point which seems to me to be of great importance, and that is the consideration of those few countries which have the same relation to the canal, commercially, that we have; that is, countries with Atlantic and Pacific ports. Canada, of course, is one; Costa Rica, Nicaragua, Mexico, and Colombia are the others.

Not only is our action on tolls of particular importance to these countries, but the countries surrounding the Gulf of Mexico and the Caribbean Sea are of particular interest to us in regard to the safety and well-being of the canal. It is very important to us that those countries should be well governed, and that there should be no possibility of any great military power gaining a foothold anywhere on the islands in the neighborhood of the canal, or on the coasts on either side.

Of course, no country is so important to us in that respect as Mexico. It is all the more important on account of its distracted condition. The peninsula of Lower California is particularly important in a strategic way. Therefore, wholly apart from the feeling which we all have of desiring the pacification of that unhappy country, comes in our own interest and the interest of the world in the canal. Therefore what government is finally established in Mexico is a matter that assumes very great importance; and that government will depend, as all governments in Mexico have depended, very largely on the character of the person who comes to the head of the government. That is, therefore, a matter of very immediate interest to us.

One of the leading candidates for that position, if I may use the word "candidate," is that general who has distinguished himself so much in northern Mexico lately—Francisco Villa, or Pancho Villa, as he is commonly known. I have been trying myself to gain some information in regard to him. There was sent me the other day an extract from the Daily Telegraph of London of the 15th of April, 1914. I need hardly say to the Senate that the London Telegraph is one of the great newspapers of England. The article is not long. It is of so much interest in this connection, as to the future Government of Mexico, that I desire to read it. It is entitled:

FRANCISCO VILLA—A FRIGHTFUL CAREER OF MURDER AND TORTURE.

[From a correspondent.]

Mr. POMERENE. Mr. President——

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Ohio?

Mr. LODGE. Certainly.

Mr. POMERENE. May I ask who the writer of the article is?

Mr. LODGE. It is simply headed "From a correspondent."

The article is as follows:

FRANCISCO VILLA—A FRIGHTFUL CAREER OF MURDER AND TORTURE.

[From a correspondent.]

Francisco Villa was born at Las Nieves, in the State of Durango, about the year 1868. He is wholly uneducated, being unable to read and barely able to sign his name. About the year 1882 when only 14 years of age, he was sentenced to a term of imprisonment for cattle stealing. On his discharge he settled in the mining camp of Guanacevi, where a few months later he underwent another sentence of imprisonment for homicide. When he came out of prison for the second time he organized a band of robbers, which had their headquarters in the mountainous regions of Perico in the State of Durango, and were the terror of all that district.

In the year 1907 he was in partnership with one Francisco Reza, stealing cattle in Chihuahua and selling them in the United States, and then stealing mules and horses in the United States and selling them in Chihuahua. In consequence of some disagreement he shot and killed Reza in broad daylight, while sitting in the plaza in the city of Chihuahua. During the early part of November, 1910, he attacked the factory of a Mr. Soto, in Allende, State of Chihuahua, and killed the owner. By threatening the latter's daughter he forced her to show where she had hidden a sum of $11,000, which he stole and used for arming a considerable force. He then joined Madero's revolution, uniting his band with Urbina's column. In January, 1911, he was at Casas Grandes, Chihuahua, where he killed Carlos Alatorre and Luis Ortiz for refusing to pay him the money he demanded for their ransom.

At Batopilas, State of Chihuahua, in February of the same year, he tortured a lady named Señora Maria de la Luz Gomez until he made her pay him $30,000. She died from the effects of the barbarous treatment she received.

COLD-BLOODED CRIMES.

When Ciudad Juarez was taken from the federals in May, 1911, he killed Señor Ignacio Gomez Oyola, a man of over 60 years of age, under the following circumstances: Having sent for him, Villa asked whether he had any arms in his house, and on his saying he had not Villa, "who was seated on a table," drew his revolver and shot him dead. After rifling the corpse of money and valuables it was thrown into the street.

After the triumph of the revolution, Villa, in November, 1911, obtained a monopoly from the then governor of Chihuahua for the sale of meat in the city of Chihuahua, which he procured by stealing cattle from the neghboring farms. Suspecting one of his subordinates, Cristobal Juarez, of stealing on his own account, he killed him one night in the latter part of November in the Calle de la Libertad.

In the early part of May, 1913, Villa, with 75 men, assaulted a train at Baeza, State of Chihuahua, that was carrying bars of gold and silver valued at ₱100,000, killing the crew and several passengers, including Messrs. Caravantes and a Señor Isaac Herrero, of Ciudad Guerrero.

Later in the same month he entered the town of San Andres, Chihuahua, and assaulted the house of Señor Sabas Murga, an hacendado, who with his two sons tried to defend themselves. Two of his nephews were killed, but the Murgas got away. Villa then got hold of two sons-in-law of Murga, who had not taken any part in the fight, and after torturing them to say where their father-in-law had hidden his money he had them killed.

Toward the end of the month Villa's band took the town of Sta. Rosalia, Chihuahua, shooting all prisoners and treating the principal officers with terrible cruelty. Col. Pueblecita was shot and his body dragged along the streets of the town. The commercial houses of Messrs. Visconti, Sarli, Cia Harinera, Sordo y Blanco (Spaniards), and many others were totally sacked. Many private persons were murdered, one of the worst cases being that of a Spaniard, Señor Montilla, cashier of the house of Sordo y Blanco, who was shot over the head of his wife, who tried to defend him. Villa personally kicked her in the face as she lay on the dead body of her husband. He also himself killed a Señor Ramos, secretary of the court of first instance.

He arrested more than 20 of the principal people of Sta. Rosalia, torturing them and taking them out to be shot, until he obtained from them ₱70,000, which were collected by several people in order to save their lives. One of these was a lady, Señora Maria B. Coviero, who was herself also tortured until the sum Villa wanted was forthcoming.

WHOLESALE ATROCITIES.

In July, 1913, Villa took Casas Grandes, Chihuahua, and shot more than 80 noncombatants, violating several young girls, amongst them two young ladies named Castillo.

He attacked and took the town of San Andres, which was held by the federals, in September, 1913, shooting many peaceable residents and more than 150 prisoners, many of these being women and children. In shooting these people, in order to economize cartridges, he placed one behind the other up to five at one time, very few of them being killed outright. The bodies of the dead and wounded were then soaked with petroleum and thrown into bonfires prepared for the purpose. The prisoners were forced themselves to make the bonfire and cover with petroleum the rest of the victims.

After this he went to the small town of Carretas, where he took prisoner an old man of more than 70 years of age, named José Dolores Moreno, demanding from him a ransom of $200. As he could not pay, Villa killed him with his own hand.

On September 29, 1913, Villa, having overpowered a force of over 500 federals commanded by Gen. Alvirez, at Aviles, 15 kilometers from Torreon, had every prisoner shot.

Toward the end of November he took the city of Juarez by surprise. Nearly all the federal officers who were taken there were shot, as well as some 60 noncombatants, most of them inferior employees and servants. The higher employees had managed to escape across the river to the American city of El Paso, Tex.

On December 8, 1913, Villa took possession of the town of Chihuahua, which had been abandoned by the federals since November 28, seizing all the commercial houses of Spaniards and Mexicans down to the smallest bars and drug stores, besides some owned by other foreigners.

Moreover, Villa expelled all the Spaniards, obliging more than 500 Spanish families to leave within three days. Only two Spaniards disobeyed this order, namely, two brothers, Martinez, owners of a small eating house. Villa thereupon ordered them to be beaten to death.

CHILDREN HELD TO RANSOM.

Señor Pedro Olivares, an old and very infirm man, whose shop, under the name of José Ma Sanchez, successor, had been already plundered, is being held until he pays $50,000 ransom. He has already paid $10,000 for two of his children, these also having been held for ransom. Villa also took prisoners two children of 14 years of age, called Lorenzo Arellano and Alfonso Moliner, sons of two gentlemen who were able to leave Chihuahua before Villa arrived.

Many private houses have been occupied by Villa's men, who use their carriages and automobiles. These last are placed at the disposal of public women for their daily orgies.

The house of Señora T. S. Vda. de Prieto is also occupied by the rebels. This lady paid ₱25,000 to Villa to allow her to leave the town.

Villa has shot in Chihuahua 150 noncombatants, the greater number being poor people who could not leave for want of means or because they thought they ran no risks, as they took no part in politics, for all the people in any way connected with the Government had left before Villa entered the city. Special mention may be made of the case of Señor Ignacio Irigoyen and Señor José A. Yañez, who, though in no way connected with politics, were taken by Villa and tortured for several days with threats to shoot them until they paid ransoms of $20,000 each. Having obtained from Villa himself safe conducts to leave by train for the border, the train in which they were was caught up at the station of Montezuma by a locomotive in which were several officers in Villa's confidence, headed by an ex-Maderista deputy called Miguel Baca Ronquillo, who took them from the train and shot them in the presence of the passengers.

Those statements, made in a responsible newspaper, are given with great detail, with names, places, dates, and all that gives them, I think, a significance.

I see it stated in the public press—I know not how truly—that the State Department is preparing a biography of Pancho Villa. I offer these suggestions from a London newspaper as matters which, at least, should be considered in the preparation of the work, if it is ever prepared.

Mr. O'GORMAN. Mr. President, I ask that the canal bill may be temporarily laid aside.

The VICE PRESIDENT. Is there any objection? The Chair hears none.

PROPOSED INCREASE OF RAILROAD RATES.

Mr. LA FOLLETTE. Mr. President, pursuant to the notice I gave some days ago I address the Chair now with the purpose of submitting some remarks upon a bill lying on the table and which I ask that the Secretary may read.

The VICE PRESIDENT. The Secretary will read the bill.

The Secretary read the bill (S. 5127) making it unlawful to attempt to influence the determination of any proceeding pending before the Interstate Commerce Commission excepting under the rules and regulations of the commission governing its proceedings in the orderly administration of the interstate-commerce law and the acts amendatory thereof, which had been

introduced by Mr. LA FOLLETTE on April 1, 1914, and is as follows:

Be it enacted, etc., That section 13 of the act entitled "An act to regulate commerce," approved February 4, 1887, as amended by section 11 of the act entitled "An act to create a commerce court," approved June 18, 1910, be, and is hereby, amended by adding at the end thereof the following:

"Every person who attempts to influence the action of the Interstate Commerce Commission, or any member thereof, in making or refraining from making any ruling, conclusion, finding, recommendation, report, or order in the determination of any proceeding pending before the commission by writing or sending to the commission, or any member thereof, any letter or any written or printed communication, circular, or paper, or by writing, or printing and circulating, or causing to be printed and circulated, any communication, matter, or thing addressed to the commission, or any member thereof, or by communicating with the commission, or any member thereof, in any other manner, with like purpose and intent in relation to such ruling, conclusion, finding, recommendation, report, order, or proceeding pending before said commission, excepting under the rules and regulations of the commission governing its proceedings in the orderly administration of the interstate-commerce law and the acts amendatory thereof, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not more than $2,000 or imprisoned for a term not exceeding one year, or by both such fine and imprisonment, in the discretion of the court."

Mr. LA FOLLETTE. Mr. President, I have before me here a mass of material which I shall refer to in the course of my remarks. Some extracts, and in some cases perhaps, brief communications I may read in full. But I shall ask to have the material, for the most part, printed in the CONGRESSIONAL RECORD without reading. It has been transmitted to the Senate by the Interstate Commerce Commission pursuant to a resolution which passed this body April 28.

On the 14th of May, 1913, the railroads operating in what is known as official classification territory—that is, the territory east of the Mississippi and north of the Ohio and Potomac—filed their formal application for an increase in railroad rates with the Interstate Commerce Commission. Many months before this application was filed there appeared in newspapers quite generally throughout the country, as if by concert, interviews with prominent railway officials setting forth the need of the railroads for increased revenues. And coincident with these interviews, from day to day there appeared in the prominent newspapers of the country editorial comment and news articles manifestly designed to create public opinion which the Interstate Commerce Commission should be made to feel.

The commission has undertaken to conduct this case under the law and to determine upon the sworn testimony of witnesses whether the railroads operating in this so-called official classification territory are justly entitled to an increase in transportation rates. The question at issue, Mr. President, is in many respects the most important that has ever been submitted to the Interstate Commerce Commission. If the public is not now paying a fair and reasonable rate the increase should be made, no matter how oppressive the burden.

It has been computed by the railroads that if the increase which they ask for in their application were granted it would average a 5 per cent increase in existing rates, and that this increase would add in the aggregate to the rates now in force approximately $50,000,000 per annum. While it has been designated as the 5 per cent rate advance, this case, if it should be decided in favor of the contention of the railroads, would add 5 per cent in many cases, less than that in some, much more than that in others, running in some instances as high as 50 and 60 per cent increase. Like the averages in tariff bills, the stated average of 5 per cent is very misleading.

Any Senator can readily see that the amount of burden laid upon the traffic of the country in the aggregate depends entirely upon the volume of that traffic. The increase may be slight in some lines of traffic; it may be manyfold larger in other lines of traffic. The average bears no relation to the amount of burden imposed upon the public as a whole, because some of the rates may attach to articles of which comparatively little is transported or consumed, and yet in computing the general average an item carrying a 2 per cent increase, only a small quantity of which is transported, would affect the average as much as another item in which the per cent of increase is 45 and in which the transportation and consumption of the product is very much larger.

I do not think from such study as I have made that it would be any exaggeration to say that this increase, if it should be allowed by the Interstate Commerce Commission, would lay upon the consumers of this country a burden in the aggregate approaching, and possibly exceeding, $100,000,000 in that limited territory instead of $50,000,000.

But, Mr. President, I am not standing before the Senate this afternoon to argue this case upon its merits. This is not the forum in which that argument should be made. I am here to present to the considerate judgment of this body evidence of an organized conspiracy to control, to compel, to intimidate, and coerce the judgment of the Interstate Commerce Commission in this case, or these two cases pending before it at this time.

So I say again that whatever the results, whether rates are increased $50,000,000 or $100,000,000 in this limited territory, or vastly more than that—to be followed, as it is certain to be followed, should the railroads secure a favorable decision in this case, by an application for increase in all the balance of the territory covered by the railroad lines of the country—if the commission should determine that the public is not now paying just and reasonable rates, such rates should be increased, no matter how oppressive the burden. Whether present rates are just and reasonable should be the only question, and testimony bearing upon that issue should constitute the only influence upon the judgment of the Interstate Commerce Commission when it comes to render its final decision in this case.

Now, Mr. President, the commission decided at the outset that there were certain questions to be settled before rates could be increased: First, do the railroads need more money to enable them to perform the services required of them as common carriers; second, if they need more money, is it because the rates are too low or because the roads are inefficiently or extravagantly managed, or because they are unlawfully giving away hundreds of millions of dollars in free service to big shippers and favored localities to the injury and ruin of smaller shippers and smaller trade centers? These are questions of fact of tremendous importance and they ought to be decided by evidence.

Mr. President, the members of the Interstate Commerce Commission are sworn officers of the Government. They are charged with duties the gravity and importance of which can not be overstated. Theoretically, at least, they have control over the great iron highways of commerce, with power to fix reasonable rates and charges and tolls which common carriers shall receive. The railroads of this country take annually from the people of the country for carrying only—not for producing, not for creating—a sum in excess of that required each year to maintain our National, State, and municipal governments. It is difficult to measure by any standard that the mind quickly grasps the magnitude of the questions submitted to this commission.

I emphasize that, Mr. President, only to impress upon the Senate the importance of the advance-rate case now before the commission.

I repeat the questions which the commission announced were vital to the determination of this case: First, do the railroads need more money to enable them to perform the service required of them as common carriers? Second, if they need more money is it because their rates are too low or because the roads are inefficiently managed—for the efficiency or inefficiency of their management is a matter of as much concern to the public as any other question touching the railroads, and a matter which the public is entitled to have thoroughly discussed before the commission. Or is it because they are unlawfully giving away hundreds of millions in free services to big shippers and favored localities to the injury and ruin of smaller shippers and smaller trade centers?

On this latter point I may suggest, Mr. President, that those who have been closely following the testimony that has been submitted to the commission will recognize in these "free services" the old evil of rebating, against which we have legislated for more than a score of years. I would not mention this if it were not for the fact that the testimony upon this point is closed, and stands undisputed, for, as I have said before, I am not arguing the merits of this case. But it has been proven that free services of definite money value have been rendered to large shippers by the railroads, which, as I say, are in all essentials rebates. It has been proven that millions upon millions of gratuities have been conferred by the railroad companies upon the great monopolies of the country, thus strengthening their hands for the destruction of their competitors; and then because of depleted revenues resulting from that sort of proceeding these common carriers come to the Interstate Commerce Commission demanding increased revenues from increased rates in order that they may meet the demands imposed upon them by the public.

Therefore, Mr. President, it was necessary for the Interstate Commerce Commission to consider not only whether rates were too low, whether the roads were efficiently managed, but to consider also this matter of free service to big shippers and to favored localities to the injury and ruin of smaller shippers and smaller trade centers.

Mr. WORKS. Mr. President——

The PRESIDING OFFICER (Mr. THOMAS in the chair). Does the Senator from Wisconsin yield to the Senator from California?

Mr. LA FOLLETTE. I do.

Mr. WORKS. Does the Senator from Wisconsin understand that the Interstate Commerce Commission is taking all the railroads as a whole in determining this question?

Mr. LA FOLLETTE. I assume that the considerations are entirely confined to transportation matters in official classification territory. However, I can conceive that they might take into consideration the interests of shippers outside of official classification territory who were concerned in transportation charges on products passing through that territory.

Mr. WORKS. But suppose within this classified territory some railroad company should be honestly and efficiently managed and is making money upon the rates that are now allowed by law, and it should appear that some other railroad company was not, how could a 5 per cent increase of the rates be made as between those companies and do justice?

Mr. LA FOLLETTE. I do not understand, Mr. President, that a flat 5 per cent rate is asked for. As I have stated, my understanding is that in many cases the rate asked for is much below 5 per cent, and in other cases the rate asked for is very, very much above, extending to 40 or 50 per cent.

Mr. WORKS. That is precisely what I am trying to find out from the Senator, whether these railroad companies were being treated individually and separately or whether the proposition was to make a horizontal increase of rates as affecting all of them.

Mr. LA FOLLETTE. Oh, no; the railroads contend that they are asking for an advance which will average a 5 per cent increase in rates in official classification territory. As I have suggested earlier in my remarks, this is very misleading; the increase is very much less than 5 per cent in some cases, and very much more in others.

Mr. President, the commission must try this case and decide it as between those who pay the rates and the carriers that receive the rates. Now, to discharge this duty honestly and intelligently it must examine witnesses on oath. It must secure evidence of the important facts material to a just determination of the issue involved.

In this field of its labors the Interstate Commerce Commission is in effect a judicial body. Its powers are in many respects broader than those exercised by the courts. Its findings of fact may be absolutely controlling in a given case. It is therefore vital to the integrity of its work and hence to the very existence of the commission that its decisions should be based solely upon evidence.

But, Mr. President, what shall be said of any attempt made by anyone to influence the action of the Interstate Commerce Commission by any means other than the presentation of testimony under the rules and regulations prescribed by the commission? I assert, sir, that in this case as in no other ever tried by this commission or by any tribunal in the history of our country an attempt has been made to subject the commission to every form of influence and pressure which human ingenuity can devise in order to force from it a decision favorable to the railroads.

A very comprehensive and effective publicity campaign has been going on for more than a year, having for its object a favorable decision to the railroads in this case. It began, as a matter of fact, shortly after the decision of the Interstate Commerce Commission adverse to the contention of the railroads in the rate-advance cases of 1910. During this campaign a mass of material has been printed and spread broadcast throughout this country in every community, every hamlet and village, through the medium not only of the metropolitan press but also through the little country weeklies, aggregating, all told, 22,000 newspapers.

This publicity work has not been limited or confined to the newspapers; it has extended itself by organized effort into magazines and periodicals. Circulars—pamphlets of large bulk, elaborately printed—aggregating a mass the extent of which is but in small part represented in all that lies before me on these desks, have fairly flooded the country.

This campaign, sir, had its inception at the meeting of railroad presidents held April 30, 1913, as recorded in the New York Times of that date. That, Mr. President, was exactly two weeks before the railroads operating in official classification territory filed their applications for an increase in rates. The campaign was on! The lines through which public opinion was to be manufactured had been laid. The eastern railroads have maintained a publicity bureau at Philadelphia, from which emanates anonymous bulletins and circulars, presenting ex parte statements of the railroads and of their officials. Twenty-eight of these publications came from one of the railroads which is a party to this pending case.

To know where they have been sent, to know what was the purpose, one has but to follow the material that they contain into the columns of the press—the daily press and the weekly press of this country. The case proves itself; and though it will require very many pages of the CONGRESSIONAL RECORD to give to the public the evidence of this monstrous plan, I ask that all of this material which I have before me here upon my desk and which was received from the Interstate Commerce Commission under the Senate resolution which I introduced be printed in the CONGRESSIONAL RECORD.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. LA FOLLETTE. If it had been necessary, Mr. President, I should have read into the CONGRESSIONAL RECORD every line and paragraph and page of this great mass of material to demonstrate the conspiracy that has been on in this country. It shall go, sir, to the people of this country a monument of shame, not only to those who would seek by that infamous method to control judicial functions, but to the press that lent itself to the imposition upon the public of this ex parte and unsworn mass of special pleading on behalf of the railroads.

Outside, Mr. President, of the bureau maintained by the eastern railroads in Philadelphia there is a bureau at the Railway Business Association, No. 30 Church Street, New York, with Frank W. Noxon, as secretary. The literature of these bureaus has been circulated throughout the country, and it forms the basis of large numbers of editorials in the newspapers of every State. Railroad officials gave special interviews to newspapers, they addressed business men's clubs, chambers of commerce, and various other organizations of influence; they invited chambers of commerce to attend meetings at which the case of the railroads was presented. The public was not there. Newspapers have been filled with columns of prorailroad material, based apparently very largely, if not wholly, on the literature put out by the publicity bureau of the Pennsylvania Railroad Co. Many newspapers have been misled as to the real facts. Scores of magazine articles have appeared during the past year pointing out the need of the proposed advance in rates. Trade journals have been literally filled with arguments and articles favorable to rate increase. Financial journals have also joined in this campaign.

Through this means and through many others great pressure has been brought to bear on the business public, so that in turn business men have written scores upon scores and hundreds upon hundreds of letters and business organizations have sent hundreds upon hundreds of resolutions and communications to the Interstate Commerce Commission, to the President, to members of the Cabinet, and to Members of Congress, urging them in turn to use their influence with the Interstate Commerce Commission. For what? To secure a prompt and favorable decision for the railroads in this case.

This campaign has also reacted on the stockholders and bondholders, and from them have come a flood of letters, telegrams, and other communications asking for the rate advance, demanding that the commission should arrest its proceedings, should stop taking testimony, and should at once decide this case, *right* or *wrong*, in favor of the railroads.

Railway employees menaced by the railroads with reduced wages or loss of employment have addressed petitions, with hundreds of signatures, to the Interstate Commerce Commission. Several other agencies besides the Pennsylvania Railroad Co. have been issuing and circulating speeches of railroad officials, and hundreds of those publications are anonymous.

Advertisements have been run in several of the leading trade journals urging readers to petition the President, Members of Congress, and the Interstate Commerce Commission in the interest of the railroads. One staggers at the audacity, at the brazen impudence of this raid upon a body of men exercising the judicial function and sworn to administer the law. The means resorted to to influence their opinion, their judgment, their conclusion, their decision are appalling and shocking beyond all expression. Let me read you, Mr. President, an advertisement which appeared in the Manufacturers' News, of Chicago, in its issue of January 8, 1914. It is a full-page ad in large display type. Listen:

Shippers attention! Wire President Wilson; wire your Senators; wire your House Member to signal the Interstate Commerce Commission to go ahead. A 5 per cent advance in rates at this time will put business over the hill; a slow-down means a rear-end collision. The track ahead is the track to watch, not the track behind. Call in the rear flagman; run to the next station; there is freight on the

platform ahead; there are loaded cars on the sidings. Industries can not move if the danger signal is set against the carrier. Telegraph at once; do not delay. The directors of the Illinois Manufacturers' Association at their regular monthly meeting Friday, January 2, passed a resolution indorsing the horizontal increase of 5 per cent in freight rates, and it requested the members to take the matter up at once with their Senators and Representatives.

Illinois Manufacturers' Association, 1227 American Trust Building, Chicago.

Here is another:

The Graves Shale Paving Brick Co., Birmingham, Ala.—

That company transmitted the advertisement which appears below on the sheet which I hold in my hand to the Interstate Commerce Commission. This came to me through the resolution of the Senate. Listen:

Manufacturers: A 5 per cent raise in railroad freight is imminent. Increased wages, increased taxes, greater expense to insure safety, and so forth, have so increased operating expenses of the railroads in general that a 5 per cent increase in rates is predestined to come, and many manufacturers favor it. Some have put themselves on record to the effect that shippers can better afford to pay a uniform advance of 5 per cent now than suffer any future impairment of railroad service.

There is no question in their minds as to whether or not it is a just increase. Mr. President, it matters little to the manufacturing company, to the great shipper, whether or not there shall be an increase in rates, except as he may think it will contribute to boom business, cause railroad extension, and set in motion lagging trade. The big shipper does not pay the freight; the manufacturer does not pay the freight; not one farthing of the 5 per cent or 50 per cent or 70 per cent of increase in rates, if the petition of the railroads shall be allowed by the Interstate Commerce Commission, will come from the pockets of the men who are petitioning to have it allowed or from the pockets of the organizations that placed these big advertisements. It will be taken from the pockets of the consumers of the country, carried over and added to the cost of what the consumer must purchase.

Mr. President, in response to the advertisement which appeared in the Manufacturers' News, I venture to say that not less than 150 letters and telegrams came to me, many of them asking that I use my influence as a Senator with the Interstate Commerce Commission to secure this increase in rates for the railroads. It is almost inconceivable, Mr. President, that the business conscience has been so dulled, the moral sense so blunted, that men can not see the iniquity of this whole proceeding.

Many letters have been written to the commission. The character of these letters, in many instances, is shocking in the extreme. Congress, derelict in its duty to this great organization, has left it exposed to every conceivable form of attack. The telegram which I hold in my hand is a copy transmitted under the resolution of the Senate by the Interstate Commerce Commission. It is, Mr. President [Mr. THOMAS in the chair], from your home city and State. It is dated Denver, February 18, 1914, and reads as follows:

Chairman HARLAN,
Interstate Commerce Commission.

Kindly decide rate increase promptly or resign. Your delay killing business.

R. U. JOHNSON.

This telegram addressed to the Interstate Commerce Commission, care of Hon. James Harlan, is a very long one. I will read just a portion of it. It is signed by A. E. Russell, and dated Altoona, Pa., December 4:

I earnestly appeal in behalf of the citizens of this section and the country in general that your honorable body waive the merits and demerits of all questions for the time being and save our burning homes. To that end I beg to suggest that a grant of the 5 per cent freight advance could be made with the understanding that the few exceptions among shippers who had real grievances could be taken up and adjudicated separately thereafter.

I read another. It is anonymous and was sent from Bridgeport, Conn. It was received at the Interstate Commerce Commission February 12, 1914, and is an example, Mr. President, of what will happen in this country if we are to permit issues before our courts and kindred tribunals to be tried by the methods employed in this case. As I have said, it is unsigned. It is addressed to the commission.

Keep up the good work, gentlemen. Do not allow any increase in railroad rates. Force all the railroads into the hands of receivers. Then the Government can buy them cheap and put many needy politicians in office.

Many of the editorials and articles which have appeared in all sections of the country have been abusive of the Interstate Commerce Commission. Some charge the commission with incompetency, unfairness, politics, cowardice, ignorance, stupidity, and lack of good faith. Many of the editorials dwell at length on the psychological effect on business of a favorable decision. Other articles make use of the instinct of fear, picturing industrial depression and panic which will follow in the event of an unfavorable decision. The commission is severely criticized for making a thorough investigation. Unemployment has been much exploited in the hundreds of news articles and editorials. It is alleged that the railroads are unable to meet their maturing obligations, that they are unable to make necessary improvements. Some articles make the point that the rate advance will prove no hardship upon the public. The argument is urged that because the railroads of England have received a 4 per cent increase therefore the railroads of the United States should have a 5 per cent increase. Some of the articles fail to perceive that the Interstate Commerce Commission is a judicial body, and urge that it ought to go into politics; that it is perfectly proper to decide rate advances on public opinion or political expediency. Many articles make the subtle suggestion that no party can retain power whose name has become a synonym for depression.

I have here a large number of letters that have been sent to President Wilson and to members of the Cabinet, and which have been transmitted by them to the Interstate Commerce Commission. Running through many of these letters, quite uniformly, one finds the suggestion that the political party that does not maintain prosperity regardless of justice is doomed to defeat, and that the Interstate Commerce Commission should be ordered from the White House to stop the taking of testimony, to allow the railroads what they demand, and thus bring "prosperity to the country." I find large numbers of these letters addresed to the President and addressed to each member of the Cabinet containing innuendoes, suggestions, threats, and all have been forwarded to the Interstate Commerce Commission for their "consideration and answer."

I ask leave to print in the CONGRESSIONAL RECORD the letters and articles and editorials to which I refer in the course of my discussion; not to which I refer in detail, for that would take more of the time of the Senate than it is necessary for me to consume, but those upon which I base the argument I am presenting to the Senate.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Nebraska?

Mr. LA FOLLETTE. I do.

Mr. NORRIS. I should like to inquire of the Senator whether the letters, telegrams, and communications sent to the President and members of the Cabinet were by the President and members of the Cabinet forwarded to the Interstate Commerce Commission and then come here to the Senate in answer to our resolution?

Mr. LA FOLLETTE. I hold in my hand a large collection of these letters. I should say that of these, not less than 150 are letters written to the President and transmitted from the White House to the Interstate Commerce Commission. They bear evidence upon their face of that fact. They are rubber-stamped, showing when they were received. "White House, March 21, 1914, received," is the form of one impress. Many of those received at the White House are stamped as follows:

Respectfully referred for acknowledgment and consideration.
J. P. TUMULTY,
Secretary to the President.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Idaho?

Mr. LA FOLLETTE. I do.

Mr. BORAH. As I understand, those signatures on the transfers are simply rubber-stamp signatures?

Mr. LA FOLLETTE. This signature is; yes, sir. I think all of these bear rubber-stamp signatures referring the letters to the Interstate Commerce Commission.

Mr. BORAH. I suppose it is fair to assume that they simply passed through the routine of business; that they never, perhaps, were read at the White House at all, but were simply transferred through the clerks to the commission.

Mr. LA FOLLETTE. I am not able to say about that. The Senator can judge of that as well as I can. The letters that I have before me are addressed to the President, and appear, from the stamp upon them, to have been received at the White House, and by another stamp they are "respectfully referred for acknowledgment and consideration"; signed by the President's Secretary.

I have here a letter written on the stationery of the Union League Club of New York, addressed to the President and signed by Mr. Henry E. Smith. I shall not take the time of the Senate

to read all of the letter. The closing sentence but one of the letter is:

While you may not want to interfere with the Interstate Commerce Commission, at least do what you can.

Just what the writer of the letter expected the President could do, I do not know.

Here is a letter written to the President's Secretary by J. H. O'Neil, president of the Federal Trust Co., Boston, Mass., and I am informed he at one time was a Member of the other House. The letter is three pages in length. In it Mr. O'Neil says:

I am writing you as one who can put in a word at the right place, close up; and as you are a practical man like myself and know conditions as I think I know them from practical experience, I hope that you will do your best to see that something is done, and done at once.

Farther on in the letter the writer says:

Do this thing, and in my opinion the Republican Party need not nominate a candidate against us in 1916. Do not do it, and I do not think there is the least necessity for our nominating one.

[Laughter.]

Here is a telegram addressed to the President from St. Paul, Minn., signed by R. G. Mackay:

ST. PAUL, MINN., *February 17, 1914.*

The PRESIDENT:

Call the Interstate Commerce Commission and pass the 5 per cent increase. It will be the crowning glory of your administration and give us the most prosperous year this country has ever known.

[Laughter.]

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Idaho?

Mr. LA FOLLETTE. I do.

Mr. BORAH. Does the Senator know who this Mr. O'Neil is?

Mr. LA FOLLETTE. I do not. He is the president, as I said, of a trust company, and I am informed was at one time a Member of Congress.

Mr. BORAH. Where does he live?

Mr. LA FOLLETTE. In Boston, Mass., according to my recollection. The letter is written on the letterhead of "The Federal Trust Co., Boston, Mass.; capital, $1,000,000; president, Joseph H. O'Neil."

Mr. BORAH. Is that letter addressed to the President?

Mr. LA FOLLETTE. It is signed by J. H. O'Neil. It is addressed to J. P. Tumulty.

This letter is written upon the stationery of Edgar R. Dawson, 8 East Madison Street, Baltimore, Md., and is signed by Edgar R. Dawson. It is dated April 6, 1914. It is addressed to Woodrow Wilson, President of the United States:

DEAR MR. PRESIDENT: Will you permit one of the enemy to say a word?

There are two or three pages of this letter. I read from the last page. I ask to print it all, as I do the rest of this mass of material.

The PRESIDING OFFICER. That permission, as the Chair understands, has been granted.

Mr. LA FOLLETTE. I shall not find it necessary, then, to ask it again.

The PRESIDING OFFICER. It is included in the previous request of the Senator.

Mr. LA FOLLETTE. This writer says:

I believe you wish to be entirely fair, and I also appreciate the delicate position in which you are placed with reference to the I. C. C. [Interstate Commerce Commission.] Would that it were judicial, or even semi, as you must, of course, consider it. I hope you may find time to read the inclosed editorial, and especially the phrase underscored. Should you see fit to forward this letter to the I. C. C., I would be pleased. I am sorry that I have not the pleasure, as have some of the family, of knowing you personally.

That is a fair sample of the character of these letters addressed to the President of the United States and to his private secretary, invoking their aid to bring about a decision of this advance-rate case in favor of the railroads. These letters were transmitted to the Senate by the Interstate Commerce Commission.

On the other hand, aside from letters of that character, there is a small number of editorials taking an impartial view of the question, and which manifestly discern the unnatural and sudden outburst of the press generally looking toward a rate increase. In order that this may be a fair showing of what has taken place I shall incorporate those in the matter I pass up for printing.

Many cartoons, nearly all of them of a prorailroad character, have appeared in the leading publications of the country. I have here a collection of something like 40 or 50 or more of that character. I do not ask to encumber the RECORD with those.

In this extraordinary campaign certain trade journals have issued special editions of their papers devoted entirely to propaganda seeking to create public opinion for a decision of this case by the Interstate Commerce Commission favorable to the railroads. I hold in my hand a letter from the Railway Record Co., dated Chicago, January 16, 1914, addressed to the International Harvester Co., Chicago, Ill., signed by T. J. Justice, manager. I will read just a paragraph or two from the letter:

The Railway Record proposes to issue a powerful special "Raise Rates" edition January 24. It will be sent to every railroad commissioner, State and national, to Members of both Houses of Congress, to hundreds of newspapers, to thousands of influential men. It will recapitulate the needs of the railroads, emphasize the necessity of a prompt decision from the I. C. C., and start an irresistible wave of opinion in favor of increased rates, favorable legislation, and fair treatment for the railroads. This will mean a lot to you—

That is, to the International Harvester Co.

This will mean a lot to you, and the better it is done the more it will mean. The way to do it is to hand this over to your advertising man with a notation to supply us with copy for an ad of one-sixteenth page at $5, one-eighth page at $8.50, one-fourth page at $15, one-half page at $27.50, or one page at $50; back-cover page, $100.

And here [exhibiting copy of paper] is the special issue of this publication, "received at the Interstate Commerce Commission February 4, 1914," gotten up ingeniously and artfully to impress the mind of the reader with the railroad side of this case. The whole of this publication is devoted to that subject.

I have here a circular letter—this is a copy of the letter which came to the Interstate Commerce Commission—it was sent out by the Standard Stained Shingle Co., dated Tonawanda, N. Y., April 10, 1914. After to-day it will have another stain.

THE WESTMORELAND CHEMICAL & COLOR CO.,
925 Chestnut Street, Philadelphia, Pa.

DEAR SIRS: If you favor the railroads having an increase of 5 per cent in freight rates, and such other privileges as they are entitled to, write a letter to Hon. James S. Harlan, chairman Interstate Commerce Commission, Washington, D. C.

Now, listen—and this will show you how every conceivable line to influence the commission has been worked to the limit:

Also write or inclose a letter to 10 firms with whom you are corresponding, asking them to write Mr. Harlan; also 10 firms—

That is, 10 other firms.

and so on, thus forming an endless chain. If this can be accomplished, Mr. Harlan will soon realize what public sentiment is. This is a very important matter as bearing on the present depression in business, and we hope you will do your part to help out the very serious situation.

Thanking you, we remain,
Yours, very truly,
(Signed) STANDARD STAINED SHINGLE CO.
H. P. KENDALL, JR., *Secretary.*

Bankers' associations were drawn into this combination to control the decision of the Interstate Commerce Commission. It seems as though business generally throughout this country had utterly prostituted itself in behalf of the railroads.

I hold here a collection of letters, which is but a small portion of a very large number emanating from bankers over this country, addressed to the Interstate Commerce Commission, appealing for a decision in favor of the railroads, regardless of the testimony. These letters were evidently solicited from the bankers of the country to be written to the Interstate Commerce Commission by White & Kemble, 56 Pine Street, New York. White & Kemble write a letter of 12 pages to the Interstate Commerce Commission, and that same letter appears also in this group, printed in circular form. It is perfectly evident that the bankers of this country were circularized in that manner by this firm. This printed letter was gotten up in convenient form for the banker who received it to pass it on to the Interstate Commerce Commission with his indorsement. A blank place was provided for signatures. In the case of the one that I hold in my hand I find that the Long Island City Savings Bank responded as follows:

We fully indorse the facts and figures presented in this statement gotten up in this office in New York, and earnestly request your honorable body to give this matter your serious consideration.

I have already stated that several letters of an insulting character were addressed to the commission. One letter to which I am going to ask the attention of the Senate—and I think I will have it read from the Secretary's desk, with the permission of the Senate—was addressed as an open letter to the Interstate Commerce Commission. It was written by Mr. Forbes, the business editor of the New York American. When that letter is read from the desk I do not think it will be necessary for me to make any comment upon it; but it simply presents another phase of this war upon the Interstate Commerce Commission, this organized system of hammering the Commission into submission to the demands of the railroads. I ask the Secretary to read the letter.

The PRESIDING OFFICER. There being no objection, the Secretary will read as requested.

The Secretary read as follows:

[Washington Herald, March 24, 1914.]

AN OPEN LETTER TO THE I. C. C.

Impelled, he explains, by "a knowledge of current conditions and of possible dangers," Mr. B. C. Forbes, business editor of the New York American, has written an open letter to the members of the Interstate Commerce Commission, in which he forcefully describes the national railway crisis and makes strong appeal for early and intelligent action by the governing body. Here is the letter:

"Gentlemen of the Interstate Commerce Commission:

"Are you aware that, partly owing to your course of action, the country is in peril of suffering an upheaval disastrous to labor, to the railroads, to investors, to industry, to the public at large, and to the administration?

"Do you realize that in your hands have been placed responsibilities comparable only with those devolving upon the Supreme Court of the United States?

"You have been given control of the greatest industry in the country, its system of transportation, on whose welfare depends, directly or indirectly, the welfare of every man, woman, and child in the Union.

"You are responsible to Congress alone.

"You are more than a quasi-judicial body; there have been reposed in you administrative functions of the gravest importance.

"Now, rightly or wrongly, your actions have created the very general belief that instead of holding the scales of justice even between the railroads and shippers you have become an antirailroad body.

"In ruling—perhaps wisely—against the *increase in freight rates applied for in 1910 you gave reasons which were supported by arguments and statistics embodying serious misrepresentation of facts. Your misuse of figures on that occasion raised doubts in well-informed minds of your desire—or your ability—to be strictly impartial in dealing with large railroad and financial problems.*

"Since then the position of our railroads has grown distinctly worse.

"The confidence of investors, both in Europe and at home, has been so shaken that many roads are to-day in a parlous financial state.

"During the years 1914, 1915, and 1916 maturing railroad obligations alone will call for upward of $1,000,000,000—this without providing one dollar of additional capital for any purpose whatsoever.

"How debts falling due are to be met and new capital necessary to maintain solvency is to be raised are problems now exercising grave concern in the financial and railroad world.

"Whether these problems can be handled without plunging the country into general disaster depends in large measure upon the course you choose to follow. The eyes of financial Europe and of thinking American citizens are upon you at this moment, anxiously awaiting announcement of your policy.

"The state of mind existing to-day in the most responsible circles is not conducive to that speedy return of prosperity which the deplorable prevalence of unemployment and discontent renders so extremely desirable.

"Without overstating the facts, it can be said that those who are charged with the task of directing and managing the country's railroads are in danger, if further denied the cooperation of the Government and your body, of abandoning as hopeless all efforts to overcome multiplying difficulties.

"I beg you to ponder these words uttered this week by Samuel Rea, president of the Pennsylvania Railroad:

"'This statement is not made to predict calamity, but it is made to prevent calamity.'

"There is more need than you, perhaps, realize for efforts 'to prevent calamity.'

"What are you gentlemen of the Interstate Commerce Commission, you guardians of the Nation's railroads, doing to prevent calamity?

"One of your number has just caused to be published in sensational manner charges of 'serious irregularities' against the Chicago, Milwaukee & St. Paul Railway, which 'irregularities'—confined wholly to bookkeeping—were committed several years ago and pointed out at that time by the financial press.

"Has it taken you three years to discover what the financial press discovered immediately the company issued its annual report?

"If not, why is the subject treated by you so sensationally at this unfortunate juncture, when the solvency of numbers of railroads and the position of the railroads as a whole are occasioning so much concern and militating so strongly against a revival in business which, if much longer delayed, can not but lead to unhappy consequences to government and governed alike?

"Not content to aggravate the unrest by harking back at this juncture to a three-year-old incident, admittedly indefensible, you add the alarming statement that 'in many instances' similar irregularities have been perpetrated.

"Why this vague, panic-breeding allegation?

"Are you concealing wrongdoing by many other roads?

"Is it your intention to explode these bombs periodically whenever your fancy, or what you may regard as expediency, dictates?

"Why single out one railroad for exposure and shield many others you know to be equally guilty?

"Can you not see how disquieting is the effect of your very serious allegation?

"How are investors to know that the road whose securities they hold is not one of the many who have juggled their accounts to flimflam the public?

"The St. Paul's shares shrank $9,000,000 in market value on your unexpected and alarmist announcement.

"Are other stocks to be forced down equal amounts from time to time, whenever you see fit to expose the many guilty companies?

"Gentlemen, I ask you to consider whether the time for purposeless recrimination has not passed.

"I ask you to consider whether the time has not come to cease destructive action and to concentrate upon a constructive policy.

"You have before you, and have had before you for many months, an application by eastern railroads for permission to increase their freight rates 5 per cent.

"The railroads have cooperated with you in supplying all needful facts to judge their case.

"Can you not expedite your deliberations?

"An attempt has been made of late to cite other avenues of relief and the impression has been spread that the railroads have been 'discovered' indulging in various practices calculated to unreasonably deplete their income.

"You gentlemen know that these practices, one and all, have been done in accordance with established usage and under arrangements never once prohibited by you.

"Yet I am not aware that you have put the public right in their conception of the position, although a statement from you would have clarified the atmosphere and tended in some degree to allay the antirailroad sentiment now so prevalent and so injurious to the whole Nation.

"Abolition of these various entrenched practices can not be ordered or effected hastily. Exhaustive investigation will be necessary before overthrowing the status quo.

"Hence no adequate relief can be obtained at this time from such sources, although later on substantial readjustments may be possible for the benefit of the railroads.

"I would respectfully ask you to consider the advisability of granting at the earliest possible moment after the conclusion of your present hearings the increased rates petitioned for, supplemented, if need be, by a statement that if developments ameliorate the circumstances of the railroads the higher rates may be canceled at some future date.

"A patient is beyond medical aid once he has died."

The Herald reproduces this remarkable letter from the American because of its strength and clarity and timeliness. *Much of its ground has been covered in this and other newspaper columns,* but possibly not so well as Mr. Forbes has presented the case.

Mr. LA FOLLETTE. Mr. President, the letters that have been received by the Interstate Commerce Commission directly and those which have been transmitted to it by Representatives in Congress and United States Senators and those which have been transmitted by the President and Members of the Cabinet aggregate several thousand. I think some 175 letters were transmitted by the President, and a smaller number from Representatives in Congress and Senators.

I have called attention to only one anonymous communication directed to the commission or to any member of it, of which a very large number have been received. Some of these are scandalous in character. It came to my knowledge that only a few evenings ago a member of the commission, in fact the chairman of the commission—I did not learn it from him—was called out of his bed after midnight by a violent ringing at his door and on going down had an anonymous communication thrust at him by some messenger who immediately disappeared. The communication was a call upon the commission to make this rate increase in favor of the railroads.

I feel compelled to call the attention of the Senate to one other phase of this campaign. For months the Washington newspapers particularly, and the papers friendly to the administration, have published that the President favors the increase in transportation rates demanded by the railroads. Every Senator here must be aware of the fact that those publications have been made from day to day. Again and again they print this statement with a definiteness and a certainty just a little short of actual quotation. That is, it has appeared that way on its face, and it has impressed the reader in that way unmistakably.

These same statements have gone broadcast over the country. Like matters have appeared from time to time in the body of what are called the White House reports, which are accepted by the public as in some measure authorized. The Washington newspapers especially, and I have found many duplications of that same matter in papers over the country, have gone the length of serious editorial comment upon "the President's effort" to bring about a decision from the Interstate Commerce Commission favorable to the railroad companies of the country. It is unbelievable, sir, that President Wilson could have entertained such a monstrous thought. Any man of integrity of character would as soon attempt from his high place to influence the decisions of the Supreme Court of the United States. But since the press has persisted in these gross misrepresentations, one is constrained to feel that the President should have let it be known that he resented the imputation. I have looked in vain for such a declaration. He has again and again corrected misrepresentations as to his action and attitude in matters of incomparably less significance, but these statements, so far as I have observed, have been permitted to stand uncontradicted until not only in the press but in the minds of thousands upon thousands of people, as shown by these letters, is lodged the belief that the President favors this advance in rates.

Mr. STONE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Missouri?

Mr. LA FOLLETTE. Just let me conclude my sentence. I say these statements have been permitted to stand uncontradicted, until not only the press but many people, as shown by the printed articles and written communications, have apparently, without thinking of the wrong that their belief does the President, concluded that the President actually desires a decision in favor of the railroads.

I now yield to my friend from Missouri.

Mr. STONE. I have seen printed statements, I think more than once, coming from the President or purporting to come from him, seemingly with authority, that he would as soon think of attempting to influence the Supreme Court in deciding any great question before that tribunal as he would of injecting himself into the deliberations of the Interstate Commerce Commission to influence its action. I have seen that in the papers. I have not conversed personally with the President on the subject.

Mr. LA FOLLETTE. I understand. I am glad, indeed, to have the Senator from Missouri call attention to the publication of a denial of the repeated statements that President Wilson is exerting influence upon the Interstate Commerce Commission for a decision favorable to the railroads. I think the Senator from Missouri could render a most excellent service to the President, to the country, and to the commission if he would cause to be investigated the papers in which such denial was printed and have such papers brought in here and spread upon the records of this Congress in order that they may give to the country the indubitable evidence that I am certain a great many people have sought.

I know that I have watched the columns particularly of all the Washington papers, and I have had their columns searched again and again, but could find no denial of these statements with respect to the attitude of the President. Right here where the Interstate Commerce Commission is sitting, and where day after day and week after week not only these statements from the White House are given out and are printed, placing the President in the attitude of favoring the advance in rates, but where serious editorials, of which I have the copies here, appeared in these Washington papers, discuss the position of the President and commend him for his endeavor to bring influence to bear upon the Interstate Commerce Commission to secure a judgment or finding or determination of this case in favor of the railroads. Many of those editorials which I will print urge the commission to yield to the President's requests, and to suspend the taking of further testimony and decide this case at once in favor of the railroads. Mr. President, it is almost inconceivable in this enlightened day and age that men charged with the responsibility of publishing papers should be so utterly consciousless.

I have prepared a diagram here [exhibiting] which shows the different organizations as they have operated to bring to bear all of the influences which have been at work upon the Interstate Commerce Commission. All the efforts of the various organizations inclosed in these brackets [indicating] were directed toward the Interstate Commerce Commission. I ask leave to print a diagram showing exactly the extent and scope and perfection of this monster organization to control a decision in this case. [See next page.]

The PRESIDING OFFICER. Is there objection? There being no objection, it will be so ordered.

Mr. LA FOLLETTE. If this wicked proceeding which I have imperfectly presented to the Senate this afternoon is not arrested at once and forever, it will lead to the destruction of the work which the Interstate Commerce Commission is doing. It will lead to the speedy abolition of that commission. Once permit the public mind to be tainted with the belief that the proceedings of that commission may be influenced in any manner outside of the sworn testimony submitted, and the great work which it can do for the people of this country is forever at an end.

Mr. President, the founders of this Republic wrought out a system by which the will of the people should be enacted into law, and impartially enforced through our judicial tribunals. This is the basic principle of our Government. Upon the integrity of its proceedings depends the security of life and liberty, of person and property—the very existence of organized society.

The ideal of justice was so precious to the framers of the Constitution that it was given first place in the enumeration of specific objects to be attained by forming the Union.

We the people of the United States in order to form a more perfect Union, establish justice—

So runs the preamble.

And it was to insure the administration of justice that they ordained our judicial system.

The constitution of every State in the Union declares, in substance, that—

Every person is entitled to a certain remedy in the law for all injuries or wrongs which he may receive in his person, property, or character; he ought to obtain justice freely, and without being obliged to purchase it; completely and without denial; promptly and without delay, conformably to the laws.

No student of existing conditions, however conservative he may be, can ignore the alarming fact that there is a widespread and growing suspicion in the public mind that our courts and kindred tribunals established to administer justice under the law are more considerate of property interests than of personal rights.

For years the current literature of the day has teemed with it. It is idle to say that it is confined to the violent denunciation of the agitator and demagogue. It has found expression in publications of accepted standing. It has been the theme of eminent publicists. It has been denounced from the pulpit. It has been discussed in the meetings of National and State bar associations. It has become the settled conviction of millions of worthy citizens of the Republic.

I say this is no longer an academic question. Out of it has come the demand for the recall of judges, which is already embodied in the constitutions of at least three States of the Union.

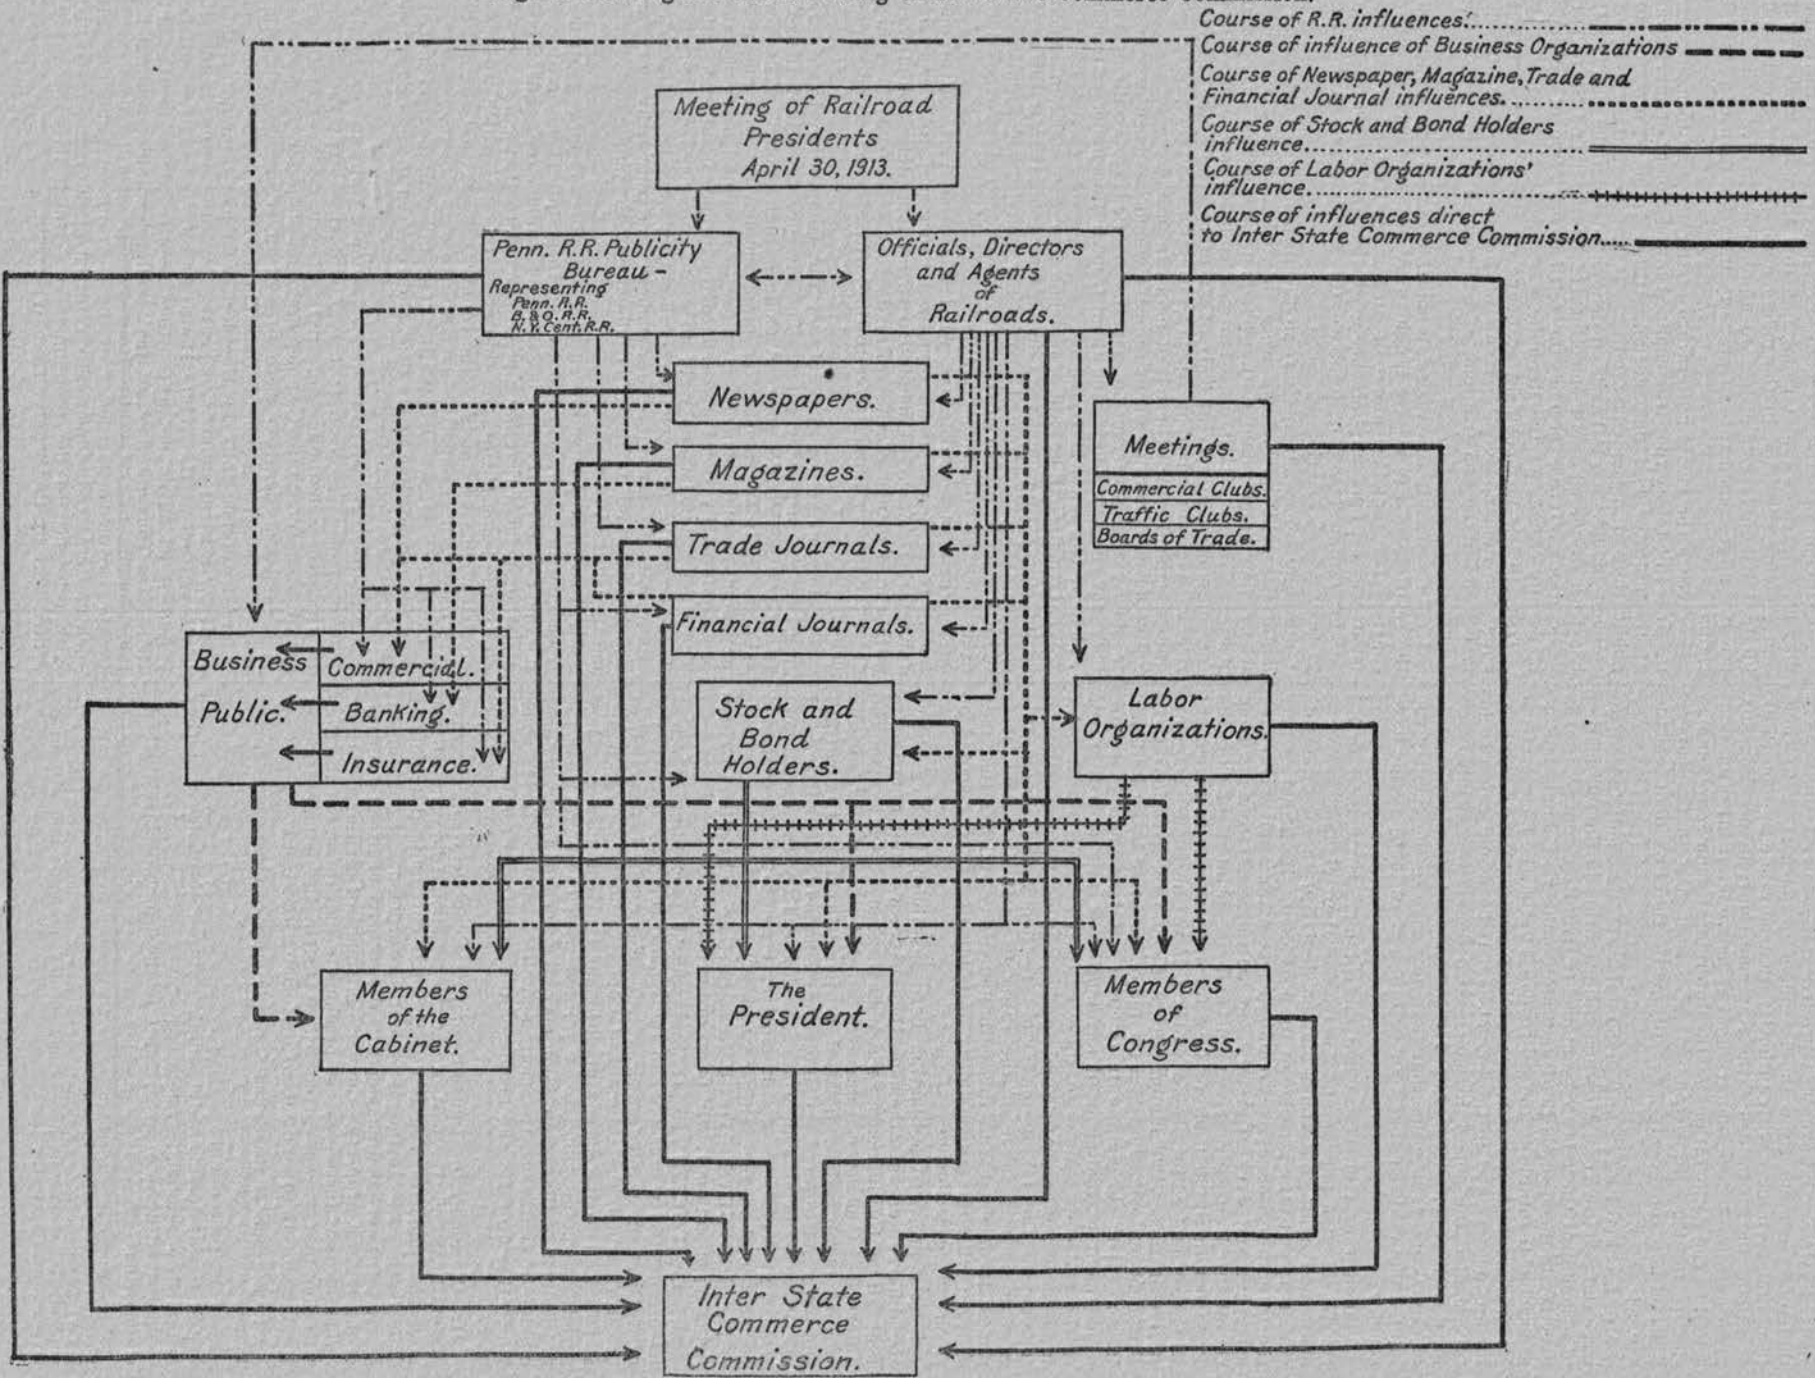
Mr. President, in the American home, in our schools, and in all the relations of life we are taught to respect and reverence our courts. The judiciary alone, of all our institutions of government, was set upon an eminence of station and consecrated to a service designed to lift it above the suspicion of perverting justice.

Standing somewhat apart from the turmoil and clash of the material world, our courts were insured a calm and repose where they might hold with even hand the scales of human justice. Nor was that all. Through common-law proceedings for contempt, and a great body of statutory crimes against justice, we have thrown about them as constituted every protection and safeguard which the wit of man can provide.

But notwithstanding all of the care which has been exercised to shelter and preserve the sanctity of their proceedings, we have not succeeded in saving them from falling under criticism which we can not wholly ignore.

What, then, shall be said of us when we create a tribunal such as the Interstate Commerce Commission, commit to it the most complex task ever imposed upon a like body of men, and leave it, in the performance of its enormous undertaking, exposed to every form of attack conceivable.

Sir, there is no mistaking what has been done. Everyone knows there has been an organized conspiracy to coerce the Interstate Commerce Commission to an immediate compliance with the demands of the railroads that $50,000,000 be taken from the public, handed over to the railroads, and no questions asked.



The law makes it the duty of the commission to require proof before increasing rates. The law presumes that the existing rate which the railroad made is high enough. The law says the railroads must offer proof enough to overcome this presumption, and then enough more to meet and overcome the proof offered by those opposed to the proposed advance rate. The commission has no right to grant an increase otherwise. To do so would be to violate the law they have been chosen to administer. It would be a dishonest and unworthy act, for which they would forfeit the confidence of the public and would merit dismissal from office.

Mr. President, I have presented a bill which in large measure, if enacted into law, will protect the Interstate Commerce Commission as our courts have been protected under the common law and the statutes that have been enacted to that end. Let us afford the same shelter for this great tribunal which we have erected about the courts of the country. I ask that the bill be referred to the Committee on Interstate Commerce.

The PRESIDING OFFICER. The bill will be considered, read the second time by its title, and referred to the Committee on Interstate Commerce.

Mr. HUGHES. Mr. President, I simply want to say to the Senator from Wisconsin that I am informed that the letters to which the Senator has referred as having been stamped and sent to the Interstate Commerce Commission for acknowledgment and consideration were so sent in accordance with the long-established custom of the White House. They were so referred automatically by the clerk who had been doing that work for a great number of years. My information is that it is the custom at the White House to refer no matters to the President which do not affect the executive department; that there is a constant flood of mail and telegraphic communications coming to the White House which must be dealt with by the various departments of the Government; and that all such matters are automatically referred in the manner adopted with reference to the communications which have been presented here by the Senator from Wisconsin.

Diagram showing influences bearing on Interstate Commerce Commission.

Mr. LA FOLLETTE. I should like to ask the Senator from New Jersey whether the information which he has secured regarding these letters would apply as well if letters were written to the President, or to the Secretary to the President, asking that the influence of the President or of the secretary be brought to bear upon the Supreme Court of the United States to secure a decision favorable to one side or the other in any given case? I should like to ask if the Senator knows or is led to believe from information that he has received that such letters would be transmitted to the Supreme Court of the United States?

Mr. HUGHES. They certainly would if they came to me, and I will say to the Senator from Wisconsin that I do not know of any better place to send a letter of that kind than to the Supreme Court of the United States in order to secure proper action on it.

Mr. LA FOLLETTE. I was just asking the Senator whether he had information that would lead him to conclude that such letters, if received at the office of the President, would be transmitted to the Supreme Court?

Mr. HUGHES. My information is that such letters would automatically go to the Supreme Court.

Mr. LA FOLLETTE. That is all I wanted to know.

Mr. HUGHES. That would be the very object of transmitting them. Where else would the Senator from Wisconsin expect that such letters should go?

Mr. LA FOLLETTE. I should think, if that were done, the secretary making the reference would be liable for contempt as well as the writer of the letter.

I now submit for the consideration of Congress and the country the written and printed material which has poured in a steady stream upon the Interstate Commerce Commission for the purpose of influencing its decision in favor of the railroad companies. The Senate has given permission for its publication in the RECORD. It is but a small portion of the vast amount printed and circulated in every State in the campaign to manufacture a spurious public opinion designed to aid the railroads in accomplishing their purpose.

Proof of Efforts to Control Decision of Interstate Commerce Commission in Advance Rate Cases.

EXHIBIT A.—Bulletins and other printed matter issued by the railroad publicity bureaus.

EXHIBIT A2.—A series of pamphlets issued by the railroads containing addresses delivered by railroad officials before traffic clubs and business organizations.

The bulletins and addresses were the bases for hundreds of newspaper and magazine articles and for action by business organizations in all parts of the country.

EXHIBIT B.—Consists of copies and lists of newspaper and magazine articles and editorials sent to the Interstate Commerce Commission. These, for the most part, are based upon the statements contained in the pamphlets issued by the railroad publicity bureaus and the addresses of railroad officials. Their evident purpose was to create a false public opinion favorable to the railroads and to impress the commission that a real public opinion favorable to the railroads existed.

EXHIBIT C.—Communications from individuals to the President and forwarded to the commission.

EXHIBIT C2.—Communications sent by the Cabinet.

EXHIBIT C3.—Communications sent by Members of Congress.

EXHIBIT C4.—Abusive and derogatory letters sent the Interstate Commerce Commission.

EXHIBIT C5.—Letters showing agitation by bankers for the rate increase.

EXHIBIT C6.—Special "raise the rates" edition of the Railway Record, showing another method of publicity.

EXHIBIT C7.—Letters showing agitation by business organizations for the rate increase.

EXHIBIT C8.—Petitions from labor organizations asking for the rate advance.

The statements made in all of these letters, telegrams, and petitions show that they were based upon the representations made in the newspaper articles or in the railway bulletins.

EXHIBIT D.—Resolutions and petitions from boards of trade, chambers of commerce, and manufacturers' associations, urging the Interstate Commerce Commission to grant the rate advance.

EXHIBIT E.—Communications from corporations, firms, and individuals urging the Interstate Commerce Commission to grant the rate advance.

EXHIBIT F.—Communications to the Interstate Commerce Commission protesting against a rate advance.

EXHIBIT G.—Chain letters made use of to secure the rate advance.

EXHIBIT H.—Communications to the Interstate Commerce Commission relative to railroad inefficiency and wastefulness and other matters.

EXHIBIT I.—Communications from shippers protesting against introduction of "spotting" or other similar charges.

EXHIBIT A.

RAILROAD PUBLICITY BUREAUS.

The Baltimore & Ohio, New York Central, and Pennsylvania Railroads conducted a publicity campaign through the publicity agent of the Pennsylvania Railroad. Thirty-two anonymous ex parte bulletins, reprinted below, have been issued and scattered broadcast over the country. They have formed the basis of thousands of news items, editorials, and addresses. They found their way into the weekly newspapers. They played no small part in influencing a large proportion of the upward of 22,000 newspapers of the United States.

Railroads in the eastern section of the United States—what is known as official classification territory—have applied to the Interstate Commerce Commission for an increase of 5 per cent in freight rates. The presentation of the railroad case is in charge of a committee of railroad presidents, as follows:

Daniel Willard (chairman), president Baltimore & Ohio Railroad Co.
Samuel Rea, president Pennsylvania Railroad Co.
A. H. Smith, President New York Central lines.

It is desired that the public generally should be fully informed as to the nature of the data upon which the railroad case is based. Consequently the railroad committee is distributing to shippers and others abstracts of the facts brought to the attention of the commission.

[Bulletin No. 1.]

THE CASE FOR INCREASED RAILROAD RATES.

General statement on behalf of the railroads made before the Interstate Commerce Commission, at Washington, November 24, 1913, by Daniel Willard, president of the Baltimore & Ohio Railroad Co. and chairman of the committee of railroad presidents appointed to present the railroad case to the Interstate Commerce Commission.

The railroads parties to this proceeding include practically all the lines operating in so-called official classification territory, which is substantially all that part of the United States east of the Mississippi and north of the Ohio and Potomac Rivers. The same companies were also parties in a similar proceeding before this commission in 1910.

In its report of that investigation, known as I. C. C. 3400, the commission made a comprehensive review of the whole subject, and found that the carriers had failed to establish the need of additional revenue from increased rates at that time. It recognized, however, that it might come about in the future, as the carriers feared that the net earnings from the then existing basis of rates would be inadequate, but held that this could only be determined by an actual test. It said, "If actual results should demonstrate that our forecast of the future is wrong, there might be ground for asking a further consideration of the subject."

Since 1910 sufficient time has elapsed to afford the actual test, and with the records of operation for the three intervening years available, the same carriers appear again, believing that the results of the actual test will now demonstrate the necessity for additional revenues or net earnings.

In I. C. C. 3400, page 19, the following language is used:

"Our railroads must be maintained in a high state of efficiency. This the public interest demands. Commerce and industry can not afford to wait on transportation facilities. Our rates should be such as to render possible a high-class, not an extravagant service.

"It is generally conceded that within the next few years, if our means for transportation by rail are to keep pace with the calls upon them, very large sums must be expended in the way of new construction and new equipment. While some small portion of this may come from current earnings, the great bulk must be new capital. This capital must be obtained from the investing public.

"If, therefore, we are to rely on the future, as we have in the past, upon private enterprise and private capital for our railway transportation, the return must be such as will induce the investment. It is therefore not only a matter of justice but in the truest public interest that an adequate return should be allowed upon railway capital."

While the carriers fully recognize and acknowledge their obligations to the public, and are alive to the responsibilities so imposed, they are helpless to fulfill these obligations unless the financial result of their operation is such as to inspire the confidence of private capital and encourage the support of private enterprise, and the result of operation during the last three years is not such as to inspire the one or encourage the other.

PROBLEM NOT MERELY OF DIVIDENDS.

This as we view it is the situation to-day, and if we are right, it is respectfully submitted that there is at this time no more important question before the people, nor one the correct solution of which will do more to stimulate healthy commercial activity and promote industrial growth. It is a mistake to think that the problem is merely a question of dividends to railroad stockholders, although that feature is of course involved. The problem in a broad and true sense affects all interests, and the outcome of this particular case, whichever way it is decided, will mark an epoch, because it will, in effect, very largely determine whether we shall, as in the past, continue to look to private capital and private enterprise for our transportation requirements, or be compelled finally to accept the only alternative possible. It is recognized, of course, that railroad expansion and improvements must go on, and any tendency or condition that threatens to seriously check, if not completely stop such expansion in a large and important part of the United States, becomes, because of that fact, a matter of vital importance.

This commission in its report (I. C. C., 3400) said that the railroads had failed to establish a necessity for higher rates at that time. It also said, in effect, that it believed that from the increase in gross earnings which would undoubtedly come to the railroads, together with such economies as the companies might effect, the net earnings of the future would be adequate, but it also said that should it come about that its views were not sustained by future developments, and should it appear at any time that there was a real necessity on the part of the carriers for increased revenue, in order that they might be in position to provide such facilities as the public required, that it would, upon request, give the matter further consideration.

NET EARNINGS DECREASING.

During the first two years immediately following the decision, the commerce of the country showed little, if any, change in volume, but during the last fiscal year there was marked activity in business of all kinds, and the gross earnings of the railroads generally for the year ended June 30, 1913, were the largest in their history. Notwithstanding the increased gross, however, the railroads in official-classification territory continue to show decreases in net earnings, and, as the commission well said in the opinion above referred to, "It is the net, not the gross, we must consider." This decrease in net earnings has been due largely to greatly increased expenses, as pointed out in the petition which the carriers filed for rehearing on May 14, 1913, from which I will quote:

"The cost of conducting the business of the carriers has been, and is being, steadily increased by increases in capital charges; increases in wages, in taxes, by burdens imposed by legislative enactments, such as extra-crew laws, employers' liability and compensation acts, by the elimination of grade crossings, either in part or in whole at the ex-

pense of the carriers, and in various other respects, and it is felt that existing rates are insufficient to afford just and reasonable compensation and return to the carriers, and are unreasonably low in view of the value of the service afforded thereunder."

In the application for rehearing just referred to, the carriers asked permission to advance freight rates in official-classification territory on the basis of 5 per cent, with reasonable minima and with the modifications necessary to preserve differential relations. The commission thereupon ordered that this proceeding of inquiry be instituted into the following matters:

"First. Do the present rates of transportation yield adequate revenues to common carriers by railroad operating in official-classification territory?

"Second. If not, what general course may carriers pursue to meet the situation?"

The railroads, parties to this proceeding, have prepared new tariffs, advancing freight rates as suggested in their petition, and have placed the tariffs on file with this commission and at stations, so that all concerned might be fully advised regarding the effect of the proposed increase.

In order to develop the whole situation and to show the actual operating results obtained during the last three years, tables have been prepared, containing such information as is necessary to show the changes that have gradually come about in property investment, earnings, cost of operation, income, etc., not only during the 3-year period, but also for the last 10 years. This has been done because the influences which have brought about the existing conditions have been operating over a considerable period of time. The present situation and the gradual but consistent tendency in that direction are both clearly indicated in these tables. Separate tables have been prepared for each of the several companies for the periods above mentioned, and a combined statement giving the consolidated figures for all of the companies has also been prepared, and all of the tables have been or will be filed with the commission.

THE INCREASED INVESTMENT.

A brief reference to some of the more striking features in the statements may be pertinent at this time. The consolidated statement shows, for instance, that during the fiscal years ended June 30, 1911, 1912, and 1913, the railroads interested in this movement increased their property investment $659,862,000. The gross earnings of these roads during the last fiscal year were $1,424,119,000, or $186,775,000 greater than they were in the fiscal year ended June 30, 1910.

The operating expenses and taxes during the last fiscal year, for the same roads, at $1,087,365,000 were $203,087,000 greater than they were in 1910, so that even though these railroads earned in gross during the last fiscal year $186,775,000 more than was earned three years previous, the net result, after paying operating expenses and taxes, was actually $16,311,000 less than it was in 1910, notwithstanding the fact that over $659,000,000 of additional money had been spent in the meantime for additions, betterments, and equipment. These companies apparently not only failed to earn any return whatever upon the new capital invested, but saved even less from gross earnings, as return upon the original property investment, than they were able to show before this large additional expenditure was made.

Another table has been prepared showing the combined results, for the same period, of the Pennsylvania, New York Central, and Baltimore & Ohio systems, these particular companies having been referred to by the commission in its report (I. C. C., 3400) as typical systems. This table shows that on these three systems during the three-year period mentioned, the property investment was increased $423,431,000. The combined gross earnings during the same period increased $109,380,000, while net operating income of all three systems, after paying operating expenses and taxes, was $8,380,000 less in 1913 than in 1910, notwithstanding the fact that over $423,000,000 had been spent in the meantime for betterments, additional equipment, etc. I might also add that in the single case of the Baltimore & Ohio system the tables show that the property investment of that company was increased over $56,000,000 during the same 3-year period; the gross earnings in the meantime increased over $13,000,000, but the net operating income in 1913, after paying expenses and taxes, was $660,000 less than in 1910.

NEW CAPITAL EARNED LITTLE OR NO RETURN.

The separate reports of the roads or systems which will be submitted show that the same tendencies have operated in greater or less degree in the case of each individual company. In brief, it appears to have come about that the new capital invested in railroads in official classification territory during the last three year has earned little or no return; in fact, these properties generally are actually earning less net, after paying operating expenses and taxes, than they were earning at the beginning of the period, and before the $659,862,000 had been spent. It would seem that the mere statement of the case should be sufficient to indicate the serious situation which confronts not only the railroads in this territory, but also those industries and commercial undertakings which depend upon the railroads for transportation.

The result, as might be expected, of this constant tendency toward diminishing net returns has been to seriously check, if not altogether stop, the normal development of railroad facilities in the territory affected. The tables show that during the 10-year period these railroads found it necessary to increase their property investment approximately $2,000,000,000, an average of about $200,000,000 per annum, and it is certain that an equal if not greater amount per annum will be necessary to meet the requirements of the future.

Railroad managers would hardly be expected, under the circumstances just stated, to continue large capital expenditures for betterments and additions, if possible to avoid doing so, at least unless they had reason to believe that something had happened, or was about to happen, which would materially change the situation. It is believed that the preceding statements, if confirmed, are sufficient in themselves to justify the request which the carriers now make fo ardvanced rates, unless it can be shown that the causes which have operated to bring about such results are of a temporary character, or have now ceased to exist. As already stated, while the matter has only recently reached an acute stage, the influences which have, as a whole, served to bring about the present condition have been operating for a number of years. Evidence will be submitted to show some of the contributing causes and their effects. It was shown in case Interstate Commerce Commission 3400 that the advanced wage movement culminating in 1910 would increase the wage payments of the railroads in this territory approximately $34,000,000 per annum. The commission, in its report, expressed the opinion that in view of the large recent increases it seemed fair to assume that wages would not much increase in the immediate future. Evidence to be submitted, however, will show that subsequent to the general increase in 1910, a similar movement was inaugurated in 1912, and increases already gained by this last movement—largely as a result of mediation and arbitration proceedings—have greatly augmented the wage payments of these same carriers.

INCREASING WAGES.

The award just recently announced by the arbitrators in the matter of the application for increase in wages by the conductors and trainmen in eastern territory, it is estimated, will give approximately $6,000,000 increased wages annually to the conductors and trainmen employed by the railroads affected, all of which are in official classification territory. The effect of this increase is not shown in any of the other figures which I am using at the present time.

A full statement, showing the general wage increases made during the three-year period, and the procedure under which they were obtained will be presented.

The total wage payment of the Baltimore & Ohio System has been increased by an amount in excess of $4,000,000 per annum, comparing the fiscal year 1913 with the fiscal year 1910, due to increased rates of pay and changes in working conditions. Approximately one-half of this amount, or $2,000,000, is due to advances gained by the movement begun in 1912, and subsequent to the increases considered by the commission in the 1910 investigation. This indicates, in a general way, what has also taken place with each of the other companies. It should be borne in mind that the wages paid on the several roads interested in this proceeding are very nearly on the same basis, and with substantially the same working conditions.

Since 1910 there has been an increase in the cost of materials, due in part to increased use and higher standards, and in part to increased prices of certain materials entering largely into the cost of operation, such as fuel and track ties. The advance in price of these two items alone in the case of the Baltimore & Ohio System served to increase the expenses of that company in 1913 more than half a million dollars above what they would have been had prices remained as in 1910.

INCREASING TAXES.

The amount paid for taxes by the companies, parties to this proceeding, has shown constant increases during the whole 10-year period, and particularly during the last three years. The increase payment in 1913 over 1903 was $28,720,000, and the increase incident to the last three years was $11,579,000. In the case of the three systems selected by the commission as typical, the amount of money actually paid as taxes during the year 1913 was $31,216,000, being $7,854,000 more than was paid in 1910.

Legislation, both State and Federal, enacted during the last 10 years, has brought steadily increasing burdens upon the carriers. It is not proposed to question the merits of any of the legislation referred to in this connection. For the present purpose, it is sufficient to say that the effect upon cost of operation has been and will be the same, regardless of the merit of the measure. Among the measures which have affected cost of operation, I may mention: Employers' liability and compensation acts, full-crew bills, so-called semimonthly pay laws, safety appliance, and standardization of equipment acts, and acts requiring the elimination of grade crossings, etc. The effect of the so-called full-crew laws alone has been to increase the expenses of these carriers more than $4,000,000 per annum.

The public demands to-day a higher standard of service than ever before, and while it may be that the wishes of the public in this particular have not been fully realized, none the less, much has been done in that direction, all of which is reflected in the cost of operation.

One other very important influence upon the expense of railroad operations, when considered in a broad sense, is the higher rate of interest which the companies have been obliged to pay in recent years for new money raised for improvement purposes. It is believed that in the case of the carriers particularly the cost of new capital has been made higher than it otherwise would have been, by the constantly narrowing margin between income and outgo, as it is upon this margin chiefly that the railroads in this territory must rely as the basis for raising additional capital.

RAILROADS FEEL HIGH COST OF LIVING.

In short, the railroads have felt the burden of the increased cost of living, like all other enterprises or individuals, but, unlike all others, have not been permitted, so far, to raise their prices or adjust their charges in recognition of that burden.

Further, the rates which were in effect in 1910 have not, in the aggregate, been maintained—that is to say, while certain increases have been made during the period in mind, decreases have also come about, so that the general basis of rates has been lowered, to some extent by orders of the regulating commissions, and perhaps to an equal if not greater extent by commercial conditions or influences beyond the power of the carriers to resist. The net result of this movement is indicated in the statement that if the same rates and classifications which were in effect in 1910 had remained in effect in 1913, the freight earnings of the Baltimore & Ohio system, in the year last menioned, would have been over $900,000 greater than they actually were, and the net income would have shown the same increase. It should be understood that this tendency will continue to lower the general level of the rate structure for some time to come, and it should be taken into account when deciding upon any fair basis of rates for the future.

OTHER NATIONS RAISING FREIGHT RATES.

In addition to the actual reduction in rates above referred to, the continuous decline in the value—that is to say, the purchasing power—of money for a number of years past has had the effect of diminishing still further the burden of the rate to the shipper, while at the same time increasing the burden of the carriers. This influence, reflected in the higher cost of operations, has been world-wide, and has been recognized by rate advances recently made by railroads in England, Italy, Switzerland, Belgium, Denmark, Russia, Austria, Hungary, and other countries.

Having set forth the results of the operation of these carriers to show that the revenue received upon the existing basis of rates is inadequate, and having pointed out some of the causes which have served to bring about this condition, we come now to a consideration of what general course the carriers may pursue to meet the situation.

If the situation is as I have shown, it is clear that the remedy must come from such changes or such line of action as will serve to increase net earnings, and this result might be brought about by one of three methods or by a combination of some or all of them. A large reduction in cost of operation—other conditions remaining as at present—would produce larger net earnings. A large increase in gross earnings, if the additional business could be handled with the present facilities and at present operating ratios, would also result in a larger

net, and it is obvious that an increase in freight charges, other conditions remaining as at present, would bring about the same result.

I do not believe it will be possible to obtain the necessary relief either by reducing wages already in effect or by making any very considerable reduction in the number of men employed; nor do I believe it will be possible to effect economies in operation of sufficient magnitude to have any saving effect upon the situation. Undoubtedly, further economies will be brought about, but it is altogether likely that in the future, as in the past, they will be more than offset by increased taxes, by the effect of further legislation, which is almost certain to come about, and by other unavoidable increases in expenses.

OPERATING ECONOMIES.

It appears from the tables submitted that coincident with increased property investment during the past three years, practically all of the railroads in this proceeding have largely increased the average tractive power of their locomotives and the carrying capacity of their cars, and have also made substantial increases in their train load, all of which has tended to more economical operation. Speaking more specifically, the Baltimore & Ohio Co., having made exceptionally large capital expenditures during the period last mentioned, was enabled to effect such increase in its freight-train load as to result in a saving in the fiscal year 1913 when compared with 1910 of over 9,000,000 freight-train miles, which, at an estimated cost of 50 cents per train mile, accomplished a saving in transportation costs of approximately $4,500,000 per annum. This large saving, however, was more than offset by increases in other expenses, due to causes which I have already mentioned. I feel confident that the relief which is necessary if these carriers are to meet the standard suggested by the commission in its report (I. C. C. 3400) is not to be found in more efficient operation.

TO RAISE RATES ONLY ALTERNATIVE.

We next come to the question of large increase in gross earnings. Under certain conditions it might properly be expected that larger gross earnings would give increased net, but it so happens that the railroads involved in this proceeding are located in that part of the United States where commercial and industrial development has been most intense, and it will be shown that in order to increase the gross earnings of these particular companies to any great extent at the existing rates, it would be necessary for them to handle a volume of business much beyond their present carrying capacity. It would, therefore, be necessary to obtain and spend a large amount of new capital for increased facilities before gross earnings could be greatly augmented, and, as has already been shown, new capital invested in such facilities during the last three years has generally failed to earn any return whatever upon the investment. For this reason, I do not think we can safely look for relief in the one direction of increased gross earnings, and this brings us to the third remaining method suggested; that is, increase charges or increased rates and fares.

Inasmuch as the passenger fares charged by these several companies are generally the result of legislative enactments, and the mail pay and express rates are also beyond the control of the railroads, it will be seen at once that no immediate relief, and perhaps no very considerable relief at any time, can be obtained in these directions, and we are consequently forced to consider an advance of freight rates as the one available source of increased earnings. When this same question was before the commission in case I. C. C. 3400, it was strongly urged by shippers who opposed the increase at that time that, if it should be shown that the carriers did need increased revenue, and if it should also appear that such increased revenue ought to be obtained by increased freight rates, such advance should not be obtained, as was then proposed, by a very considerable advance of some of the rates and no advance of others. It was pointed out that the rate structure, such as it was at that time, was the result of a long period of competition, plus the influence of many years of State and Federal regulation, and that commercial and industrial conditions generally had grown up in harmony with the existing structure, and it was urged that the relation of rates between different places and between themselves ought not to be violently or unnecessarily disturbed. The force of this argument has been recognized by the carriers, and in the present instance, while it is proposed to secure the necessary increased revenue by an advance of freight rates, it is also proposed that it should be obtained by an increase generally of 5 per cent, using minima of 5 cents per ton and of one-quarter of a cent per hundredweight, preserving so far as possible existing competitive adjustments as between localities. This method takes full cognizance of the claim previously made by the shippers that the existing rate structure should not be unnecessarily disturbed so far as relation between rates is concerned.

The amount of advance, or the percentage of increase now proposed is, in the opinion of those who are parties to this movement, too small to properly meet the exigencies of the case. It was felt, when the matter was first discussed, and that feeling has been strengthened with the passage of time, that a 10 per cent increase of freight rates was necessary and should be requested at the present time, and while all felt that 10 per cent was not higher than the conditions justify, the lesser advance of 5 per cent was finally determined upon, because it was recognized that the whole rate situation was a matter of delicate relationship, and the individual carriers were naturally solicitous that nothing should be done to disturb the free and well-established movement of traffic. An increase of 5 per cent, it was thought, would not be large enough to affect seriously, if at all, commercial adjustments, and the increased net which would be gained by such an advance, while not of itself equal to the necessities of the case, would in any event be of assistance, and most important of all, the general increase of rates would serve to direct attention to the relationship which does and must exist between railroad charges and the total cost of operation.

It was urged in the previous hearing that the carriers at that time were nuable to show by actual test that the rates in effect were insufficient, and that they failed to show the necessity for increased revenue. We believe that in the present case the evidence showing the need of additional revenue is ample. It was suggested, also, that even if additional revenue were necessary at that time, the plan proposed was not the right one by which to obtain it. The carriers accept that point of view, and now propose that the increased revenue be obtained by an advance of a small percentage of all rates in the territory affected. It is believed that the plan now submitted is the fairest and best one possible under all the circumstances.

In conclusion: I have shown that tendencies which have been operating over a period of at least 10 years have resulted in such diminishing net returns that it has gradually come about that money invested in these railroads, because of the low average rates prevailing in so-called official classification territory and for other reasons, does not earn the same return as money invested in other enterprises of similar kind or character. As a matter of fact, money so invested during the last three years, taken as a whole, has earned no return whatever. In view of all this, those responsible for the management of these properties would not be justified in continuing large expenditures of new capital for additional facilities and equipment, even if such capital were available at reasonable rates of interest.

$200,000,000 CAPITAL INVESTED EACH YEAR.

I have also shown that the railroads in official classification territory have increased their property investment for new tracks, stations, locomotives, freight and passenger cars, and for other similar purposes at the rate of approximately $200,000,000 per annum during the whole of the last 10-year period, and it is certain that the continued annual expenditure of a sum even greater than that will be necessary for similar purposes, if the carrying capacity of the railroads in this territory is to keep pace with the normal growth of commerce.

The immediate and all-important question is, How shall these railroads obtain the new capital necessary if they are to provide the needed facilities and furnish the high-class service which the public interest demands and to which the public is properly entitled? The answer, we think, is to be found in the following words, which appear in the report of this commission, from which I have already quoted:

"We should allow such rates which will yield to this capital as large a return as it could have obtained from other investment of the same grade. If rates formerly in effect have become insufficient, then higher rates should be permitted. Commerce and industry can not afford to wait on transportation facilities."

[Bulletin No. 2.]

Statement on behalf of lines in Central Freight Association made before Interstate Commerce Commission November 24, 1913, by Frederick A. Delano, receiver Wabash Railroad.

In the 1910 case the commission reiterated a principle it had frequently applied in previous cases involving the reasonableness of competitive rates, which is tersely stated in the following sentence taken from the Spokane case:

"We must therefore in fixing rates have regard not altogether to any one particular railroad, but to the whole situation, and must consider the effect of whatever order we make upon all these defendants."

In applying this principle in the 1910 case, the commission held that the Pennsylvania, New York Central, and Baltimore & Ohio systems were, for the purpose of measuring the reasonableness of rates, fairly typical of the railroads in oiicial classification territory.

Mr. Willard has indicated in his statement that the lines generally will offer evidence which will show that they are now entitled, on the authority of that ruling, to increase their rate.

That ruling was, no doubt, justified by the evidence submitted in that case, but we, who represent the Central Freight Association lines, do not believe the evidence in that case fully developed the whole railroad situation in the territory.

We concur in all that Mr. Willard has said, and believe the evidence will show that the systems I have mentioned considered alone are entitled to an increase in rates; but we are not satisfied with the ruling of the commission that those systems are typical of the lines in the territory, and believe that if the ruling should be affirmed as a fixed precedent for future guidance its application will cause irreparable injury not only to them but also to the people they serve, and we have accordingly determined to bring to the attention of the commission in the present case evidence which we believe will justify a reconsideration of the subject, and I have been delegated to briefly outline that evidence.

We will participate with the trunk lines in offering testimony on the general features of the case, and will confine our separate presentation to the submission of additional evidence which, we believe, will show the ruling of the commission, that the systems I have mentioned are fairly typical of the whole situation in the territory, ought not to become a fixed precedent, and that the "whole situation" in Central Freight Association territory is the fair measure of the reasonableness of the rates in that territory, and calls for a very substantial increase in rates.

OFFICIAL CLASSIFICATION TERRITORY.

Official classification territory embraces three distinct and independent railroad territories and rate zones, which we will endeavor to show were created in a natural way in the evolution and development of the railroad business by economic conditions peculiar to each but not common to two of them.

NEW ENGLAND TERRITORY.

First, we have the New England territory, which embraces the New England States, and contains an area of approximately 64,000 square miles, inhabited by approximately 11,000,000 people, or 174 inhabitants to the square mile, and traversed by 8,071 miles of railway lines, which touch an average population, including New York City, of 1,389 per mile of railroad. The population of that territory is dense, and, in the main, assembled in large industrial centers, the rural population of the New England States being only 17 per cent of the whole population.

That territory does not produce fuel or other raw material, except granite, marble, and lumber—and those do not comprise a substantial tonnage—and, while the traffic is dense, it consists largely of merchandise, manufactures, and miscellaneous. For instance, approximately 45 per cent of the tonnage of the two principal railroads in that territory during the year 1912 consisted of that class of traffic.

The hauls in that territory are short. Little traffic passes through, except imports and exports, and the bulk of the traffic originating or destined beyond that territory is received from or delivered at its west boundary to lines running west and south, while the water-borne tonnage is largely hauled but short distances to inland towns.

These conditions and the isolated location of that territory along the Atlantic seaboard, water competition, and numerous other economic influences peculiar to it, which the evidence will bring out more in detail, have created a railroad territory and fabric of rates and traffic conditions peculiar to it and independent of the West and South.

TRUNK-LINE TERRITORY.

We have next the trunk-line territory, which embraces the area west of the Hudson River and Atlantic seaboard, north of the Potomac River, and east of what is known as the "western termini"—a line extending from Buffalo through Pittsburgh to the Ohio River. This territory embraces an area of 112,000 square miles, and has a population of 21,000,000, or 207 inhabitants to the square mile, and is traversed by 23,777 miles of railway lines, which touch an average population of 889 per mile of railroad.

As in the New England territory, the population in the trunk-line territory is found largely in its great cities—the rural population of the States included in the territory being only 30 per cent of the whole.

The area and population of this territory are greater than the area and population of the New England territory, but the area per mile of railroad is only about one-half, which indicates that the former is more amply supplied with railroad transportation facilities than the latter. While the population per mile of railroad is greater in New England territory than in trunk-line territory, the tonnage in the latter, per mile of railroad, is approximately twice the tonnage in the former. The character of the traffic is likewise substantially different in the two territories. For instance, the combined tonnage of products of mines carried by the Pennsylvania Railroad proper, the New York Central proper, and the Baltimore & Ohio system in 1912 was approximately ten times the same class of tonnage carried by the two principal railroads of New England. That class of tonnage comprised 66 per cent of the total tonnage of the Pennsylvania and the Baltimore & Ohio but only 30 per cent of the total tonnage of the two New England roads.

The evidence will show that trunk-line territory comprises relatively the largest population per square mile, the greatest industrial activity, and the densest traffic of any similar area in the country. It embraces the great manufacturing centers of New York, New Jersey, and Pennsylvania, and the Pittsburgh district—the greatest tonnage center in the world.

In the early history of railroad building in that territory the railroads were built westward from New York and other Atlantic seaboard cities on the south and either terminated at Buffalo, on the Lakes, or at Ohio River cities. The rates were made applicable to these lines as originally constructed, and the character of the traffic, physical surroundings, and other economic influences, which we will point out more in detail in the evidence, built up and have preserved to this day a railroad territory and a fabric of rates and traffic conditions peculiar to it and independent of and distinct from the territory east, west, and south of it.

CENTRAL FREIGHT ASSOCIATION TERRITORY.

The remainder of official classification territory—the vast area extending from trunk-line territory to the Mississippi River and the Lakes—comprises what is known as Central Freight Association territory.

The portion of that territory in the United States contains an area of approximately 186,000 square miles, inhabited by about 19,000,000 people, or 122 inhabitants to the square mile, as compared with 207 in trunk-line territory and 174 in New England territory, and is traversed by 35,849 miles of railroad, which touch an average population of 506 per mile of railroad, as compared with 889 in trunk-line territory and 1,389 in New England territory.

It will be noted that while this territory contains 2,000,000 less population than trunk-line territory, its area is 74,000 square miles greater, and is traversed by 12,072 more miles of railroad, and while it contains about 8,000,000 more inhabitants than New England territory, it comprises more than three times the area and is traversed by 27,778 more miles of railroad.

The population of the principal States in Central Freight Association territory is about equally divided between the cities and the rural sections, the percentage of rural population being 46 per cent of the whole. But it does not follow that it has too many railroads or too much mileage, because, as we have seen, the population is thinly spread over 186,000 square miles, as compared with a 2,000,000 greater population in trunk-line territory assembled on 112,000 square miles, and only 8,000,000 less population in New England territory assembled on 64,000 square miles.

The traffic in this territory is diversified and very general in character, and is substantially different in many respects from the traffic in the other territories.

SPECIAL NATURE OF MIDDLE WEST RAILROADS.

This territory was created largely by physical conditions and natural development and growth of population. Its numerous lakes and rivers, some of which form its boundaries, attracted to their borders the early settlements and cities, and in time came Chicago and St. Louis, its two chief centers of population. The territory is comparatively level, which facilitated railroad building, and as population increased railroads were constructed in all directions, the objective points being naturally lake and river cities.

It is a well-known fact that in the development of that territory water competition has always been an important factor, and that the railroads have promoted the growth of population and industrial development by low rates. Again, railroad building at times has been in excess of the growth of the country, and caused abnormal competition, resulting in lower rates.

At the time the Government entered upon the regulation of rates, those prevailing in Central Freight Association territory, as a body were comparatively the lowest rates prevailing in any section of the country, and in recent years they have been still further reduced—and especially passenger fares, which have been reduced from 3 to 2 cents per mile, or 33⅓ per cent—in all the States in that territory.

The influences I have mentioned, which we will show in detail in the evidence, have resulted in the bankruptcy of a substantial portion of the railroad mileage in the territory and in depleting the earnings and debilitating the credit of the remaining lines to an extent which, unless relieved by prompt and substantial advances of rates, will naturally result in impeding the commerce and transportation of that section of the country.

On the evidence, we will urge that, owing to the different conditions existing in these three component parts of official classification territory, lines traversing two of these sections ought not to be regarded as typical of the whole situation in the territory or in the component parts. Undoubtedly a great many important considerations are common to all the lines in the three component parts, and, accordingly, the showing of the Pennsylvania, Baltimore & Ohio, and New York Central systems will be of great value to the commission. We do not mean to disparage, or in any way discredit the showing of those systems, but merely contend that their showing is not conclusive or typical of the entire situation.

GROUPING OF LINES IN CENTRAL FREIGHT ASSOCIATION TERRITORY.

We believe it will be pertinent to show the conditions prevailing in Central Freight Association territory, and will, therefore, offer in evidence, among other things, statements of the mileage, earnings, and results of operation of the lines located therein, with a view of indicating the "whole situation" in that territory.

There are, in the territory, 35,849 miles of railroad (exclusive of the mileage of switching and terminal companies) owned by 93 companies.

We have omitted switching and terminal companies because they perform a special service on an arbitrary basis, generally fixed on a per car rate.

The mileage, however, includes the mileage in Central Freight Association territory of the Mobile & Ohio; St. Louis, Iron Mountain & Southern; Louisville & Nashville; Southern Railway; St. Louis Southwestern; Chicago, Burlington & Quincy, and Norfolk & Western—1,892 miles, or 5.3 per cent of the total—but we exclude that mileage from our figures, because it is only 7 per cent of the mileage of those companies, and the results of their operation can not be segregated. As 93 per cent of the mileage of these companies is in higher-rate zones, it is obvious that the operations of these companies as a whole would be immaterial.

This leaves 33,957 miles of railroad, or 94.7 per cent of the total, in the territory.

In presenting our figures we will be obliged to add to that mileage the results of the operation of 264 miles of the Chicago & Alton, 2,628 miles of the Illinois Central, and 859 miles of the Wabash. The principal operation of these three companies is in the territory, the 3,751 miles outside being west of the Mississippi River or south of the Ohio River, in higher-rate zones, and we include them because the results of operation of the mileage in the territory can not be segregated.

We will also include 3,401 miles of the Baltimore & Ohio and Erie, which are located in trunk-line territory, because the operation of this mileage can not be segregated from their lines in the territory.

SPECIAL GROUPING OF CENTRAL FREIGHT ASSOCIATION RAILROADS.

Our figures will, therefore, embrace the results of operation of 41,109 miles of railroad, and we will arrange them in four groups:

Group one: Embraces the 41,109 miles of railroad I have mentioned, except 6,443 miles of Erie lines east of Marion, Ohio, and the Baltimore & Ohio system, and 2,729 miles—the aggregate mileage of 46 short railroads in the territory which, together, earned less than $8,000,000 in 1910.

Group two: Embraces the Erie lines east of Marion, Ohio, and Baltimore & Ohio system, aggregating 6,443 miles, 3,401 of which are located in trunk-line territory. This mileage is grouped together because the results of operation of the mileage in Central Freight Association territory can not be segregated.

Group three: Embraces 28 of the 38 roads in group 1, with an aggregate mileage of 23,167 miles, which includes 19,416 miles, or 51½ per cent of the entire mileage in the territory, and embraces such important lines as the Big Four system; the Vandalia; the Chicago & Eastern Illinois; Nickel Plate; Grand Trunk Western; Grand Rapids & Indiana; Pere Marquette; Cincinnati, Hamilton & Dayton; Illinois Central; Chicago & Alton, and Wabash.

Group four: Embraces 46 companies with an aggregate mileage of 2,729 miles, or 7½ per cent of the total mileage in the territory, which, together, in 1910 earned less than $8,000,000. These roads are important factors in the development and commerce of the respective communities they serve, but, as a rule, they are in great financial distress, and, being short lines, we thought it natural to group them together.

LINES REPRESENTING THE WHOLE SITUATION.

We believe that group 3 embraces lines which are fairly representative of the whole railroad situation in the territory, and for that reason we will refer to it in some detail.

We have omitted from this group the main-line connections of the trunk-line systems—the Lake Shore, the Michigan Central, the Pennsylvania Co., and the Panhandle—although the figures will show that their prosperity has been substantially impaired during the last few years by a constantly increasing ratio of expense to earnings.

The fact, however, that this mileage as a whole was constructed at a very low capital charge, and forms integral parts of the best and strongest railway systems of the country, to say nothing of the credit and business they have enjoyed from their affiliations and the returns on their outside investments, place them in a class by themselves. These facts (which will be shown more in detail in the evidence) will conclusively prove that while those lines no doubt need an increase in rates, they do not belong in the group of railroads which fairly represents the railroads in the territory.

We have also excluded from group 3 the Pittsburgh & Lake Erie, Bessemer & Lake Erie, Hocking Valley, Kanawha & Michigan, Toledo & Ohio Central, and Wheeling & Lake Erie. These roads are located in a comparatively small area between the Great Lakes and the iron furnaces and coal mines of Ohio, and their traffic is not of a general nature but substantially confined to the products of mines, their tonnage of these products during 1912 being 78.6 per cent of their entire tonnage, but the exceptional feature of their situation lies not only in the volume of this mineral traffic but in the fact that by reason of hauling iron ore in one direction and coal in the reverse way they have a balanced traffic which produces an unusually favorable operating condition.

While these lines are within the boundaries of the territory they do not enter into the general railroad situation and can not be included in a group of roads fairly representative of all the railroads in the territory.

We have also excluded from group 3 the 46 short lines whose aggregate earnings for 1910 were less than $8,000,000, because, as we have said, those lines are short, their earnings are small, and they are, as a rule, in financial distress and ought not to be included in a group of roads representative of the railroads in the territory.

We have included in group 3, 28 companies, with an aggregate mileage of 23,167 miles, which traverse all parts of the territory and participate in the general traffic of that section of the country.

We believe a mere glance at the map of this large mileage (23,167 miles) will indicate that it is fairly representative of the territory. In any event, we may be assured that if this mileage is not influential in determining the reasonableness of rates, the prosperity, commerce, and development of the whole territory will be placed in jeopardy.

SALIENT FACTS FROM THE EVIDENCE.

On the evidence we will present, in detail, our contentions, but my present purpose will be served by merely calling your attention to a few salient facts.

This great network of railroads, covering the entire territory, during the year ending June 30, 1910, earned $239,000,000, and during the year ending June 30, 1913, $275,000,000, or a gross increase of about $36,000,000; but in the former year the operating expenses and taxes were $182,000,000 and in the latter year $227,000,000, or an increase in expenses of about $45,000,000, resulting in a decrease in net revenue, after payment of taxes, of over $9,000,000 and in net corporate revenue of more than $16,000,000.

As stated in other words, the ratio of operating expenses and taxes to earnings during the same period increased from 76.3 per cent to 82.8 per cent.

These same roads during the year ending June 30, 1908 (which will be remembered as a panic year), earned $212,000,000, and during the year ending June 30, 1913, $275,000,000, or an increase of $63,000,000; but during the year ending June 30, 1908, the operating expenses and taxes were $165,000,000 and the year ending June 30, 1913, $227,000,000, an increase of about $62,000,000.

NET CORPORATE INCOME DECREASING.

Now, despite the fact that during that same period more than $175,000,000 were put into additions and betterments, the net, after deducting operating expenses and taxes, showed an increase of only $800,000, while the net corporate income actually decreased about $8,000,000.

As we have shown, this mileage comprises 51½ per cent of the entire mileage in the territory, and if we add the mileage of the 46 short railroads we will have 59.1 per cent of the entire mileage of the territory, all of which is in a deplorable financial condition.

While, as we have said, the evidence will show the lines embraced in group 3 are fairly representative of the whole situation in the territory, the lines embraced in group 1 show a result almost equally deplorable, especially in the last few years.

Group 1, as we have seen, embraces 78.6 per cent of the entire mileage in the territory, including all the strong lines and, besides, 3,751 miles outside of the territory in higher-rate zones, and excludes only the 46 short lines which are in financial straits and the Erie east of Marion, Ohio, and the Baltimore & Ohio system and the short projections of southern lines into the territory.

Group 1, in the fiscal year 1910, earned $457,000,000, and in the fiscal year 1913, $533,000,000, or showed an increase of $76,000,000; but operating expenses and taxes during the former year were $329,000,000 and during the latter year $417,000,000, or an increase in expenses and taxes of $88,000,000, resulting in a decrease in net revenue, after deducting operating expenses and taxes, of $12,000,000 and a decrease in net corporate income of $17,500,000.

These large decreases resulted in the face of the investment of vast sums of new money for additions and betterments; in other words, notwithstanding the investment of this new capital, the ratio of operating expenses to gross revenue increased from 72 per cent in 1910 to 78.2 per cent in 1913.

LATEST FIGURES LESS ENCOURAGING.

The figures for the first two months of the present fiscal year are still less encouraging; for instance, the net revenue, after deducting operating expenses and taxes of the lines in group 1 for the two months mentioned, decreased about $4,500,000 as compared with the same two months last year, while the decrease of the lines in group 3 was about $2,000,000 as compared with the same months last year.

The evidence will show that the lines in Central Freight Association territory are confronted with the expenditure in the near future of millions of dollars in the separation of grades in various cities on which they will receive no adequate return, and many of the lines have not the credit to raise this money. This circumstance, in view of the present conditions of the roads, presents a serious situation which calls for prompt relief.

It will be obvious from the evidence that a 5 per cent increase in rates will not be adequate to meet the demands of the territory. As I have said, the rates in that territory, both freight and passenger, are the lowest rates prevailing in the United States, and the interests of the people of that rapidly growing and developing section of the country, to say nothing of the carriers, require in the near future a readjustment of the rates, both freight and passenger, to a basis which will enable that territory to have good railroads and the people to have efficient and adequate service, and to progress measurably with the other sections of the country.

[Bulletin No. 3.]

HOW THE DEMAND FOR RAILROAD FACILITIES HAS INCREASED.

DECEMBER 3, 1913.

The railroads of the eastern district now applying for a 5 per cent increase in freight rates have filed with the Interstate Commerce Commission a statistical exhibit showing the growth of population, railway building, and railway traffic during the past decade.

The territory from which these statistics have been drawn is substantially that part of the United States east of the Mississippi River and north of the Potomac and Ohio Rivers.

RAILROAD BUILDING.

1. There are some 49 railway systems in this territory, and in 1903 they were operating 55,706 miles of line. (All statistics in this exhibit were taken direct from Interstate Commerce Commission records.) This does not include double trackage or sidings—merely the distance between terminals. In the decade succeeding—that is, through the year 1912—the increase in new line was only 3,619 miles, or about 362 miles a year; less than 1 mile a day over this immense territory. Reduced to a percentage, the increase amounted to 6½ per cent.

In 1909 and 1910 only 52 miles and 199 miles, respectively, of new line were constructed. While the percentage of increase of 1912 over 1903 was 6½, that of 1912 over 1910 had dropped to less than 1½ per cent.

During the period of 10 years these 49 railroad systems double-tracked—or, where there were double tracks, added a third or fourth track—over 10,465 miles of track, or an average of almost 1,050 miles a year. Thus they had 15½ per cent more double trackage in 1912 than in 1903, although the increase of 1912 over 1910 was but 3.54 per cent.

In 1903 these systems had a total of 95,349 miles of all kinds of tracks, including double tracks, yard switching tracks, and sidings. This had grown to 115,683 miles by 1912—an increase of 21½ per cent, or an average increase of 2,000 miles a year. The increase of 1912 over 1910, however, was only 4.17 per cent.

POPULATION.

2. The population of this section of the United States was, in 1903, 36,381,924. By 1912 it had increased by more than 6,000,000—an annual average growth of 612,000. The population in 1912 was almost 17 per cent greater than in 1903, and in 1912 3.62 per cent in excess of what it had been in 1910, i. e., 41,021,267, as against 42,508,230.

Thus in 10 years' time these same railroads had come to have 117 persons to serve where previously they had had 100. They had but 106½ miles of new extension track as compared with every 100 miles in 1903. They had 115 miles of double trackage for every 100 miles they had had, and 121 miles of track facilities, as compared with 100 miles in 1903.

In other words, the 17 per cent of increased population in this decade, while it found an increase of 15 per cent of double trackage and 21 per cent of tracks of all kinds, had had built for it only 6½ per cent of new line.

These miles of double, third, and fourth tracks and sidings constituted the emphatic note in this decade, and drew attention to the intensive development of the railroads rather than the extension of their lines.

3. Railway traffic, both freight and passenger, increase much faster than the facilities for handling either. In 1903 the freight traffic amounted to carrying one ton of freight 93,948,275,807 miles, or, to reduce it to an almost incomprehensible comprehensibility, this ton of freight, could such a thing have been possible, might have made almost four million odd trips around the globe.

In 1912 these 49 railway systems were transporting 1 ton of freight 143,803,436,298 miles, which means that the ton of freight had gained the right to about 2,000,000 additional world-girdling trips. The increase of the year 1912 over the year 1903 was 53 per cent. The annual average increase of the second half of the decade over the first half was 22 per cent.

The passenger traffic in 1903 was the equivalent of carrying one passenger 10,985,949,080 miles. In the supposititious case of globe girdling this passenger would have been carried around the globe 400,000 times, i. e., the railroad transportation in that year was equal to carrying 400,000 passengers once around the world.

The passenger traffic in 1912 had increased 41⅛ per cent, which means that the lone passenger was now carried 15,578,111,594 miles, or another load of about 200,000 passengers had been added to the railroad annual globe-encircling trip.

The passenger traffic also saw an increase of 20⅜ per cent in the annual average of 1908–1912 over 1903–1907.

The freight traffic increase correspondingly was 22⅛ per cent. As the percentage of increase of freight traffic in 1912 over 1910 was 3.69, passenger traffic grew more rapidly, since it attained an increase of more than 5 per cent.

Thus, as compared with an increase of 17 per cent in population between 1903 and 1912, the freight traffic increased 53 per cent and the passenger traffic 42 per cent. In other words, freight traffic increased three times and passenger traffic more than twice as fast as population.

Between 1910 and 1912 the rate of increase in freight traffic was slightly greater than the growth of population, while the rate of increase in passenger traffic was almost twice as great as that of population.

In presenting the case of the railroads to the commission, Mr. Daniel Willard, president of the Baltimore & Ohio Railroad Co., commented on this situation in these words:

"The railroads in official classification territory have increased their property investment for new tracks, stations, locomotives, freight and passenger cars, and for other similar purposes at the rate of, approximately, $200,000,000 per annum during the whole of the last 10-year period, and it is certain that the continued annual expenditure of a sum even greater than that will be necessary for similar purposes if the carrying capacity of the railroads in this territory is to keep pace with the normal growth of commerce.

"The immediate and all-important question is, How shall these railroads obtain the new capital necessary if they are to provide the needed facilities and furnish the high-class service which the public interest demands and to which the public is properly entitled?"

Comparison of increase in population, railway mileage, and railway traffic, railways in the eastern district, fiscal years 1903 to 1912.

[Compilation in matter of application of eastern railways for increase in freight rates, 1913.]

Year.	Population.	Railway mileage operated.			Railway traffic.	
		Miles of line.	Miles of main track.	Miles of all tracks.	Ton-miles.	Passenger-miles.
1903	36,381,924	55,706	68,262	95,349	93,948,275,807	10,985,949,080

Authorities: Reports of the Bureau of the Census; returns of the railways to the Interstate Commerce Commission.

Prepared by Bureau of Railway Economics, Washington, D. C.

Explanatory note: The population figure shown for 1910 is drawn from official compilations of the Thirteenth Census; those for the other years are estimates based upon the rate of population growth between 1900 and 1910. The method underlying these estimates is that of the Census Bureau itself. The railway statistics of this table are those of the 49 railway systems covered by the compilations of the Bureau of Railway Economics.

[Bulletin No. 4.]

RAILROAD EXPENSES INCREASE FASTER THAN EARNINGS.

DECEMBER 4, 1913.

Expenses have increased so much faster than revenues that the net operating income of eastern railroads for 1913 was $16,311,000 less than it was in 1910, and this notwithstanding the fact that more than $650,000,000 of new money has been put into these railway properties in that time.

This in brief, coupled with the present difficulty of obtaining new capital, is in a word the railroad case for increased rates. Details are presented in an elaborate statistical compilation submitted to the Interstate Commerce Commission by the railroads interested.

1. The revenue or money received from the operation of these railroad systems had attained the sum of $1,205,155,435 in 1910. The increase in 1911 was some $14,000,000, while 1912 held the gain and added to it $38,000,000. In 1913 this revenue had grown to $1,386,073,429. This showed an increase in revenue of $181,000,000 for 1913 over 1910, or in a matter of three years' time.

The largest item in this revenue was, of course, that derived from carrying freight. This was in 1910, $860,403,390. Passenger fares collected amounted to a little less than one-third of this sum, or

$260,234,027. To avoid the constant repetition of large figures the increased receipts from freight charges were successively, in 1912 and 1913, over each preceding year, $30,000,000 and $105,000,000, while 1911 decreased over 1910 $3,000,000, while in the same years the passenger department receipts increased $14,000,000, $5,000,000, and $14,000,000. Thus passenger and freight receipts were in the year 1913 $165,000,000 in excess of what they had been in 1910.

To show what each mile of track was earning in each of these years it can be said that the return was $20,611 for each mile in 1910, and that in 1911, 1912, and 1913 the amounts, respectively, were $20,850, $21,271, and $23,430. Separating them again for the four successive years the freight returns for each mile were $14,715, $14,654, $15,006, and $16,770, while the passengers returned in fares $4,451, $4,692, $4,720, and $4,965.

Looked at from another angle the percentage of increase in revenue made by each mile of track in the year 1913 over 1910, 1911, and 1912, respectively, was 13.7 per cent, 12.4 per cent, and 10.2 per cent.

WHERE THE MONEY WENT.

2. There are three items which make up between 90 and 95 per cent of the expenses of operating a railroad. In the order of their magnitude they are: Transportation, maintenance of equipment—which means its rolling stock—and the maintenance of the roadbed, bridges, etc.

These 49 railways spent $410,734,001 for transportation charges in 1910. Their maintenance of equipment consumed $195,727,105, while to maintain their railway tracks, bridges, etc., demanded an expenditure of $145,273,335. As the total expenses—money paid back to the public—for the running of these railroads in 1910 was $800,662,522, it will be seen that the three items mentioned accounted for more than $750,000,000, or above fifteen-sixteenths of the money paid out.

The sums of money which these 49 railway systems were called upon to pay during the years 1911, 1912, and 1913 had increased steadily from year to year until in 1913 the increase over the year 1910 amounted to $92,000,000 in transportation charges, $51,000,000 in equipment maintenance charges, and $35,000,000 in maintenance of way and structure charges.

3. These railroads paid out in taxes for the successive years 1910, 1911, 1912, and 1913 $43,140,475, $45,898,383, $51,055,738, and $53,946,004. The percentage of increase in taxes in 1913 over 1910 for each mile of line was 23.6 per cent. When the total amount of taxes had been slightly more than $43,000,000 in 1910—in the space of three years the tax expense had been increased almost eleven millions of dollars, or, to be accurate, $10,805,529.

THE RESULT.

The operating income for these 49 railway systems in 1910 was $362,006,165. This income fell to $321,927,779 in 1911, picked up to $327,453,816 in 1912, and to $347,803,564 in 1913. Thus the actual loss in income in three years was about $14,000,000, and this in the face of an increase of annual receipts of more than $180,000,000, and the addition to the railroads property investment of more than half a billion dollars in new money.

Each mile of the 59,157 miles of railway line operated in 1913 showed a decrease of 5 per cent in net operating income over each mile of the 58,471 miles in use in 1910.

To recapitulate: The money received by the railroads for the business they handled on each mile of line was greater in 1913 than in 1910 by $2,819, or 13.7 per cent, yet the increase in expenses more than balanced this increase and resulted in a decrease in operating income of $312 a mile, or 5 per cent.

The money received in 1913 was greater by $181,000,000 than in 1910, but the expenses and taxes had increased $195,200,000. Thus the net operating income of these 49 railway systems was in 1913 less by over $16,000,000 than it was in 1910, notwithstanding the expenditure of more than $650,000,000 for improvements.

[Filed with Interstate Commerce Commission. Compilation in matter of application of eastern railways for increase in freight rates, 1913.]

Operating revenues, expenses, and income, in the aggregate and per mile of line, railways in the eastern district, fiscal years 1910 and 1913.

Account.	Aggregate amount.		Amount per mile of line.		Increase per mile, 1913 over 1910.	
	1910	1913	1910	1913	Amount	Per cent.
Total operating revenues	$1,205,155,435	$1,386,073,429	$20,611	$23,430	$2,819	13.7
Freight	860,403,390	992,078,364	14,715	16,770	2,055	14.0

[Bulletin No. 5.]

THE NET CONDITIONS OF EASTERN RAILROADS.

DECEMBER 6, 1913.

In order to bring to the attention of the Interstate Commerce Commission and the public generally the facts as to their real condition, the 35 railroad systems east of the Mississippi and north of the Ohio have filed with the commission an exhibit such as had not hitherto been compiled.

It eliminates all intercorporate system ownership of capital obligations, as well as receipts and payments as between members of a railway system, and reduces results to a net figure showing the actual conditions as they affect investors and the public, which must have railway facilities provided for its use.

These railroads own 53,670 miles of roadway, with a total of 107,933 miles of track. Their gross earnings from 1910 to 1913 increased $187,000,000, while operating expenses and taxes increased $201,000,000. Tax payments alone increased from $42,900,000 in 1910 to $54,490,000 in 1913. The net operating income actually decreased $16,311,000. Consequently, even had these companies made no increase in capital expenditures in the period, they would still have been worse off in 1910 by this amount of over $16,000,000.

But in the three years the actual property investment—that is, the cost of railroad and equipment—increased by almost $660,000,000. With increased business to the extent of $187,000,000, there was a decline in net operating income of $16,311,000, notwithstanding this large increase of almost $660,000,000 in the investment in the property.

It required above $3.50 property investment for each dollar of increased gross earnings, and for each $1.87 of increased gross earnings increased expenses and taxes were $2.01, without any allowance for interest on the new money spent to supply facilities to earn the increased gross revenue.

In 1910 these companies showed net operating income equal to 6.28 per cent on their property investment, but in 1913 this percentage had fallen to 5.36 per cent.

The total capital obligation of these 35 companies are $6,389,000,000, of which funded debt is $3,829,000,000, and the balance capital stock.

These companies earned in 1913, in gross, $1,424,000,000. Their net operating income, after deducting expenses, taxes, rents, and hire of equipment, was $336,754,000. Their net corporate income, after payment of interest on funded debt and other obligatory charges in 1913, was $206,600,000. Out of this net income the companies declared dividends of 5.10 per cent on the capital stock outstanding, amounting to $130,000,000. This sum was $19,000,000 less than the dividends paid in 1912 and $7,000,000 less than the dividends in 1910.

The design of the exhibit containing these figures was to emphasize statistically that the reason for the application is that in the last three years (since the last application was made to the commission for an advance in freight rates) the operating expenses of these railroads have increased faster than their gross earnings, with the result that net operating income has not increased sufficiently to furnish any additional return on the additional investment of the past three years.

[Bulletin No. 6.]

THE RAILROAD SITUATION IN THE MIDDLE WEST.

DECEMBER 7, 1913.

As part of the presentation by the railroads of the need for an increase in freight rates the railroads of the Middle West, operating in what is known as Central Freight Association territory, have filed with the Interstate Commerce Commission elaborate statistical data covering the condition of those companies.

Figures covering 78.6 per cent of the entire mileage in the territory show that these companies enjoyed in 1913 an increase in operating revenue of $76,000,000 over 1910; nevertheless, after paying operating expenses and taxes, they suffered a loss of $12,000,000 in operating income.

This result was due to an increase in the ratio of operating expenses and taxes to gross as between 1910 and 1913 from 72 per cent to 78.2 per cent. This showing was made despite the fact that large sums of new capital were invested in the property.

Besides the loss in net revenues for the year ended June 30, 1913, as compared with 1910, the figures for these same roads for the three months of July, August, and September, 1913, show a decrease in net operating earnings of $6,937,353, or approximately 20 per cent.

In addition to the tables covering figures for all the roads in this territory, special attention has been directed to the condition of a special group of roads which, as stated by Mr. F. A. Delano in his opening statement the previous day, were more particularly representative of the "whole situation" in Central Freight Association territory.

This group embraces 28 roads, with 23,167 miles of road, or 51.5 per cent of the entire mileage in the territory, and including such important lines as the Big Four System, Vandalia, Chicago & Eastern Illinois, Grand Trunk Western, Grand Rapids, Illinois Central, Chicago & Alton, Nickel Plate, and Wabash Railroads.

In 1913 roads in this group earned $63,000,000 more than in 1908, which is known as the panic year, and operating expenses and taxes were $62,000,000 more. Net operating revenues, after paying expenses and taxes, were only $811,000 more than in 1908.

The net corporate income of these properties was actually $8,000,000 less than in 1908, although during this five-year period $180,000,000 new capital was put into these properties.

In 1913 the roads in this group earned $36,000,000 more than in 1910; operating expenses and taxes were $45,000,000 more than in 1910, and the net, after operating expenses and taxes, decreased $9,500,000. The net corporate income decreased almost $17,000,000.

If in 1913 the railroads in this group had been able to operate at the same ratio as in 1910, their net operating revenue, after paying taxes, would have been almost $18,000,000 greater than it was in 1913.

The increase in cost is largely in two items—transportation and maintenance of equipment.

Mr. F. A. Delano, one of the receivers of the Wabash Railroad, in presenting the situation of the middle western railroads to the Interstate Commerce Commission, says:

"It will be obvious that a 5 per cent increase in rates will not be adequate to meet the demands of the territory. The rates in that territory, both freight and passenger, are the lowest rates prevailing in the United States, and the interests of the people of that rapidly growing and developing section of the country, to say nothing of the railroad companies, require in the near future a readjustment of the rates, both freight and passenger, to a basis which will enable that territory to have good railroads and the people to have efficient and adequate service, and to progress measurably with the other sections of the country."

[Bulletin No. 7.]

RESULTS OBTAINED FROM RAILROAD IMPROVEMENTS.

DECEMBER 8, 1913.

The railroads of the eastern district participating in the application for a 5 per cent increase in freight rates have filed with the Interstate Commerce Commission a series of statistical tables which give the details as to various operating conditions in the last decade incidental to handling and carrying freight.

The principal result herein enumerated is set forth in the fact that for 1912 these railroads were able to carry in each freight train an average load of 510 tons, while the average in 1903 had been but 391 tons.

This achievement was one of the results of the fact that the 49 railroads in the territory affected expended during the past 10 years an average of $200,000,000 a year in enlarging the roadbed and equipment. The increase in the property investment account per mile is due to many things—larger and more expensive terminals and stations for both passenger and freight; elimination of curves, grades, and crossings; heavier and improved bridges, rails, ties, signals, interlocking, etc.; and generally a more substantial standard of roadbed to carry the heavier equipment.

The railroads also have built larger locomotives. The average locomotive in service in 1912 had grown so in size and power that it could haul a heavier load by more than one-third—33.8 per cent, to be strictly accurate—than the locomotive of 1903. This meant that two locomotives in 1912 could almost do the work of three average locomotives a decade earlier. This is expressed technically in the statistical fact that tractive power of locomotives on these roads increased from 22,796 pounds in 1903 to 30,501 pounds in 1912.

As the engines increased in size so did the freight cars. The average freight car in use in 1903 could carry a little less than 31 tons.

In 10 years the capacity of freight cars increased to 39½ tons—a gain of more than 9½ tons. At present three freight cars can carry almost as much as four could have carried in 1903.

Every freight car with any load in it carried 19 tons of freight on an average in 1903. This had increased to almost 23 tons in 1912, or short of 20 per cent. That is, five loaded cars in 1912 were doing the business of six loaded cars in 1903.

The average number of cars in each freight train—loaded cars, empty cars, and cabooses—increased in this period from a train of 30.3 cars to one of 34 cars. While the number of loaded cars in each freight train was 20.7 in 1903, it was 22.4 in 1912.

The result was that these railroads in 1912 carried 15 tons of freight on an average on every freight car hauled—loaded or empty—when they had only carried 13 tons in 1903, an increase of 2 tons on each freight car moved in the decade.

[Bulletin No. 8.]

HOW AVERAGE RATES HAVE DECLINED AND WAGES GONE UP.

DECEMBER 9, 1913.

The decrease which has taken place in the money received by the railroads for carrying each passenger a mile, as well as the decrease for carrying each ton of freight a mile, in the decade of 1903–1912 is set forth in two statistical exhibits, which have been filed with the Interstate Commerce Commission by the 49 railways participating in the application for a rate increase of 5 per cent.

These railroads in 1903 received 0.653 of a cent, on the average, for each ton of freight carried 1 mile. If it were possible to conceive the hauling by rail around the world of this average ton of freight, the average railroad company's bill, at this average rate for doing it, would have been $163.25.

Average freight revenues had dropped in 1912 to 0.617 of a cent a mile ($0.00617). This means that the ton of freight would be hauled around the world for $154.25, or a decrease of $9 a ton in the decade for such a distance. This represents a loss of 5.8 per cent in money received for carrying the same weight of freight. Even admitting that the decline in freight revenue per ton mile may be partly due to a change in the character of the traffic handled, the loss in revenue remains an actual fact.

Nearly three times as much money was received, on the average, for carrying a passenger a mile in 1903 as for carrying a ton of freight the same distance. These roads that year received 1.847 cents for carrying each passenger a mile. In dollar-sign figures this reads $0.01847.

In the impossible case of giving a passenger a continuous ride around the world at the Equator, he would have paid the railroads for the trip, based on the average, $461.75 in 1903. He could have had the ride around the world, at the 1912 average rate, for $451.50, a saving to him of $10.25 and an equal loss in money received by the railroads for doing the same business.

His average rate for each mile in 1912 would have been 1.806 cents, as compared with $0.01847 in 1903.

WAGES.

While these reductions were in progress aggregate wages and average rate of wages paid per man were steadily rising.

The aggregate amount of wages paid by the railways of the eastern district to its employees in the year 1903 was $364,000,000 (excluding general officers). The amount paid in 1912 was $567,000,000, an increase of $203,000,000, or 56 per cent. Employees received in wages $57,000,000 more in 1912 than they did in 1910, or 11 per cent.

The advanced wage movement which culminated in 1910 added $34,000,000 a year (based on the pay rolls of that year) to the pay rolls of the railroads in the eastern district. (Cf. statement of Mr. Daniel Willard, Bulletin No. 1.)

The award just announced by the arbitrators will give the conductors and trainmen alone of the roads affected in the eastern district $6,000,000 increase wages annually. And the effect of the full-crew laws has added $4,000,000 a year.

[Bulletin No. 9.]

TESTIMONY AS TO CONDITIONS ON ERIE RAILROAD SYSTEM.

DECEMBER 10, 1913.

The Erie Railroad system, through Mr. Charles P. Crawford, to-day presented to the Interstate Commerce Commission a statistical statement of its own condition in relation to the application of the railroads for an advance in freight rates.

The following is a summary of Mr. Crawford's testimony:

"In 1913 the property investment of Erie Railroad system had increased $88,459,748 since 1903, or 24.26 per cent, while its net operating revenue increased only $1,701,404, or 9.36 per cent, and its net operating income decreased $799,205, or 4.76 per cent.

"During the same period its gross operating revenue increased $19,133,219, or 39.70 per cent, showing greatly increased service to the public. The Erie system in 1913 fell $799,205 short of receiving any additional return on its great increase in investment, although it rendered a greatly increased amount of transportation service to the public.

"The business handled by the system has greatly increased since 1903. The number of tons of revenue freight carried 1 mile has increased from 5,600,000,000 in 1903 to 6,669,000,000 in 1910, 7,976,000,000 in 1913.

"During this period the average revenue per ton per mile was 6.13 mills in 1903, 6.15 in 1910, and 5.92 in 1913. The revenue per ton per mile has decreased 3.74 per cent since 1910.

"While the decrease in the average revenue per ton per mile since 1903 may have resulted in part from changes in the character of traffic handled and in its average movement, yet it is believed the reduction in the average revenue per ton per mile has resulted in large part from rate reductions.

"Notwithstanding these reductions in the average revenue per ton per mile, the total operating revenue has increased from $48,000,000 in 1903 to $59,000,000 in 1910 and $67,000,000 in 1913, making an increase of 39.70 per cent for 1913 as compared with 1903, and of 13.96 per cent as compared with 1910.

"Under normal conditions, with such a large increase in the business handled and in operating revenue, there should be a substantial decrease in the ratio of operating expenses to operating revenues; but this has not been the case, as operating expenses and taxes have increased at a rate largely in excess of the increase in operating revenues."

[Bulletin No. 10.]

CHANGES IN ECONOMIC CONDITIONS AFFECTING RAILWAY EARNINGS.

DECEMBER 10, 1913.

Mr. Charles A. Conant, economist and author of "The Principles of Money and Banking," was called by the railroads to testify before the Interstate Commerce Commission regarding changes in the purchasing power of money, and the world-wide demand for capital.

Mr. Conant said, in substance:

"The purchasing power of the dollar over the great mass of commodities has permanently fallen since the present schedule of passenger and freight rates was established.

"Average prices in 1912 were 48.9 per cent higher than in 1897; 47.8 per cent higher than in 1896; and 18.2 per cent higher than in 1904. Analysis of the details of prices by classes of products shows that under the head of metals and implements, the index number advanced from 86.6 per cent, in 1897, to 126.1 per cent in 1912; lumber and building materials, from 90.4 per cent in 1897, to 148.2 per cent in 1912, or an increase of more than 60 per cent.

"In 1880, the first year after the resumption of specie payments, prices were much higher than the average of 1890–1899. An almost uninterrupted decline occurred, however, until 1896, when the index number fell to 90.4, or more than 40 per cent below the prices of 1880. With the resumption of business activity, in 1898, the index number begins to rise until it has attained 110.5 in 1900.

"There was then a slight recession, followed by a slow recovery, which carried the index number for 1904 to 113. Then began the rapid upward movement of the past eight years—interrupted by the depression of 1908—which finally advanced the index number for the year 1912 to 133.6. This is an increase of nearly 11 points over the low point of 1908, and of 40.2 points over the index number of 1898.

"One of the most remarkable evidences that the increase in the value of goods in terms of money in recent years has been broad and general in character is afforded by the statistics which are compiled annually by the Comptroller of the Currency in regard to the banking power of the United States."

After noting that the banking power of the country increased 111 per cent in 12 years, Mr. Conant continued:

"The essential question is whether this great increase in banking power, by 111 per cent in 12 years, reflects a corresponding increase in the annual production or in the accumulated wealth of the country. The population during this period increased only 25.3 per cent, so that the increase in banking power was more than four times as rapid as that in population. For the four years between 1908 and 1912 the increase in banking power was 27.8 per cent, while the increase in population was only 9.3 per cent."

In dealing with the effect upon railroad freight earnings of the purchasing power of money, Mr. Conant said:

"Taking the receipts for freight alone per ton-mile and expressing them in mills, or tenths of a cent, it appears that this average of ton-mile receipts varied only within narrow limits during the whole of the 16 years from 1896 to 1912. In 1896 the average receipts per ton-mile were 8.06 mills; in 1912 they were 7.43 mills. This represented a decline of 63 hundredths of a mill, or about 7 per cent.

"If the receipts per ton-mile in 1896 were 8.06 mills, and wholesale prices bore a ratio to the standard of 90.4 points, the purchasing power of the receipts per ton-mile was 8.92 mills. As the index number of prices advanced, however, even if receipts remained the same in terms of money, the purchasing power of the receipts inevitably fell in a striking ratio.

"After the revival of business activity in 1897, receipts per ton-mile declined only slightly, but the index number of wholesale prices increased rapidly. The result was that the purchasing power of the money received for freight fell from a ratio of 8.06, in 1898, down to 6.61 in 1905.

"Then began another decline, interrupted only by the depression of 1908, which finally carried the ratio of purchasing power of freight receipts in 1912 down to 5.56. When this purchasing power of the receipts per ton-mile is compared with the corresponding figure of 1896, we find a decline of 3.36 mills, or 37.6 per cent.

"I conclude, therefore, simply as a question of mathematics, and without undertaking to enter into the intricacies of railway accounting or the special demands which have been made upon the railways, that the purchasing power of the moneys which are now paid for freight is approximately 37 per cent less in the market for commodities than it was in 1896."

THE DEMAND FOR CAPITAL.

On the subject of the world-wide demand for capital, Mr. Conant said:

"In recent years new demands have converged upon the supply of available capital in an unusual degree from the conversion of industrial enterprises into stock companies, the absorption and merger of old companies with new, the great extension of the system of local traction lines, the demands of undeveloped countries for railways and industrial equipment, and the remarkable expansion in the calls of governments upon the financial markets for the means of increasing armaments and making public improvements.

"This great demand for capital which converges on the principal money markets of the world has effects similar to those produced by great demand upon other commodities—it raises its price. As the price of capital is the rental charged for its use, or the interest rate, this rate has risen in a marked degree in recent years. The influence of this condition may be summarized as follows:

"'1. New securities can only be sold at lower prices than formerly or must pay higher interest rates on their par value.

"'2. The prices of outstanding securities fall, making them unsalable in the hands of their holders except at a loss and reducing the assets and the surplus funds of savings banks, other banking institutions, and insurance companies.

"'3. The seekers of new capital by means of security issues must pay a larger amount in money for its use, and in view of the rise in general prices, must pay more for their materials, thus making necessary a higher rate of earnings than formerly in order to meet fixed charges.

"'4. Under the conditions of competition for capital thus established, industries of high earning power are able to outbid those of lower earning power for the supply of free capital in the market.

"'5. Incident to the decline in the purchasing power of money, there is a tendency on the part of investors to shift their investments to those paying higher returns than formerly, in order to meet the increased cost of living, even at the risk of some slight decrease in security.

"'6. In so far as the decline in the purchasing power of money is recognized in the financial world as a factor likely to be continuously felt, there will be a tendency on the part of investors to refrain from purchasing securities for long terms, paying a fixed income in money.'

"The railways have not adopted their charges, as have other industries, to the change in the purchasing power of money. They have continued to sell their services for an amount which has remained comparatively fixed in money, but has declined greatly in purchasing power.

"Such additional capital as they have sought by the issue and sale of securities has been obtained on higher terms than in former years, while its purchasing power, in materials and wages, has been much less than in former years. The railways have been in the peculiar position of seeing prices rising all around them, while they have been unable to make advances proportionate to their changed relations to other industries.

"If the value of the money received by the railways for their services has so seriously declined in purchasing power as to deprive them of the means of meeting their legitimate charges and obtaining new capital at its present rental price, they are not on an equality with other industries, they are receiving a much less proportionate share of the proceeds of the economic output of the country than that which they formerly received, and they are less capable of contributing their share to equipping this country for unfettered competition with other countries in the field of production and international commerce."

[Bulletin No. 11.]

INCREASES IN FREIGHT RATES WORLD WIDE.

DECEMBER 14, 1913.

At the hearing before the Interstate Commerce Commission on December 10, Mr. Charles A. Conant, testifying in reference to the proposed increase in freight rates, stated that adjustments of rates had been made in many leading countries on account of the increased cost of operation.

Mr. Conant cited as authoritative on this point an article by Mr. C. Colson, the eminent French economist, published in the Revue Politique et Parlementaire for August 10, 1913.

Mr. Colson is a conseiller d'état, was formerly director of railways in the French university of public works, and is professor of political economy in the École Nationale des Ponts et Chaussées of Paris, etc.

A copy of a translation (made by Mr. J. H. Parmelee, statistician of of the Bureau of Railway Economics) of that article has been filed by the railroads as an exhibit in their case, and is reprinted herewith:

Among the economic phenomena which have characterized the last few years, few have been more marked than the general increase in prices. This increase at first influences the railway situation only by the increase which it brought about in railway expenses. It is now commencing to bring about rate increases on a fairly large number of railway systems. In view of the rapid and continuous decline in transportation rates, which has been one of the principal factors of economic progress for a century, this fact certainly merits attention.

When price variations are spoken of by the public at large, comment nearly always centers around changes brought about through retail sales. Economists who endeavor to measure these variations with exactness generally take for the purpose the average prices of the principal agricultural or industrial products as registered upon the exchanges where they are sold in bulk. These averages they call index numbers. In most cases they are interested only in transactions involving material goods, which constitute, however, perhaps only 50 per cent of all current transactions. The prices taken into account by them do not as a matter of fact cover either wages or rents or transportation rates. To get an exact idea of what a given sum of money represents at different periods, it would be necessary to take account of both wholesale and retail prices of a number of products, such as services rendered by different categories of labor, by landlords who lease their property, by transportation agencies, etc. This would be a considerable task, and one which we believe has never been attempted as a whole.

Yet studies made with respect to each price category taken by itself, according as they measure the general movement, permit at least an appreciation of its significance and importance. To be sure, this movement is not manifested to the same degree in different kinds of transactions, or in different countries whose markets are separated by more or less obstructive customs barriers. A generally characteristic gain is, however, maintained.

OSCILLATIONS IN PRICES.

Disregarding oscillations resulting from alternating periods of prosperity and depression, there was till recently a general and rapid decline in the prices of industrial products, resulting from technical progress. Agricultural products, on the other hand, increased constantly in price in western Europe until about 1875–1880, as a result of increasing density of population within a limited area. But about this time the tremendous decline in transportation rates that resulted from extensions of railway and steamship lines permitted older settled regions to draw a portion of their necessary subsistence from scarcely settled territory in the New World; the rapid fall in agricultural prices which took place toward the end of the nineteenth century resulted in an agricultural crisis. Both the increase of population in the New World and in the Old, and the increase in consumption due to increased wages, have brought about a new movement of rising prices during the past 15 years.

If one seeks to measure the general movement of wholesale prices by that of the customs values of French imports and exports, an increase of about 20 per cent from 1847 (the date of the first valuation) to 1860–1865 will be observed, followed by a gradual decrease of about 40 per cent from the latter period down to 1896–97. Then the movement again reversed itself, and the increase which has resulted is actually about 20 per cent over the prices of 15 years ago. It must not be forgotten that the present moment probably marks the culminating point of a period of business expansion which will undoubtedly be followed by a certain temporary reaction.

Retail prices have not followed exactly the trend we have just described, because the gap between them and wholesale prices naturally goes on increasing in the degree to which wages and business rentals in congested centers continue to rise. Disregarding products of exceptional quality, the prices of which increase continuously with the increased number of fairly rich families who use them, the following variations in current prices may be noted:

FURNITURE AND FOOD.

The cost of furniture and of clothing declined constantly until about 1896–97, but has risen a little since that time. As to articles of food, the increase was very marked up to 1880, while the period since 1880 is divided into two equal parts, the first of which is characterized by a notable decrease, and the second by an increase which, contrary to general belief, has not yet brought prices up to the level reached some 30 years ago.

Wages, on the other hand, have constantly increased. The increase, rather slow up to 1850, was extremely rapid, both in agriculture and in industry, between that date and the agricultural crisis. It slacked considerably in the country districts and to a slight extent in the industrial centers 30 years ago. During the past 15 years, however, it has resumed an accelerated progress, first in the towns, then in the rural districts. One may sum up the change in living conditions of laborers during two intervals, 30 years apart, by following a study of the French Statistical Office prepared with the care and acumen characteristic of all the labors of its director, M. Lucien March. The results of this study are shown by the following relative figures (calculated by assuming the corresponding figures of the year 1900 as equivalent to 100):

	1850	1880	1910
Wages	51	82	110
Cost of living (uniform throughout)	85.5	110	104
Purchasing power of wages	59.5	74.5	106

The underlying statistics for this table were drawn especially from the cities, and notably from Paris, but the results may well be extended to cover the country, at least for the three dates considered. It was only for a portion of the years between 1880 and 1910 that the agricultural crisis seems to have stood in the way of actual parallelism of movement in city and country.

EFFECT OF LABOR ORGANIZATION.

It should be remarked in passing that the advance in wages produced solely by the play of economic forces, notably technical progress and the accumulation of capital, was more rapid from 1850 to 1880 than from 1880 to 1910. Statistics confirm what a study of the mechanism of prices teaches, contrary to almost universal opinion, that the organized-labor movement (infinitely more powerful in the second of the 30-year periods considered above) is powerless to accelerate the advance in wages. We even believe that in France it had the reverse effect during the last few years by disseminating ideas among the working classes that have considerably reduced the labor output. The result is that the net cost to the employer of a given piece of work has increased in recent years to a much greater extent than is indicated by statistics of increases in hourly or daily wages. This net cost would no doubt be less, the cost of living would also be less, the gain to the workman would be considerably increased, and his purchasing power would be very much greater if the slackening of endeavor which has so much diminished the productivity of his work were less accentuated. As a matter of fact, in view of the attitude of labor, the peculiar mental influence of the labor unions is felt principally with regard to the productivity of labor, while wages, depending on supply and demand, escape their action whenever advances are sought which the state of the market at the moment does not justify.

In the cities rents also have notably increased. It is true that the cost of local transportation has considerably decreased at the same time that the cost of long-distance travel has been decreasing, and also, except very recently, the cost of freight transportation.

STATISTICS HAVE WORLD APPLICATION.

The foregoing conclusions are based upon French statistics, but, with very slight differences as to dates and as to the sweep of the movement, the general trend is the same for all Europe, and even to-day for America. It can be summed up by saying that the level of prices, including wages, presents a marked rise during the past century. Moreover, this general movement, after having undergone a considerable slackening in the last quarter of the nineteenth century, and especially from 1882 to 1897, has been notably emphasized since then. Especially

true of this latter period is the fact that the increase has become almost universal in character. Technical progress may continue to reduce the net cost of many industrial and agricultural products, but the margin is no longer large enough to neutralize either the increased cost and efficiency of manual labor or the increased demand due to the improved condition of the working classes.

We shall not inquire here into the causes of this general rise in prices. It may be remarked, however, that if the increase or decrease in the relative value of products or of different services results necessarily from causes which are peculiar to each, a movement which bears at the same time on practically all prices can hardly be explained, except as the result of monetary causes; the more so that these causes at the present time are obvious. The increase in production of gold, added to the development of methods of payment without the use of money (notes, checks, book transfers, etc.), appears for a long time to have proceeded faster than that of the need for money. Although very much increased by the working of the Siberian deposits, the production of gold did not average 200,000,000 francs annually from 1840 to 1850. Carried by the exploitation of California and Australia to an annual average of 673,000,000 between 1851 and 1870, the average fell back to 572,000,000 between 1871 and 1890, but since that time the Transvaal mines have increased it to such an extent that it reached 1,086,000,000 between 1891 and 1900, 1,959,000,000 between 1901 and 1910, and finally amounted to 2,423,000,000 for the year 1911. An equal increase in instruments of exchange must necessarily have resulted in the diminuation of the purchasing power of money; that is, an increase of general prices.

If the production of gold continues to increase there is no reason to doubt that our descendants will assist at a phenomenon analogous to that general increase during the sixteenth century which was the consequence of the enormous influx of precious metals resulting from the discovery of America, and which raised prices threefold according to some writers and fivefold according to others. The existence at the present time of a larger stock of gold than four centuries ago, the colossal development of business transactions, the demonetization of silver and the diffusion of gold in the Far East serve actually to reduce the importance of the movement to-day, and without doubt will continue to do so in the near future. Its effects are none the less already felt and may be even more strongly felt in the future.

RAILWAY RATES HELD IN CHECK.

But there exists one industry, the railway industry, whose selling prices do not by the sole interplay of supply and demand follow the general rising movement under which it pays increased prices for all the things which it buys, notably the wages of its employees. Railway service is a public service which practically can be organized only by the State or by grantees selected for the purpose. Railway operation has the character of a monopoly, and when a country endeavors to establish competition the only result is to divide the benefits of the monopoly between several enterprises. As a result transportation rates can not be left to free action; they must result from tariffs established by the Government or under its control. Even in Anglo-Saxon countries the State, which has proceeded upon a wholly different conception, does not now allow the railways the same freedom of action accorded to them at the beginning, a freedom which has resulted in a control always arbitrary in character, although not, as with us, contractually defined.

Under these conditions, an increase in rates, even when it is imposed by economic circumstances, always has the appearance of a unilateral and forcible act. This act is the more ill received by public opinion the more it has become accustomed to seeing tariffs go almost constantly down in a movement which technical progress and the elasticity of traffic have rendered nearly universal. States have only rarely authorized increased tariffs on railways under their control, and when they have substituted Government operation for operation under concession, they have generally sought to render the new régime popular by rate reductions. Both in England, where the railways desired to compensate themselves by means of lessening former reductions which had become obsolete at certain points, for the new reductions imposed upon them at other points to diminish rate inequalities, and in the United States, where the cordial relations eventually established between different railway systems permitted the suppression of abnormal reductions brought about by previous competition over certain routes, laws have intervened to give quasi-judicial authorities power to oppose such increases. The freedom of action of the railway companies and the mobility of their tariffs, which has so powerfully contributed to the economic development of the American continent by facilitating rapid railway growth, are no longer tolerated in the United States, since the need for new railways is less vividly felt than the need of equality in the treatment accorded competing producers. Increases in rates, always more rare than decreases, have for a long time been extremely exceptional almost everywhere, and have become rare even in America during later years.

EFFECT OF 1907 PANIC.

But rapid increases in operating and construction expenses have come seriously to modify the situation in a number of countries. It was at the very crisis which followed the height of prosperity in 1906 and 1907 that the effect of this increase was most severely felt. As we have frequently stated in these pages, the movement of expenses always follows that of receipts, but at a slower gait; traffic progresses by spurts, the most recent of which have been somewhat in advance of the date set for them under the periodical alternation at approximately 10-year intervals of industrial prosperity and depression. At the beginning of these spurts the railroads meet the situation as best they can with the facilities at hand, and it is only when they have ascertained where, for what classes of traffic, and under what conditions the needs exist that they undertake the necessary and costly improvements of their operating facilities. Then, when the slackening of traffic renders it more difficult to provide for the new expenses, they endeavor to retrench. This is what occurred in all countries when the crisis of 1907–8 seriously affected the financial status of most of the railway systems. But the results of the measures adopted to realize economies were nullified, when business again became active after a short period of slackening, by the general increase in prices. This increase is no doubt in part temporary with regard to coal and metals, but will probably be permanent with regard to wages; and the expenses brought about by the increase have been aggravated by the necessity of offsetting reduction in labor output by means of added facilities. It was under these conditions that the idea of raising rates gained ground and has been applied in a number of countries.

It has not been necessary to refer to Germany, where, as we have frequently shown in these pages, abundance of traffic, added to exceptionally advantageous conditions resulting from the configuration of the country and from regulations very favorable to the railways, assured excellent results, even with a relatively expensive system of operation. After the enormous falling off in net revenue in 1908 a serious effort was made to reduce expenses; since then the recovery of traffic has been sufficiently strong to secure for the capital invested a greater return in 1911 than the maximum realized in 1906, although capital had grown three and one-half billions in the interval. Meanwhile, in the smaller German states where the railways are less prosperous than in Prussia, the question of raising rates has been agitated at different times. Wurttemburg, soon after the unification of tariffs throughout the empire in 1907, increased the price of fourth-class tickets in 1909 from 2.5 centimes to 2.875 centimes per kilometer. The Prussian Government withdrew the export tariffs on coal, but this was apparently less to augment receipts from coal traffic than to reserve that commodity for national industry. With regard to internal traffic, the Government contented itself with forcing the public to pay for the routing of freight shipments over longer but less congested lines. As to the stamp tax on bills of lading and passenger tickets which, established by the empire, was levied for passengers at a progressively higher rate, according to class of accommodation, this caused much disappointment, since passengers simply shifted to the lower classes, and the measure has had the character of a general tax rather than an increase in rates, so that the railway administration of the several German states have suffered rather than profited by it.

CONDITIONS IN ENGLAND.

In England, as we have shown (May number, 1913), successive interventions by the Government at the time of the threatened strikes of 1907, and afterwards at the time of the strike of 1911, caused the companies to make concessions to their employees in consideration of the promise that legal facilities would be afforded them for two classes of relief measures: First, the consummation of agreements or consolidations that would permit reductions in expenses by suppressing existing competition on many lines, not as to prices (in this respect there has been an understanding for a long time among the railways), but as to the facilities offered to the public. Second, increases in freight rates. A bill presented in 1912, which covered these two points, and at the same time imposed various new obligations upon the railway companies, did not pass. The Government, called upon to fulfill its part of the agreement, at last carried a bill through both chambers which consisted merely of a brief amendment to the act of 1894 by virtue of which the railway and canal commission was empowered to oppose all unjustifiable increases of freight rates. This amendment, which took effect in March, 1913, declared that an increase would be deemed justifiable when it should be established that its object was to meet the additional expense of handling goods resulting from increases in wages and improvements in working conditions since August 19, 1911 (date of the strike).

Already, in January, 1912, the railways had put into effect certain increases in passenger rates, to which the restrictive measures of 1894 did not apply; these very moderate increases affected only certain exceptional passenger tariffs. Utilizing the new privilege granted them in regard to freight rates, they put into effect, on July 1, 1913, increases equivalent to a general surcharge of 4 per cent on all traffic. It is natural that the customers of an industry thus suffer the consequences of its increased net cost; this is only what occurs in all unregulated industries, whether the increase results from the intervention of public authority, so frequent nowadays in the matter of labor, or whether it proceeds from natural price variations. So far as the railways are concerned the British Government has kept its promise by refraining from interposing legal obstacles which would have rendered them victims of the pressure brought upon them on behalf of their employees. As to the agreements between different railways for the purpose of reducing expenses, the indefiniteness of the law has allowed them in most cases to consummate these agreements without the necessity of new legislation.

ITALY RAISES RAILROAD RATES.

In Italy, as in England, betterments of the conditions of the laboring force have necessitated increases in rates. The old leasing system, which was ended in 1905, did not sufficiently permit the railways to provide the means for necessary increases in equipment, and thus made it impossible for them to respond to traffic needs. Direct operation by the Government, under the capable and energetic management of M. Bianchi and a fairly independent administration, has notably improved the service. But expenses have gone up considerably, for the most part as the result of legislation enacted by Parliament under pressure from railway employees, providing for increased rates of pay. The latest of such laws, enacted April 13, 1911, provided that part of the new charges should be taken care of by means of an increase in the price of term tickets and of special tickets issued at unusually low rates. These increases have produced six millions, perhaps a little over 3 per cent of total passenger receipts. At the same time there has been authorized an increase in accessory charges on freight amounting in the aggregate to three millions, perhaps a little over 1 per cent of the receipts from ordinary freight. This increase has for its object the creation of a reserve of 4,000 cars for the transportation of agricultural products.

In Switzerland a law passed June 23, 1910, improved the conditions of railway labor to a very marked degree; its application will add about fourteen millions to a wage aggregate amounting to sixty millions in 1910. Inasmuch as the wage increases provided for are often automatic, it is fair to ask whether the service will be improved along with the condition of the employees. On the other hand, the Government railway administration has put into effect increases running from 9 to 12½ per cent on certain forms of season tickets very much used in that country. Other increases have been proposed, applying to round-trip tickets, but these the Federal Government has not ventured to adopt.

MEASURES TAKEN IN BELGIUM.

In Belgium the State has for several years been endeavoring to offset the increase in expenses, brought about through increases in railway wages, by increases in rates. The stamp tax (droit d'enregistrement), which in France is but 10 centimes, has been raised from 20 to 50 centimes. Measures have been taken to prevent such combining of shipments as permit the economical transportation of small consignments. Finally, after a long series of struggles and one first ineffectual attempt, increases of 50 centimes per ton have been imposed upon short-haul shipments of all coals.

In Denmark the net revenue of the State system declined from 6,300 francs per kilometer in 1905–6 to less than 2,100 francs in 1909–10, the gross revenue being more than 31,000 francs per kilometer. The public authorities took steps toward putting into effect on the 1st of December, 1911, new tariffs which would increase total revenues about 9 per cent.

In Russia ordinary freight rates on a large number of manufactured products were considerably raised in 1910. Some increases were also made with respect to passenger rates; but on account of the poverty of the population these latter increases brought about a reduction of passenger traffic and a shifting from higher to lower classes, which has forced a partial abandonment of the scheme.

It is especially in Austria and in Hungary that a considerable sustained effort has been made. In Austria the State system, considerably enlarged by the policy of purchase of railway lines which has led to the gradual disappearance of all the private systems, with the sole exception of the Südbahn, has been far from earning the interest on its capital. For a long time the Government has been seeking to increase revenues by means of rate increases. Some years ago station charges had been considerably increased. A general reform was instituted in 1910, applying both to freight and passenger tariffs, by means of which revenues were increased ten millions the first year and thirty-seven millions in later years. But the results were seriously disappointing, and in 1911 and 1912 new and important increases were effected, bearing partly upon certain special classes of goods—cement, lumber, alcohol, petroleum, coal, sugar—and partly on merchandise of all classes in carload lots.

HUNGARY MAKES GENERAL RATE INCREASE.

In Hungary still more radical measures were adopted. In 1909 the net revenue of the State system was forty-five millions less than the capital charges. During 1910 and 1911 rates on a majority of commodities were sensibly increased. The results, though satisfactory, remain still insufficient, and on March 1, 1912, normal fast-freight rates were uniformly raised 7 per cent, exceptional fast-freight rates 5 per cent, and all ordinary freight rates also 5 per cent. Finally, the celebrated zone tariffs for passengers, which had formerly been extolled as a great step forward, were completely abandoned.

This zone system, established in 1889, was destined in part to develop local passenger traffic and in part to bring the capital of Budapest and the farthest parts of the kingdom into closer relations. At the beginning there were 2 zones for local passenger traffic and 12 zones for journeys of from 25 to 225 kilometers (each carrying a uniform rate for all the points within a fairly wide area, the rates increasing at successive steps either of 15 or 25 kilometers). Finally, there was a single zone, with a uniform fare, for all journeys over 225 kilometers, even up to 800 kilometers. However, there was a necessary break in all journeys by way of Budapest. This tariff produced a species of traffic not then existent over very short and very long distances. From 1888 to 1894 the State railways and the Austro-Hungarian Co.'s lines, purchased by the State in 1891, increased their traffic in the following proportions:

	Per cent of increase in—	
	Number of passengers.	Passenger receipts.
Local zones	650	232
Zones 2 to 12	40	10
Zones 13 to 15	246	186

But when the long-distance travel, hardly existent before, had developed so seriously as this, it did not take long to ascertain that the receipts from such travel did not cover the corresponding expenses. In 1896 and 1903 the local tariff was altered and two new zones created, one of 75 and one of 100 kilometers, so as to establish a complete uniformity of rates only beyond 400 kilometers. Experience shows that these increases have had no effect on the growth of traffic.

Under these conditions passenger traffic barely made expenses, but did not contribute, so to speak, to net revenue. On the 1st of July, 1912, the zone system of tariffs was abolished. Rates are now, with a few exceptions, increased at 5-kilometer intervals for trips under 30 kilometers, and at 10-kilometer intervals thereafter, the per-kilometer rate rapidly decreasing above 250 kilometers. The increased revenues resulting from this new classification amount to about 16,000,000 francs, or about 18 per cent of former passenger receipts.

RAILROAD POLICY IN FRANCE.

It is clear that the once generally accepted idea that railway rates must always continue to decline is contrary to the facts. In France, public opinion still refuses to admit that rates can never be increased. However, the operating results which we analyze each year in the May number of this Review lead us to fear that, as in so many other countries, we shall be obliged to apply higher rates some day. From 1906 to 1912 the revenues of the railways d'intérêt général increased in round numbers about 350,000,000, while operating expenses increased 400,000,000, and the capital invested had increased about 2,000,000,000. Of this increase in expenses, the follies that have accompanied the purchase by the State of the Western Railway are perhaps responsible for 50,000,000, adding that much to the normal increase in expenses which the Government operated systems must suffer, as well as the private systems. Even after deducting these 50,000,000, it is clear that the increase in expenses entirely absorbed the total increase of revenue. The operating ratio in 1906 was about 52 per cent. The length of the new and slightly productive lines put into operation in the interval, upon which this ratio is necessarily higher than on the older lines of dense traffic, is hardly more than 1,000 kilometers. On the other hand, the additional traffic of the older lines would not, by a wide margin, have brought an increase in expenses proportionate to that of revenues, had not the net cost of transportation grown. On the whole, an increase in expenses equivalent to half the increase in revenues would have been the expected thing, had not the conditions of operation been seriously changed.

Among the changes of this period are those which represent real improvements, both as to the speed and the number of trains, improved car accommodations, etc. But the expenditures undertaken by the railway managements on this score have not greatly exceeded the economies brought about through technical progress; the use of more powerful locomotives, permitting an increase in average train load, the development of classifications based upon weight, etc. The enormous gap between the results actually attained and those reasonably expected from the development of traffic is due chiefly to the general increase of prices and especially of wages.

But the intervention of public authority has considerably contributed to the increase. We have often spoken of the special legislation which assures railway employees better pensions even than those granted to State employees themselves, and incomparably better than those provided under ordinary legislation for workmen in general, without even that contribution from the budget which is granted to other workers. This special act increased expenses of operation from twenty-five to thirty millions a year, which would have been infinitely better employed in the amelioration of wages—to say nothing of 8,000,000 carried in 1912 to capital account on behalf of employees pensioned during that year, nor of its retroactive provisions, nor of the slowly decreasing amounts it will add to the expenses of future years. The labor regulations imposed upon the railways have also added new expenditures over and above those brought about by such increases in force as have been necessitated by the general movement tending toward greater leisure for laborers.

HOW FRENCH EXPENSES INCREASED.

The law of 1905, regarding the liability of carriers, has further added to railway expenses, by means of payments for damage, to the extent of 15,000,000 a year. While nullifying the contractual clause which combined the privilege of lower rates with a lessening of the carriers' liability, the law has very much reduced the number of cases in which the court of cassation can exert a control over the decisions of judges of fact of the lower courts. However, it must be recognized that these judges, when elected by patrons of a railway, do not always grant it all the necessary guarantees. Doubtless, in the large cities, the commercial tribunals exercise their authority with entire impartiality; but their independence is not the same in the less important centers. The more closely they are in contact with the merchants who elected them, the more they incline to side in their favor against enterprises that are foreign to the region. As to this, statistics regarding the legal suits of one of our great railways in 1910 and 1911 are singularly instructive. It should be noted that all these suits are prepared and defended by the same legal-claim department, which examines all cases in the same light and goes to law only when it believes that there are good chances of a victory. Yet the proportion of legal cases lost by it before commercial tribunals is as follows:

	Per cent.
In Paris	32.5
In other cities of 50,000 population and over	46.6
In cities from 10,000 to 50,000 population	60.9
In cities of less than 10,000 population	80.

When the law of 1905 had overthrown one of the conditions made by the railway systems in return for the voluntary rate reductions introduced by them, the Government recognized that it could not insist upon these reductions without some compensatory arrangement. The minister of public works took the almost unheard-of step of promulgating increases in certain rates that were extremely low and were due for revision when the effect of the new legislation should become known. But when the time came the administration directed its whole weight of authority against the railways, to obtain their renunciation of certain surcharges which it was impracticable to refuse to them if they should insist on their rights. The railways give in upon the promise that a slight compensation would be granted them through the revision of certain tariff regulations much more burdensome to them than really beneficial to the public. Then, as always, when it was proposed to promulgate certain rules facilitating railway service, the administration backed down in the face of demands formulated not so much by large shippers, seriously interested in the question, as by small groups who receive their instructions from agencies on the lookout for opportunities to file claims. As a final result, the railways obtained nothing in exchange for their consent to the maintenance of special tariffs, even in cases where the evidence itself showed that the provisions reducing the liability of carriers had been among the determining conditions underlying the reductions voluntarily agreed to by them.

EFFECT OF RISING INTEREST RATE.

Although the new operating expenses absorbed, and more than absorbed, the increases in revenues, the amount of capital grew and the corresponding charges grew still faster. The general increase in the rate of interest has continued simultaneously with the increase in prices for 15 years past. Of late it is especially with regard to old family investments that this increase has been manifested; the cost of living has forced a search for more productive investments; furthermore, in the face of financial and other threats that are directed from all sides upon accumulated wealth, the difference in safety between securities once regarded as absolutely sound and other investments no longer seem important. Fifteen years ago the rate of interest (including funding costs) at which the railways borrowed hardly exceeded 3.25 per cent; to-day they can no longer issue securities without paying about 4 per cent. Retirement of securities becomes more difficult in the measure by which the end of the period of concession approaches. The annual amortization charge (l'annuité des emprunts) has increased by 0.50 to 0.75 per cent in 15 years, and amounts to 75–115 centimes to-day, according to the length of time yet remaining to the concession of each system, and the charge will grow very rapidly unless measures are taken to render possible the continuation of betterments indispensable to the good of the service.

Whether the increase in capital charges and expenses of operation bears directly upon the State in regard to its own system and the expenditures assumed by it, through the construction of new concessionary lines, and whether it directly affects the railways with which the State is closely associated through guaranties of interest and the division of profits, it reacts no less gravely upon the state budget. For other reasons as well the budget is affected by the general increase in prices and wages, being drawn upon especially for the improvement of the working conditions of all public employees—not to give satisfaction to labor associations or unions, whom it would be easy to bring to their senses, but because the recruiting of civil or military employees becomes more and more difficult, and will become impossible if they are not properly compensated. The new military burdens which have been imposed upon us and the social burdens sometimes imprudently assumed, added to those which have resulted from the natural movement of prices, forced the State to secure new resources for immense sums never required before, not even after the catastrophe of 1871. At the very moment when it becomes necessary to search on all sides for new taxes it is no longer possible to discard a priori any idea of an increase in transportation rates.

THE PROBLEM IN FREIGHT CHARGES.

Without doubt this increase will bear grievously upon agriculture, commerce, and industry. But under whatever form it may arrive the new burdens imposed upon national production will fetter that produc-

tion. To burden the transportation industry, or to tax its transactions, or to attenuate its capital, all tend to diminish the productive power of a country. The problem is to so distribute the load as to render no one part of it crushing. A certain increase in railway rates must nevertheless follow upon a general increase in prices, such as was described at the beginning of this article. Soon, perhaps, the State will no longer be able, in fairness, either to refuse the increase to the railways, in whose prosperity it is directly interested as a partner, or to continue to operate its own system at a continuously increasing loss. Perhaps, also, it would be wise to use from now on additional transportation charges that are relatively low and well selected as part of the resources of which there is need, in order to cover at least the interest on the capital expended to develop all sorts of means of communication.

The memory of the enormouse part that has been played by the considerable decrease in transportation rates in modern progress must not lead us to exaggerate the inconvenience of a slight increase. The experience of actual increases abroad, as well as increases of transportation taxes in France some time ago, show that charges of this kind are not especially prohibitive, provided they be moderate and well selected; and even if they were to bear heavily upon passengers traveling on passes or special tickets (cartes de circulation), yet they constitute a valuable means of moral uplift.

What is of significance to the public welfare is not that a special form of service, like the railway service, is left out of the general movement of increased prices and augmented public charges, but that these charges be not increased without absolute necessity. The policy of reducing transportation rates is an excellent one, but to carry it out it is necessary to avoid increasing beyond measure the charge upon the carriers, the expenses of operations of doubtful utility or of no utility at all, and even, if possible, the total budget. On the other hand, when it becomes absolutely necessary to increase the levy made by the public power upon national production the users of means of communication of all kinds should justly and inevitably contribute their share, at least in the proportion by which special legislation and the general increase in prices have increased the net cost of the services rendered to them.

This is what many countries have already recognized. It looks as if France also will soon have to recognize it.

[Bulletin No. 12.]

METHODS OBSERVED IN ADVANCE OF FREIGHT RATES IN TRUNK LINE TERRITORY.

DECEMBER 16, 1913.

The railroads have published complete tariffs covering the proposed advance in freight rates. These publications involved a reprinting of all the tariffs on many railroads. In order that the exact application of the proposed increase may be better understood, the railroads have filed with the Interstate Commerce Commission a supplementary statement, prepared by Mr. C. C. McCain, chairman of the Trunk Line Association, describing in general terms the methods observed in advancing "trunk line" rates.

The controlling principle was to bring about a uniform advance of 5 per cent on all class and commodity traffic via the various standard and differential routes: (1) From all eastern points to trunk line western termini and points beyond, domestic and import; (2) from western termini of the trunk lines to all eastern points, domestic and export, and (3) between all eastern interior points.

The detailed instructions formulated for this purpose, and which were employed by all roads, were as follows:

"In computing and publishing all revised class and commodity rates in cents per 100 pounds, decimals of tenths to be employed.

"In figuring advanced per ton rates, fractions of 1 cent per ton to be disposed of by dropping 49 hundredths of 1 cent or less per ton and increasing 50 hundredths or more per ton to 1 cent.

"The minimum advance in the per ton rates to be 5 cents per ton and ¼ cent for rates in cents per 100 pounds expressed in decimals.

"In computing through westbound rates, the New York-Chicago rate will first be advanced 5 per cent, and other western points taking a percentage of the New York-Chicago rate, will take the established percentage of the new advanced Chicago rate, with the understanding that port differentials heretofore established and recognized will be continued.

"In computing other rates not based on a percentage of the New York-Chicago rate, recognized differentials above or below advanced basing rates will be maintained."

The new rates, generally, were constructed in accordance with the foregoing; there were, however, certain exceptions to the strict application of the 5 per cent increase which were regarded as necessary in order that the long-established competitive rate relations as between the principal shipping points and via various routes should remain substantially as before. Typical instances of these exceptions are given, as follows:

Under existing methods governing the west-bound rates from the seaboard, certain differentials have applied as between the Atlantic ports, known as port differentials, under which the rates from Philadelphia and Baltimore and points taking the same rates to western points have been stated amounts lower than the rates currently in effect from New York. Instead of computing the advanced rates upon the existing rates from Philadelphia and Baltimore, the new rates have been obtained by observing the existing differentials under the new rates established from New York, and while this process results in some variation from an actual 5 per cent advance, the average advance will not materially exceed 5 per cent. Under the new basis, the rates from Philadelphia and Baltimore and points taking the same rates will bear the same relation to the rates from New York as now prevailing.

From New York, Boston, Philadelphia, and Baltimore rates are published by various differential routes, such as rail-and-lake, ocean-and-rail, and canal-and-lake, as the case may be, the rates via these routes being specified amounts under those of the standard all-rail routes. When computing the new rates the differential relation of these several routes has been maintained as heretofore, the rates of the standard routes having been first advanced 5 per cent and those of the differential routes then obtained by deducting therefrom the established differentials. This method operates to produce slight variations from the exact advance of 5 per cent via such routes.

For many years the rates from eastern seaboard and interior points to points in Central Freight Association territory have been constructed under what is known as the westbound percentage scale, by which the rates to such points have been determined under assigned percentages of the current rates New York to Chicago; for example, the percentages of several points are as follows: Peoria, 110 per cent; St. Louis, 117 per cent; Cincinnati, 87 per cent; Indianapolis, 93 per cent; Detroit, 78 per cent, and Grand Rapids, 96 per cent of the rates New York to Chicago. When computing the new rates this percentage method was observed, the result being less variation in the relation of rates as between western points than under the method of applying the 5 per cent increase to the former rates to such points, and a close approximation to the advance of 5 per cent.

The former rates from eastern interior points, such as Albany, Syracuse, Binghamton, etc., have similarly been made under a fixed percentage relation to those from seaboard points, and in order to continue this relation the same method has been observed in computing the advanced rates from such origin points. The observance of this plan in connection with the new rates has resulted in slight variations from an actual 5 per cent advance.

It was regarded as desirable to prescribe a minimum advance per 100 pounds or per ton. The minimum prescribed, as shown above, was one-quarter cent per 100 pounds, or 5 cents per ton. Where existing rates were of small amount, the application of this minimum has operated to increase such rates more than 5 per cent; for example, the rate of 20 cents per ton, to which a minimum of 5 cents is added, produces 25 cents, the advance being 25 per cent. Variations of this character will occur in sundry rates of low amount, but usually as between points where the traffic involved is not large and would not therefore materially affect the general average of the 5 per cent increase.

There are many instances throughout eastern territory where through rates to points on different roads are constructed on basis of adding to the rates to the junction points certain arbitrary rates. The rates to these junction points have in all instances been advanced, and in certain cases the arbitraries beyond junction points have been similarly advanced. Where such arbitraries were not advanced the revised through rates were increased only to the extent of the advance to the junction points, which was not equivalent to a full 5 per cent advance in the through rate.

The rates from Albany, Syracuse, Binghamton, and other interior points to western points bear a certain relation to the rates from New York or Buffalo to the same western points. Similarly, the rates from eastern points to Cincinnati, Indianapolis, Columbus, and St. Louis bear a stated relation as compared to Chicago and as compared with each other.

These relations are recognized as long-established factors in commercial operations, and it is understood that it would be preferable from the public standpoint that they should be continued rather than that the increase should be computed directly upon the existing rates to such points, although the observance of the present plan results in variations from an exact 5 per cent advance.

The new rates to various western points from Philadelphia and Baltimore are computed by employing the New York-Chicago rates as the basic rates and then observing the differential relation governing at Philadelphia and Baltimore under New York, and also observing the percentage group system as governing at western points.

It is believed that, notwithstanding the variations, the application of the new rates to the entire traffic affected will very closely approximate an advance of 5 per cent.

[Bulletin No. 13.]

PROPOSED RATE ADVANCES IN THE MIDDLE WEST.

DECEMBER 18, 1913.

In order that there may be a clear understanding of the method of applying the proposed 5 per cent increase in freight rates to the complicated rate structure in the Middle West, the railroads have filed with the Interstate Commerce Commission a statement prepared by Mr. E. Morris, chairman of the Central Freight Association.

CLASS RATES IN CENTRAL FREIGHT ASSOCIATION TERRITORY.

The class rates between points within Central Freight Association territory, both intrastate and interstate, were, except as may be hereafter stated, increased as follows: Rates 5½ cents per 100 pounds and less were increased one-fourth of 1 cent; rates in excess of 5½ cents were increased 5 per cent; minimum increase, one-fourth cent per 100 pounds.

An exception to an increase of 5 per cent, literally speaking, is the employment of the established differentials from Youngstown and Cleveland rate points.

A second exception to the literal increase of 5 per cent is the intrastate class rates applying between points in the Lower Peninsula of Michigan and also the interstate rates applying between points in the Lower Peninsula of Michigan and certain points in northern sections of Indiana and Ohio adjacent to southern State line of Michigan, which were affected by the basis announced for recheck of the intrastate rates between points in the lower peninsula of Michigan.

The rates from and to Louisville, Owensboro, Henderson, and Paducah, Ky., which were made subject to established arbitraries in excess of the increased rates published from and to the usual Ohio River base points in cases where arbitraries were used in obtaining present rates.

Still another exception to an increase of 5 per cent are the rates proposed between Buffalo, N. Y., Erie, Pa., Salamanca, N. Y., Pittsburgh, Pa., Wheeling, W. Va., and points taking same rates and points contained in territory taking higher than 100 per cent and some points taking 100 per cent of rates applying from Chicago to New York City. The rates between these points were advanced, subject to established percentage of the increased rates proposed from same origin points to New York City.

CLASS RATES EXTRATERRITORIAL.

The rate increase, in so far as it applies where joint through rates are in effect from and to South, Southwest, and Northwest, is as follows:

Northwest: The rates between points located in territory east of the Indiana-Illinois State line and points in Wisconsin, eastern Minnesota, and upper peninsula of Michigan, taking Winona, St. Paul, Duluth (Minn.), Marquette, Hancock, Houghton, Michigamme, and Sault Ste. Marie (Mich.), rates were increased to the extent of the increase made in the rates applying between Pittsburgh and Chicago.

The rates applying between Buffalo and Pittsburgh rate points and Lexington and Winchester, Ky., groups were advanced subject to the usual percentage of the increased basing rates announced to apply between Lexington and New York City.

Southwest: The joint through rates applying from territory above described located east of the Indiana-Illinois State line to Arkansas and other southwestern territory are to be increased to the extent of the increase made east of St. Louis on the 5 per cent advance.

COMMODITY RATES IN CENTRAL FREIGHT ASSOCIATION TERRITORY.

The commodity rates applying between points in this territory, both intrastate and interstate, were also advanced in the same manner as class rates. The differential adjustments were used from western Pennsylvania, eastern and southern Ohio.

The commodity rates now published between points in this territory on basis of percentage of established class rates will continue to be made on same percentage basis, but subject to the class rates increased on basis mentioned above.

COMMODITY RATES EXTRATERRITORIAL.

The extent to which the joint through commodity rates applying from and to South, Southwest, and Northwest were increased is as follows:

Northwest: The joint through commodity rates published between points located in territory mentioned above east of the Indiana-Illinois State line and points in Wisconsin, eastern Minnesota, and upper peninsula of Michigan, taking Winona, St. Paul, Duluth (Minn.), Marquette, Michigamme, Houghton, Hancock, and Sault Ste. Marie (Mich.), rates were advanced amounts equal to the increase made in the commodity rate applying between Chicago and points east thereof.

In some cases the advance made in the commodity rate from or to Chicago, as the case may be, and the base point east thereof was the measure of the increase made in the joint through rates published on the same commodity from all points in respective origin territories.

To trans-Mississippi River territory: The joint through commodity rates from territory located east of the Illinois-Indiana State line to trans-Mississippi River territory, Montana, Wyoming, Colorado, Oklahoma, and east thereof, to which joint through commodity rates are published from said origin territory, were advanced to the extent of the increase made in the rates from the base or origin points mentioned, as the case may be, to the junction of Central Freight Association and western roads, which was used as the western base point.

Through rates made on combination of locals or proportional rates were increased to extent of increase made in the locals or proportional rates applicable from and to the base point used.

RAIL-AND-LAKE RATES—CLASS.

The class rates from points in western New York and Pennsylvania, Ohio, Indiana, etc., to points named in caption were advanced on basis as follows:

First: Combination of locals on increased basis to and from Lake Erie ports were used.

Second: Baltimore rates on increased basis were applied as maxima.

Third: The usual grouping and adjustments were observed.

Fourth: Customary differentials below all-rail rates were applied.

RAIL-AND-LAKE RATES—COMMODITY.

The commodity rates were obtained as follows:

Manufactured iron and steel articles: Rates were increased subject to foregoing principle as mentioned for class rates.

Cast-iron pipe: Rates were increased subject to usual differentials under all-rail rates from base points to St. Paul, Minn.

Miscellaneous commodities: Joint through rates were increased 5 per cent.

RATES FROM CENTRAL FREIGHT ASSOCIATION TERRITORY TO TRUNK LINE TERRITORY—CLASS.

The class rates from Chicago, Ill., to New York City were increased 5 per cent.

The class rates from other points in Central Freight Association territory to New York City were increased subject to the established percentage of the advanced basing rates as named above to apply from Chicago to New York City.

The rates to interior eastern basing points were computed subject to the established percentage of the advanced basing rates to New York City.

The rates to Boston rate territory are made subject to the following arbitraries in excess of the advanced rates to New York City:

1	2	3	4	5	6	classes.
7	6	5	4	3	2	cents per 100 pounds.

The advanced rates to Philadelphia rate points are made subject to an arbitrary of 2 cents per 100 pounds for all classes below the increased rates to New York City; and the advanced rates to Baltimore rate points are made subject to an arbitrary of 3 cents per 100 pounds below the increased rates to New York City.

The advanced rates to Newport News and Norfolk rate points are the increased rates to Baltimore, except from certain territory located south and east of Columbus, Ohio. From this excepted territory the usual practice was observed, and the increased rates from Columbus, Ohio, to Baltimore, Md., are applied as minima to Virginia cities.

RATES FROM CENTRAL FREIGHT ASSOCIATION TERRITORY TO TRUNK LINE TERRITORY—COMMODITY.

The commodity rates (which are commonly understood to mean rates applicable on articles that are not subject to the established class rates governed by official classification) from origin points west of Buffalo and Salamanca, N. Y., Pittsburgh, Pa., Parkersburg and Charleston, W. Va., to points east thereof, were also advanced subject to 5 per cent increase in the basing rates applying to New York City.

Where a basing rate existed from Chicago to New York City, such basing rate was advanced 5 per cent, and the rates in effect from other points in said origin territory to New York City were computed on the established percentage of the advanced basing rate from Chicago to New York City.

Where there are commodity rates from origin points located in Central Freight Association territory and no commodity rates are now published from Chicago on like traffic, such commodity rates from each origin point to New York City were advanced 5 per cent.

The rates to interior eastern basing points were computed subject to the established percentage of the advanced basing rates to New York City, except where the present rates may have been arrived at subject to different procedure, in which event such procedure was observed in publication of increased rates.

EXPORT RATES.

The rates on by-products of grain, etc., from points located in territory described under section 1, when for export, were advanced as follows:

From Chicago to New York City, the basing rate was increased 5 per cent.

From points taking 100 per cent and less, the increased rates were obtained as follows:

To New York City, established percentage of the increased rates from Chicago to New York City.

To Boston, Philadelphia, Baltimore, Newport News, and Norfolk the usual rule was observed.

From points west and south of Chicago taking in excess of 100 per cent of Chicago to New York rate, the arbitraries above referred to were added to the increased rates from Chicago.

RAIL—LAKE-AND-RAIL RATES.

The rates from points in Western Indiana, also Illinois and on Mississippi River, to Buffalo, Salamanca, N. Y., Pittsburgh, Pa., and points east thereof were advanced subject to established differentials less than the all-rail rates on the increased basis.

RAIL-AND-OCEAN RATES.

The rates from points in Central Freight Association territory to North Atlantic seaboard ports were advanced, subject to the established differentials less than the all-rail rates on increased basis.

The rates to eastern points which make on arbitraries over rates to the base point will continue to be made in the same manner, subject to the increased rate to the base point.

[Bulletin No. 14.]

METHODS OF ADJUSTING INCREASED COAL FREIGHT RATES.

DECEMBER 20, 1913.

In order that the methods pursued in adjusting the proposed 5 per cent increased freight rates to the coal rate structure may be clearly understood, the railroads interested have filed with the Interstate Commerce Commission two general statements. The first of these, relating more particularly to the eastern territory, was prepared by Mr. R. H. Large, general coal freight agent of the Pennsylvania Railroad Co. The substance of Mr. Large's statement is as follows:

I.

The instructions received from the executive committee of the Trunk Line and Central Freight Associations required that a general advance be made of 5 per cent, with a minimum of 5 cents per ton, the existing differentials to be preserved.

It was determined by the coal-traffic officers—

(1) That wherever port or regional differentials existed, in making the 5 per cent advance such differentials should be preserved.

(2) That fractions of forty-nine one-hundredths of 1 cent should be dropped, and where the straight 5 per cent figured fifty one-hundredths of 1 cent, a cent should be added.

BITUMINOUS COAL RATES, EASTBOUND.

(1) Tidewater: The existing rates on bituminous coal to the Atlantic seaboard for transshipment by water to coastwise or export destinations from the various fields of origin hereinafter designated to the several ports of transshipment, which rates have existed since May 1, 1907, are as follows:

From the Georges Creek and Cumberland, upper Potomac, Austen-Newburgh, Meyersdale, Somerset, and Clearfield regions:

To Baltimore, f. o. b. vessels, $1.18 per gross ton.

To Philadelphia, f. o. b. vessels, $1.25 per gross ton.

To the lower New York Harbor ports of South Amboy, Elizabethport, etc., $1.55 per gross ton.

To the upper New York Harbor ports, $1.60 per gross ton.

From the New River and Pocahontas districts to Hampton Roads, via the Chesapeake & Ohio Railway, Norfolk & Western Railway, and Virginian Railway, $1.40 per gross ton.

While the basic rate to tidewater is the rate from the Georges Creek and Cumberland region to Baltimore, via the Baltimore & Ohio Railroad, of $1.18 per gross ton, it may be said that the basing rate is the $1.25 rate to Philadelphia, on which rate the differentials to the several other ports are based.

As a straight 5 per cent advance in the aforesaid rates would have resulted in an advance of 8 cents in the $1.55 rate to New York Harbor, of 7 cents in the $1.40 rate to Hampton Roads, and of 6 cents in the $1.25 and $1.18 rates to Philadelphia and Baltimore, and as it was essential that the prevailing differentials to the several ports should be preserved, it was determined to advance the tidewater rates based on the average rate to all ports.

Adding the five before-mentioned rates toegther and dividing by five gives an average rate of $1.396 per gross ton, 5 per cent of which would be 7 cents per ton, the equivalent of a 5 per cent advance in the $1.40 rate to Hampton Roads. It was therefore determined to advance the tidewater rates 7 cents per ton. Thus, while the rate to Hampton Roads would be advanced exactly 5 per cent, the rate to New York Harbor less than 5 per cent, and the rates to Philadelphia and Baltimore slightly more than 5 per cent, the port differentials are preserved.

It was further understood that the existing regional differentials over and above the aforesaid rates from the Georges Creek and Cumberland, Austen-Newburgh, Meyersdale, Somerset, and Clearfield regions, and from the New River and Pocahontas regions, should be preserved. For example, the rates to Baltimore, Philadelphia, and New York Harbor from the Greensburg district are 10 cents per ton above the rates from the Clearfield region; from the Westmoreland and Fairmont regions, 25 cents above the rates from the Clearfield region, etc.

Those, as well as all other regional differentials to tide, were preserved, so that all rates on bituminous coal to the Atlantic seaboard for transshipment into vessels for coastwise or export trade were advanced a straight 7 cents per ton—i. e., an average advance of 5 per cent on the minimum rate to tide, which, of course, yields materially less than a 5 per cent advance on the average rate to tide.

(2) All-rail—New England: It was further determined, using as the basing rate the minimum rate (which is the Clearfield-Somerset rate), to advance the all-rail rates to New England a straight 5 per cent, observing the rule with respect to fractions decided upon, and that the inland rates from the ports of entry in New England to the interior of New England should be advanced 5 per cent, with a minimum of 5 cents per ton, by the New York, New Haven & Hartford Railroad Co., the Boston & Maine Railroad Co., and others.

(3) All-rail—Eastern other than New England: The all-rail rates to eastern destinations in New York State, Pennsylvania, New Jersey, Delaware, Maryland, Virginia, and the District of Columbia, and into Canada via the so-called St. Lawrence River gateways, were advanced a straight 5 per cent, using as the basing rate the so-called Clearfield-Somerset-Meyersdale rate, and the regional differentials over and above that rate were preserved both in the all-rail rates to New England and in the all-rail rates to the other territory referred to.

Northbound.

The rates to the Buffalo district were advanced 6 cents per ton, that being 5 per cent on the minimum rate, i. e., the rate from the

Reynoldsville district of $1.10, and likewise 5 per cent on the maximum rate, i. e., the rate from the Pittsburgh district of $1.25. This advance of 6 cents per ton was likewise made in the proportions of the through rates to the north side of Lake Erie in such joint rates as were published into Canada via Ashtabula and other Lake Erie ports and across Lake Erie car ferry routes, thus preserving the existing relation between the all-rail rates via those routes and the combination of the rates to and beyond Black Rock.

Westbound.

(1) Cargo coal rates: The existing rates on bituminous coal from the several fields of origin to Lake Erie ports for transshipment as cargo up the Great Lakes are as follows:

	Per net ton.
From the Pittsburgh district	$0.78
From the Ohio district	.75
From the Fairmont district	.90
From the Kanawha and Thacker districts	.97
From the Pocahontas and New River districts	1.12

As the rates from the Pittsburgh, Ohio, Fairmont, Kanawha, and Thacker districts were less than $1 per ton, and as the executive officers had determined that the minimum advance should be 5 cents per ton, it was decided to advance all the rates from the several fields of origin to the several Lake Erie ports for transshipment as cargo up the Great Lakes a straight 5 cents per ton, thus preserving the existing regional differentials.

(2) Line rates: In the all-rail rates to the West the Pittsburgh district rate was used as the basing rate. That rate was advanced 5 per cent, the regional differentials from the other districts being preserved. In this instance, in the case of the rate to Chicago and some other western places where the rates are all-rail from the Ohio district are on a differential of 25 cents per ton less than the Pittsburgh district rate, the advance may be said to be slightly more than 5 per cent.

ANTHRACITE COAL RATES.

Eastbound.

By reason of the fact (1) that the existing rates on anthracite coal to the East are already the subject of bitter attack and that the Interstate Commerce Commission is about to proceed with an exhaustive examination into the rates, rules, regulations, and practices of the several carriers of anthracite coal, and (2) that the small sizes of anthracite coal must practically all be sold in the East and are now sold at a loss (that is, at less than the cost of production), in competition with bituminous coal, no advance therein was made.

Westbound.

The rates on anthracite coal to and beyond the western termini of the trunk lines were advanced a straight 5 per cent. That is to say, the rate to Buffalo was advanced to 5 per cent, and the rates published by the several lines operating westward therefrom were also advanced 5 per cent, as were likewise the all-rail rates to and beyond Pittsburgh, published by the Pennsylvania Railroad Co. and its connections; the rates to and beyond Salamanca, published by the Erie Railroad Co. and its connections, and the rates to and beyond Pittsburgh, published by the Philadelphia & Reading Railway Co. in connection with the Baltimore & Ohio Railroad Co. and their connections, and all other all-rail rates, with the exception that to the several Mississippi River crossings, to which there are joint rates established, which rates are based on certain differentials over and above the Chicago rates, those differentials were preserved.

COKE RATES.

It will be observed from the foregoing that in every instance, with the exception of the rail rates to Chicago and a few other western places, insofar as the advances in the bituminous and anthracite coal rates are concerned, the basing rate on which the 5 per cent advance was made was the minimum rate. The reason for that was that the preponderant proportion of the bituminous coal tonnage moved under those rates, and it was realized that unless the minimum rate was used as the basis the carriers would receive a greater return than 5 per cent.

In advancing the coke rates we deviated from this practice in principle, but only to a very slight degree in result. By reason of the fact that the preponderant proportion of coke—probably 90 per cent or more—consumed throughout the Eastern and Middle States is produced in the Connellsville region, which rate, generally speaking, is the maximum rate, it was determined but fair to use that rate as the basing rate, and therefore the rates on coke from the Connellsville region eastbound, northbound, and westbound were advanced 5 per cent. This results in a greater advance than 5 per cent in the rates from the Fairmont, Latrobe, and mountain regions eastbound, but as the production in those fields is exceedingly limited as compared with the production in the Connellsville field, the net result is that the advance will be but slightly more than 5 per cent.

The sum and substance of the entire matter is that by reason of using the minimum rate as the basing rate in every instance in advancing the coal rates, except in the case before referred to, the general advance published in the tariffs already filed will be in the aggregate materially less than 5 per cent.

II.

COAL RATES IN THE MIDDLE WEST.

The statement filed with the commission covering the increase of coal rates in the Middle West was prepared by Mr. George H. Ingalls, freight traffic manager of the "Big Four" Railroad, and is as follows:

In advancing coal rates westbound the Pittsburgh-Chicago rate was taken as the base rate, and the rates from that district were advanced 5 per cent to all points north of the Ohio-Michigan line and to all points west of a line drawn from Toledo to Cincinnati on the Cincinnati, Hamilton & Dayton Railway; to all points on and east of that line they were advanced 5 cents per ton. The rates to Chicago, Peoria, St. Louis, and Cairo were advanced 10 cents per ton as well as the proportional rates to the upper Mississippi River crossings and across-lake—this to equalize, via those junctions, the rates made to western points on the Chicago combinations.

As the Ohio rates are carried on a differential under the Pittsburgh rates the same advance was made in the rates from the Ohio fields to the territory outlined above, thus maintaining the regional differentials.

Rates on coal to the lake for transshipment from the Pittsburgh district were advanced 5 cents per ton, and in order to maintain likewise the regional differentials, the rates from Ohio fields to lake for transshipment were advanced 5 cents per ton.

The coal fields in Indiana and Illinois have been treated as one coal field, any change in rates from one State necessarily affecting the rates from the other State. Therefore, it has been the practice to consider together the rates on coal from both States.

There are in existence to-day practically 10 working districts, with as many rates, and in order to maintain the present regional differentials, the rates have been advanced uniformly from each district 5 cents per ton to Chicago and Chicago rate points.

The rates to northern Illinois and southern Wisconsin south of a line on or south of the Chicago, Milwaukee & St. Paul Railway, Milwaukee to Madison via Watertown, thence via Chicago & North Western Railroad to Dodgeville, were advanced 5 cents per ton from each district.

Rates to northern Illinois, southern Wisconsin, and some points in Iowa have been advanced 5 cents per ton from each district. The rates to the north of the above-outlined territory have not been advanced, due to the fact that these markets are competitive with eastern coal handled via lake, and no advance having been made in rates from the Head of the Lakes to this territory, it was felt equitable to maintain the present basis of rates.

The rates from Indiana and Illinois to southern Indiana and Illinois points have been advanced 5 cents per ton uniformly from each district.

No advance has been made to points south of the Ohio River, due to there being no corresponding advances from competitive fields in Alabama.

An advance of 5 cents per ton has been made from Indiana and Illinois points to all central and northern Indiana points, thus maintaining the regional differentials.

To Michigan points the rates from Indiana and Illinois are based on proportional rates to Chicago junctions in connection with specifics into Michigan.

The rates from the Danville group to Michigan territory are the base rates and were increased 5 per cent, and an advance of the same amount per ton made from other Illinois-Indiana districts, thus maintaining the regional differentials. This corresponds to the 5 per cent advance to this territory that has been made from eastern coal fields.

As tariffs from Illinois districts serving St. Louis markets were filed on April 1, 1913, advancing the rates on coal 5½ cents per ton to East St. Louis, East St. Louis rate points, and St. Louis proper, and the same having been suspended by the Interstate Commerce Commission and being now in the course of investigation, no further advance has been made in those rates. The proposed advance would maintain the present regional differentials.

As of November 29 the proportional rate on coal destined to points west of St. Louis were advanced 5 cents per ton, uniformly.

Where through rates are made, in combination with the Iowa distance rates on fine coal, the rates have been advanced 5 cents per ton, the same as the upper Mississippi River crossings, thus maintaining the regional differentials.

[Bulletin No. 15.]

HOW RAILROAD WAGES HAVE BEEN INCREASED.

DECEMBER 21, 1913.

The railroads participating in the application for increasing freight rates have filed with the Interstate Commerce Commission statistics showing how wages have increased on these roads during the past several years.

The various railroad companies in this territory paid out $506,000,000 in wages and salaries in the year ending June 30, 1913. Estimates for 29 of the 38 railroad systems concerned show an increase in wages for 1913 over 1910 of $48,618,972.41, due to changes in rates of pay and working conditions.

This figure was obtained as a result of a request to the railroads to take the actual performance for the year ending June 30, 1913, and compare the rates of pay and working conditions prevailing in that period with those in effect in October, 1909, a period prior to the date of the important increases.

In addition to the increases up to June 30, 1913, careful estimates show that the increases in wages recently granted to the firemen, conductors, and trainmen will add not less than $8,750,000 more to the expenses of the railroads parties to the respective arbitration proceedings, this estimate being based on the volume of business for the calendar year 1912.

In addition to the wage increases granted in the calendar year 1910, a small portion of which was effective in the fiscal year ending June 30, 1910, the engineers, firemen, conductors, and trainmen have been awarded increases through arbitration proceedings amounting to $10,350,000 per annum on the eastern railroads, and increases in rates of pay have been granted to various other classes of labor amounting to large sums in the aggregate in addition to those granted in the year 1910.

Taken altogether, there has been an increase of 10.62 per cent in the average rates of pay on these railroads in 1913 over 1910.

Figures for the Pennsylvania system show that during the year 1913 the various companies of the system paid in wages the sum of $189,397,069, an increase for the 1913 pay roll of $18,088,673 over what would have been paid to the same number of employees at the rate of wages prevailing in 1909.

Various increases and adjustments in wages from 1901 up to June 30, 1913, applied to the 1913 performance, added over $45,000,000 to the pay rolls of the Pennsylvania system companies by reason of changes in rates of pay and working conditions.

The records of the New York Central lines show that wages paid since 1910 have amounted to $10,000,000 more than would have been the case had not the successive increases and adjustments been made.

On the Baltimore & Ohio Railroad the increases amounted in this period to $4,069,014.

[Bulletin No. 16.]

ATTITUDE OF THE RAILROADS CONCERNING QUESTIONS SUBMITTED BY THE COMMISSION.

JANUARY 7, 1914.

On December 26, 1913, the Interstate Commerce Commission addressed to the carriers concerned in the case for advanced freight rates a series of 78 questions relative to the organization and practices of the railway companies.

On January 7, 1914, a committee representing the carriers appeared before the commission, and the general attitude of the railroad companies concerning these questions was set forth by Mr. Daniel Willard, president of the Baltimore & Ohio Railroad Co., at the opening of the hearing, as follows:

"This commission, in its circular letter of December 26, 1913, addressed to carriers in official classification, announced that it would on

January 7, 1914, hear parties concerning any matters in connection with the list of questions therewith submitted, and as to which further instructions might be desired. It is in response to that invitation that the carriers interested in this proceeding appear here to-day.

"The carriers have given careful consideration to the questions referred to, and they wish to announce first of all their entire willingness to cooperate as completely as possible with the commission in a full and thorough development of the whole case, and to that end will endeavor to furnish any and all information which may be desired, but inasmuch as the commission has ordered that complete answers to all of the 78 questions be submitted not later than January 31, 1914, and in view of the fact that some of the questions contemplate a review of complicated transactions extending over a period of 15 years, it has seemed desirable to the carriers that they avail themselves of the opportunity now afforded to discuss the matter.

"The commission states in its letter of inquiry that 'elaborate and helpful compilations from the carriers' accounts have been submitted by the railroads with a view to showing the diminishing net returns from operations and lessened net income,' but it says further that 'these statements of the financial result do not furnish fully the data deemed by the commission to be necessary to determine the general course carriers may pursue to meet the situation' and that additional data is desired in that connection.

"The carriers involved have, since the inquiries were received, made as thorough an examination as possible of the questions for the purpose of developing the information required as well as the time and expense involved in furnishing full and complete answers thereto. This examination indicates that it will be impossible to furnish all of the information desired by January 31, and that several months will be required in which to prepare some of the answers, and the work will involve a very considerable expense.

"However, for the purpose of developing how the information desired may be best obtained, and at the same time with minimum delay and expense, the carriers would like at this time to discuss with the commission some of the more difficult features involved, and will be glad to submit suggestions with respect thereto.

"It may be mentioned in this connection that the chief executives of a number of the more important lines involved in the proceeding desire to appear as witnesses when hearings are resumed, and it is quite possible that by cross-examination the commission may be able to obtain from such witnesses much of the additional information deemed necessary to enable it to reach a determination of the matter at issue.

"While the carriers do not wish to appear as urging improper haste concerning a matter of such great importance, they are very deeply impressed with what appears to them to be the seriousness of the situation, and they hope it may be possible to proceed with the hearing without undue delay.

"They believe that they have already demonstrated, or will be able to do so, a necessity for increased revenue, and they feel that the advance proposed by the schedules now on file will, if granted, only serve to partly meet the necessary requirements of the situation. In suggesting, however, that the situation be met by a uniform advance of freight rates of approximately 5 per cent, the carriers have felt, as already pointed out, that that was the only practicable solution available at the present time."

[Bulletin No. 17.]

RESULTS OF OPERATIONS IN THE CENTRAL WEST.

JANUARY 14, 1914.

To set forth the needs of the railroads in the Central West in the application for advanced freight rates, Mr. J. L. Minnis, attorney for the Central Freight Association lines, has just filed with the Interstate Commerce Commission a digest of the evidence submitted by Mr. W. C. Maxwell, on behalf of the Central Freight Association companies.

Quotations from the digest prepared by Mr. Minnis follow:

"The data, therefore, covers a total mileage of 34,866 miles, arranged in groups.

"Group 1 contains the mileage of 38 companies, aggregating 31,937 miles—28,186 miles, or 78.6 per cent of the total mileage in the territory, and the 3,751 'outside mileage'—and includes all the mileage in the territory except 13.8 per cent of the mileage of the territory; and except, also, the mileage of 46 short roads owned by 46 companies, aggregating 2,729 miles, or 7.6 per cent of the total mileage in the territory, whose aggregate gross revenue for the year 1911 was less than $8,000,000.

"(a) Prior to the fiscal year 1911 the carriers were free to promulgate their interstate rates and substantially the body of their intrastate rates, and to adjust them from time to time to ever-changing conditions, and were, in a practical sense, unhampered in the management of their properties.

"(b) The ratio of operating expenses and taxes to operating revenues of Central Freight Association territory lines reached the low point of a descending period in 1910 and began to ascend in 1911; for instance, the ratio of group 1 was:

	Per cent.
1908	75.11
1909	73.28
1910	72.40
1911	76.49
1912	77.25
1913	78.56

"(c) Beginning with the year 1911 the power of the carriers to promulgate their interstate rates and substantially the body of their intrastate rates was placed under the supervision of the National and State Governments, so they could not adjust their rates to the increasing ratio of expenses and taxes to earnings; and other governmental regulatory laws have been enacted affecting the management, expenses, and revenues of the carriers.

RESULTS FOR 1910 AND 1913.

"The lines of group 1 increased their mileage, 1913 over 1910, first main track owned 684 miles, operated 828; all tracks owned 3,320 miles, operated 3,568; and increased their property investment $225,503,220.

"Operating revenues, 1913 over 1910, increased $71,398,933; operating expenses and taxes increased $84,934,336; operating revenue, after deducting operating expenses and taxes, decreased $13,535,403; or, after deducting operating expenses, taxes, and rentals, decreased $13,893,910; or, after deducting operating expenses, taxes, and hire of equipment, decreased $15,133,257; or, after deducting operating expenses, taxes, rentals, and hire of equipment, decreased $15,491,764. The decrease in net corporate income was $23,207,414.

"The increase in operating revenue, $71,398,933, measures an additional service rendered the public—increase, 1913 over 1910, in tons carried 1 mile, approximately 10,000,000,000, or an increase of 16.43 per cent; and in passengers carried 1 mile, 400,000,000, or an increase of 7.32 per cent.

"Not withstanding the much larger volume of business enjoyed in 1913 over 1910, the power of the carriers to earn a return on their property declined substantially.

RESULTS IN GROUP 3.

"While the showing of group 1 indicates that the carriers as a whole in the territory are rapidly approaching financial disaster, it is believed the showing of that group is far above the average railroad situation in the territory.

"Group 3 embraces 28 companies, which operate 19,416 miles, or 54.1 per cent of the entire mileage of the territory. It includes all the mileage in the territory, except that of the 'four main trunk line connections,' the 'coal and ore roads,' the '46 short roads,' and the 'excluded mileage' (the Baltimore & Ohio; Erie; Chicago, Burlington & Quincy, etc.), and embraces all the mileage which serves generally the people of the territory, and whose prosperity is dependent upon the territory.

"Obviously, the reasonable needs of the lines embraced in group 3—54.1 per cent of the entire mileage of the territory, to say nothing of the 46 short roads—must control in determining the reasonableness of rates in the territory, if the people in that section are to have adequate transportation facilities and prosper measurably with other sections of the country.

"The lines group 3 increased their mileage, 1913 over 1910—of first main track owned, 543 miles; operated, 604 miles; of all track owned, 2,020 miles; operated, 2,106 miles; and increased their property investment, $99,570,844.

"Operating revenue, 1913 over 1910, increased $33,025,190, but the operating expenses and taxes increased $43,724,956, resulting in a decrease in operating revenue, after expenses and taxes, of $10,699,766; or a decrease in operating revenue, after operating expenses and taxes and rentals, of $10,271,473; or a decrease in operating revenue, after operating expenses and taxes and hire of equipment, of $13,526,961; or a decrease in operating revenue, after operating expenses and taxes, rentals, and hire of equipment, of $13,098,668; and a decrease in net corporate income of $15,987,445.

"The increase in operating revenue, of $33,025,190, measures an increase, 1913 over 1910, in tons carried one mile of 4,500,000,000; passengers carried one mile, 145,000,000.

"It will be observed that after swelling the volume of business by this increased traffic and increasing the property investment approximately $100,000,000, group 3 had remaining, after deducting operating expenses and taxes, above $10,000,000 less money than in 1910.

DIVIDENDS PAID IN 1910 AND 1913.

"Dividends paid by the lines in group 3 decreased, 1913 as compared with 1910, $5,943,035. The companies paying dividends in 1910 include the Grand Rapids & Indiana—which has not paid subsequent dividends—and the Chicago & Alton and Toledo, St. Louis & Western—who ceased paying dividends in 1913. In 1911 four companies reduced their dividends; in 1912 five companies reduced their dividends, and in 1913 six companies reduced their dividends.

"Only 9 companies out of 28 in group 3 paid dividends in 1913."

[Bulletin No. 18.]

SITUATION OF EASTERN RAILROADS IN MARCH, 1914.

MARCH 20, 1914.

At the hearing before the Interstate Commission to-day, Mr. George F. Brownell, vice-president of the Erie Railroad, in requesting that the commission proceed immediately to hear the conclusion of the case of the railroad, made the following statement to the commission:

It is the earnest desire of the carriers, as it has been their desire since these proceedings were instituted, to complete the presentation of their evidence in support of the advanced rates and close their case at the earliest possible date, in order that the matter may be submitted for the consideration and determination of the commission without any avoidable delay. The petition of the carriers for a hearing of the commission's determination in the 1910 case, as to the necessity for additional revenue to be determined through higher freight rates, was filed in May of last year.

The commission, under date of June 21, denied the petition for rehearing, but instituted a proceeding of inquiry (Docket 5860) into the following matters:

1. Do the present rates of transportation yield adequate revenue to carriers by railroad operating in official classification territory?

2. If not, what general course may carriers pursue to meet the situation?

* * * * * * *

In its report upon the petition for a rehearing, Commissioners Clements and Marble dissented from the institution of this proceeding of inquiry upon the ground that it should not be made in advance of the filing and posting of the proposed increases. Commissioner McChord, while agreeing to the general proposition stated by Commissioners Marble and Clements, was of the opinion that the investigation should be made.

In these circumstances and in order, among other things, to meet the views of the commissioners named, the carriers filed their tariffs providing for a general increase on the basis of 5 per cent, with certain minima and certain modifications, in order to preserve certain necessary differentials. These tariffs were to become effective November 15, 1913, but were suspended by order of the commission November 4, 1913, by which order the commission also instituted this hearing (Docket No. 333) concerning the propriety of the increase and the lawfulness of the increased rates, etc., stated in the tariffs so filed. The hearings have proceeded together.

The first hearing was on November 24, at which time Messrs. Willard and Delano made opening statements for the railroad companies, and on that day and two succeeding days a large amount of evidence was presented by accounting officers of the carriers and other witnesses. The hearing was then adjourned for the purpose, among others, of permitting the representatives of the commission and others to examine the carriers' exhibits and prepare for the cross-examination of the accounting officers and other witnesses who had testified on behalf of the carriers.

The commission subsequently, by circular letter of December 26, called on the carriers to prepare and submit answers to some 78 questions propounded by the commission, and announced that on January 7, it would hear parties concerning any matters in connection with the list of questions, as to which further instructions might be desired.

On January 7 the carriers appeared before Commissioner Marble and announced, through Mr. Willard, their entire willingness to cooperate as completely as possible with the commission and furnish any and all information which might be desired. They pointed out, however, that it would take at least several months to prepare answers to those questions, and that the work would involve a very considerable expense. At that time and in that connection Mr. Willard said:

"While the carriers do not wish to appear as urging improper haste concerning a matter of such great importance, they are very deeply impressed with what appears to them to be the seriousness of the situation, and they hope it may be possible to proceed with the hearing without undue delay.

"They believe that they have already demonstrated, or will be able to do so, a necessity for increased revenue, and they believe that the advance proposed by the schedules now on file will, if granted, only serve to partly meet the necessary requirements of the situation. In suggesting, however, that the immediate situation be met by a uniform advance of freight rates of approximately 5 per cent the carriers have felt, as already pointed out, that that was the only practicable solution available at the present time."

Since then there have been numerous hearings with respect to the propriety of the carriers making additional charges for the spotting of cars on industrial tracks, lighterage, reconsignments, and diversions transit, and other services, which are now performed without charge, in addition to the regular tariff rate; also a number of hearings assigned to hear testimony offered by protestants against increases with respect to certain commodities.

In the notice from the commission under date of the 24th instant, assigning hearings for the 30th and 31st instant, it is stated that the carriers have expressed their desire to present, at an early date, additional testimony touching their financial requirements; also to have an opportunity to offer evidence in rebuttal of testimony recently introduced in opposition to the proposed increases in rates, and that March 30 and 31 were assigned for this purpose, and for hearing Mr. Thorne, and that if the carriers were not able to complete their testimony at the close of March 31, the hearing would be continued April 20, inasmuch as arguments had been set for the intervening days. The carriers will not be able to complete the presentation of their case in one day, but could complete it in three days, and they respectfully and earnestly urge that the commission afford two additional days this week to enable them to complete their case.

PRESENT EARNINGS.

The statement of the revenues and expenses of the carriers for the seven months ending January 31, 1914, show a decrease of operating revenue amounting to $6,995,529, and a decrease in operating income of over $51,000,000, as compared with the seven months ended January 31, 1913, being a decrease in operating revenues of 1.5 per cent.

The returns of the roads in Central Freight Association territory for the same period (group 1) show a decrease of $8,178,477 in freight revenue, and a decrease in operating income of $25,190,598. This is without including the figures of the roads in group 2 of the Central Freight Association roads, which, if included, would show a further decreased operating income of over $4,000,000.

The returns of revenues and expenses for February and March, so far as they are now available, are in the same direction, and are of such significance as compared even with the returns for the fiscal year ended June 30, 1913, as to indicate that the condition confronting the carriers at the present time is one of gravity, and that it is of vital importance in the interest of the public, as well as of the petitioning carriers, that the question of the propriety of the advanced freight rates involved in docket No. 333, should be submitted to the commission for their determination at the earliest possible day.

We desire, therefore, that opportunity now be afforded us to advise the commission fully with respect to the situation which now confronts the carriers and respectfully urge that the commission proceed with the inquiry as to the adequacy of freight revenues under present rates, and into the reasonableness of the advanced rates, without further deferring action thereon on account of the collateral inquiry in regard to the practices of the carriers involved in the proceeding of investigation, docket No. 5860, but that the latter be considered by the commission in due course.

[Bulletin No. 19.]

HOW RAILROAD EARNINGS HAVE DECREASED.

APRIL 7, 1914.

The railroads petitioning for a 5 per cent increase in freight rates have filed with the Interstate Commerce Commission figures showing the results of operations for the seven months ending January 31, 1914, of the fiscal year beginning July 1, 1913.

For the three principal systems, namely, the Pennsylvania, Baltimore & Ohio and New York Central, returns show operating revenues of $458,472,676, a decrease against last year of $1,294,375, or 0.3 per cent. Operating expenses increased $25,157,945, and operating income decreased $29,513,161, or 24.8 per cent.

The 40 railroads in Central Freight Association territory showed revenues of $316,584,427, a decrease since last year of $4,850,029, or 1.5 per cent. By reason of the great increases in operating expenses, the operating income of these roads showed a decrease of $25,195,598, or 30.7 per cent.

The Pennsylvania Railroad System, with operating revenues of $223,693,157, increased over last year $1,231,796, while by reason of increased expenses, the operating income decreased $8,434,640, or 15.9 per cent.

The Baltimore & Ohio System, with operating revenues of $59,950,125, showed a decrease of $903,217 in gross, and a decrease of $2,227,429 in operating income, or 13.9 per cent.

Operating revenues of the New York Central System, were $174,829,394, a decrease of $1,622,954, and showing a decrease in operating income of $18,851,092, or 37.8 per cent.

The Erie System's gross operating revenues decreased $612,732, to a total of $37,630,081, and operating income decreased $2,643,970, or 24.8 per cent.

The figures for the 49 roads in the entire official classification territory showed operating revenues of $821,426,031, a decrease of $6,995,529, and such increases in expenses that the operating income was reduced $51,026,935, or 22.5 per cent.

[Bulletin No. 20.]

THE PRESENT CRISIS IN RAILROAD CONDITIONS.

APRIL 9, 1914.

In testifying before the Interstate Commerce Commission in the application for an advance of 5 per cent in freight rates, Mr. Daniel Willard, president of the Baltimore & Ohio Railroad, when asked as to whether or not there was a crisis in the business situation demanding immediate relief, replied:

"I suppose I had better define first what is meant by a crisis, and what I have in mind when I speak of a crisis. When I speak of a crisis, what I have in mind is a condition like this:

"If it has come about, as it seems to have come about, that new money to provide railroad facilities does not now, under existing conditions, earn any return, then it would seem that the carriers could not be expected to put the amount of new money constantly into the property that is necessary in order to take care of the growing commerce which they are called upon to move.

"The history of the Baltimore & Ohio, for instance, shows that for a long period of years it has been necessary to expend from $15,000,000 to $20,000,000 of new capital upon the property each year for new equipment, new facilities, new tracks, and things that are necessary to take care of the developing country which it serves.

"If a condition should come about which would make it seem unattractive or unwise to the Baltimore & Ohio Railroad Co. to continue to put that new capital into the property to provide new facilities and take proper care of the commerce that is growing all the time, then I should say there had come about a condition of crisis to those people who looked to the Baltimore & Ohio Railroad Co. for transportation—just such a condition, for instance, as existed in 1910.

"I have already referred to the fact that when I came to the Baltimore & Ohio Railroad Co. the shippers complained that they were then confronted with a very serious situation, and that development in part of West Virginia particularly had stopped. To my mind that would be one indication of a crisis as affects the general public.

"There might be another phase of a crisis. I should say that we would be approaching a crisis whenever net earnings, as a result of our operation, were so small that our ability to maintain fair returns upon our existing capitalization was seriously in question. Those who hold our securities would certainly look upon that as a crisis approaching, for it would certainly have reference to their investment.

"I should also think that it might be considered there was a crisis at hand from the point of view of the workman, when a man who had been employed by a company for some time was deprived of employment, not because his services were not needed, but because of the inability of the employer to pay him. I should think that would be a crisis from the employee's point of view.

"As I view the situation, all of these phases are at hand to-day, in a state of greater or less development, and I have referred to the reasons that have brought it about. I would like to say this in that connection also:

NOT TENDENCIES, BUT FACTS—NOW.

"Three or four years ago, when this matter was before the commission, the carriers at that time, as I recall, based their request for increased rates very largely upon what they considered to be the tendencies of that time, and they pointed out that while at that particular time they were able to meet their engagements as they viewed it, the tendencies of a constant increase in wages, increases in taxes, and increases in other directions, brought about by various other forces, the tendencies of all of that would be in the near future to bring about a condition where they would not be able to maintain their fair and reasonable payments and to continue to provide additional facilities.

"To-day we have not rested our case upon the matter of tendencies. We have stated—I have stated—and I most earnestly believe it is not a question of tendencies that confronts the railroads in the eastern territory now. It is a question of fact, and the facts either are or are not, as we have endeavored to point out, and in the case of the Baltimore & Ohio, I honestly believe them to be as I have endeavored to show. It is not a question of tendency with the Baltimore & Ohio. It is a question of an exact state of fact at the present time."

Mr. Willard stated that since June 30, 1910, his company has spent about $56,000,000 in improving its property. The results of these improvements were largely available for the traffic of 1913. In 1910 the company earned about $90,000,000 gross, and in 1913, $103,000,000, the largest earnings in the history of the company. But by reason of the increased expenses which had occurred in the meantime their net earnings in 1913 were $751,000 less than they had been in 1910, before the additional capital had been spent for the additional facilities provided.

[Bulletin No. 21.]

INCREASING DIFFICULTIES OF THE RAILROADS.

APRIL 11, 1914.

Mr. F. A. Delano, president of the Chicago, Indianapolis & Louisville Railway, commonly termed the Monon Route, in presenting to the Interstate Commerce Commission the situation in Central Feight Association territory said that the commission in 1910 "thought the railroads were unduly alarmed at what they regarded the tendencies, and the commission pointed out that times were improving and that the railroads were going to fare better, apparently, rather than worse. The hopes of the commission do not seem to have materialized, and the fears expressed by the railroads have come true."

With reference to the contention that railway credit, judged by market quotations on railway bonds, was improving, Mr. Delano stated that there was a wide difference between what might be known as railroad credit and what might be known as the price of securities.

"Now, to illustrate that point, take the case of the Wabash. If anybody should take the price of Wabash first mortgage 5 per cent bonds or second mortgage 5 per cent bonds for the period from 1889 down to date he would find that the prices had been pretty well maintained. Those first-mortgage bonds sold all the way down from 105 up to 110. There has been very little fluctuation. The prices on the second-mortgage bonds have fluctuated from 98 to 102.

"Now, that has no bearing at all on what may be called the credit of the railroad company. These mortgages were closed mortgages at the time the company was reorganized, in 1889. There could not be any more bonds sold. Any additions to property had to be made either from surplus or from issuance of car-trust notes or from the sale of third or fourth mortgage bonds—and there were such; there were debenture bonds that were equivalent to that—all of which went to

increase the property and increase the security behind these same first and second mortgage bonds.

"It would entirely mislead Mr. Thorne or any other investigator, then, to simply consider the price of those first mortgage or second mortgage bonds and reach a conclusion from that as to the credit of the Wabash. The credit of a railroad is really what it can raise money for from year to year.

"The railroads are in this position. Their senior securities have practically all been marketed. They must either sell a short-time security, like a note, a car-trust note, something that you pay off the principal in installments, or they must sell a consolidated-mortgage bond or a convertible bond, something which has some speculative feature to attract the buyer.

"So the vital question with these railroads is their credit as measured by what they can borrow money for. The Wabash Railroad last August, in the hands of a receiver, renewed receivers' certificates on the basis of 7½ per cent, although those receivers' certificates came in ahead of $40,000,000 of the refunding bonds.

THE REAL MEASURE OF RAILROAD CREDIT.

"That is a measure of the credit of a railroad rather than the price in the stock market of first and second mortgage bonds."

Mr. Delano called attention to the fact that the average gross freight rate in C. F. A. territory was not only less, but the average haul was less than in any other territory in the country except one, namely, New England; and that the combination of the two—that is, the rate per ton-mile—on the whole is very much less in C. F. A. territory than in any other territory.

With reference to maintenance charges Mr. Delano said:

"In the last 9 or 10 years, more specifically from the year 1905 down to date, I found on the Wabash that in spite of a continuing increase in gross earnings, maintenance increased from between 24 to 25 per cent of gross earnings to about 29 to 30 per cent. That was under precisely the same management through all that time, with precisely the same policy, and was not due to any conscious effort to increase maintenance or to improve the quality of the road more than was absolutely demanded by the public.

"I think you gentlemen are conscious that there has been a very steady, irresistible demand for improved conditions. Take mantenance of way. Sixty-five or seventy-five pound rails were once considered ample. To-day there are very few main lines that do not find it necessary to lay 85, 90, and 100 pound rails.

"To-day we have to use, very largely, softwood ties that are creosoted in place of hardwood, white-oak ties, which we were formerly able to get. The great State of Indiana, for instance, in the center of C. F. A. territory, is requiring all railroads to adopt automatic block signals, and public safety demands it. In respect to maintenance of equipment, I might point out to you that 70 per cent of maintenance of equipment is labor. The wages of labor in our shops have gone up very considerably in the last 10 years.

"Just as Mr. Willard very well said, what we have been able to accomplish in reducing expenses in conducting transportation has in a measure been reflected by an increase in expenses in maintenance. It costs more to maintain these big engines than it did smaller ones. It costs more to maintain big cars than smaller cars. Especially it costs more to maintain old cars handled in big trains. It costs more to maintain tracks that are operated over by powerful engines, and switches, sidetracks, passing tracks, and all items of that kind have increased; and while wages of track labor have increased far less than other wages, they have increased very considerably in the average.

"Railroad officials generally believe that a valuation of the railroads will fully justify the property accounts; but they also realize that until that valuation is completed they may be attacked, and the railroads have no answer which they can make. For that reason the C. F. A. lines made no mention in their presentations, and did not urge in any way the argument for return on capital invested. Their whole case was based on the fact that since 1907 new capital has been invested in these companies, that the accounts have been kept strictly as this commission required them to be kept, and with that added capital invested in these roads, in most cases they showed less return than they did before the capital was invested.

"We simply submitted that complete statement as evidence that we could not on that sort of a showing continue to get capital to improve or develop these railroads."

Mr. MINNIS. What would you say generally of railroads in C. F. A. territory? Are they prosperous or otherwise?

Mr. DELANO. They are certainly not prosperous. In the group of railroads known as group 3, in my opening statement, it shows that of the 28 lines, 9 of them paid a dividend in the year 1913. The other 19 did not. Quite a number of the 19 were in the hands of receivers.

[Bulletin No. 22.]

OBSTACLES TO RAISING NEW RAILROAD CAPITAL.

APRIL 13, 1914.

Mr. W. H. Williams, third vice president of the Delaware & Hudson Co., in the 5 per cent advance rate case has presented a statement to the Interstate Commerce Commission concerning the decline in railway credit and the increased competition, especially by municipalities and public utilities, for the world's available capital.

The substance of Mr. Williams's paper is as follows:

"Based on the yearly averages, the railroads are now compelled to pay more for their capital than at any time within the 11 years. The railroads are between upper and nether millstones. They are not only compelled to raise the net interest rate on their new offerings in order to withstand the higher rates offered by municipalities, but they must also contend in the investment market with the increasing amount of new standard public utility and industrial offerings.

"Thus, on the one hand, the railroads have to meet the competition of an increasing amount of securities of the very highest character as regards safety, i. e., municipal borrowings; on the other hand, they have to compete with the high rates of return offered by the so-called public utility and industrial securities.

"Railroad securities have lost a great deal of the strength of their former position as the most popular class of investment securities, occupying a place between Government obligations—selling at a very low-income yield—and public utility or industrial securities—offering a high-income yield, but considered less desirable for conservative investment. This has contributed to (a) the pronounced fall in the prices of outstanding standard railroad securities and (b) greater difficulty in procuring new railroad capital."

INVESTMENT MERITS OF RAILROAD SECURITIES.

The ability of the railroads to raise new capital has been impaired to a considerable extent by the following:

1. The inability of many railroads to issue further prior lien obligations as the mortgages on their existing lines, and other property have become closed.

2. The decrease of net earnings, due in part to decreases in rates and in part to higher operating costs.

3. Inability to obtain any increased return after increasing total investment.

4. Legal restrictions on railroad securities as investments for savings banks, trust funds, and insurance companies.

5. Discrimination against railroad securities in the matter of exemption from taxation, as contrasted with State and municipal bonds.

6. Risk attending railroad enterprises.

Owing to the rigidity of rates and the inability to adjust their charges to conform with changes in business or in operating conditions, railroads in this respect are at a peculiar disadvantage as compared with manufacturing concerns. Although railroads can not expand earning capacity, as industrial companies do, they are, nevertheless, affected by business depressions.

The property investment of the railroads is increasing at a greater ratio than net operating income. Thus the increase in the capital investment as of June 30, 1913, over June 30, 1910, of 38 eastern railroads was $659,862,586, or 11.74 per cent, whereas net operating income actually decreased $16,311,321, or 4.62 per cent.

This condition is undoubtedly due in large part to the nonproductive nature of much of railroad capital. Improvements such as the elimination of grades, elevation of tracks, electrification of terminals, and the like, entail large capital expenditures, without corresponding net return.

NOTHING EARNED ON NEW CAPITAL.

In recent years, notwithstanding large increases in gross receipts, increases in expenses and in taxes have been so great as to more than offset the additional receipts, so that for the new money which the investor has put into the railroads there has been little or nothing earned.

It should be noted that in 1913 the savings banks of the United States reporting to the Comptroller of the Currency owned about $821,500,000 of the railroad bonds against about $708,000,000 held by all other banks, trust companies, etc. These figures serve to suggest the serious effect upon these important agencies for the encouragement of thrift and the irreparable damage to their depositors that would follow further depreciation of railway securities.

The failure to earn any return on new capital tends to produce a condition in which the payment of dividends would be impossible. Further, it should be noted that a number of companies whose bonds are already in the savings-bank class are not able to obtain new capital by the issue of stock.

It is therefore essential that railroad earnings shall be large enough to place the companies in a financial position that will enable them to obtain necessary new capital by the issue of shares of stock and, at least, to maintain the position of the existing issues of bonds that are now available for savings-bank investment.

Notwithstanding the large capital expenditures made by the railroads during the past six or seven years the economies and increased traffic resulting therefrom have not been sufficient to offset the increased cost of wages, materials, supplies, and taxes, so that with a substantial increase in their fixed charges the railroads have had a less amount available with which to meet such charges.

RAILROADS NEED $600,000,000 NEW CAPITAL PER YEAR.

If the railroads are to secure sufficient funds, their credit must be improved, and this can only be accomplished by larger excess of current earnings over the current cost of operation and taxes. Increased capital can not be invited in any other way. The railroads of the United States invest annually about $600,000,000.

The bulk of this new capital must be obtained from private investors. These naturally place their funds where the prospects for fair returns are reasonably assured. They will put their money into railroads, therefore, only when the investment returns in railroad properties are as good and as well secured as in other enterprises.

This competition of outside securities is an element in the cost of capital to the railroads. It must be successfully met if transportation systems are to continue developing and expanding.

[Bulletin No. 23.]

HIGHER COST OF RAILROAD LIVING.

APRIL 14, 1914.

Testifying before the Interstate Commerce Commission in the 5 per cent advanced rates case, Mr. W. C. Wishart, statistician of the New York Central Railroad, spoke in substance as follows concerning "A railroad's cost of living":

Rates of pay for transportation have gone down sharply. The consumer of to-day can secure more transportation for a given amount of goods than he ever could before, and the carrier continues to sell at declining prices regardless of cost of production. While revenues per unit of traffic have remained fairly constant, as measured in money, the railroad has suffered a heavy decline in actual compensation for its services, on account of the decreasing purchasing power of the dollar.

Though it has been necessary time and again to raise the scale of wages to meet the demands of employees and to procure the necessary labor, the railroad must still accept for its services an average rate which is very much depreciated in exchange value from that which it had when the present rate level was established.

While transportation revenues per unit of traffic appear, since 1902, to have remained fairly constant, in that they are expressed in approximately the same figures year after year, influences beyond the control of any group of men have been at work quietly and constantly to reduce the actual compensation to the carrier to a level which is estimated as almost 40 per cent below that of 1896.

The ability of a railroad to purchase labor, supplies, and credit has been impaired by the general increase in commodity prices in the face of a fixed rate of return per unit of service, for it may be shown that the cost of labor, supplies, and capital increase as the general price level rises.

While average revenues have declined somewhat, wages have risen 24 per cent per unit of traffic, and other expenses and taxes about 12 per cent per unit of traffic, but it has been possible to do a larger business per dollar of plant investment.

RAILROAD DOUBLY PENALIZED.

A railroad which can not adjust its rates to meet rising costs, and thereby suffers a loss in relative net earnings, is doubly penalized. First, it must pay more on account of the general rise in interest or rent for the use of capital; and, second, it must suffer through its inability to offer as good security as formerly or to maintain a margin of profit great enough to offset the change in the character of the security offered. Both factors increase the cost of production and in most enterprises are met by an increase in the selling price of the product.

The present difficulty of the railroad, however, rises more largely out of the increased cost of operation and taxes, the current expenses, which have kept pace with the rise in commodity prices and have advanced faster than gross revenues or traffic. The increasing cost of plant and higher fixed charges make themselves felt more slowly, but are none the less serious.

If the service of transportation were paid for in kind; that is, by taking toll of the commodities carried, and the standard toll to-day were the same as that to which it had been reduced after the period of competition spoken of by Commissioner Prouty, the well-managed railroads would be prosperous and the impairment of credit which they are now experiencing would have no reason for existence.

As it is, there has been a marked increase in business done with a steady shrinkage in the measure by which the carrier's toll is meted out. The result is that the railroad apparently has passed the point where it is possible through an increase in the volume of its business to obtain a living from the decreasing toll and now finds itself in a predicament not of its own making.

REAL RATES GREATLY DECLINED.

If there had been the same growth in traffic, with a practically stable medium of exchange, as there has been during the past 15 years with money constantly depreciating in exchange value, the railroads would have no just cause for complaint.

Furthermore, the relation between the railroads and their patrons, their employees, and their stockholders probably would be more satisfactory than they are. While the service has been greatly improved, it has not been possible to make it what the managers would like.

While wages have risen as a result of arbitration, mediation, and the general demand for higher pay in all branches of industry, stockholders have not received relatively as high a return as they did in the late nineties.

The percentages may be the same, but the purchasing power of the dividend is considerably lowered, and if one attempted to-day to realize upon the investment, he would receive not only fewer dollars, but considerably less in what they will buy.

[Bulletin No. 24.]

WHY IT COSTS MORE TO KEEP UP A RAILROAD'S CARS AND LOCOMOTIVES.

APRIL 15, 1914.

At the hearing before the Interstate Commerce Commission, Mr. J. T. Wallis, general superintendent of motive power of the Pennsylvania Railroad Co., testified concerning the increased maintenance of equipment expenses incidental to the operation of the Pennsylvania Railroad system.

Mr. Wallis pointed out that the Pennsylvania system paid out $72,971,585 for maintenance of equipment in 1913, as compared with $58,197,036 in 1910, an increase of 25.39 per cent.

The Pennsylvania Railroad east of Pittsburgh had 4,242 locomotives on June 30, 1913, against 4,067 on June 30, 1910. Average tractive power in 1913 was 32,776 pounds against 31,013 pounds in 1910. Total locomotive miles were 128,334,119 in 1913 and 117,010,549 in 1910.

The cost of locomotive repairs on the Pennsylvania Railroad lines east of Pittsburgh for the year ended June 30, 1910, was $11,597,406. The cost of locomotive repairs for the year ended June 30, 1913, was $15,267,832, an increase of $3,670,426, or 31.7 per cent.

It costs proportionately more money to maintain a large locomotive than a small one, and the repairs of any given size locomotive will vary with the number of miles that the locomotive is run, namely, its use. It is accordingly proper to base comparison of the cost of locomotive repairs on tractive power miles, which are arrived at by multiplying the mileage of every locomotive in service by its tractive power.

Of the total increase of $3,670,426 in locomotive repairs $1,129,940 is accounted for by increased rates of pay and by expenditures to meet changed conditions and $1,843,988 as a result of increase in tractive power miles.

The cost of locomotive repairs to-day bears a proper relation to the class of locomotives that are being maintained when due consideration has been given to the general increases and various adjustments in wages that have been made since the adoption of locomotives of the type used to-day.

Repairs of freight cars cost the Pennsylvania system $24,121,049 in 1913, as compared with $18,281,364 in 1910. There were 268,364 cars the former year against 249,788 in 1910.

Of the total sum of $5,839,685 increased charges to repairs of freight cars, there is due to an increase in total freight-car mileage $2,175,482. The increase in wages previously refered to in connection with locomotives caused an increase of $572,802. Expenditures rendered necessary by the standardization of equipment law accounted for a further sum of $1,190,054.

The remaining amount of $1,901,347 is due, first, to an increase in the price of yellow pine and oak used in repairs of wooden cars, and, second, to the increase in the capacity of the modern car.

WHY REPAIRS COST MORE.

The character of the cars that are being constructed to-day is different from what it was 10 years ago. Steel cars are coming in for heavy repairs, and the situation is gradually adjusting itself, but we will not have complete data as to the cost of repairs to such cars until a greater proportion of the steel cars have been passed through the shop for heavy repairs and probably not until some of them, at least, have been discarded on account of decay, at which time an average figure for the repair of steel cars can be arrived at; but this is not possible to-day.

The cost of repairs to freight cars per million capacity ton-miles has decreased each year, as compared with the year 1903, this decrease for 1909 being 22.6 per cent. Since that time the decrease has not been so great, due to the fact that there was an increase in wages and added expenditure in connection with the standardization of equipment law. In the year 1913 there was a decrease of 17.4 per cent in the cost of repairs per million capacity ton-miles under the cost of 1903. If the charges for the standardization of equipment law and the increase in wages were eliminated, the cost per million carrying capacity miles would have been .00069, as compared with .00093 in 1903, or a decrease of 26 per cent. In other words, it is quite plain that the cost of car repairs per unit of capacity available for loading is decreasing, if other varying factors, such as increases in wages and charges for standardization of equipment, are eliminated.

The cost of repairs to passenger equipment cars for the year ended June 30, 1910, was $2,681,753, and for the year ended June 30, 1913, $3,176,707, an increase of $494,954, or 18.4 per cent.

Of this, 6.6 per cent, or $176,006, is due to an increase in car mileage. An increase in wages heretofore referred to accounts for an additional amount of $75,781, or 2.8 per cent.

In 1908 we received our first steel passenger-equipment cars. At January 1, 1914, we had a total of 1,742 steel passenger cars in steam service, 84 steels cars in electric service, and 2,209 wooden cars. The wooden cars have been rapidly going out of service and the steel cars have been replacing them. The rate of replacement has been very rapid, in fact, much faster than the replacement of wooden cars prior to the adoption of the steel car. During the first few years that the steel cars came to us they required comparatively little attention, and in our effort to utilize our steel passenger-equipment cars to the very best advantage and to make steel cars cover a maximum number of trains, so that the public might have the maximum benefit therefrom, we kept our steel passenger-equipment cars out of the shop and did but comparatively little work on them until within the last two years, when it became necessary to take them in and do more work to prevent deterioration.

RENEWALS AND DEPRECIATION OF EQUIPMENT.

At the present time the Pennsylvania Railroad Co. charges depreciation on the following bases: Locomotives and passenger cars on a basis of 4 per cent of the original cost of the equipment, and on freight cars on a basis of 3 per cent on such cost, for the reason that we believe a locomotive will last about 20 years, and based on the final value of the scrap being 20 per cent of the original value, the depreciation plus the salvage will equal the original cost. On passenger cars we believe that our wooden cars will last 20 years. As far as steel cars are concerned, we do not know how long they will last, but in order to provide for the replacing of our wooden with steel cars in a reasonable time, and for the steel cars when they shall have to be retired, the best figure we have been able to arrive at is 4 per cent.

[Bulletin No. 25.]

WHY IT COSTS MORE TO MAINTAIN A RAILROAD.

APRIL 16, 1914.

Testifying in the 5 per cent rate case before the Interstate Commerce Commission, Mr. J. G. Rodgers, general superintendent of the northern division of the Pennsylvania Railroad, set forth the reasons for the increase in cost of maintenance of way and structures on the Pennsylvania Railroad in recent years.

Charges to operating expenses on the Pennsylvania system east of Pittsburgh were $24,855,624 in 1910 and $29,411,210 in 1913, an increase of 18.3 per cent. Mr. Rodgers stated in substance:

The maintenance of way expenses for 1913 are necessarily much larger than they have been in the past, and will undoubtedly continue to be at least on the present level in the future, due to the following causes:

1. The large increase in wages which has already been made.

2. That in view of the policy of commissions and the demands of the public a much higher standard of maintenance must be observed than in the past.

3. That in past years the standard, quality, durability, and strength of the roadbed and track structure has not kept pace with the increase in the weight of locomotives and steel cars, but the improvements that have been made looking toward this end have made the track a much larger and more expensive structure than it was some years ago, and therefore it costs more to renew the different parts thereof.

4. That the policy of eliminating grade crossings, installing interlocking and automatic signals, straightening line, etc., in which respect there is still a great deal to be done, and which will continue as far into the future as we can foresee, involves heavy charges for replacement in kind of plant retired, and the structures which are built to eliminate grade crossings, consisting as they do of embankments, tunnels and bridges, will require much more to be spent upon them in the way of maintenance than the ordinary running track that heretofore existed.

Thus of the total increase in maintenance of way and structures expenditures, 1913 over 1910, of $4,555,586 there are accounted for:

1. Mileage maintained	$1,089,059
2. Rate of wages paid	633,760
3. Number of men employed	283,721
4. Prices of materials used	607,603
5. Miscellaneous repair items	7,624
6. Amounts charged to expenses as replacements in kind in connection with elimination of grade crossings, installation of interlocking and automatic signals, changes of grade and line, etc	2,162,964
Total	4,784,731

INCREASING COSTS.

Mr. Rodgers gave certain concrete illustrations of increased costs, as follows:

The average distributing point price of rail has advanced from $28.87 in 1910 to $30.88 in 1913, an increase of $2.01 per ton, or 7 per cent, due to a greater proportion of open-hearth than Bessemer steel used to secure increased safety during the latter year.

The average price of all ties used for repairs increased from 76.6 cents to 84.5 cents at the distributing point. This is due largely to the increased use of creosoted softwood ties made necessary by the scarcity of hardwood ties. Creosoted ties have been used since 1909 only; in 1910 17,598 and in 1913 1,102,886 creosoted ties were put in.

The depth of ballast in 1909 was from 8 to 12 inches, and the standard has now been established as 18 inches. While the first cost of the increased depth is chargeable to additions and betterments, operating expenses are increased by the renewal of cinder, gravel, and slag ballast placed under track a few years ago and will increase as the additional stone ballast wears out.

The number of ties used per mile has been increased in order to strengthen track for use of heavier equipment; prior to 1909 the number of ties to a 33-foot rail was 16, or 2,560 per mile; in 1909 this was increased to 18, or 2,880 per mile, to comply with which policy additional ties per rail have been put in as rapidly as possible.

The total number of tons of rail used for renewals in 1913 was 77,094, as compared with 95,808 tons in 1910. There were 3,023 miles of 100-pound rail in main track in 1910, or 37 per cent of the total, and in 1913 3,534 miles, or 43 per cent of the total. There were 3,904 miles of 85-pound rail in main track in 1910, or 48 per cent of the total, and in 1913 3,825 miles, or 46 per cent of the total.

Eighty-five-pound section was adopted as standard in 1887, and 100-pound rail for main line passenger tracks in 1892.

As was the case in some other instances, renewals of rails in 1908 and 1909 were low, which made it necessary to use larger amounts in 1910. The consumption in the latter year, therefore, was considerably higher than the average, while that for 1913 was about normal, based upon the average for the past five years.

In the endeavor to promote the safety of the traveling public in every possible direction, special attention was given to the rock cuts between Philadelphia and Pittsburgh and overhanging rocks were removed, at a cost of $72,852.

Renewing linings of tunnels on the Western Pennsylvania division and maintaining an improved ventilation system at Baltimore entailed an increased expenditure of $29,032.

"SAFETY" COSTS MORE.

"Safety work"—signs and signals at crossings, heavier repairs to road crossings and fences—together with the construction of a large amount of improved fence in New Jersey, represented an increase of $36,206.

The signal system has been greatly extended during this period, all passenger tracks having been put under absolute block system in 1912, in addition to which there has been a large extension of the automatic signals in place of manual block signals, and revisions of interlocking in connection therewith.

In 1910 there were 395 miles of automatic signals and 3,209 miles of manual block signals; in 1913 there were 690 miles of automatic signals and 3,926 miles of manual block signals. These changes must continue, resulting in increased charges to expenses for replacements in kind, as shown above, as well as in the increased cost of maintenance.

[Bulletin No. 26.]

THE POSITION OF THE PENNSYLVANIA RAILROAD.

APRIL 18, 1914.

In presenting the case of the Pennsylvania system in applying to the Interstate Commerce Commission for a 5 per cent increase in freight rates, Mr. Samuel Rea, president of the Pennsylvania Railroad Co., testified in substance as follows:

"The position of the Pennsylvania Railroad system is not so strong as it was.

CHANGES IN 15 YEARS.

"1. In 1898 the company was emerging from a period of prolonged and very severe depression, whereas in 1913 it was at the end of a great period of growth. It would be natural under ordinary circumstances that the owners of the property should find themselves very much better off in 1913 than they were in 1898.

"2. In the 15 years between 1898 and 1913 the company had the benefit of the following:

"(a) An advance in certain commodity rates.

"(b) The abolition of rebates.

"(c) The expenditure of hundreds of millions of capital for improvement and enlargement of facilities and equipment.

"(d) A consequent great improvement in efficiency and use of plant.

"3. In the 15 years, 1898 to 1913, property investment increased from about $792,000,000 to almost $1,387,000,000, or 75 per cent; operating revenues increased from a little less than $145,000,000 to over $382,000,000, or 163 per cent; operating revenue per mile of track operated increased from $8,178 to $15,261, or 87 per cent; the company thus had during these 15 years all the benefits arising from a remarkable growth of business both in volume and density, which ordinarily under the law of increasing return should have materially improved the position of its owners.

"4. But as a matter of fact the return on property investment in 1913 was only 5.48 per cent, as against 5.45 per cent in 1898, and, furthermore, was the smallest return in any of the 15 years of the period; the percentage of net corporate income (plus interest on funded debt) on total capital obligations in 1913 was but 6.88 per cent, against 6.65 per cent in 1898, and with the single exception of the year 1899, when this figure was 6.70 per cent, it is the lowest of any year in the 15-year period; the net corporate income per cent on capital stock outstanding held by the public in 1913 was only 9.64 per cent, against 8.53 per cent in 1898, and here also the 1913 figure is the lowest for any year in the 15-year period with the single exception of 1899, when the figure was 8.94 per cent.

"5. The conclusion to be drawn from these facts is that the increase of expenses and other outlays beyond the company's power to control have finally overcome the advantages thus far realized of advanced rates, abolition of rebates, increased volume and density of business, large expenditure of capital, and improvement in plant and methods. The company is now confronted by a rapidly decreasing rate of return on property investment and capital obligations and is unable to offset these tendencies by any methods which it can at present apply or which seem to be practically possible other than an advance in rates.

"We have in more prosperous times given to the public a good share in our prosperity. We desire to continue to live up to a high standard of public service, but whether we can do so or not depends on the decision of this commission.

"Unless the gap between receipts and expenditures can be widened, we must begin to retrench, and retrenchment must begin on betterments and improvements not directly necessary to the movement of trains. We should be very reluctant to do this, as it would be to run counter to our traditions and practice of half a century, and we are sure that it would not be in the public interest, and we do not believe the public desire it.

"I would not create the impression that a 5 per cent rate advance is necessary to the maintenance of the Pennsylvania Railroad Co.'s dividends in the immediate future, although, if it can not be obtained, it may be necessary for the company to curtail the necessary provision to preserve that high standard which the public has grown to expect from it.

"Any general idea that the Pennsylvania Railroad Co.'s position is so strong as not to need any additional revenue is not correct, because only 4.84 per cent was earned on the money invested in the railroad and equipment of the Pennsylvania Railroad Co. and the lines east of Pittsburgh directly operated by it during the year ended June 30, 1913.

"This company has paid a return on the stock in every year since its incorporation, but in the past 36 years the cash dividends have never exceeded 6 per cent per annum, except in 1881, when 8 per cent was paid, and in 1882 and 1906, when 6½ per cent was paid, and in 1907, when 7 per cent was paid. Cash dividends since 1847 have averaged 6.01 per cent on par ($50 per share).

EIGHTY-NINE THOUSAND STOCKHOLDERS.

"Our company is owned by over 89,000 stockholders, and the average holding is about 113 shares. Fully 48 per cent of this number is made up of women, and two-thirds of the stockholders do not hold over $2,500 each of stock.

"Since 1907 our large body of stockholders have, like everybody else, had to face the higher cost of living; that is, with the decreased purchasing power of the dividend. We have not been able to relieve them by any change in the rate of dividend, although it is recognized that some of them subscribed for the stock at 20 per cent above par and their return is but 5 per cent per annum. The bondholders who converted their holdings into stock at 140 per cent obtain a return of only 4.29 per cent, while those who converted their bonds at the fixed rate of 150 per cent receive only 4 per cent per annum on their investment.

"The stockholders have pursued a very liberal policy in using the surplus of past years for betterments and to maintain a high and safe standard of railroad service.

FUTURE POLICY.

"But what is to be our policy in the future? The striking shrinkage of net operating income in recent years compels us to review and reconsider it; we can not stand still; we must advance with a growing country, for which there is yet much to be done, or go backward.

"It is unwise as well as unnecessary to commit ourselves to any large fixed program of expenditures, except to say that without assurance of adequate earnings they can not proceed, and a reasonable portion of the cost of these future enlargements and improvements ought, in our judgment, to be provided from surplus earnings.

"The Pennsylvania Railroad ought to continue its traditional policy of paying stable and reasonable dividends and putting back into the property a reasonable portion of its surplus for additional facilities and improvements for the public, but if we are to be prevented from securing reasonable rates, I am forced to deal with the question whether that policy is still sound. The question must be faced from two points of view—that of the stockholders and that of the public, including in the latter all dependent on the railroads for support as well as service.

"From the stockholders' point of view I desire now to say that our present dividend, unless it is absolutely secure in good and bad years, is not a fully reasonable return to our shareholders. The fact that we have not paid to our shareholders many millions of dollars earned as a profit, at very low rates, which profit might without objection, either legal or moral, have been paid out as dividends, but instead have devoted this money very largely to the improvement of the public service, entitles us to make this claim.

"If we are allowed to earn a net income that will make our dividends safe beyond reasonable risk the company will, I doubt not, continue its established policy of devoting a large portion of its surplus to improvements and the maintenance of a safe and high standard of transportation service.

"But if the security of our dividend is to be imperiled we must do what we can to protect ourselves, and we shall be forced to seriously consider the propriety of insuring against a reduction of dividends in bad years by devoting in good years our additional earnings not to the improvement of property devoted irrevocably to public service, but to a reserve dividend fund for our shareholders.

"Experience indicates that the practice of putting back into the property the surplus beyond a reasonable dividend is in the interest not only of the shareholders, who thereby tend to insure the permanence of their dividend, but also of the public, who thereby insure the continuance of the provision of adequate facilities, even where they are not directly dividend earning. Is not the policy of betterments from income at least more in the public interest than dividing the entire net profits?

"In all of this it should be recalled that while improvements and betterments made out of surplus income become the property of the shareholders, they are properly dedicated to a public use, and as such subject to public regulation, and only by the pursuit of this policy for over 50 years has the Pennsylvania Railroad Co. been able to maintain its dividends, and its surplus is not excessive.

"The position of the Pennsylvania system is clearly revealed in the following brief digest:

"In 10 years (June 30, 1903, to June 30, 1913): Property investment in railroad and equipment has increased five hundred and thirty millions; operating revenues increased one hundred and forty-nine millions; operating expenses increased one hundred and twenty-nine millions; net operating income (after paying taxes, rents, and equipment hire) increased twelve millions, or a return of only 2.23 per cent on the increased investment.

"In the last three years (1911–1912–1913): Property investment in railroad and equipment has increased two hundred and seven millions; operating revenues increased forty-seven millions; operating expenses increased fifty-four millions; net operating income (after paying taxes, rents, and equipment hire) decreased eleven millions.

CONCLUSION TO BE DRAWN.

"What is the conclusion to be drawn from all of this?

"1. The margin of surplus is steadily diminishing and the company is not receiving any return either on the additional capital invested or for the value of the service rendered and the facilities provided for public use.

"2. Had there been no surplus in earlier years, and had the whole of the improvements been paid for out of capital, the margin would now have reached the vanishing point.

"3. If surplus steadily decreases, improvements, if made at all, will more and more need to be made out of new capital.

"4. But if the margin of safety decreases, new capital will only be raised with greater difficulty and on more onerous terms.

"5. Indeed, it is questionable whether, if new capital is to continue to earn no income, the directors will be justified in attempting to raise more than a modicum of what they believe necessary, as the effect must be to reduce the percentage return on the shareholders' capital already invested."

[Bulletin No. 27.]

RAILROAD RETURNS FOR FIRST EIGHT MONTHS OF CURRENT FISCAL YEAR.

APRIL 26, 1914.

The 35 railroad systems in official-classification territory which are applying for a 5 per cent increase in freight rates have compiled and just filed with the Interstate Commerce Commission data setting forth results of their operations for the first eight months of the present fiscal year.

During the period from July 1, 1913, to February 28, 1914, the revenues of these companies decreased from $931,508,361 to $910,346,537 as compared with the previous year.

For the same period expenses increased from $645,404,198 to $683,364,514.

There was thus a decrease in revenues of $21,161,824, and an increase in expenses amounting to $37,960,321—or a loss in net operating income of $59,122,145.

When to the foregoing fact is added an increase in taxes of $2,507,471 and a decrease in net revenue from outside operations there is shown a loss in operating income of $69,355,881, or 26 per cent.

Assuming that no additional money has been invested in these properties since July 1 of last year, the returns for the current eight months show 4.47 per cent earned on property investment, as against 5.53 per cent in the corresponding eight months of last year.

The Pennsylvania system in the same period shows 4.92 per cent, as against 5.56 per cent in 1913.

The New York Central lines show 3.56 per cent, as against 5.63 per cent in 1913.

The Baltimore & Ohio system shows 4.10 per cent, as against 4.63 per cent in 1913.

The Erie system shows 2.75 per cent, as against 3.91 per cent in 1913.

The Pennsylvania Railroad system, Baltimore & Ohio system, and New York Central lines show 4.23 per cent, as against 5.44 per cent in 1913.

The rate of return on property investment that is shown by all these railroads for this portion of the present year is the smallest of any year in the last 15 years.

[Bulletin A.]

APRIL 27, 1914.

The 35 railroad systems which are appealing to the Interstate Commerce Commission for an increase in freight rates to-day filed with the Interstate Commerce Commission their briefs summarizing the position of the railroad companies.

The brief devotes considerable attention to the purely economic features of the case. It is set forth that the purchasing power of money has so decreased in the past 18 years "that the purchasing power of the moneys now paid for freight on the railroads of the country, generally, were in 1912 approximately 30 per cent less in the market for commodities than it was in 1896."

"Imagine the protests," says the brief, "and the unsettlement of the value of railroad securities in the market if it had been proposed by law in 1896 to require the railways to reduce their rates and the compensation received by them for their services from 35 to 40 per cent, or if an order had been made by this commission to any such effect. Yet witnesses have shown that the actual rates and actual compensation have, by reason of the diminished purchasing power of the dollar, been lowered far in excess of the apparent lowering as measured in gold dollars.

"The railroads are still required to sell their services at rates to pay even less than those established years ago, after competition had forced them to a low level, and to take their pay in a depreciated currency, while they must buy their labor, buy their materials, borrow their capital, and pay their taxes on the basis of present-day commodity prices."

After presenting in detail the situation as relating to different roads or groups of roads, the conclusions of the carriers are thus set forth:

"We have shown a steady decline in the return on the money which has gone into the transportation plant; i. e., the road and equipment.

"We have shown (*a*) that in the period 1903 to 1913, the net operating income per cent (of the 35 roads embraced in this proceeding) on the money which went into the property investment account, was an amount equal to 4.31 per cent in 1913 over 1910. The rate of return on property investment was 5.85 per cent in 1903, 6.28 per cent in 1910, and 5.36 per cent in 1913.

"Comparing 1913 with 1910, the combined property investment increased $659,862,588, while operating revenue increased $186,775,867. Including taxes, which increased over $11,579,165, expenses increased more than $201,301,462, so that net operating income decreased $16,311,000, or nearly 5 per cent.

"In other words, after increasing investment 11.74 per cent and gross revenues 15.09 per cent, there was no resulting increase in net operating income; on the contrary, there was realized $16,311,321 less net than was earned before the $659,862,588 was added to the property investment.

"(*b*) That during the 1903–1913 period, the Baltimore & Ohio system increased their property investment account by $116,387,481, with a decrease in net operating income of $829,021, and that between 1910 and 1913 their property investment account increased $56,634,002, with a decrease of net operating income of $660,791, notwithstanding the fact that in 1913 their operating revenues exceeded 1903 by $35,837,724, and exceeded 1910 by $13,341,491. The rate of return on property investment was 6.01 per cent in 1903, 5.21 per cent in 1910, and 4.52 per cent in 1913.

"(*c*) That in the case of the Pennsylvania system, the property investment increased $530,750,073 between 1903 and 1913, with an increase of only $11,860,533 in net operating income, or an amount equal to 2.23 per cent on the increase in property investment, and that between 1910 and 1913 that same system increased its property investment by $207,186,919, with a decrease of $11,485,511 in net operating income, notwithstanding an increase in 1913 in operating revenues of $148,861,269 over 1903, and of $47,057,640 over 1910.

"The rate of return on property investment was 7.49 per cent in 1903, 7.41 per cent in 1910, and 5.48 per cent in 1913.

"(*d*) That between 1903 and 1913, the New York Central lines increased their property investment account $460,198,262, and their net operating income $28,714,151, or an amount equal to 6.24 per cent on the increased investment, and that between 1910 and 1913 they increased their property investment account $159,606,173, and their net operating income $3,765,591, or an amount equal to 2.36 per cent. Operating revenues increased 1903–1913, $124,520,099, and 1910–1913, $48,981,231.

"The rate of return on property investment was 5.07 per cent in 1903, 5.89 per cent in 1910, and 5.47 per cent in 1913.

"(*e*) That between 1903 and 1913 the property investment account of the Erie Railroad system increased $88,459,748, with a decrease of $799,205 in net operating income or no return on the increased investment, and notwithstanding an increase of $19,133,219 in total operating revenues during that same period; that between 1910 and 1913 there was an increase of $24,617,024; in property investment, with an increase of $201, 230 in net operating income, or an amount equal to 0.82 per cent on the increased investment, while in that same period operating revenues increased $8,247,449.

"The rate of return on property investment was 4.60 per cent in 1903, 3.68 per cent in 1910, and 3.53 per cent in 1913.

"(*f*) That there has been a steady and constant increase in transportation, maintenance of way, and maintenance of equipment expenses, an increase not temporary, but of a continuing character due to the nature of the underlying causes, such as the increase in wages, legislative requirements, and the necessity of maintaining a higher standard of track and equipment.

"(*g*) That the operating revenues of the carriers are inadequate to keep pace with this increase in expenses, and, accordingly, that the money expended in procuring necessary facilities has earned an utterly inadequate return since 1903, and no return at all since 1910.

"(*h*) The effect of these things is that at a time when the business of these carriers is larger in volume than ever before in their history, at a time when their capital obligations are the largest ever recorded and their plant and equipment more complete and more efficient than ever before, they find themselves face to face with a declining net income. They are, moreover, now without the potentiality of further operating economies, such as they have been able thus far to put into effect, and which have, until but recently, held in check the forces beyond their control, and these are now operating in full strength to diminish profits. The situation disclosed in the figures for 1913 which are before the commission is serious, but a truer reflection of the actual facts is found in the figures so far available for 1914, for it is only now that the full effect of the factors operating to diminish the carriers' profits is beginning to appear.

"In brief it appears (as Mr. Willard said in his opening statement) that 'the new capital invested in railroads in official classification territory, during the last three years, has earned little or no return; in fact, these properties generally are actually earning less net, after paying operating expenses and taxes, than they were earning at the beginning of the period, and before the $659,862,000 had been spent.

"'The result, as might be expected, of this constant tendency toward diminishing net returns, has been to seriously check, if not altogether stop, the normal development of railroad facilities, in the territory affected. During the 10-year period these railroads found it necessary to increase their property investment approximately $2,000,000,000, an average of about $200,000,000 per annum, and it is certain that an equal, if not greater amount per annum will be necessary to meet the requirements of the future.

"'It is a mistake to think that the problem is merely a question of dividends to railroad stockholders, although that feature is, of course, involved. The problem in a broad and true sense affects all interests, and the outcome of this particular case—whichever way it is decided—will mark an epoch, because it will in effect very largely determine whether we shall as in the past continue to look to private capital and private enterprise for our transportation requirements, or be compelled finally to accept the only alternative possible. It is recognized, of course, that railroad expansion and improvements must go on, and any tendency or condition that threatens to seriously check, if not completely stop, such expansion in a large and important part of the United States, becomes, because of that fact, a matter of vital importance.'

"The interest of the public in the situation has nowhere been more clearly stated than in the 1910 case, where the commission said:

"'Our railroads must be maintained in a high state of efficiency. This the public interests demand. Commerce and industry can not afford to wait on transportation facilities. Our rates should be such as to render possible a high-class, not an extravagant, service.

"'It is generally conceded that within the next few years, if our means for transportation by rail are to keep pace with the calls upon them, very large sums must be expended in the way of new construction and new equipment. While some small portion of this may come from current earnings, the great bulk must be new capital and this capital must be obtained from the investing public.

"'If, therefore, we are to rely in the future, as we have in the past, upon private enterprise and private capital for our railway transportation, the return must be such as will induce the investment. It is therefore not only a matter of justice, but in the truest public interest, that an adequate return should be allowed upon railway capital.'"

In reference to the difficulties encountered by the railroads in obtaining new capital, the brief says, in part:

"Railroad companies have experienced constantly increasing difficulty in recent years in securing necessary new capital.

"There has been a general increase in the interest return demanded of investment securities and at the same time the railroads have been forced to meet a great, world-wide and strenuous competition for the use of capital.

"One of the principal causes for the impaired ability of the railroads to obtain new capital is that their property investment is increasing in a greater ratio than their net operating revenue and that their inability to increase their rates to meet increased expenses has made them no longer responsive to the law of increasing returns.

"Unless the railroads are permitted to increase their revenues by a reasonable increase in their rates for transportation services so as to help meet the large and permanent increases in the cost of capital, wages, taxes, and other expenses, then it will be only a question of time when there will result not merely the reduction or suspension of dividends, but also in some cases at least a default in the payment of interest and other obligations.

"Unless the railroads are able to receive rates for their transportation services that will produce net revenues sufficient to meet reasonable dividend requirements and leave a reasonable surplus as a margin of safety to help defray the 'cost of progress,' secure the future stability of rates, establish confidence in the continuance of dividends, and otherwise maintain credit, there is but little ground to believe that private investors will afford the necessary new capital.

"Diminished surplus earnings prevent the creation of adequate reserve funds unless dividends be curtailed or suspended. Curtailments of dividends would aggravate the situation, while suspension of dividends would make it increasingly difficult to obtain any capital even by the sale of bonds, and where obtainable by bond sales it would only be at much higher rates of interest. Total suspension of dividends by all the railroads, though it would produce a great panic, would not produce the amount of new capital required."

[Bulletin B.]

WHY THE CARRIERS SEEK A GENERAL RATE ADVANCE.

APRIL 28, 1914.

The railroads seeking a general increase of 5 per cent in freight rates have just filed with the Interstate Commerce Commission a memorandum as to why the railroads seek a general rate advance. The memorandum says:

"To meet the need for increased net revenues, three methods were looked upon as possibilities:

"(1) A large reduction in the cost of operation, other conditions remaining as at present, would produce larger net earnings.

"(2) A large increase in gross earnings if the additional business could be handled with the present facilities and at present operating ratios would also result in a larger net.

"(3) An increase in freight charges, other conditions remaining as at present, would bring about the same result. The process of reasoning by which two of these possibilities were eliminated may be best stated in the language of Mr. Willard:

"'I do not believe it will be possible to obtain the necessary relief either by reducing wages already in effect or by making any very considerable reduction in the number of men employed; nor do I believe it will be possible to effect economies in operation of sufficient magnitude to have any saving effect upon the situation. Undoubtedly further economies will be brought about, but it is altogether likely that in the future, as in the past, they will be more than offset by increased taxes, by the effect of further legislation, which is almost certain to come about, and by other unavoidable increases in expenses.

"'Under certain conditions it might properly be expected that larger gross earnings would give increased net, but it so happens that the railroads involved in this proceeding are located in that part of the United States where commercial and industrial development has been most intense, and it will be shown that in order to increase the gross earnings of these particular companies to any great extent at the existing rates, it would be necessary for them to handle a volume of business much beyond their present carrying capacity.

"'It would therefore be necessary to obtain and spend a large amount of new capital for increased facilities before gross earnings could be greatly augmented, and as has already been shown, new capital invested in such facilities during the last three years has generally failed to earn any return whatever upon the investment.

"'For this reason I do not think we can safely look for relief in the one direction of increased gross earnings, and this brings us to the third remaining method suggested—that is, increased charges, or increased rates and fares.

"'Inasmuch as the passenger fares charged by these several companies are generally the result of legislative enactments, and the mail pay and express rates are also beyond the control of the railroads, it will be seen at once that no immediate relief, and perhaps no very considerable relief at any time, can be obtained in these directions, and we are consequently forced to consider an advance in freight rates as the one available source of increased earnings.'

"In the opinion in Docket No. 3400, at page 16, the commission noted the fact that in official classification territory especially the existing fabric of freight rates is the product of most active competition, recognizing the principle that 'there is a strong presumption that rates so arrived at are reasonable rates.'

"Having before them, therefore, a fabric of freight rates presumed to be reasonable and nondiscriminatory, and having reached the conclusion that the only practicable method of augmenting net revenues was by an increase in the rates therein contained, it appeared to the carriers to be obvious that the fair method of effecting the increase, having regard to the interests of the shippers, was to lift the entire fabric into a higher plane by means of what may be called a horizontal increase, thereby preserving in support of the increased rates the presumption in favor of their nondiscriminatory character, and leaving open as the sole question to be determined before permitting the rates to go into effect whether the need for increased net revenues justifies the extent to which the entire fabric has been raised.

"In anticipation of a possible conclusion by the commission to the effect that present rates do not afford adequate revenue to the carriers, and having regard to the second question referred to by the commission in its inquiry under Docket No. 5860, it has been suggested that the revenue of the carriers under present tariffs and practices suffers important depletion from the performance by the carriers of certain services as incident to the transportation of freight without any charge in addition to the transportation rate, when in fact such services should more properly be held to be in addition to the transportation service covered by the published rate and should be made the subject of additional charges.

"In its decision in the so-called Industrial Railways Case, Docket No. 4181, at page 217, the commission said that—

"'the very carriers that are augmenting their expense accounts and dissipating their revenues in this manner (by paying allowances to industrial railways) to the extent of many millions of dollars a year, and for the benefit of a comparatively few shippers, are now complaining that their present earnings are insufficient and on that ground have asked our permission to make a substantial increase in their general rate schedules.

"'In this general connection it may safely be assumed that no substantial part of the well-informed and reflecting public would deny to the owners of the railroads of the country a reasonable return on their investments; nevertheless, before they may fairly ask the general public to share further in carrying their burdens it is manifest that the railroads must themselves properly conserve their sources of revenue by making every service rendered by them contribute reasonably to their earnings.'

"Following the decision just referred to, notwithstanding the fact that no order was made, the carriers in this territory attempted in good faith to comply with the views of the commission in respect to industrial allowances. Tariffs were filed with this commission and with the various State commissions canceling allowances to 109 so-called industrial railways, only 30 of which were specifically dealt with by the commission in its opinion.

"Many persons affected by these cancellations felt themselves aggrieved, and sought, through the medium of the various State commissions, to prevent the tariffs from going into effect to the full extent contemplated by the decision of this commission.

"Proceedings were instituted before the public-service commissions of New York, Illinois, Indiana, and Ohio, and protests were filed with this commission, with the result that the tariffs providing for cancellations of allowances to 20 of the 79 roads not mentioned by the commission in Docket No. 4181 were by this commission suspended.

"It thus appears that the reform recommended in Docket No. 4181, estimated to be worth $15,000,000 a year, has failed of its immediate purpose, and it is apparent that it can only be made effective in aid of inadequate revenue by overcoming many obstacles which those controlling the industrial railways will be able to interpose.

* * * * * * *

"We understand that these subjects—spotting, etc.—are not on the docket for discussion in this brief, and that further investigation thereof will be made. With such further investigation the carriers sympathize, and if at the end of such investigation some way is found by which additional revenues may be secured for the so-called 'volunteered services,' such additional revenue will doubtless be welcome.

"The matters are referred to here merely to call attention to what appears to be the obvious fact that if the commission shall be of opinion that the carriers are in immediate need of additional net revenue, it is not at all likely that such additional net revenue in any adequate amount can be immediately secured by the adoption of any of the reforms which have been suggested."

[Bulletin C.]

THE NEED OF THE CARRIERS FOR ADDITIONAL REVENUE.

WASHINGTON, *April 27.*

In opening the oral argument in the application of the eastern railroads for an increase in freight rates, Mr. George Stuart Patterson, general solicitor of the Pennsylvania Railroad, addressed the Interstate Commerce Commission to-day on "The Need of the Carriers for Additional Revenue."

Mr. Patterson said in substance:

"During the past 10 years, for the 35 railroad systems in this proceeding property investment has increased 46.04 per cent, capital obligations have increased 49.22 per cent, operating revenues have increased 63.54 per cent, operating expenses have increased 74.80 per cent, and taxes have increased 111.43 per cent.

"During this same period, 1903–1913, there has been (a) a decline in the ratio of net operating income to property investment; (b) a decline in the ratio of net operating income (plus interest on funded debt) to total capital obligations; (c) a decline in the ratio of surplus to total capital obligations.

"All of this shows a decided weakening in the position of the carriers as regards their return on investment, despite the growth in the size of the plant, volume and density of the business, and the facilities and improved methods of handling that business.

"Thus during the last 10 years the carriers find themselves, after a period of great growth and expenditure of new capital, worse off than they were before this growth and expenditure, though they should be materially better off.

"The importance of this showing for the period of 1903 to 1913 is greatly increased by the fact that the tendencies which operated during that period to decrease the return on the investment are operating with even greater force in the last three years.

"The figures reflect an acceleration in the rate of decline in recent years. They show the lowest rate of return and the lowest surplus in the last three years, and the year 1913 shows the lowest figure for any of these years. If it be remembered that these three years are the biggest three-year period in the carriers' history, and that 1913 was in itself the largest of the three, then the full significance of the showing becomes apparent.

"The view has been suggested that the net revenues for 1913 were larger than for any of the last five years except 1910, and therefore negative any inference that the carriers' revenues are inadequate or that they have reached a crisis in their affairs.

"In 1913 not only were the facilities the largest in the history of these carriers, but the use of them was the greatest, and practically to their full capacity.

"To justify the outlay required to provide the facilities, the net revenues resulting from such use should have exceeded those of any prior year—should have been sufficient not only to pay the charges on the additional property investment for a year such as 1913, but to provide money to pay those charges during lean years, e. g., 1914, when the facilities are not fully used.

"The year 1910 is that of the preceding five years wherein the then facilities of the carriers were fully used, and is, therefore, the year properly comparable with 1913.

"When a comparison of 1913 with 1910 shows that, despite the expenditure of over $659,000,000 on property and an increased use yielding $186,775,000 increased operating revenues, the net operating income decreased $16,311,000; then that comparison, the carriers urge, does prove the inadequacy of their revenues, and that the results so shown are not such as to fairly justify the expenditure of additional capital for the further provision of similar facilities.

"It is an absolutely new thing in the history of American railroading for a year like 1913, or a period like 1910–1913, when traffic was the largest ever recorded for a similar period of time, to show the position of the owners of the property to be worse off than any previous years or periods.

"It is strong and conclusive evidence that some change has taken place in conditions, nor is it difficult to see what this change is, and what has brought it about. It will be disclosed by the collateral lines of inquiry; namely, increased cost of operation, and increased cost and difficulty of securing new capital.

"There has been a steady increase in transportation, maintenance of way, and maintenance of equipment expenses, which are continuing in character, and the full effect of which is just beginning to be felt.

"Operating revenues are inadequate to keep pace with the expenses, and accordingly the money expended in procuring facilities has earned an inadequate return since 1903, and no return since 1910.

"The effect of these things is that at a time when the business of the carriers is largest in volume, and at a time when their investments and capital obligations are the largest, and their plant and equipment more complete and efficient, the carriers find themselves face to face with a declining net operating income.

"The result of this tendency toward diminishing net returns will be to check, if not altogether stop, the normal development of railroad facilities in this territory. In the last 10 years they have been forced to spend $200,000,000 a year, and an equal, if not a greater, amount will be necessary for the future if the railroads are to properly handle the business of the country.

"The question is one not merely of railroad dividends, though that is a question of vital importance, but one of the interests of the general public in seeing that the railroads are maintained in a high state of efficiency, for, as Mr. Prouty said in the 1910 case—

"'If, therefore, we are to rely in the future as we have in the past upon private enterprise and private capital for our railway transportation, the return must be such as will induce the investment. It is, therefore, not only a matter of justice, but in the truest public interest that an adequate return should be allowed upon railway capital.'"

[Bulletin D.]

THE ECONOMIC JUSTIFICATION FOR AN INCREASE IN FREIGHT RATES.

WASHINGTON, *April 28.*

Oral argument that fundamental economic and financial conditions justify an increase in freight rates was offered the Interstate Commerce Commission to-day by Mr. Geo. F. Brownell, vice president of the Erie Railroad. Mr. Brownell said in substance:

"If operating expenses and the new burdens imposed by law upon the railroads had not been enormously increased they would now be in a highly prosperous condition, but it is the net income and not the gross that counts, and the adequacy of the net must be considered in connection with the amount of capital employed in the work and the aggregate amount of transportation service performed.

"The railroad industry is the Nation's greatest industry, save only that of agriculture. In it is invested more than a tenth of the Nation's wealth, and it gives direct employment, under normal conditions, to nearly 2,000,000 of the country's most intelligent and efficient workers, and indirectly to many more.

"But except for its magnitude it is in most respects like other industries. It provides transportation, which is all that it has to sell. Its prosperity and its ability to properly and adequately perform its important functions for the public depend upon its ability to charge such reasonably adequate transportation rates as will yield fair compensation for the service, including a fair return upon the capital employed and one that will make the investment of new capital attractive to investors.

"Until recent years it was, like other industries, responsive to the law of increasing returns, under which an increase in the volume of traffic would produce a decrease in the unit of cost, and operating revenues would increase more rapidly than would operating expenses. In those early years, like other industries, it was able to control its expenditures and increase its charges to meet changed conditions.

"All this has changed. It has lost in large measure its ability to control its expenditures. Because of its quasi public character it is subject to governmental regulations and control to much greater extent than most other industries. It has been subjected to numerous requirements of legislatures and regulatory bodies, both Federal and State, which have increased greatly its operating and its capital expenditures. Many additional legislative requirements of this character are in various stages of incubation.

"The railroads are not here questioning the wisdom or expediency of these requirements, and will continue to the best of their ability to bear and sustain the financial burdens they impose; but they ask that they be not deprived of strength to accomplish the task—and remunerative rates are the very sinews of that strength.

"The railroad industry has ceased responding to that economic law; it has been forced to become an industry of decreasing returns. The increase in expenses and other burdens has also absorbed the savings from increased efficiency and from the investment of new capital. It is fast reducing net operating income to a point less than in previous years, when the business handled and the investment of capital were much less; and the prospect is that, upon the basis of existing freight rates, the rate of net return will continue to diminish, notwithstanding any further increase in the volume of business handled and in property investment.

"The irresistible processes of economic forces have reduced the money or purchasing value of railroad rates more than a third in the last 15 years, more than 15 per cent since 1903, and nearly 10 per cent since 1908. The railroads have been compelled to accept pay for their services in currency which in fact, though not in form, has depreciated, and the reduction in their real compensation is quite as effective, if it is not so apparent, as though the nominal rates had been reduced but made payable in dollars of their former value.

"Efforts at readjustment to meet these new conditions have long been in evidence on every hand. Labor and capital require and secure higher rates than heretofore. Other industries have increased selling prices of their products, but in the railroad industry this readjustment has taken place only with respect to the railroad companies' expenditures for wages, materials, interest, etc., but not with respect to the railroads' charges.

"They have been restricted by statute from adapting themselves like other industries to the new economic and monetary conditions. They are still required to sell their services at rates of pay even less than those established years ago, after competition had forced them to a low level, and to take their pay in a depreciated currency, while they must buy their labor, buy their materials, borrow their capital, and pay their taxes on the basis of present-day commodity prices.

"Why should not they be given permission to adapt their rates to these general economic changes just as the wage earner or merchant, operating in a free market, without restraints of legislation limiting his power to fix his charges or prices, has been able to secure an adjustment of his charges or prices?

"The forces bringing about the rise of prices will necessarily lead to a rise of railway rates—or lead to railroad bankruptcy.

"The railroad companies have experienced constantly increasing difficulty in recent years in securing necessary new capital; and, where they are able to market new securities for that purpose, they are unable to do so except at substantially lower prices or upon substantially higher interest bases. There has been during recent years a general, a substantial, and a world-wide rise in interest rates.

"The rates of interest yielded by underlying and well-secured outstanding railroad bonds at the present prices do not measure the price which railroad companies have to pay to-day to secure new capital. The competitive position in the struggle to obtain new capital out of the general investment fund has been impaired by a number of causes specially applicable to them.

"It is not an abstract question as to whether railroad credit generally has deteriorated as compared with other forms of credit. It is a practical question whether the kind of credit these railroads now have available has deteriorated as compared with their available credit in former years, by reason of factors beyond their control.

"They no longer are able to offer prior lien obligations. They are no longer able to dispose of capital stock. They are therefore compelled to offer junior securities which can be marketed only at lower prices and upon higher interest bases. Because of the existence of conditions unfavorable to the borrower, short-time notes have become an important factor in the investment market.

"Recently many companies have found that, owing to the conditions in the money market, it was not practicable for them to dispose of long-term bonds, and that financing by means of short-term notes presented the only practicable and available means of meeting their immediate necessities, affording as they do a relatively high rate of interest yield and generally being specially secured by collateral.

"An added cause of the decline in railroad credit is the increasing uncertainty of the financial results of railroad operations and the risk attending railroad investments.

"If the railroads are not allowed to charge such rates for their services as will produce the proper return upon the money invested, then how long will those responsible for the management of these properties be justified in continuing these expenditures of new capital, even if it should be available at reasonable rates of interest?

"How about their duty to their shareholders and those whom they have induced to purchase their securities? Must not that duty be considered as well as their desire to furnish better and additional transportation facilities for the use of the public? How long can they be expected to incur additional fixed or dividend charges through the continuance of expenditures that have proven to be unremunerative in the past and that in the judgment of the managers will continue to be unremunerative in the future, unless freight rates be advanced?

"Unless the railroads are permitted to increase their revenues by a reasonable increase in their rates for transportation services so as to meet the large and permanent increases in the cost of capital, wages, taxes, and other expenses, then it will only be a question of time when there will result not merely the reduction and suspension of dividends, but also, in some cases at least, a default in the payment of interest and other obligations.

"Now, when the need for capital is greater than ever, the ability to secure it rests more largely than ever upon the ability of the railroads to satisfy investors that they will be able to increase their net earnings. The great bulk of this new capital must be obtained from private investors. Increasingly less amounts can be obtained from surplus earnings.

"Being practically limited to the issue of junior securities, the physical property or securities they can pledge as security for the new issues are subject to various prior liens. Consequently the principal basis of the market value of the bonds and other corporate obligations which these carriers can now issue, as well as of their capital stock, is the income producing ability of the railroad. The rapidly diminishing price which can be realized for their bonds other than those that are underlying and well secured, and for their stocks, bear eloquent testimony as to the impairment in their net income producing ability which has already occurred and that which investors regard as a serious risk in the future.

"Unless the railroads are able to receive rates for their transportation services that will produce net revenues sufficient to meet reasonable dividend requirements and leave a reasonable surplus as a margin of safety to help defray the 'cost of progress,' secure the future stability of rates, establish confidence in the continuance of dividends, and otherwise maintain credit, there is but little ground to believe that private investors will afford the necessary new capital."

[Bulletin E.]

THE NATION'S POLICY TO ENCOURAGE INVESTMENT IN RAILROAD PROPERTIES.

WASHINGTON, *April 28, 1914.*

Speaking on behalf of railroads in the Central Freight Association territory, Mr. J. L. Minnis, general counsel for the Wabash Railroad, to-day presented to the Interstate Commerce Commission a special argument in reference to the meaning and purpose of our national laws regulating railroads. Mr. Minnis said in substance:

"Transportation by railroad in a country of great area like ours is a public necessity vital to every citizen, and therefore a facility which the Government is bound to afford for the use of the people. The Government may afford it either by owning and operating the railroads as a Government instrumentality, or by authorizing and encouraging its citziens, by the inducement of private gain, to own and operate them.

"At the beginning of the railroad era Government ownership was, according to tradition, thought not only unwise but incompatible with the permanency of our free institutions, in that it would place in the hands of the executive department the expenditure of vast sums of public money and the power to appoint, supervise, and discharge the vast armies of organized men necessary to the conduct of the railroad business, which would so enlarge the office-holding class as to greatly diminish, if it would not in time destroy, the influence of the people generally in the conduct of the Government.

"The Government including the States, accordingly declared its public policy with respect to railroad transportation by authorizing the citizens, whom I shall call private investors, to construct, operate, and develop the railroads of the country through the agency of corporations organized for private gain.

"By saying the Government authorized and encouraged private investors to construct, operate, and develop the railroads for private gain, I mean that when the Government determined to rely and depend upon private investors to furnish the money necessary for so great an undertaking, involving the well-being of the people, it must have engaged to make railroad investments attractive as the foundation of its policy, because a breach of that engagement would deprive the people of transportation or necessitate its conduct as a Governmental facility; and the engagement must, in duration, exist as long as the need for transportation exists.

"I have said that policy was to foster and promote the operation and development of the railroad transportation of the country by means of private capital through the agency of private companies. Now, what, in its final analysis, did that policy embrace?

"A railroad company has no owners in the sense that ordinary property has owners; it is only a legal fiction or agency of the private investors who supply it with its caiptal; and as its officers act under their impulse, we may say that the legislative charters gave to the private investors the management through the companies of the railroad enterprises and the right to fix, in their discretion, their reasonable tolls and fares.

"By these charters, then, the Government and the States, in substance, gave to the private investors the authority to construct and manage the railroads, and left them free to make as much money as

they could obtain from the reasonable rates and fares they promulgated in their discretion.

"But in return for these valuable grants the private investors agreed, in the charters of the companies, to operate the railroads as public carriers for reasonable rates and fares.

"The policy then embraced two elements: One of a private nature, namely, that the private investors represented by the companies should have the right to construct and manage the railroads and make all the money they could obtain from the reasonable rates and fares they charged for transportation; and the other of a public nature, namely, that the private investors represented by the companies would operate the railroads as public carriers.

"The policy of Congress from the beginning was to rely upon competition to prevent excessive rates, and it was no doubt reasonable to assume that the enforcement of the salutatory provisions of the Hepburn bill would confine competition to its natural and lawful field. In addition, it was a well-known fact that the carriers could not, without acting in combination in violation of the antitrust statute, increase their rates as a body. Besides, the Hepburn bill provided an effective means from preventing them from applying excessive individual rates.

"The competitive conditions prevailing since the enactment of the Hepburn Act rendered impossible an increase in the body of rates of the companies, except pursuant to combination which was forbidden by law.

"The amendment of 1910 has, then, opened up a way for the companies to lawfully increase the body of their rates if necessary to encourage the investment of private capital in their railroads.

"Thus it will be observed that the act to regulate commerce, whether viewed from the standpoint of the Government or the investor in the railroads, was designed to foster and encourage the operation and development of the railroads by private capital.

"The amendment of 1910 invested the commission with power to veto advanced rates filed by the companies if they be unreasonable. Now what is meant by a reasonable rate in that amendment?

"As we have seen, the amendment was enacted to promote the public policy of the Government, and it is obvious that in construing it we should make it useful in carrying out that policy; and if we do so, we find that the policy of the Government affords a definition of the reasonable rate referred to in the amendment, and it is this:

"A body of rates which will produce sufficient revenue to encourage private investors to supply the companies with the two hundred and twenty-five or fifty million dollars per annum which is necessary for their development.

"Such a rate or rates were contemplated by the amendment, because their promulgation is essential to carry out the policy of the Government. Such a rate would be a reasonable rate to the shipper, who ought not expect a lower rate than is necessary to supply the needed money for developing the railroads. It is likewise a fair rate to the companies, because if it be high enough to encourage new investors to supply needed money from time to time, it will produce a fair return on the money already invested in the properties.

"The amendment of 1910, therefore, in connection with the act it amends, affords a fair workable method of carrying out the policy of the Government. If, then, what I have said is true, the policy of the Government can fail, only in its administration. This reflection heightens the duty of all of us who have duties to perform in relation to the railroads, because every good citizen must shudder at the suggestion of its failure.

"The question presented here is not the ordinary question involved in an attack upon the reasonableness or unreasonableness of a rate—it is a question of giving effect to a great public policy. The concrete question to be decided is whether present rates have produced and are now producing sufficient revenue to the companies to justify the belief that much needed new capital may be obtained from private investors on reasonable terms.

"The only object of investing money is personal gain. Private capital is timid and often influenced by misapprehensions and unfounded suspicions. Investors owe no duty in the premises, and do not act by compulsion, but invest voluntarily if at all.

"Many misapprehensions, with respect to the purposes of the act to regulate commerce, have been hurtful to railroad credit. By some it has been assumed that a share of the managements of the railroads has been vested in the commission, when in fact, notwithstanding that the many public abuses which provoked the enactment of the law were due to private management, the law left the management with the investors represented by the companies.

"Others have assumed that the power vested in the commission was designed to prevent the companies from earning a return on watered securities, when in fact, notwithstanding the rank abuses attending the financing of the companies by private investors—although likely not more scandalous than attended the transactions of the Government and the States in aiding the construction of the early railroads—Congress has not, directly or indirectly, exercised any authority on that subject; in fact, the legislation now pending in Congress on that subject is designed to safeguard future investments in the railroads.

"The absence of an enactment in regard to abuses in connection with issuing securities, and the pendency of the present legislation, recognizes that Congress has in the past deemed it wise to allow a wide range of discretion in issuing railroad securities, with a view to encouraging private investments in railroads; and that it does not now regard it wise to further unsettle railroad credit by casting a cloud on the value of investments made in good faith in securities for which present value may not have been received.

"The harmfulness of the assumption that those securities are to be destroyed is obvious when we reflect that the supposition is that they are to be destroyed by the Government. It would be a slander on the Government to say that while it preserves its own obligations as sacred, it has conferred power on this commission, one of its instrumentalities, to destroy a large class of investments which our citizens have made in good faith.

"If the policy of the Government be executed, allowance must be made in the rates to cover the natural timidity of private capital, and if capital is to be acquired by the companies at reasonable interest, their rates must be high enough to foreclose question as to the security of railroad investments.

"It will not reassure the investor to say that the companies might be more profitably managed. That would frighten them away, and if it may ever be truthfully said that the managements of the companies are incompetent and wasteful, it will mean that the policy of the Government has failed.

"So the question is not one merely of theories with respect to maintenance or efficiency or accounting, but it is a broad, practical, common sense question which must be dealt with on broad lines."

EXHIBIT A2.

MANY PRORAILROAD PAMPHLETS HAVE BEEN PUBLISHED.

Speeches of railroad officials and business men in the interests of the railroads have been widely circulated. The Railway Business Association, 30 Church Street, New York City, acted as distributors for several of the pamphlets printed below. It is impossible to determine who was responsible for the publication of speeches made before the traffic clubs of Pittsburgh, Rochester, and Milwaukee. The speech of Mr. Ivy L. Lee to the City Club of St. Louis was printed by Mr. Festus J. Wade, of the Mercantile Trust Co. Various other printed matter was issued, some of which is printed below.

THE RAILWAYS AND THE GOVERNMENT.

Address by Howard Elliott, chairman of the New England lines, delivered at the fifth annual dinner of the Railway Business Association, the national association of manufacturers of railway materials, equipment, and supplies, at the Waldorf-Astoria Hotel, New York, December 11, 1913.

This is a gathering of representative men who contribute much to the industrial activity and prosperity of the Nation. The opportunity of speaking to you was accepted with hesitation, not only because it gives me a chance to meet many old friends and make, I hope, some new ones, and also because gatherings like this help us to appreciate our mutual interests. It is well to talk over those problems which the remarkable social and industrial evolution of the Nation has placed upon the business men, who are anxious that this country shall progress, and who believe that the social and intellectual advancement of the people depends upon reasonable success in all forms of industry—a class of men also who are as high-minded and patriotic and as great believers in the United States and its future as any class of men in the country.

INDUSTRIAL INTERDEPENDENCE.

The rapid increase in the country's population, accompanied, as it has been, by a racial mingling unprecedented in history, has produced new economic conditions and has brought to the fore new problems and new theories of the relation of the Government and the citizen in his business. The application of the principle of increasing Government supervision of business emphasized more than ever before the interdependence of all industry.

The industries which you and I represent are very closely related. Lack of sustenance and stagnation in one affects the others. If the railways of this country are to be maintained and operated as they should be, increasing their facilities to meet the increased demand of the growing business of the Nation, then they must be supplied with materials, and this benefits the many industries which you represent. These purchases of the railway stimulate the activities of the whole country. [Applause.] On the other hand, any curtailment in the purchasing power of the railway will have a withering effect on many industries and retard the prosperity of some which have been leading factors in the commercial growth and expansion of the Nation.

RAILWAY GROWTH.

The growth of the railways in the United States is without a parallel in any other nation. In their present form these railways have been constructed practically within the last 50 years. The total operating revenues of railways earning $1,000,000 or more for the fiscal year ending June 30, 1913, were $3,057,089,811, of which $2,134,563,789 came from transportation of freight and $678,440,089 from carrying passengers. In the same year these railways paid out for expenses $2,118,529,173, of which $407,156,008 was for maintenance of way and structures, $501,663,582 for maintenance of equipment, $1,074,914,428 for the actual expenses of transportation, and $134,795,155 for administration and traffic expenses. The net operating revenues of the railways of the country in the last fiscal year amounted to $938,560,638, out of which was paid in taxes $123,682,118.

The railways east of the Mississippi and north of the Ohio and Potomac Rivers in the same year did a business of $1,386,073,429, of which $992,403,390 was from freight and $293,234,927 from passengers carried. For the three items which make up between 90 and 95 per cent of the expense of operation, maintenance of equipment, maintenance of roadbed, bridges, etc., and transportation these roads spent in 1913 $246,727,105 for maintenance of equipment; $180,273,335 for maintenance of tracks, bridges, etc.; and $502,734,000 for transportation.

THE RAILWAY PAY ROLL.

Everyone admits now that the transportation question in this country is a very vital one, and these few figures are given to emphasize its importance. And the importance to the general welfare is not alone in the service rendered by transporting man and his property, but also because the railway is a greater paymaster. The railway pay roll is one of the greatest pay rolls in the country; more than 1,700,000 employees receiving in wages and salaries last year nearly $1,250,000,000. Adding the families of those employees there are nearly 7,000,000 people—about 7½ per cent of the total population—supported by this pay roll. Think of what this means to the communities in which these railway employees live; to the tradesmen to whom their earnings go for food and clothing. Think of the effect upon the business interests of this country generally of the distribution of this sum of money passing through the hands of this multitude of purchasers into the channels of trade. It would be difficult to find a person in this country who is not in one way or another benefited by this employment of labor. The railway employee is an important factor in his community, and there is no better proof of the theory that the prosperity of a railroad and the section it covers are interdependent than that furnished by the part the railway employees' purchases play in helping business.

Out of $2,750,667,435 which the railways earned in 1910, $1,143,725,306, or 41.58 per cent, were distributed in wages and salaries; in 1911, out of $2,789,761,669, $1,208,466,470, or 43.32 per cent; and in 1912, out of $2,826,917,967, $1,243,113,172, or 43.97 per cent. And each year this wage distribution has been taking a larger proportion of the railway dollar. Between 1910 and 1911 there was an increase of 5.66 per cent in the pay roll and only 1.42 per cent in the operating revenues. Between 1911 and 1912, the increase in the pay roll was 2.87 per cent and in operating revenues 1.33 per cent. There are no very complete statistics of the amount of material purchased by the railways, but it is very large—many hundreds of millions of dollars.

Obviously, as an abstract proposition, because of its effect on general business activities and upon the welfare and happiness of so many people, everybody must want this great pay roll maintained,

and want the railways to go on spending money. Curtailment of the railway purchasing power, or a diminution of its pay roll, would be felt in millions of homes. A continued improvement of the railway will stimulate trade, give a general steadiness to business, and minimize depression. The money the railways would spend in expanding their facilities as they should be expanded, to keep pace with the growth of business in the country, would percolate into every conceivable artery of trade. Can it be doubted that this would impart that wholesome stimulus to business that is so anxiously awaited at the present time?

To a large extent the railway is simply a collecting and distributing agency of the sums, small in units but large in the aggregate, that the public pays for the service it performs. The railway owner retains for himself what, compared with many forms of other business, is a relatively small return on the value of the railway plant. If there is to be a halt in railway activity, if the railways of the country are to be forced, by the conditions imposed upon them, to abandon all new construction and restrict their outlay to the absolute necessities of maintenance and operation, what will be the result? Will there not follow a corresponding contraction, especially in those industries, many of them very large, which the railroad helps to support, and be imparted by them, in turn, through still other trade channels until an adverse influence is felt throughout the entire business life of the country? For example: The railways purchase a very large proportion of all the iron and steel made in this country. Thus their prosperity is very closely interwoven with the prosperity of the great metal industry of the country, and upon this industry enforced economies and the suspension of construction by the railways will have a most serious effect.

RAILWAY EARNINGS.

There is indisputable evidence that that expansion of our railways which has contributed so much to the country's prosperity has, by reason of the conditions now imposed upon them, reached a point of practical suspension. There is hardly any new construction being undertaken, and improvements are being postponed wherever practicable because of lack of funds. This is due, in part, to the great increase in the cost of labor and materials, in part to the elaborate and luxurious facilities which the people demand, and in part to the rise in the rates of interest, all of which is reflected in the loss in net earnings shown by recent statements of the railways; and this despite an increase in gross earnings maintained until very recently, though there are signs to-day of a falling off even in gross. In the case of the eastern roads, the gross earnings increased $187,000,000 from 1910 to 1913, while operating expenses and taxes increased $201,000,000, the increase in tax payments alone amounting in those three years to $11,590,000. There was an actual decrease in the net operating income of these roads of $16,311,000. In 1913 these railways earned in gross $1,424,000,000. Their net operating income was $336,754,000, and after payment of interest on funded debt and other obligatory charges there was left $206,600,000. The dividends paid out of this amounted to $130,000,000, which was 5.10 per cent on the capital stock outstanding. This was $19,000,000 less than the dividends paid in 1912 and $7,000,000 less than the dividends paid in 1910.

In the Central Freight Association territory, a group of 28 roads, having 23,167 miles of road, or 51.5 per cent of the entire mileage in the territory, roads like the Big Four, Vandalia, Wabash, Chicago & Alton, and Illinois Central, in the year ending June 30, 1913, earned $63,000,000 more than in the panic year of 1908, but their operating expenses and taxes were $62,000,000 more, and after paying expenses and taxes their net operating revenues were only $811,000 more than in 1908, and their net corporate income was actually $8,000,000 less, although in these five years $180,000,000 of new capital had been invested in these properties.

The reduction in net is shown very strikingly in the statements of the New York Central, the Pennsylvania, and the New Haven for the first four months of the present fiscal year. In this period the New York Central lines showed an increase in gross earnings of $4,339,442, as compared with the same period of 1912, but as a result of increased expenses there was a decrease in the net earnings of $7,614,542. The Pennsylvania for the same period showed an increase in gross earnings of $5,100,192, but a decrease in net earnings of $4,367,795, while the New Haven, including all transportation lines in which it is interested, showed a decrease of $790,379.12 in the gross and $4,020,311.51 in net operating revenue, and of $4,934,725.01 in net corporate income, after allowing for all fixed charges of every kind.

THE RAILWAY PROBLEM.

I think that all candid and thoughtful persons will admit that the situation as reflected here is a serious one, not only as affecting the railways themselves but the entire business of this country. Indeed, with railway credit impaired, it would seem difficult for the railways to extricate themselves from the present situation unless a change occurs in public sentiment and in the treatment they receive from the people, as expressed through their various governmental agencies. Undoubtedly, various causes have contributed to bring this situation about. Some of these have been economic and some social, and the railway has suffered from both, perhaps, more than any other industry in that the price of its service is no longer within its own control, and the same may be said of its great pay roll.

Is it not incumbent upon all thoughtful men who wish to see this country continue to prosper to stop and ask themselves what can be done in this emergency? Is this trouble a socialistic one, due to new currents of thought and feeling in the minds of a majority of our citizens, fostered possibly by ideas of government brought here by many of our new citizens from the Old World, who influence many others with whom they come in contact? And if the trouble is socialistic, does it not behoove every citizen who does not believe in this kind of doctrine applied to business to speak out?

PRESENT TENDENCIES.

Many of us have hazy ideas about socialism, but the principle underlying the proposed socialistic state, as expressed by many socialists, is that from everyone shall be expected according to his ability, and that to everyone shall be given in accordance with his needs. The socialistic ideal thus expressed, is that every man shall do his utmost, but that he is not to be paid in proportion to the amount of work that he does, or in proportion to its value, but, on the contrary, he is to be paid in accordance with his needs. The tendency of the people of the United States, however, seems to be not to extend to the railways even that treatment which is expressed by this socialistic ideal. [Applause.] Under that ideal the railways would be expected to do all that they can, and would be allowed to receive all that they need, but is it not true to-day that the railways are expected to do more than they can, and at the same time are not permitted to receive what they need?

THE HUMAN FACTOR.

For example, first and foremost, the railways are expected to run their trains without causing injuries or death that would be avoidable by all ordinary human precaution. Yet distinction is seldom made between the need for care and caution on the part of the public and the need for care and caution on the part of those intrusted with railway operations. [Applause.] A very large number of the injuries and half the deaths charged against the railways are of trespassers on railway property. If people will not keep off railway property the law should compel them to do so. [Applause.] Yet, although the railway companies have time and again urged legislatures to pass laws against trespassing, only two or three State legislatures have responded. In other words, more is expected of the railways in diminishing the number of casualties and fatalities than they can do, and there is not given them that protection which they need and which the people need. [Applause.] Wrecks and accidents are sometimes due to the delinquency of those charged with the management and operation of a railway, and it is only right that the managing officers of a railway should be held directly to account for defects in administration and carelessness in directing operation. But there is another side, and if the officers are to be held responsible for the administration and discipline, the employees of a railway should be held responsible for submission to proper discipline and should not consider their allegiance to their brotherhoods above their allegiance to the company which employs them [great applause], or their duty to the public who supply the money for their wages. The Interstate Commerce Commission has pointed out that one of the most disturbing causes of accidents is the carelessness of the railway employees. Under these conditions, quite generally acquiesced in by the public and the press, the people make it difficult for the railway managers to preserve the discipline that the hazardous business of train operation demands, and are asking almost more than the railways can do. [Applause.] If the railways are quasi public servants, their employees are also quasi public servants, and the people should hold the man as well as the master to his responsibility. [Applause.] By not demanding this responsibility, the people are not according to the railways that which they need and that which the people need.

IMPROVEMENTS.

While the railways should be held directly to account for maintaining roadbed, track, and other facilities in proper condition, the fact should not be lost sight of that safety in operation, as the people look upon it to-day, means equipment of steel or steel underframe in the passenger service and other heavy expenditures in consequence. To demand that such improvements be made within any short period of time, in advance of the ability of the railways to pay for them, is to demand of the railways more than they can accomplish. And to hold them down and so to impair their credit that they can not obtain funds for such improvements is certainly not to accord to them that which they need. [Applause.] Again, in insisting that they serve the end of efficiency from the standpoint of economical operation, and, at the same time, meet the requirements for fast and frequent service, the people demand of the railways more than they can do. If they desire such service without allowing the railways the compensation that justifies it, they are not according the railways what they need.

In this respect the railways of Europe are treated better than ours, because there the justice of charging a higher rate for a fast-freight service has been recognized. In Europe, as in this country, there are generally three kinds of service, express freight on passenger trains, expedited or fast freight, and ordinary, or low-speed freight. But, while in this country no distinction is made between the fast and slow freight in the matter of compensation, in Europe a higher rate is permitted in the case of "accelerated freight." Such a charge, if permitted here, would increase earnings and help the railroads to make improvements now badly needed and yet would not impose an undue burden upon the public. [Applause.]

COMPETITION VERSUS COMBINATION.

There is another respect in which the people of this country are dealing at cross purposes with the railways, and this is a question of transcendent importance, not only in the field of transportation but throughout industry and commerce. This is a question of competition versus combination. The New Haven road is a consolidation of 189 companies—the Boston & Maine and Maine Central of 200 companies. Before the consolidation of these lines, when it was desired to move a carload of freight from one end of New England to another, separate arrangements had to be made and varying instructions issued for each railway and endless bargaining and higgling over rates and schedules, as well as the expense of many separate organizations. In this combination of separate railways in one organic whole there is the possibility of efficiency, under proper management, both from the standpoint of economical operation of the railways and from the public's standpoint of improved service. Because of practices incident to the great construction period of American development and not confined to railways, the people created the Interstate Commerce Commission, which has pretty effectually not only restrained competition but stifled it, so far as rates are concerned. As the commission has the power to prevent the railroads from charging unreasonable rates and to prevent unjust discrimination, it is a grave question whether it is not an economical error to object to combinations of railways which, under suitable management, can be made to serve the ends of efficiency by more economical operation and better service. [Applause.] Here, again, we find an inconsistency on the part of the people, who insist that the railways shall practice the greatest economy and efficiency in operation, but who, at the same time, object to principles that will further such economy. If the railways are not supported by the people they can not render service to the people. The very expression "the railroads and the people" indicates a distinction, a separation of interests, that the prosperity or the adversity of the railways is a matter of indifference to the people, and vice versa. Such a feeling occasionally finds expression in such an utterance as was made recently in the New Orleans Picayune, which editorially called upon the voters to oppose any candidate who was not "fully competent and willing to place the people's interests above those of the railroads and transportation lines under all circumstances," when, as a matter of fact, their interests are identical. One reason, I believe, for ths attitude, is that our people do not realize that railroading is business just as much as rail making or producing paint is business, and that railways are as much a part of everyday life as any other business.

MULTIPLICITY OF LAWS.

There are State legislatures which pass laws concerning the railways within their State and the laws of one State sometimes conflict with those of another, and sometimes with those of the National Government. The effect of this multiform and heterogeneous regulation is to compel the railroads to serve 49 masters, although the impossibility of serving even 2 masters has been crystallized in a proverb. [Applause.] The effect of this multiplicity of laws also has been to undermine the confidence of investors, whose money is needed for the extension and the improvement of the railroads. It has been estimated that nearly one billion dollars will be required within the next year to improve the railways so that they may meet the demands of growing business and safer and more luxurious service. How can this money be raised? How can this condition be remedied? Must it not come from cooperation of the people with the railways and from the conviction in the public mind that railways are rendering to the people not only an essential but a vital service?

GOVERNMENTAL EFFICIENCY.

If the people, by reason of new tendencies of thought, are exacting more of the railways and allowing them less in return for service rendered, are the people following the same rule with respect to the great machine of Government which they themselves have created, and in whose management they have a potent voice? There has been criticism of lack of efficiency in railway administration, and some of it is just, because railway officers and men are human and imperfect, but as a class they are doing better year by year. As a class they are high-minded, patriotic gentlemen, dealing with a problem that at times is very discouraging. They believe in frank and honorable business methods. They are doing the very best they can and they should receive help and commendation from the public instead of hindrance and hostile criticism. [Great applause.] Does the Government set any better example to the busines men or to the youth of this country of the necessity of hard, efficient, and high-minded work? [Applause.] In 1896 there were in the executive civil service, excluding employees in the Congress, the judiciary, and enlisted men and officers of the Army and Navy, 178,717 persons, and in 1910, 355,635, an increase of 100 per cent in 14 years. While the population of the country has increased, it has not increased 100 per cent, and is the Government doing the careful, efficient work the taxpayer has a right to demand? [Great applause.] If the Government with all its power has been unable to resist the demands for greater elaborateness and more employees, can it be expected that the railways can escape these same forces? [Applause and cries of "No, no."] Again, does the Government exemplify in its own dealings with others the principles of justice and business morality which the people, through this same agency, exact from those subservient to it?

STANDARDS OF CONDUCT.

There has been a gradual and desirable change in the standards of business in the past 20 years, and particularly in the past 10. Practices that a few years ago were considered proper in financial, commercial, manufacturing, and transportation business are contrary to the ideas of the public to-day.

In this business uplift, I think the great railway systems of the country, taken as a whole, are in the front rank in trying to do their work on a high plane and in trying to observe the complicated laws of the land. [Applause.] And the larger and more complicated the business, the more rigid is the carrying out of the maxim that "Honesty is the best policy." [Applause.]

Some people are still ready to ask for the rebate, the pass, and the special privilege. Because of some glaring failures here and there the press and the public sometimes are too prone to condemn all. But every man in modern industrial-business life knows how insistent the majority of men charged with the responsibility of management is for honesty, good morals, industry, and avoidance of sharp practice, and of trying to get something for nothing. [Applause.]

The moral effect of this policy on the young man in business must be good, because whether he likes it or not he must behave or be thrown into the discard. What kind of an example does the United States Government set before the youth of the land in its treatment of the great transportation lines? The Government should surely be as scrupulously honest and high minded in dealing with the railways as it expects the railways to be in dealing with the people, but is it? [Applause.]

RAILWAY MAIL PAY.

Look at the mail and parcel-post situation for a moment. The Government pays the railways for transporting the mail on the basis of weights obtained in the autumn of 1912 for four years beginning July 1, 1913, although there is always some increase in weight each year. In January, 1913, the parcel post began with a weight limit of 11 pounds, then increased it to 20, and it is now, in some cases, to be 50 pounds. The parcel post takes business away from the express business of the railway and reduces earnings in that way but the Government pays nothing for the extra weight carried, as the test weighing was before the parcel post began. So for four years the railways must carry the increasing weight of the ordinary mail and the rapidly growing parcel post freight for nothing, unless the Government takes steps to pay for service already performed and to be performed, which, so far, it seems disinclined to do. [Applause.]

On the New Haven road, which right now needs all the help it can get [laughter and applause], a careful computation made by chartered accountants showed that the company was performing service costing $743,000 a year more than it received; and what is true of the New Haven is true of many other roads. Yet there is little criticism of the action of the Government, although it is taking large sums of money away from the railroads. [Applause.] Do you remember all the outcry there was, and justly so, when it was found some years ago that an importer in Brooklyn was defrauding the Government through false weights? [Laughter and applause.]

The New York Times, in an editorial in October, 1913, said:

"Every receiver of a postal parcel carried at the cost of the railways whose services are not paid for is a receiver of stolen goods." [Laughter and applause.]

The Chicago Inter-Ocean, in commenting on this, said:

"Any man who, merely because he has the power, compels another to give him unpaid service is a robber. [Great applause.] He has taken from the other his time, his strength, or his property in some form without making due compensation. If 10 men thus combine to rob 8, the immorality remains. Because several millions have combined 'through Government' thus to rob their fellow citizens who happen to own railroads, the wrong of it is not made right."

SERVICE WITHOUT PAY.

This is strong language, but is it not true?

Here are the railways, struggling to make both ends meet, and the Government takes service from them worth, exclusive of the parcel post, at least $15,000,000 per year, and no pay. What kind of an example is this for the great United States Government to set to the younger men of the country? [Laughter and applause.]

The whole theory of modern railway regulation is to secure honesty of operation and fairness of treatment on the part of the railway toward all classes of the public. Does it not, therefore, behoove the Government in all of its relations with the transportation companies to treat them with the most scrupulous regard to the dictates of honesty and fairness? Treatment by the Government, however, of the question of compensating the railways for carrying the people's mails suggests a lack of full appraciation of this converse proposition by some of our highest governmental authorities. While not a single definite and practical step has been taken with a view of compensating the railways for carrying the additional weight of the mail for the period of the first six months of the parcel post, the Postmaster General was empowered, after July 1, to add not exceeding 5 per cent to the pay of the railways. But on August 15 the Postmaster General increased the weight limit from 11 to 20 pounds, and the Interstate Commerce Commission, only last week, gave its approval to his recommendation of a further increase to 50 pounds. No arrangements were made, however, and no arrangements have as yet been made, to compensate the roads for this additional weight. Is it any wonder that the parcel post, under such conditions, has been eminently successful? [Laughter and applause.] And is it any wonder that some advocates of Government ownership have seized upon its success as an argument for other theories, particularly with respect to its efficiency and economy? [Laughter and applause.]

The Supreme Court has ruled that the railways are not compelled to carry the mails, but that if they do carry them it must be under the rules laid down by the Postmaster General. Any thinking man will realize that they could not seriously consider refusing to carry the mails. If the law compelled them to carry the mails under rates fixed by Congress which were not compensatory, they would have some standing before the courts, but under the law as it stands they must make now a contract with the Post Office Department upon terms dictated by that department, and can only appeal to public opinion for a redress.

THE RAILWAY FACTOR.

The more men of fair and unbiased minds study the economic situation in this country, affected as it undoubtedly is by some of these experiments of Government, the more are they impressed with the importance of the railway situation as a factor. Sir George Paish, eminent in the field of finance and economics, commenting on the country's condtion, after a long trip of observation, said recently:

"In considering the economic outlook of the United States in the immediate future, it is evident that the factor of most immediate importance is the application of the railways of the Eastern States to the Interstate Commerce Commission for an advance in rates. The difficulty experienced by the railways in raising capital has already caused many of them to reduce their new capital expenditures, and this reduction in a large measure accounts for the reaction in the iron and equipment trades that is now observable. If the difficulties of raising new capital become still greater, then it is obvious that the railway companies would practically stop improvement works and a serious setback in trade would result. If, however, the railways succeed in funding the large amount of notes which fall due in the current year, and in raising the new capital they require to expend on works of improvement and on new equipment, then the reaction in trade, due to international conditions and other influences would, in my judgment, be comparatively small. Thus the action of the Interstate Commerce Commission in altering or disallowing the railways of the East to advance their rates by 5 per cent will have important economic consequences."

RAILWAY IMPROVEMENT NECESSARY.

With all our troubles, however, I still feel that we will come out all right, but—and this a great big but—care must be taken in working out these problems, and the public must be told the truth, or harm will be done that will take years to cure, and the best results will be delayed. It is foolish, in this country, to admit that all railway improvement must be given up. These things must go on; public opinion will not tolerate a deterioration of the railways. It will insist upon their being able to furnish the service required by growing business and by the very logic of the situation the public will provide the means for them so to do. But it is most important not to delay too long.

HOPEFUL SIGNS.

There are some rifts in the clouds. Signs indeed are multiplying of a readjustment of ideas in the public mind, which ought to find a reflection in the attitude of governmental agencies. The miasma which has arisen from the misrepresentation of the past is disappearing, and the public mind is clearing in consequence. That a constructive rather than a destructive sentiment is growing is apparent. This drift in public sentiment is clearly beginning to make itself felt, as shown in some recent expressions of a friendly nature coming from those in Government offices. Such, for example, was the statement made only a short time before his death by Interstate Commerce Commissioner Marble: "We are seeking to bring about a condition that will be fair and equitable and that will make the railroads successful under present ownership." [Applause.] In the newspapers this drift is finding expression in a rebuke of continued criticism and intemperate denunciation of former practices, and a general realization that such a course can only produce widespread business atrophy.

CURING THE PATIENT.

National need of terminal and other railway facilities having been thoroughly impressed upon the public mind, shippers and editors generally convinced that larger net railway returns should be permitted, what are the reasons and perplexities which prevent the people from giving effect to a policy that will cure the trouble, making it unanimous? Even if there is only a vigorous minority opposed to such policy, candid consideration of their objections is due them.

It is claimed that the management of some roads has not been honest—that insiders have profited when they should not. The morals of all kinds of business have improved year by year, and things have been done in railway and other business in the development of the country that were probably not right then and that certainly are frowned upon now by law and public opinion. Such things ought never to have been done. Owners of railways should root out dishonesty if it exists, and

if they will not, public authority will do it. But is there anything in the situation that warrants calling a halt on the development of the continent? [Applause.] Every time a clergyman, a doctor, a senator, or a cashier is punished, are we forthwith to abolish all clergymen, all doctors, all senators, and all cashiers, while we unfrock that particular clergyman, convict that particular doctor, expel that particular senator, or jail that particular cashier?

RAILWAY SECURITIES.

Others say that some railways are overcapitalized. Whether they are or not, and certainly American roads have led the world in refraining from it, no more capitalization ought to be created than is necessary in order to serve the public. If too much was issued by some roads in the past, this is to be regretted, but no workable method has been suggested by which securities issued legally and bought in good faith can be taken from their owners without failures and receiverships that harm many more people than the owners of the securities. [Applause.] As for the future, every railway of importance runs through one or more States which regulate security issues. And apart from that, those responsible for railway management realize, as they never did before, the absolute necessity of sound business principles in issuing securities, law or no law. The present problem is not to restrict the issues of securities but to find people willing to buy them. [Laughter and applause.]

Another says that if securities were sold over the counter the bankers' commission would be saved. Perhaps, some day, if confidence can be restored, part of such commissions might be saved, but a railroad must have financial experts, as well as engineering experts, and pay a fair price for services rendered. If the commissions can be saved, they ought to be. But not even city, State, and Federal Governments, whose credit is based on the taxing power, have been able at all times to float even moderately large popular loans without the aid of bankers. [Applause.]

Others object because they say the new revenue would go to increased dividends. So some of it would and must. The dividend which a stockholder receives is not all that he would like or that his managers want to pay, but is an amount needed to induce him and others to buy more stock or bonds when an enlarged plant is necessary in order to meet the desires and absolute necessities of the public.

EFFECT OF ECONOMIES.

It is said that the increased income needed could be had by economies. It is true that economies have been introduced, and there is room for more of them. Railroad managers, as a whole, are pushing hard every day to improve men, methods, and facilities. Many economies, however, can only be adopted by throwing away old appliances and buying new ones, which is the case in mills and factories as well as in railroads. And, if the railroads have no money with which to get the new tools, they must do the best they can with the old ones. No effort in this direction should be neglected, and no other industry is, or in the nature of things can be, so thoroughly organized nation-wide as the railways to cooperate in studying, experimenting, and standardizing their progress. But, in view of the wonderful savings already accomplished, both major and minor, in the past few years, and in spite of the larger percentages of gross earnings absorbed by expenses and taxes, it is doubtful if the people should depend on such measures to offset the apparently irresistible rise in wages and in the price of materials, the higher cost of capital, and the demands for more elaborate facilities and luxurious service.

Are any of these obstacles sufficiently important to delay such revision of rate schedules as will meet this anomalous situation of increasing gross earnings, but declining net earnings, and still more rapidly declining net corporate income after payment of fixed charges?

The railway managers of the country want to know where to improve. They welcome just criticism based on a real knowledge of all the actual facts. It is their purpose to profit by it. To serve the public adequately, on the other hand, is also their purpose, and it is their duty to seek diligently from the appropriate authorities the sanction and help necessary if the railway is to do what the people want and must have if the country is to grow. So it would seem as if it was to the interest of the people to be patient with a railway which has practically no control over the price of what it has to sell—transportation—and very little control over the price of labor needed to produce that transportation.

New England is a great educational and financial force. She has sent her sons all over the country to help do the work needed. In the last edition of "Who's Who in America" 20 per cent of the names are those of men born in New England. Anything that affects adversely the credit and social welfare of New England will, in turn, affect the whole country. Her welfare and the welfare of her railways are important to the entire country. These six New England States have one-fourteenth of the national population, and have one-twelfth of the national wealth. They consume one-eighth of the materials of manufacture, and they have one-sixth of the bank deposits. For the New England lines, that I represent, I ask the patient goodwill of her people and of the Nation while her peculiar and difficult transportation problems are being solved. [Great applause.]

I don't think I ever sat in a board that felt so badly as the New Haven board did yesterday when the figures forced them to make the decision that took away a dividend, coming at Christmas time, from thousands and thousands of people. [Applause.] But they had the courage to take that position because they felt in the long run it would be better for the property, better for New England, and better for the stockholders themselves. [A voice: Good, good!]

The business men of the country who benefit from the accumulated savings of New England, from her large purchases from other parts of the country, from her great and continuous contributions to the national welfare in sending out trained men and women, should at this time of storm and stress help the situation in every reasonable way. It is to your interest to do it, and as patriotic citizens interested in the welfare of the whole country, I ask you most earnestly to help. [Great outburst of applause and prolonged cheering, Mr. Elliott rising and bowing.]

GOVERNMENT AND THE RAILWAYS.

An address by Hon. James M. Cox, governor of Ohio, delivered at the fifth annual dinner of the Railway Business Association, the national association of manufacturers of railway materials, equipment, and supplies, at the Waldorf-Astoria Hotel, New York, December 11, 1913.

Business and government are beginning to understand each other better—a development in attitude born of expediency on the one hand and an awakened consciousness of responsibility on the other. Business in its present form is a distinct social evolution based on the elements of human dependence. In fact, it not only antedates organized society, but it was the one thing most conducive to the association of man without which he would still be encased in the shell of primitive darkness.

As government sprang logically from the social organization, then a very simple analysis establishes the important part that the mere exchange of products and utilities has played in the whole scheme of things. This very obvious corelation makes it difficult to account for the prejudice which government so long held for business. And yet we must not delude ourselves into the thought that the human element was lacking in this estrangement. The tendency of government is but the impulse of humanity. Laws are but the reflex of a controlling public desire, the act of government being as closely joined to the social organization as the movement of the arms to the mind which directs them.

So that we are brought confessedly to the proposition that the mass has been drawn into agreed opposition to the class. There is a high average of fairness in public opinion, the admission of which brings the thought that unfair advantages have obtained somewhere. As our Government is designed to maintain the largest measure of equality and opportunity possible, then it must adjust itself to the useful function of correction.

PARENT GUILTY, TOO.

So-called big business was chartered by government, and if the child has been guilty of abuses, the parent is not blameless for permitting them to go on until they assume the form of a distinct menace to the industrial life of the Nation. [Applause.] Everyone but the cynic grows into an acceptance of the philosophy that things balance up pretty evenly in the game of life, and it would seem that the agencies which by one form or another postponed the day of governmental regulation find the consequences falling upon them with some severity. [Applause.] On the other hand, the Nation, now aroused from the lethargic spirit of letting well enough alone, finds the results of its long neglect spread into every community.

A NATIONAL RESPONSIBILITY.

The country is now facing a responsibility which must be met with candor and courage. Something must be done with the railroad question. Let us discuss it frankly in its important phases.

First. The part which transportation plays in our affairs and in the development of the country.

Second. The real condition of the railroads, physical and financial.

Third. The cause of the present confusion.

Fourth. The remedy.

IMPORTANCE OF TRANSPORTATION.

It is surprising upon analysis of industrial activities to find the potential part that the railroads play. Ours is a great country of vast domain. Our lands possess the diversified fertility which yields the extremes of corn and cotton. Our mines give up the richest treasures in all the world. The genius of man lays hand on the waterpower of our rivers. We enjoy the varying climates common to every region from St. Petersburg on the north to Palestine on the south. We attract the strong, red-blooded people of all nations, and as they pass through the melting pot of the American institutions there comes from it that wonderful composite figure, the American citizen. [Great applause.] And yet, with all these God-given advantages, what would it avail the great Northwest to grow bread for millions if its products could not be transported all over the world, producing in steady flow the yellow stream of gold? The South, facing the future with every promise of restored commercial strength, would fall into stagnation if the means were not provided to convey cotton from the plantation to the spindles and looms of the globe. [Applause.]

The great Middle West, a giant in the part it plays in the affairs of man, would lapse into decline if transportation lines did not tap the fields of this vast universe. We are a great people because we produce practically everything necessary to civilization. We are essentially a nation of traders, because the North, South, East, and West must sell to and buy from each other.

We are a concrete mass in commerce, because the genius of man has solved the problem of distance and isolation. Lay down the map of the Republic and trace the network of railroad lines. In combined mileage they span the distance from the earth to the moon. They pierce every State. In 1912 they transported 1,019,658,605 passengers. Over every mile of track were carried more than a million tons of freight and 138,169 passengers.

SPIRIT OF RAILWAY ORGANIZATIONS.

The vast organizations are held together by a spirit as impressive as that dominating an army. No order of loyalty exceeds that of the vast majority of officers, while the privates unflinchingly face dangers every day that would try the mettle of the seasoned soldier. [Applause.]

The great trunk lines and feeders resemble the circulation system of the human body.

And if you lay your finger on the pulse of the railroad organism you have certain and unmistakable symptoms of the country's prosperity or adversity. [Applause.] One out of every twelve male adults in this country is employed by the railroads. Their contribution to labor and manufacturing makes up one-twelfth of the commerce of the land. No city of any size has grown without a railroad.

OHIO'S GREAT FLOODS.

When the great Commonwealth of Ohio was stricken last spring with the great flood catastrophe we lay stunned and helpless until railroad communication was established. As soon as the severed cords were put together the whole aspect changed. Communities were fed and the vital life of the State restored.

Certainly none will deny how important the railroads are and how essential it is to conserve this utility, and by this is meant protection from unwise operation, and a guarantee of measurable safety to the individual and institutions that have hazarded their capital. The health of the railroads is very far-reaching when we consider that, aside from the ordinary investor, life insurance companies, holding in their hands the hopes and expectations of almost 30,000,000 policyholders, have invested one and a quarter billion dollars in railroad securities.

CONDITION OF THE RAILWAYS.

Now, what is the condition of the railroads? We have enjoyed unprecedented prosperity. Commerce has its ups and downs, but the tonnage of the railroads continues stupendous. Terminals in every city are insufficient. There is congestion at these points which interferes with the normal tide of travel. Service is beginning to show the lack of old-time regularity. Rolling stock is inadequate in some respects. The development of the country makes a call on the railroads for exten-

sions and equipment which finds an enforced feeble response. They could, advantageously to the public, use hundreds of millions of dollars right now. [Applause.]

Three years ago James J. Hill, with a vision that was almost prophetic, stated that the railroads should for five years expend a billion dollars annually for construction if they were to handle the business of the country efficiently. [Applause.] He predicted congested terminals and vastly inadequate facilities, and events show the wisdom of his observation.

RAILWAY CREDIT IMPAIRED.

With the public and the railroads in agreement on the proposition that the march of progress has passed the transportation business, the fact remains that the railroads can not borrow the money to provide for the situation. Short-time notes have been given to meet current and emergency expenses, and if the banks of the country were to demand payment we would be in the throes of a well-organized panic. Investors have been driven to other fields, notwithstanding no business is based on a more stable utility than that of the railroads. The amount of securities listed on the New York Stock Exchange by steam railroads in 1912 was the smallest in 10 years.

RAILWAY REGULATION.

While there can be no difference in opinion with reference to the utility of the railroads, their present physical and financial condition and the necessity of their conservation, there may be a vast divergence in views with reference to what has brought about the present situation and the correct remedies which must come from both the common sense and fairness of the American people. Where symptoms are so well marked it seems to me that the diagnosis out to be measurably easy. You hear in many quarters the statement that adverse legislation and the policy of regulation by the Government—State and Federal—are the largest contributing factors. I do not subscribe to this view. In fact, sane regulation will become the ultimate salvation of the business. [Applause.]

REGULATION NOT SOON ENOUGH.

One can not resist the thought, when he surveys the abuses of overcapitalization, financial adventure, and personal exploitation, that the mistake in regulation has been that it did not come soon enough. Prior to regulation by Government, 20 per cent of the railroads of the country were in the hands of receivers. This was the situation in 1894. It can not but be regarded as significant that the New York Central, Baltimore & Ohio, and Pennsylvania Railroads, with a combined capital stock of $934,000,000, have issued, since 1900, during the period of increased regulation, stock to the amount of $548,000,000, upon which they realized more than $600,000,000 in cash, the securities having sold at a handsome premium.

COWARDICE AND CORRUPTION.

No one will contend that the laws in some of the States have not been unduly burdensome. The truth is that in the political affairs of a nation the two harmful elements are cowardice and corruption, and as debasing as corrupt influences have been, the ultimate harm from cowardice in public station has been infinitely greater. [Great applause.] Personal political expediency is too apt to rise transcendent to the public welfare. There has been a regrettable absence of that order of courage to withstand some legislation born of prejudice against the railroads, and I believe you gentlemen will agree that this prejudice developed in considerable degree because of the unwise and, in some instances, reprehensible administrative policies of some companies.

NEW MORAL STANDARDS.

No one will seek to condone the practice of milking railroads in order that the executive officers and directors might be illegally and immorally given vast fortunes through the artful and insidious method of contracting with themselves for construction work. [Applause.] No man in conscience will avow the propriety of a wildcat policy in the issuance of securities. No community in America will produce the man who will attempt to justify the practices which have shaken the confidence of the conservative thought of New England. These abuses of power, like every other disaster in social or economic life, have their compensations. There is always a hidden blessing which plays its part in working out an ultimate evolution along the lines of morality and sound business policy. There is no saying more truthful than that the hazard always makes the man; and it is fortunate that over the wreckage of these misguided projects there come men with a vision, a humanity, and a courage which give hope to this whole country, which can not but look upon the situation with grave concern. [Applause.]

ABOLITION OF REBATES.

The method of regulation by Government which prevents preferential rates and rebates is not only helpful to the railroads themselves but it is a dignified participation of Government. These quasi-public corporations spring into life by the consent of society through the agencies of Government. That is the first and essential element of vitality to the project; and the institution responsible for the birth of the corporation not only has a constitutional right to retain a reserve power of control, but the moral obligation to do so is just as binding. [Applause.] The misconduct of the child is a reproach upon the parent if he has been remiss in his duty. It is unfortunate that the railroads, in their failure to recognize the ultimate advantage from regulation, drifted for a time into a Nation-wide policy of resistance, and this resulted, in some instances, in a too large corporate participation in politics.

RESTORE THE PATIENT FIRST.

Now, what is the remedy?

First of all, we might just as well recognize at the outset that a puritanical severity with stockholders who honestly acquired their securities is not going to do any good. The thing to do is to restore the patient and then prescribe and enforce a diet and behavior which will prevent recurrent illness. The man who stands for progressiveness in government bases his plea upon the theory that all things are changing; that man and his activities must fall into inevitable subjection to the laws of evolution; and we remind the ultraconservative that things not only change in business, in professions, in the sciences, in all the agencies of life itself, but that each age brings its changes in accepted fundamentals of justice.

NEW ETHICAL YARDSTICK.

Our fathers subscribed to many things in full conscience that are shocking to present-day ideals. My reference is obviously to the offense for witchcraft, imprisonment for debt, and the property qualification in suffrage. We must therefore be consistent and recognize this as fundamentally just—that the transgression of yesterday can not and must not be measured with the ethical yardstick of to-day. [Applause.] It is more creditable, I feel sure, to adhere to this doctrine than to frame a policy of confiscating the holdings of present owners who are in no way to blame for the abuse of those who sold them.

NEW ENGLAND SITUATION.

Some may contend that the Government is not the guardian of the people in their traffic regulations one with the other, but that does not reach the question of the Government's neglect for years in permitting its corporate creature to run amuck. [Applause.] We have in illustration of this thought the developments of to-day in the affairs of the New Haven road. [Applause.] The whole country stands appalled. A great property builded on the resource, thrift, and pioneer morals of New England has been drained of its very blood and bone through methods that inspired the Divine command, "Thou shalt not steal." [Applause.] Of the 22,000 stockholders, half are women, many are estates and trustees, a circumstance which speaks the confidence of those now dead. What excuse has government to offer those who lived secure in the thought that it protected the defenseless? What word have the States responsible for this outrage to utter in explanation? It would have been impossible of accomplishment in any progressive State. I feel sure the Federal Government in its present hands will not remain dumb to the constitutional command of absolute control over interstate commerce. [Applause.]

SOCIETY MUST PAY.

As the responsibility was divided in the first instance, there should now be common acquiescence as between the Government and the railroads in the suggestion to seal the past and proceed in making of a better order of things on an entirely new base.

If we concede that the agencies of transportation must be healthy in order that the country can grow and develop, then regulation must proceed on the theory that what society imposes on the railroads society itself must pay for. [Applause.] If increased taxes, larger compensation for labor, the application of safety devices, the maintenance of expensive schedules and other things are insisted upon by society through Government, then the railroads, like any other institution, must be given the right and the facility to distribute the burden. The business man meets the increased cost of his products by adding to his selling price. Augmented costs, due to short crops or other unseemly circumstances, fall generally upon consumption. If the industry involved were to bear it alone and Government prevented the distribution of added expenses, there would be but one result—disaster. So that if we expect the railroads to draw from their earnings to meet the changed and developing conditions of the day, they must receive the same consideration shown to other business enterprises, or the result with them will be the same—disaster. [Applause.]

You can not buy land for terminals, lay tracks of steel to accommodate the growing traffic of the Nation, build spurs to mines, cities, or agricultural centers without an increased cost in investment. You can't sell the securities unless the public is assured of a return on the outlay.

TO STRENGTHEN INVESTORS' CONFIDENCE.

Every phase of the fiscal situation with the railroads suggests that something be done to establish in the mind of the investing public some fixed idea not only of the inherent value of the railroads but a national policy securely supported by an intelligent public opinion must be framed for the conservation of the transportation utilities, and you can not conserve the business without conserving the confidence of the country. Railroad men everywhere admit that a new day in the affairs of this industry has arrived, and that the old order of things is displaced, first, by the impossibility of extensive exploit and adventure; and, second, by a new moral code which seems to be finding adoption everywhere. The policy of dealing above board with the Government, public, and shipper will become the real asset of the railroads. The Government is the best agency to give dignified and effective exploitation of that plan. If a railroad corporation desires to work out a project of extension or improvement, and votes a perfectly honest issue of securities with every intent to disburse them in good faith, the very essence of the whole transaction inspires confidence which will be widespread if some agency without the railroad organization certifies the legitimacy of the enterprise.

I introduce, therefore, entirely regardless of the objections that have been raised to the plan, the suggestion that ultimate relief will never come until the Interstate Commerce Commission passes upon the issuance of securities. Now, let us analyze this proposal.

FEDERAL SUPERVISION.

Suppose the Pennsylvania Railroad Co. desired to issue $50,000,000 in bonds—and I can not mention the Pennsylvania Railroad Co. without making this observation that out in our country we believe that its honor has never been stained [great applause]—and it prepares to issue these securities. It goes to Washington and submits in detail and specification absolutely everything connected with the project. The Government makes its investigation, finds it to be a legitimate enterprise, and it says so. It certifies the integrity and the legitimacy of that project. You then divide your securities into smaller denominations. Confidence has been procured by the Government participation, and if you give the people the opportunity to buy the securities, in 10 years' time the railroads will be owned by the people and you will have public ownership instead of Government ownership. [Great applause.]

STATE-RIGHTS OBJECTION.

I am mindful of the recommendations made by the commission appointed to investigate this plan. It proceeds from the premise of State rights. Every fair-minded student of this great subject concedes that when the States manifest no disposition to act in concert with reference to a subject, nation wide in its consequences, for the simple reason that the Federal unit of government can reach the responsibility with more efficiency and directness than the States, the general welfare of the people must be considered before the ethical rights of the States. Let me give you this illustration:

The Pennsylvania Railroad Co. operates largely in the States of New York, Pennsylvania, Ohio, Indiana, and Illinois. I think only two of these States have laws which compel governmental supervision over the issuance of securities. The company submits its project to Ohio, which has such a law, and yet this procedure by one or two States does not give the slightest aid to the investor, because the local authority is concerned only about the improvement within the State. Ohio counties used to value utilities for taxation; but it became perfectly apparent that they must surrender the task to the State in order that the valuation could be made on the corporate unit or that part of it local to the Commonwealth. The results have been so satisfactory that no one would think of restoring the old order of things.

MUST HAVE LIVING RATES.

As already indicated, I hold no brief for the railroads, but I recognize that Government, from the standpoint of morals and expediency, must permit them to have living rates. The survey should be an exhaustive one; and if it develops that while the gross receipts have increased, the net receipts are considerably diminished by the liberal policy of society, then relief ought to be granted, whether it be 1 per cent, 5 per cent, or 10 per cent that is needed. [Applause.]

There is nothing more harmful than the tendency to hold to a fetish. There is no more offensive species of standpatism than to impose a rate one year and continue it without term.

The future may develop the necessity of scaling rates downward. The inventive genius of man may contribute the means to vast economies in operation. When that comes, the public should be given a reasonable rate, based on the cost of the service; the reasonableness of the rate is the issue now and always will be. The railroads are entitled to it, and so is the shipper.

Recognizing, as we do, that there is some prejudice against the railroads, and that an increase in rate, even though suggested by every consideration of fairness, might be unpopular, our great Government has no higher function than rising to the dignity of a courageous recognition of rights, whether they be individual or corporate.

RATES ARE LOW.

Statistics would seem to show that while the Government receives 2 cents for carrying a letter from 1 to a thousand miles—a very unscientific rating, by the way—the railroads transport a ton of freight 3 miles for the price of a postage stamp. This might be an odious comparison, and yet it reduces the whole situation to a problem so simple that we can better understand it.

The question of rates is an involved one. There are so many things to consider that one develops a sympathetic attitude for the Interstate Commerce Commission. There can, of course, be nothing but a uniform rate, and yet it has its elements of unfairness. Let us analyze this:

Between Chicago and St. Paul there are six different competitive railroads, and their capitalization per mile is as follows:

	Per mile.
Chicago, Burlington & Quincy	$36,338
Minneapolis, St. Paul & Sault Ste. Marie	36,362
Chicago & Northwestern	43,900
Illinois Central—Minneapolis & St. Louis	58,000
Chicago, Milwaukee & St. Paul	58,342
Chicago Great Western	74,983

BONUSES WERE NECESSARY.

The first thought might be that the vast difference is due to varying policies of finance and construction. The question of integrity may be raised, and yet on analysis explanation may be found in considerable part in the matter of terminal values, a difference in rolling stock and roadbed—the physical characteristics of the routes might add to the cost in one instance and reduce it in another. Some of the roads may have been built when the future of railroads was uncertain and bonuses were necessary to the completion of the enterprise. We must recognize that few projects in the formative period of any industry were ever launched without common stock being given with the subscription of bonds or preferred stock. The man who took a long chance is entitled to a reward beyond his 6 per cent return. [Applause.]

EARLY OBSTACLES.

Let us not forget the difficulties railroads encountered and overcame. In our own good State, with a citizenship that has always been progressive, the early legislature was asked to prevent the construction of steam railroads on the ground that the trains would frighten the stock in the fields until it would not take on fat. It was urged that transportation by wagon would be impossible with trains running through the lands, because the oxen and horses would be frightened to the point of frenzy by the whistling of the engines. [Laughter.]

Then, as a compromise, it was proposed to allow the roads to be built and operated, provided the trains would stop within half a mile of the wagon road and some one would go ahead to notify the people along the road that the train was approaching. Nor was this during the dark ages. It was within the memory of the oldest inhabitants of the State. [Laughter.]

The first newspaper published in Ohio was established a little over a hundred years ago, and known as the Western Star. It is still operated under that name, although the western stars have moved 3,000 miles farther west. In an issue of that paper there was printed an argument against railroad construction in Ohio upon purely economic grounds. It was shown that one train would displace 50 horses; that it would draw as much freight as 25 two-horse teams. And the writer sought to show that the displacement of so many horses would tend to lower the price of grain—that the raising of grain would be unprofitable, because there would be no horses to eat it.

But every reform that has been worked out, every invention that has been launched, has had to meet this economic opposition. Christianity itself was opposed upon purely economic grounds in the beginning. One of the philosophers of Rome congratulated Nero upon his attempt to stamp out Christianity on the ground that there were so many people embracing the new teaching that it was affecting the market for fodder used to fatten cattle for heathen sacrifice. [Laughter.]

In 1818 the school board of Lancaster Township passed a resolution refusing to allow the use of the schoolhouse for a debate upon the subject of railroads and telegraphs. The resolution stated that such propositions as railroads and telegraphs were marks of infidelity and held that had the Lord intended men to talk through the air or ride at the rate of 15 miles an hour it would have been foretold in the Scripture, and that a careful search of the Scripture failed to reveal any such prophecy. [Laughter.]

CAPITALIZATION.

Attention is drawn to the vast excess of capitalization of foreign railroads per mile as compared to American lines, and the difference is impressive, as shown by the following exhibit:

Capitalization per mile of line:	
United States	$62,657
Germany	113,855
France	144,683
United Kingdom	275,156
England and Wales	328,415

Two factors must be considered in this. When steam as a motive power made railroads possible, European cities were developed in size and realty values, and terminals were expensive, while in this country the railroads and cities grew together. Furthermore, the American roads were given vast subsidies in lands and rights of way—a considerable factor in their present wealth and resource which enabled many extensions and improvements to be made without the issuance of securities.

That the rates are lower in America than abroad is but another tribute to the genius of our people, and the admission is another puncture in the fallacious doctrine that we can not produce most things in this country as cheaply as in Europe. [Laughter.]

MATTER FOR PUBLIC OPINION.

In closing, let us all dedicate ourselves to the solution of this great problem of transportation—recognizing that it concerns every community and every household. Let us be reminded that in the forum of public opinion every issue has been settled, and ultimately settled right in this our glorious country. If progress means anything, it is that prejudice can not last, and that fair dealing will be indorsed.

It is no reflection on the stability of our race that we adjust ourselves in government and commerce to the changing order of the day. It would be better never to have been lifted at all to the higher moral vision of advanced civilization if we are to retain the field glasses of yesterday. Upon every hill the goddess of progress has planted her trumpeteers, showing us the way to a greater national destiny, reminding us that life is but the march of generation, and we have our pilgrimage to cover. Let us do it with an open-mindedness that enabled our fathers to burst the restraints of prejudice and tradition, and find fuller happiness, strength, and godliness in the radiant influence of the new day. [Great and prolonged applause.]

Railway Purchases Measure General Business Prosperity.

Address by E. B. Leigh, president Chicago Railway Equipment Co., delivered at the annual meeting of the Railway Business Association, the national organization of manufacturers of railway material, equipment, and supplies, at the Waldorf-Astoria Hotel, New York, Thursday morning, December 11, 1913.

What is the matter with general business? What can be done to restore activity? There are conclusive grounds for believing that the largest single factor in the present interruption and rapidly approaching business depression was and is the enforced and continued curtailment of railway purchases. No factor which could now be introduced into the situation would do more to stimulate general business out of its present and impending condition than a vigorous resumption of railway expenditures. This conclusion, while applying to the state of affairs at this moment, is based upon a careful study and comparison covering many years, showing the relation between railway purchases and general business.

STIMULATING EFFECT OF RATE ADVANCE.

The results of this careful and detailed analysis are presented at this time in the hope that the painful experience with which the country is afflicted and further threatened may yield us at least the dividend of knowledge upon which to base future national policies. Indeed, it has an immediate and urgent bearing upon a policy which the Government is at this moment engaged in formally considering. If the conclusions drawn from past experience are correct, and if even the small advance in freight rates now asked for by the eastern railroads would enable and encourage them and other roads to make considerable outlays at once, such an outcome would directly result in a decided restoration of general business activity.

REMOVE ARTIFICIAL RESTRICTION.

It is not for a moment proposed that railways shall be permitted advances in rates in order that unnecessary purchases may temporarily benefit the railway supply industries or even the whole country. Waste never permanently benefits anybody. It is not unnecessary purchases which are under discussion. Railway facilities are insufficient to meet any considerable increase in tonnage. The proposition is not to overstimulate, but to remove an artificial restriction in the shape of rates too low.

The greatest danger at this moment is delay. It is well recognized that it requires a greater force to start from inertia than to continue a momentum already established. The sooner the commission can issue a favorable decree the more certainly will the influencing power of railway purchases be effective in the restoration of general business.

RAILWAY PROSPERITY MEANS GENERAL PROSPERITY.

Not many years ago comparatively few business men, aside from those directly selling to the railways, realized that railway prosperity meant general business prosperity.

The past few years, however, have witnessed a steadily growing recognition of this fact on the part of business men generally, until to-day it is substantially an accepted doctrine.

There is widespread confusion, however, as to what constitutes "railway prosperity," often the result of the popular error of accepting the increased earnings of some particular railway, or the naturally growing gross earnings of railways generally, as proclaimed by the public press, as being indicative of "railway prosperity." Much is now being written regarding decreased net earnings and the many other evidences that the railways generally are by no means prosperous in the true sense of the word, or as determined by the true tests applicable to all business enterprises.

RAILWAY PURCHASES "MEASURE" PROSPERITY.

It is believed that the watchword "Railway prosperity means general business prosperity" should be changed to read "Railway purchases measure general business prosperity."

Inasmuch as the railways of this country constitute its greatest industry next to that of agriculture; with but one thing to sell—transportation; the ultimate consumers of everything they buy; their purchases extending substantially throughout almost every department of business, many of them on a tremendous scale—it must be obvious how potent a factor they are in general business conditions.

As the iron and steel industry has long been recognized as being the truest index of general business conditions, and as the statement has been reliably made that the railways consume, directly and indirectly, between 40 and 50 per cent of the iron and steel production of the country, it is manifest that the expansion or restriction of railway consumption must vitally affect this barometer.

The ramifications of railway purchases make it impossible to classify them in the aggregate. But few of the more important items, such as rails, for example, are made the subject of public information and statistical compilation. However, the conditions under which rail purchases are made are not believed to be such as to reflect the railways' prosperity or their purchasing ability in a broad sense.

EQUIPMENT PURCHASES AN INDEX.

Many years of observation have led to the belief that of those items officially compiled, tabulated, and made public, perhaps no one so clearly and typically reflects the railways' general purchasing ability as that of new equipment. When the railways are buying freely of new equipment, they are generally likewise buying freely of all other articles essential to maintenance and operation. Within the past few years the purchasing of new equipment has had a greater influence upon the iron and steel industry because of the transition from wooden to steel construction.

One branch of the speaker's business being that of making and supplying a necessary article used on railway car equipment, he has been led to make a close study of the effect of railway purchases of new equipment upon general business, and long since became more than convinced that there was no one more important factor in the development of general business activity than that of the active purchasing of new equipment by the railways. He further fully believes that railway-equipment purchases, with naturally attendant influence upon the great volume of other railway purchases, not only initiate general business prosperity, but are necessary to sustain such prosperity.

RAILWAY REVIVAL ANTICIPATES GENERAL.

It has been observed for many years past that the railway supply industry has been the first to recognize and to participate in a revival of general business; likewise the first to detect the signs and feel the effects of its impending decline.

It is well known in many quarters that since 1907 railway purchases have been affected (and in large measure curtailed) by causes other than those which influenced them in preceding years, chief among these being governmental control and restrictions.

It has, however, become quite apparent that since the year 1907 "railway purchases" as a factor in general business conditions have been evidenced with increasing clearness and brought into more prominent notice by those who attempt to follow the trend of general business.

Reviewed by years and since what is known as the "money panic" of 1907, we find the following conditions:

1908 LEAN YEAR.

1908: The year 1908 was notably the leanest of business years, notwithstanding bountiful crops and plentiful money. It was likewise the year in which the smallest number of cars were ordered, namely, 62,999, and the minimum of railway purchases made for many years.

BEGINNING OF REVIVAL.

1909: The conditions of 1908 were continued well into 1909, but the last half of the year witnessed a substantial buying movement by the railways, the total cars ordered for the year aggregating 193,874, nearly 70 per cent of which, however, were ordered within the last four months, with particularly heavy orders in November and December. This gave a fairly good business year, with a heavy "carry over" to 1910.

UP AND THEN DOWN AGAIN.

1910: General business promptly followed, and with the heavy "carry over" business from 1909 referred to, coupled with fairly good buying on the part of the railways during the first six months, made the year 1910 a still better year than 1909, although the total of car purchases was only 145,085. The falling off in car orders after the middle of the year was duly reflected in the decline of business until at the end of 1910 the probabilities of 1911 were clearly foreshadowed.

DEPRESSION IN ABSENCE OF BUYING.

1911: The decline in general business, together with the falling off of railway purchases continued throughout almost the entire year; but at its close a buying movement on the part of the railways set in. The total number of cars ordered for the year were 135,740, nearly 30 per cent of which were placed at the very end of the year, and necessarily carried forward into 1912.

PURCHASES OFFSET UNCERTAINTIES.

1912: We reached a high point in railway purchases about May, 1912, continuing with normal purchases for most of the remainder of the year, again reaching a high point at the very end of the last quarter, the total car purchases being 238,400, the largest number in any year since 1906. It is here significant to note that the foregoing conditions in railway purchases were followed by a phenomenal revival of general business during the last half of 1912, this, too, in the face of a national election fraught with more uncertainties as to its outcome than any we have had for years. Business seemed to ignore these conditions, however, while the heavy purchases made by the railways filled the steel mills of the country with orders toward the close of the year, so overtaxing their capacity as to compel buyers to anticipate deliveries by orders placed four, six, and even nine months in advance of shipping dates, a condition heretofore unprecedented, while general business assumed almost the aspect of a boom.

PURCHASE DECLINE, PROSPERITY THREATENED.

1913: The heavy purchases of new equipment continued during the first three months, but sharply declined at the beginning of the second half of the year; almost immediately sinking to the lowest level reached these several years. It was here that the "danger signal" was set by this barometer; but naturally general business did not immediately feel this falling off of railway purchases at the time (because of the accumulations), nor in fact until quite recently, being sustained by the "unfilled orders" on hand, or what may properly be termed the "unspent momentum." The conditions clearly foreshadowed at the middle of the year, and accentuated every month since, are now upon us, and what have we to look forward to after January 1, 1914? If the railways do not resume purchasing on a fairly liberal scale, we are certainly facing a very depressed business situation.

It is believed that the great majority of business men have failed to recognize the real situation, and that the now noticeable decline in business is being attributed to other causes.

IMMEDIATE ADVANCE MIGHT HAVE AVERTED DEPRESSION.

Had the railways been granted the 5 per cent advance in freight rates which they sought last June, it would not only have restored great confidence in railway credit, but would undoubtedly have been followed by a buying movement which, if on but an average scale and within the limitations of money conditions, would have so far reenforced the large volume of "unfilled tonnage" as to have obscured the several now existing uncertain elements, just as these same elements (when in prospect) were practically ignored during the latter part of the year 1912 and the early part of 1913.

The illustrations given above are believed to be sufficiently significant, if not conclusive. They may be carried back over any number of years, and with the same result shown. Is it merely coincidence or is it cause and effect?

PULSE OF BUSINESS.

While financial or money conditions are essentially fundamental to "railway purchases" as well as to every business enterprise, nevertheless anything which affects "railway purchases," be it lack of money, inability to secure it on favorable terms, or unwillingness to use it, must work to the same common result.

If the iron and steel industry, heretofore broadly recognized as the great barometer of general business conditions and as basic to them, is dependent upon "railway purchases" to the extent of the absorption of 40 per cent to 50 per cent of its production, how much more really basic are "railway purchases" as the initial force in starting and sustaining the circulation of general business? Are they not manifestly the pulse of general business?

RAILWAY BUYING POWER AFFECTS EVERYBODY.

It is confidently believed that the sooner this country as a whole recognizes this basic relation of "railway purchases" the sooner we will deal intelligently with this controlling factor.

In conclusion, one prominent thought is urged, namely, that it is not the railway supply industry alone that is so vitally affected by "railway purchases," as is generally supposed. From its nature, the railway supply industry is logically the first to feel their effects, but every business interest, every business man, large and small, and all those dependent upon them, are each in turn affected, favorably or unfavorably, by the relation undoubtedly existing between "railway purchases" and "general business prosperity."

SHOULD RAILROAD RATES BE RAISED?—AN AFFIRMATIVE ANSWER.

Extract from address of William A. Hayes at annual banquet of Milwaukee Traffic Club, January 20, 1914.

Considering American railroads as a system, traffic rates are too low and ought to be substantially increased. Such an increase would prove advantageous to the general public as well as to the companies. I am not here to ask you to accept my conclusion, but to point out certain facts for the consideration of intelligent men, and to suggest inquiry as to further facts, which, taken in connection with those to be mentioned, compel the conclusion indicated.

To come to any sound conclusion in respect of the sufficiency or the insufficiency of existing rates we must take into account the larger facts touching American railroads as a whole. Governors, senators, legislatures, courts, judges, and commissions have each and all failed to deal effectively and justly with railway problems because a consideration of the subject in hand was limited either to a particular railroad or to a group of railroads without reference to its or to their relation to the other railroads of the country. There can be no fair solution of the railway problems unless we become familiar with these larger facts and comprehend the railroads of the country in their entirety.

Therefore, as preliminary to more specific remarks upon the subject of rates, I invite you briefly to consider a few facts which show that the railroads of the country constitute the greatest system of transportation on the face of the earth and the greatest piece of constructive work for the serving of the people accomplished by man since the beginning of recorded history.

There are in the country at this time 250,000 miles of line and 380,000 miles of track. There is enough line to go around the earth ten times at the equator and more than fifteen times in the latitude of Milwaukee. There is enough track to go around the earth nearly twenty-five times in the latitude of Milwaukee; enough to lay nearly 120 parallel tracks from New York to San Francisco, and all of this has been constructed within the lifetime of men still living. All of this trackage is of standard gauge, and every mile is a connected part of the whole; it penetrates every part of the 3,000,000 square miles of our public domain, and over it the products of the farm, the forest, and the mine may be and daily are shipped to the cities and the seaports of the land, and over it, in turn, are daily shipped for distribution the finished products of every foreign country and of every section of our own.

This great system is equipped with nearly 65,000 locomotives, more than 50,000 passenger cars, and more than 2,300,000 freight cars. The locomotives, if placed in a continuous line, would extend almost from Chicago to New York. The passenger cars, if placed in a continuous line, would extend nearly from Chicago to Washington, and their capacity is sufficient to house at one time all the people of the State of Wisconsin and still leave enough room to shelter from the chilling winds of winter all of the people of Montana and Nevada. There are enough freight cars to make a continuous line around the earth in the latitude of Milwaukee, to fill nearly five parallel tracks from New York to San Francisco, and their carrying capacity is sufficient to hold nearly 3,000 pounds of freight for every man, woman, and child in the United States.

This great plant is manned by about 50,000 conductors, nearly 65,000 engineers, a like number of firemen, and in all by nearly 1,700,000 men. Its activities never cease. Every *month*, every day, every hour, every second, in darkness and in daylight, in the face of fire and flood and storm and tornado, in the extreme cold of winter and the extreme heat of summer it is operated for the convenience and the comfort of the people. The products of the farm, the forest, the factory, and the mine; the wheat of the Dakotas; the corn of Iowa and Kansas; the fruits of California and Florida; the cotton of Mississippi and Texas; and the coal of Pennsylvania and West Virginia derive their value very largely from its existence and its operation. The freight carried annually, at the lowest rates in the world, is equivalent to more than 25 tons conveyed 100 miles for every man, woman, and child in the Nation, and the yearly passenger traffic is equivalent to the taking of the entire population of Wisconsin around the earth in this latitude, or to the travel of a party of more than 30 persons, going at the rate of a mile a minute, night and day, every second of the time since Christ was born.

Owned and operated by many companies, the various lines have, by reason of matters which time will not permit me to discuss, come to constitute one great system, and the process of nationalization, as it may be called, is now going on more rapidly than at any previous time. It may be said that the railroads constitute one great system of commercial highways, the activities of which are in an intricate and delicate way most vitally connected with the economic, the industrial, and the social life of the Nation. Like the arteries and nerves of the human body they penetrate and vitalize every part, and the agricultural, the manufacturing, the mining, the commercial, the financial, and the social activities of the people, as they exist to-day, would be inconceivable without them. Considered in their entirety, our railroads are

the most wholesome economic force in existence. They are the balance wheel, as it were, of production, distribution, and consumption, and next to agriculture contribute most to the prosperity and the comforts of the people. Whatever therefore affects their management and their finances affects their service, and through their finances and their service affect every other industry and all persons throughout the country.

The Interstate Commerce Commission and commissions in the several States have for some years past exercised large authority in the matter of rates, while at the same time determining to a considerable degree both the character and the extent of the service, thus reducing income and increasing expense.

Wages and the cost of materials, supplies, and taxes have been largely increased, but net earnings have not been increased accordingly, and as a result the financial condition of the railroads has been most seriously affected. There are, therefore, many good reasons why a substantial increase in traffic rates would prove beneficial generally, but I shall limit myself to a very brief discussion of three.

First. The laborer is worthy of his hire. So is the man possessed of capital, or, as it may be termed, crystallized labor, entitled to a fair return for its use, and the return upon capital now invested in the railroads of the country is too low. It is lower than the return received by many of the large life insurance companies, whose securities are of the strictly investment class, and very much lower than the return on capital invested in banking, manufacturing, and other industries generally. I am well aware that some will question the accuracy of this statement, and reply by saying that, while the interest and the dividend rates upon the bonds and the stocks of the railroads may be low, the capital as shown by the bonds and stocks is excessive, and that the rate upon the actual investment is higher than it ought to be. Indeed, it is generally assumed that the railroads of the country are grossly overcapitalized, and it is widely charged that the people are paying vast sums in the form of interest and dividends upon such overcapitalization. It is not so. The charge is contrary to the facts in so far as the facts have been ascertained. It has been made again and again by certain magazine writers and by some public men, but I care not by whom made, it can be substantiated by no one. Whenever, wherever, and by whomsoever made, it is made either in ignorance of the fact or in disregard of the fact.

The best available information at present obtainable is to the effect that the American railroads as a whole are not overcapitalized. It is not unlikely that an impartial valuation of their properties, as they exist to-day, by competent and impartial men would find such values to exceed by from 10 to 20 per cent the net face value of all of their bonds and stocks. Let us examine a few facts. A physical valuation of railway property has been made by public commissions in five States, namely, Michigan, Wisconsin, Minnesota, South Dakota, and Washington. The value of the railway property in these States, as shown at the time by their stocks and bonds, was approximately $1,210,000,000; yet the commissions found the value to aggregate a little more than $1,211,000,000, and the actual value was fixed by other competent and disinterested authorities at considerably more than the values found by the commissions.

Again, we have in the country about one-sixteenth of the world's land area and one-sixteenth of the world's population, but we have 40 per cent of the world's railway mileage, nearly all built without any guarantee of profits upon the investment other than faith in the future of the country. Yet the average capitalization per mile of railway in this country is considerably less than the average capitalization per mile of the railways of the world. It is probable that rights of way here have cost less per mile than in many of the other countries, but nowhere else in all the world has the cost of labor, the chief item in the cost of railway construction, been so high as in our own country. Another consideration is this: The average capitalization per mile is less than the average capitalization per mile of railroads now being constructed in Japan, India, and elsewhere, yet we are informed that labor in India is cheaper than in any other country of the world.

If we turn to the matter of taxation, we arrive at the same conclusion. The taxes of the railroads have been increased more than $50,000,000 a year within the last seven years, and they are now paying a tax of about $130,000 annually. If the value is in the railroads, why not the rate to pay a fair return thereon? If the value is not there, and the tax is, then it would seem that we have at least a few public officials who are violating their oaths of office and committing grand larceny in the name of the State. Is it fair treatment that one set of public officials should increase the taxes upon the theory that the capital indicated is actually invested, and that another set of public officials should refuse to permit the railroads to charge an adequate rate upon the theory that the capital is largely water? For my own part I am satisfied that the capital is invested and that the rates ought to be raised. I hope that the physical valuation to be undertaken by the Government will be promptly carried out, for, if the work should be thoroughly and fairly done, the result will remove a very erroneous idea from the public mind.

Let us approach the question of investment from another point. Let us consider for a moment the cost of what may be termed a table of accessories. There are along the railroads of the country about 325,000,000 fence posts and 2,500,000 miles of wire, and the fences have cost approximately $125,000,000. There are cattle guards, plankings, wing fences, and warning signs from 400,000 to 500,000 in number, and these have cost almost $50,000,000. There are upon the ground about 1,140,000,000 ties, which have cost from $600,000,000 to $700,000,000. There are more than 5,000,000,000 spikes and fastenings; there are enough of these to put at least three into the hands of every human being on the face of the earth; enough to give an armful of 50 to every man, woman, and child of all the 100,000,000 people in the United States, and these little things have cost nearly $60,000,000. There are more than 53,000,000 tons of rail, which have cost approximately $1,600,000,000. There are water tanks and watering plants costing nearly $100,000,000. There are roundhouses, small repair shops, and the like, costing upward of $500,000,000. There are 80,000 passenger depots and more than 100,000 depots in all, which, according to the best information at hand, have cost approximately $1,750,000,000. There are about 65,000 locomotives varying in cost from $10,000 to $50,000 apiece and having an aggregate value of nearly $1,200,000,000. There are 50,000 passenger cars that have cost upward of $600,000,000, and there are more than 2,300,000 freight cars, which have cost approximately $2,000,000,000. We have in these accessories an investment of from $8,000,000,000 to $9,000,000,000, and at a most conservative estimate such investment amounts to more than 40 per cent of the net capitalization of all of the railroads of the country. But we have not yet a railroad. We have not an acre of right of way, nor have we a shovelful of earth turned, nor a rock blasted, nor a river spanned, or a tunnel bored.

So, I repeat that, as the laborer is worthy of his hire, the men and the women of the land who have both directly and indirectly invested their savings in the railroads of the country are entitled not only to a reasonable security for such savings, but also to a fair return thereon, and in the present state of things they are not getting it. It is unjust and it is unwise from an economic viewpoint to seek to compel those who have invested their means in these great public-service undertakings to go without an adequate return. In the long run and in a large way such a policy is certain to react upon other lines and ultimately to have an adverse effect upon all of the country's industries and upon every individual.

Last year the people of this country paid only about $700,000,000 as a return upon the tremendous investment in their railroads; that is all that was paid for the use of all the vast machinery of transportation which stretches from ocean to ocean and from the Lakes to the Gulf, and upon which the prosperity and the comfort of the Nation depend. Mark it: For these purposes they paid only about $7 per capita, yet they paid almost $11 per capita to run the Federal Government alone. Senator BURTON, of Ohio, writing two weeks ago in the Saturday Evening Post, said that two-thirds of all of the appropriations made by Congress last year were on account of wars that have been or wars that may be. If this statement be true, then the people of this country paid last year less for the use of the capital invested in their splendid transportation system covering the whole country than they paid on account of war.

Second. Another reason why rates should be advanced is this: The return on existing capital is so low as to discourage further investment in railway securities, and if this situation continues the development of the country's transportation facilities is likely to be arrested to an extent certain to hinder the development of other industries. Adequate transportation facilities are indispensable to the prosperity of agriculture, manufacturing, mining, jobbing, and other industries generally. Such facilities can be secured only by improving and extending existing lines, building new lines, providing larger and more conveniently arranged terminals, warehouses, depots, and additional locomotives and cars. These require vast sums of money, and to provide them there should be a further investment within the next few years of from five to seven billions of dollars. If the railroads are to keep up with the growth of the country in other respects, and if they are to afford the farmer, the manufacturer, the jobber, and the shippers generally the facilities which these industries are demanding, and which all well-informed railroad men concede should be afforded, then the investment of additional capital must be encouraged. It is probable that there is not at present a large city in the country where the railroad facilities are sufficient to accommodate the handling of traffic as promptly and as cheaply as it ought to be handled, and this is equally harmful to the shippers and to the railroads. It means expense to the former without benefit to the latter.

Transportation facilities which keep pace with and contribute to the growth of other industries can be secured only by that fair treatment which gives confidence to those who are charged with investing the means necessary to develop such facilities. It is idle to talk of compelling. There is nothing either in law or in morals by which one man can compel another to put his means into a given enterprise for the benefit of the first without a reasonable return to the second. We must not forget that by reason of the venets of the past few years the custodians of capital have justly become cautious; that the reservoirs of capital, from which the vast amount needed to make improvements must be drawn, are the banks, the trust companies, and the insurance not forget that by reason of the events of the past few years the custodians of trust funds belonging to the millions of individuals throughout the land, and that the law as well as sound business judgment forbid their putting these funds into railroad enterprises, no matter what the need for additional facilities may be, so long as existing capital is insecure and the return thereon inadequate.

A further investment of from three to five billion dollars is required to satisfy the public demands for improvements, which, if made, would not appreciably, if at all, increase the earnings of the railroads. These demands cover the elimination of grade crossings, more commodious and more conveniently arranged passenger depots, the substitution of steel passenger cars in place of present equipment, more and better train service generally, and many other minor improvements. It may be conceded that all of these changes are desirable, but they would not materially increase the earnings. Then whence the money? Railroad managers are not magicians. Like the great mass of men in other pursuits, they can but work in "common ways with common men." If such improvements are to be made—and railroad men generally, as well as the public, would be glad to see them made—the expense must be met either by another large addition to capital or they must be paid for out of net earnings. If the expense is to be met by the first method, the net earnings must be increased sufficiently to provide the sums adequate to pay not only a reasonable return upon existing capital, but a reasonable return upon the additional capital required. If such expense is to be met by the second method, the net earnings must be correspondingly increased in order that there may be a sufficient surplus out of which the improvements may be gradually made.

There appears to be little appreciation of the extent of the demands made upon railroad companies in recent years. For instance, men talk freely about the substitution of steel cars in place of present passenger equipment, as if the matter were of no great consequence from a financial standpoint, and Members of Congress and Senators make speeches and introduce bills to compel an immediate change. They appear to think that steel equipment could be quickly provided and that it would result in a great saving in operating expense, whereas the fact is that it would require nearly 10 years for the car builders of the country to turn out sufficient cars to make the change, the expense of operating would be considerably greater than the present cost of operation, and the initial cost would be approximately $600,000,000. As a further illustration, it may be said that there are upon the railroads of the country more than 350,000 highway crossings, and that the elimination of the entire number would probably cost more than $5,000,000,000. It may truthfully be said that railroad men generally are more keenly appreciative of the importance of making the improvements about which so much is said, but they have not yet found a way to pay out two dollars where they receive but one.

Third. Another reason why the rates should be increased is this: A substantial increase is necessary to preserve the economic balance in the country generally. While the rates are insufficient to pay a reasonable return upon the present investments, not only are further investments discouraged but the development of transportation facilities

is arrested, with a consequent disastrous effect upon all other industries. There is also a serious disturbance of the finances of the country at large, for the finances of the railroads are quite as extensively interwoven with the finances of the country generally as is the physical system of tracks and terminals and cars with the several parts of the land. I know of no other single agency in all the land which so widely and so promptly returns to the pockets of the people so large a proportion of the moneys received as do the railroads.

The gross earnings at present are about $3,000,000,000 a year, and of this about $1,500,000,000 is immediately disbursed in the form of wages, $600,000,000 to $700,000,000 are paid out for materials and supplies, and about $130,000,000 is paid in taxes. For example, during the fiscal year ending June 30, 1913, the three large systems operating in Wisconsin, namely, the Chicago & Northwestern, the Chicago, Milwaukee & St. Paul, and the Minneapolis, St. Paul & Sault Ste. Marie, had gross earnings in the State of a little more than $57,000,000, and of this sum these three companies paid out to the people of the State during the same fiscal year the sum of $45,000,000 in three items, namely, for wages, materials and supplies, and taxes. It is not likely that such a showing could be made by any other industry.

What is true of the vast sums paid out for wages, materials, and *taxes is almost* equally true of the remaining $700,000,000 paid as interest and dividends. Only in a very limited sense are the stocks and the bonds the property of the few and the rich. There are from eight to nine millions of people who draw their daily sustenance from the railroads, but their are in addition to these more than a million stockholders, thus adding approximately three millions more who have a direct interest in the properties of the various companies.

But the number who have a financial interest, only slightly less direct, exceeds in number both of the classes mentioned. To illustrate: A few days ago the New York Life Insurance Co. published a statement showing more than 1,000,000 policyholders and more than three hundred millions of the company's assets invested in railroad bonds and stocks. It follows, therefore, that from twelve million to fifteen million dollars of the moneys disbursed last year in the form of interest and dividends upon the bonds and stocks of the railroads a fairly substantial part of the seven hundred millions mentioned went into the treasury of a single life insurance company for distribution among more than a million policyholders, including farmers, mechanics, and other laborers, as well as the merchants, manufacturers, bankers, and the like. Were we to trace the moneys paid as interest and dividends, we would find a very large proportion of it returning to the pockets of the thrifty men and women residing throughout the country.

This invisible connection of vast numbers of the people with the very financial resources and accumulations of capital which they are wont to attack as antagonistic to their own interests is the most strange phenomena of the age. It suggests the question, whether as a people we are not somewhat wanting in the power of analysis and in the habit of calm reflection. There are within five minutes' walk of where we now sit, in the bank vaults of the city, more than a hundred millions of assets. Next to the labor of her people, this is the most potent force in the industrial and commercial life of the city. Each little sum is without productive capacity while it remains hoarded in individual hands. On the other hand, even the single dollar to the credit of the baby in the cradle, when deposited in bank and rendered active in the productive enterprises of the community, becomes a contributing factor in moving and expanding the mighty manufactories which are the support and the pride of the city. So it is with the capital of the railroads. It belongs to the many. It is the capital of the people generally, and when the situation is rightly understood the people will see that in attacking the railroads they are attacking their own interests.

It is well to take account of these things, for they help us to think straight and to comprehend the great principles of finance which lie at the foundation of prosperity in every well-ordered state; principles which have endured and will endure, for "On the rocks primeval, hidden in the past their bases be, block by block the endeavoring ages build them up to what we see." It must be clear that any policy which affects the value of railroad securities by reducing the return thereon below what is reasonably adequate tends to disturb all of the country's industries and its entire financial system, to the detriment of all of the people.

An address by Daniel Willard, president of the Baltimore & Ohio Railroad Co., at the annual dinner of the Traffic Club of Pittsburgh, March 27, 1914, Memorial Hall, Pittsburgh, Pa.

My first definite impression of Pittsburgh as an industrial center was gained in 1899. I happened to be here on an inspection trip with Mr. John K. Cowen, who was at that time president of the Baltimore & Ohio Co., and I remember his saying that the tonnage handled by rail into and out of Pittsburgh per annum was much in excess of all the tonnage handled at that time by the Baltimore & Ohio from all of the stations on its entire line. He further said that Pittsburgh was then the greatest tonnage-producing center in the world.

Later on, when I was an officer of the Erie Railroad, Mr. Cowen's statement frequently recurred to me, and we of the Erie often deplored the fact that our rails, which went within 60 miles of Pittsburgh, fell short by that same distance of reaching the greatest tonnage center in the world. When I reentered the service of the Baltimore & Ohio Co. in 1910, the impression which I had gained 15 years before concerning Pittsburgh's industrial importance was as vivid as when first made, and it has been strengthened, if possible, by my experience during the last four years.

I understand that the total freight tonnage shipped into and out of Pittsburgh via railroads during the calendar year 1912, and not including tonnage simply passing through, amounted in the aggregate to 164,594,015 tons. The revenue tons carried by the Baltimore & Ohio Co. during the same period amounted to 69,762,098, or less than one-half the tonnage which was actually handled in this one center, showing that the condition which Mr. Cowen described in 1899 has become even more accentuated since that date. I have recently made inquiries concerning the business of other large industrial cities, and, so far as I am able to learn, Pittsburgh is still the greatest tonnage-producing center on earth.

The enormous tonnage above referred to, however, is not created in Pittsburgh. In a large sense the raw materials required are brought here from the iron mines in Minnesota, from the coal mines in Pennsylvania, Ohio, and West Virginia, and from the forests and quarries located at other places more or less remote, and after the crude material has been manufactured and put in commercial shapes it is then sent to the four corners of the earth as a market.

It is interesting to recall in this connection that Washington, when on his first trip to the headwaters of the Ohio, is said to have written in his diary while camping on the point of land between the junction of the Monongahela and Youghiogheny Rivers that "here would be a good place to build a mill"—another instance, if such were needed, of the remarkable foresight and prophetic vision of the revered Father of our Country.

With the conditions just referred to in mind, it is clear that Pittsburgh should be—and we know it is—deeply interested in transportation, using the word in its broadest sense, and it is particularly interested in that kind of transportation represented by the steam railroad. The railroads that are fortunate enough to reach this great manufacturing center with their own rails are in turn equally interested in anything that affects the success and continued development of Pittsburgh. You have doubtless listened many times, upon such occasions as this, to statements dwelling in much detail upon the varied phases of Pittsburgh's greatness, and you have no doubt been told just as often of the enormous business done by the railroads that enter your city. It is not my purpose, however, at this time to speak further concerning either of the subjects just mentioned. I desire rather to talk for a short time about certain phases of the railroad question which have been under general discussion of late, and on that account more or less in the public mind, and part of what I shall say in that connection will apply more particularly to those railroads located east of the Mississippi and north of the Ohio and Potomac Rivers and in that part of the United States which traffic men are accustomed to speak of as official classification territory.

It has gradually come about that under existing conditions the rates and charges now in effect in official classification territory do not yield sufficient revenue to properly meet the situation, and the railroads are endeavoring at the present time to obtain permission to advance their freight rates approximately 5 per cent. I shall not recite the causes which have brought about the present situation, because I assume you are already familiar with that phase of the subject. Neither is it my purpose to emphasize at this time the arguments that have been presented in the case now before the Interstate Commerce Commission, but I can not discuss my subject fully and freely unless to some extent use is made of information which has already been developed in that connection.

In the present rate case it has been shown, for instance, in statements presented to the Interstate Commerce Commission that 35 roads in official classification territory have actually added to their property investment since 1910 for additional facilities and equipment over $659,000,000, but as a result of operations in 1913, although the gross earnings of the 35 railroads were $186,775,000 greater than in 1910 the net earnings after paying operating expenses and taxes were actually $16,311,000 less than in 1910, showing that not only had these particular companies failed to earn any return whatever upon the new capital invested, but they actually had $16,311,000 less net as return upon their previous investment than was the case before the large additional amount of money had been put into the plant, and, of course, it is unnecessary to say to you as business men that no business enterprise can continue on such a basis.

It has been stated by men who have given this matter careful consideration that the growing needs of the commerce of this country will require an additional expenditure by the railroads for new equipment and facilities of upwards of a billion dollars a year for some years to come, and under existing conditions the only way in which such money can be obtained is through private enterprise, actuated, of course, by the desire for private gain. Men having money to invest will not put it in railroads unless they believe that money so invested will upon the whole bring as safe and satisfactory return as might be expected if invested in other direction, and railroad investments must be made sufficiently attractive to secure new capital, else development, which means new cars, new engines, new stations, new tracks, and other facilities, will cease, and nothing can more effectually check, if not absolutely stop the growth of commerce than insufficient transportation facilities.

How may the new capital needed be obtained? How may railroad investments be made attractive? By permitting the railroads to impose such reasonable charges for service performed as will, with economical and intelligent operation, yield sufficient net to pay fair and reasonable return upon the capital required.

The claim is frequently made, and rarely denied, that the American people are fair, and that ultimately they may be depended upon to do what is reasonable and right. Nevertheless, it sometimes appears as if they were not willing at all times to do what is fair and right toward the carriers, and the question naturally arises, why should a people of recognized fairness be unfair or feel unkind, if they do, toward the railroads?

I think this feeling was due largely to the fact that in the past the railroads did things that in the light of present-day standards ought not to have been done. I might, in this connection, if it were worth while, urge extenuating circumstances, but within the limited time at my disposal I think it would be more profitable to consider inseall the situation as it exists to-day. It is beyond doubt that there has been a more or less general feeling of hostility toward the railroads, and it was due, among other things, to the fact that the railroads exercised at times, we will say, or at least they were supposed to have done so, a control over some of the people's representatives and public officers that was not in harmony with our democratic ideas of government. They showed partiality between shippers and between communities as regards rates, passenger fares, and conditions of service. They were not sufficiently considerate of the rights of others, and, further, financial transaction of an objectionable character were suspected and disclosed in numerous instances. All this finally developed a feeling of pronounced hostility on the part of the public generally toward the railroads and those who represented them, and this feeling found expression from time to time in laws framed to correct the things complained of

The Interstate Commerce Commission, which came into existence in 1887, was the result of a nation-wide demand that certain abuses should be corrected. The things chiefly complained of at that time were, as I have suggested, the misuse of passes, the granting of rebates, the hauling of freight a longer distance for a less amount than was charged for a shorter distance, and the evils connected with the so-called pooling system, etc., all, I may say, the natural fruits of competition. The commission, then established, has been given the power to correct the things above referred to. The Interstate Commerce Commission is one of the most powerful bodies of the kind in the world, and in it the people have the strongest possible guaranty against misuse of power by the railroads in the future.

It has been frequently stated that the railroads, or at least some of them are incompetently and dishonestly managed. Men engaged in the railroad business are human and no way different from those engaged in other business undertakings. It has developed in certain instances, I regret to say, that men holding official positions with railroads have been unfaithful to their trusts; conditions of extravagance have developed in localities, and uneconomical methods have been disclosed. I suppose the same may be said concerning any other undertaking in connection with which a considerable number of men are employed, because in such cases there is always the element of human weakness to contend with. However, as matters exist to-day the railroads are obliged to keep their accounts in accordance with methods prescribed by the Interstate Commerce Commission; they are, in fact, prohibited by law from keeping them in any other way, and their books must be open at all time for inspection. Under such condtions it is practically impossible for dishonest methods to be followed for any considerable length of time without detection, and in this connection I wish to state in the strongest manner possible that in my opinion there is no more efficient, high minded or honorable body of men to be found anywhere than those who to-day constitute the official staff of the American railroads. I do not claim they are better than other men; I do assert, however, that they are just as good, and my belief is based upon an intimate knowledge of an acquaintanceship with the men in mind of more than 30 years' duration. Further, there is no incentive to wasteful or inefficient operation, but on the contrary there is the strongest possible incentive to efficient and economical operation. Those who manage the railroads are endeavoring to do so in such a way as to make them profitable to the owners, as well as satisfactory to the public. In other words, they are actuated, we will say, by the feeling of selfishness—the same feeling which actuates each one of us as individuals in all of our business undertakings. However much we may dislike the word, we must admit that as a rule the real incentive behind the farmer, the merchant, and the manufacturer is the desire for private gain or gain for self.

It should be remembered, however, that the railroads, quite unlike the ordinary manufacturing or business enterprise, extends over many miles of country, and its operations on that account are extremely difficult to supervise; and because of its public character the railroad is constantly required to sacrifice economy in the interest of safety, dispatch, or the commercial requirements of the service. All of these features make it difficult to obtain such economy and efficiency in service as might otherwise be expected. They do not make efficiency or economy impossible, but they do make both more difficult, and in any event the efficiency of American railroads has been a matter of amazement to the railroad managers and students of economies from every country in the world. It is possible that further economies will be effected in the cost of transportation. It is certain, however, that the demands of commerce, of labor, of the regulating bodies, and of the people themselves, expressed in various ways, will continue to add to the cost of operation, and it is doubtful if all the further economies possible will be sufficient to offset the increase to be expected from the causes just mentioned.

The claim is also frequently made that the capitalization outstanding against American railroads is largely in excess of their fair valuation, and it represents, in the popular language of the day, watered stock and securities. It is interesting to note in this connection, however, that the outstanding capitalization of the entire American railway system, as shown by last report, 1911, of the Interstate Commerce Commission, was $63,944 per mile, as compared with $275,354 per mile in the United Kingdom, $143,648 per mile in France, $117,837 per mile in Austria, and $113,326 per mile in Germany.

In response to a public demand, based, I believe, upon a misunderstanding of the facts, the Congress has provided for a Federal valuation of all the properties of the railroads, money has been appropriated for that purpose, and the necessary machinery set in motion. The carriers are confident that a fair valuation will show that the railroads, as they exist to-day are actually worth a sum very greatly in excess of all outstanding capitalization. It is possible this statement may need qualification concerning some individual companies, but there is no doubt in my mind that it will fairly apply to the situation as a whole.

It should be remembered in justice to those who have invested their money in railroad securities and to those who have spent their lives in the service of the railroads, that notwithstanding all that has been said in criticism of railroad methods and management, the capitalized cost per mile of the American railroads as a whole has been less than one-half the average cost of the railroads in Europe. Further, the freight rates on American railroads are, upon the average, but little more than one-half what they are in Europe, while the wages paid American railroad employees are from two to three times as high as those paid similar employees in any other country in the world, with the single exception of Canada on our north.

At the present time the railroads of the country generally are managed by men who have grown up in the service, and have been and now are devoting their best talents to that end. They appreciate the change that has come about concerning the relation of the railroad to the public; they understand thoroughly that the railroad to-day is a semipublic institution, and because of that fact the officers and employees of the railroad are semipublic servants. Further, they appreciate fully that the railroad as a semipublic institution is charged with a very important public duty to perform—that is to say, the duty of furnishing transportation of a generally satisfactory character to all who desire to make use of its facilities, but they also realize that in addition to the duties which they as semipublic officers owe to the public, they at the same time hold a very important and no less honorable position as trustee for those whose money has made the railroad possible. They know, however, that they are best performing their duties as trustees when they are operating the railroads so as to best serve the territory through which they pass. They clearly understand that the best interests of the railroad are identified with the best interests of the community which it serves.

Our country is one of magnificent distances, and no people in the world make so free a use of transportation as do the people of the United States. The latest official records show that in Germany the railroads carry 490 tons 1 mile per annum for each individual; in France, 336; in England, 292; and in Austria, 184; while in the United States as a whole the number of tons carried 1 mile for each individual is 2,800, or nearly six times as much as is carried in any of the countries just mentioned. This is due to the fact that it is our established economic policy as a nation to raise our wheat, dig our coal, and mine our ore at the place where each can be most economically produced, and then move it to the place where it is needed by the ultimate consumer, over what I venture to say is the best transportation system in the world. Without doubt this system of domestic economy has contributed largely to the wonderful development of our country; but in order that it may continue it is of prime importance that there should also continue to be an efficient transportation machine, and for that machine—unless we depart entirely from our present policy—we must depend upon private capital, and, as I have already stated, that can only be obtained by the reasonable expectation of satisfactory reward.

I do not think the necessity for increased revenue on the part of the carriers in official classification territory is seriously questioned by anyone at the present time. I shall not take your time to discuss whether the increased revenue which the carriers need should be obtained by advancing passenger fares, by increasing, if possible, the charges for carrying the mails and express, by increasing some freight rates and not increasing others, or from various other suggested sources. It is perhaps sufficient to say that those representing the carriers gave the whole subject their best thought, and concluded that the most practicable and, upon the whole, the best way to meet the situation at the present time was to advance all freight rates a small and substantially uniform amount. There is doubtless much to be said both for and against some of the other methods suggested.

I would like to say just a word before I close about the present attitude of the press toward the railroads. Four years ago when the eastern carriers endeavored to advance freight rates, the press was generally opposed to the movement; to-day, however, it is practically unanimous in support of the railroads' position, and this change of attitude has been much commented upon and much misunderstood. It has been said, for instance, in the Halls of Congress that all manner of schemes have been worked to create public sentiment favorable to the increase of railroad rates. That efforts have been made to create a sentiment favorable to the railroads in the present rate matter, I will not deny. I do assert, however, and as chairman of the presidents' committee I am in position to know, that such efforts have been confined to the very simple procedure of presenting the facts.

The railroads have been criticized in the past, and perhaps rightly so, for not taking the public into their confidence. In the present case we have tried, I have tried, others have tried, to do the thing that we have been criticized for not doing in former years. We have stated our case to the public, and we have done so because we have felt that it was a matter in which the public was largely interested and concerning which it ought to be informed; and while it is not to be presumed that the Interstate Commerce Commission will be or should be influenced by public opinion, still the commission, because it also is the servant of the public, has the right to know the public's view concerning a matter of such prime importance. If the press in a large sense truly represents public opinion—and I sincerely believe it does—then the carriers may well feel gratified by the attitude of the public in the present case.

I am glad of this opportunity to express my appreciation of the very fair and intelligent manner in which the question has been discussed in the columns of our great dailies and other publications, and I appreciate it all the more because of my belief that they truly represent the real feeling of the people.

I believe that the relations between the railroads and the public in the future, because better understood, will be more harmonious than in the past, and in that connection there is perhaps no better agency through which that better understanding may be promoted than the one represented by the gathering here this evening. The Pittsburgh Traffic Club, as would be expected, is one of the most important associations of the kind in existence. There have been many questions of difference between the railroads and the shippers of Pittsburgh in the past, and unfortunately there are some still unsettled to-day. I believe, however, that if both sides will approach the subject fairly, and with a disposition on the part of each to recognize and respect the rights and privileges of the other, that there are no existing differences which can not be amicably settled and to the mutual advantage of both.

The Necessity for an Increase of Railroad Rates in the Interest of All American Business.

An address by T. H. Symington before the Rochester Credit Men's Association, Rochester, N. Y., Wednesday, October 22, 1913.

GENTLEMEN: When your committee requested me to make an address to you to-night they stated that they wanted a change from the usual type of orator, and that you would welcome some plain thoughts from a plain business man on some topic of current interest. I accepted the invitation on these conditions, as I felt that I can guarantee some of these requirements, for I am certainly no orator and just as certainly a plain business man, and I am sure there is no current topic of more interest than "The relation of sufficient railroad rates to general prosperity," particularly as Rochester is the only city east of the Mississippi River and north of the Ohio and Potomac Rivers, which is known as official classification territory, that has not been visited by the executive traffic officer of the railroads to discuss this most important question.

Nowadays all business is so closely related, and each industry is in such close contact with every other one, that sickness or depression in one line is just as certain to spread to other lines as that one man with smallpox can spread disaster through a whole city. For this reason you and I are mutually interested in each other's welfare and in the welfare of all other men and corporations throughout our entire country. Following this idea, it is evident that the larger and more spread out any one industry is, the more damage to you and me is occasioned by sickness in that industry.

The only contagious sickness that can come to any industry is lack of prosperity, and this can never occur so long as there is a good market for its products, at good prices. We are all of us, directly or indirectly, dependent upon the prosperity of our neighbors in direct proportion as the neighbor is in big or little business and a large or small consumer.

The largest industry we have in this country is agriculture, and, incidentally, the farmers constitute the largest class of consumers of what you and I are selling, viz, money, labor, and manufactured goods. When we look back to the times when our farmers were not prosperous, just as surely do we note times when none of us were prosperous, but now, because of the advanced price of everything that the farmer has to sell, he is prosperous throughout the whole country, there is no danger of our becoming infected adversely through him, so we can turn to the next largest industry, the railroad, to see if there is any need for treatment to promote its well-being and increase its consumption of what you and I have to sell, and this is the subject that I have in mind to-night, "The needs of the railroads to put them in somewhat the same position of strength and security that our farmers now hold, and thereby remove the contagion from our business situation that I am confident is adversely affecting you and me."

The fact that the railroads are in trouble is so generally known and admitted that one might say it is hardly worth while discussing the matter, but the question is one of such vital importance to us all that I think it behooves us to go into it very carefully and do what we can to put them in a sound condition.

There is only one trouble with the railroads as a whole—their income has not a sufficient margin over their expenses to keep them in a safe and sound position. They have asked the Interstate Commerce Commission for a 5 per cent increase in rates, which question will be settled this winter.

In the summer of 1910 the railroads east of the Mississippi and north of the Ohio and Potomac Rivers tried to advance their rates, but were prevented by the Interstate Commerce Commission from putting them into operation until they could prove to the commission the reasonableness of the proposed increase. They failed, for some reason, to do this.

The interstate commerce act under which this adverse ruling was made is unfair to the railroads in its present form. They must spend a large amount of money and labor in preparing new tariffs and having them printed before they can get any standing whatever before the commission. In ninety-nine cases out of one hundred the commission suspends the proposed new tariffs for six months or more and then has a hearing, and after the hearing there are very few cases on record under the amended act where the proposed new tariffs have been approved.

Imagine the situation if, before you and I could raise the selling prices of our goods, we were compelled to print new price lists, then hold them in abeyance for six months, and then prove our case of reasonableness with all our customers on the opposition. We would never get a justified advance in price, and we would not stand for it. We would change the law to put the burden of proof of unreasonableness on our customers, which is the universal custom in trade the world over.

There are only three factors in a railroad's business, as in yours and mine, viz, income, expense, and surplus earnings, and it seemed entirely logical to the roads that an undisputed larger expenditure must be offset by a larger income to produce the same surplus, but right here the railroads lost their case on the adverse argument that there was no need for the same surplus, and that anyway the same surplus could be maintained by increased operating efficiency. It was further held by the commission that the plan proposed by the roads for an increase of revenue might be improved on, and that in any event it was hardly fair to put into effect at that time new advanced rates, when all business was depressed and railroad traffic was below normal, the idea being that the roads were not entitled to a long-term increase of revenue based on their low ebb of business, as their income would then be unreasonably large with a normal volume of traffic.

The proposed increase of rates in 1910 provided for an advance of 10 to 20 per cent in certain rates and no advance in others, which would have upset the relationship of one rate to another, which balance had been established through many years of adjustments. The roads have accepted this point of view and have now requested a straight 5 per cent increase in all rates so as not to disturb the fine balance of the present rate fabric. It is held that a 10 per cent advance is more reasonable under all the circumstances, but in asking for only 5 per cent they may have in mind the hope of a realization of the Latin proverb "Qui quito dat dis dat," which means that "Whoever gives quickly, gives twice."

While the volume of traffic in 1910 was not up to normal, certainly the traffic of the past year has been as great or greater than ever before in the history of our country, and yet the net income of most of our railroads has not been at all satisfactory.

The argument that carried a great deal of weight in 1910—that it was not up to the people to furnish a sufficient income through increased rates to pay dividends on fictitious capital—is still a good one, provided we agree on the meaning of fictitious capital, but you credit men, more I think than any other class of people, can realize to what foolish lengths this argument can be carried. I will not discuss this question from an ethical standpoint, because we all agree that a dishonest dollar of security is an abomination, but I will ask you to reflect that much that has been condemned as water in some railroad securities was as necessary to the very life of those properties as water is to men crossing the Sahara Desert.

It is needless for me to speak of the larger return an investor demands when he is taking a risk in business, because the matter is so generally understood, but you may be interested to know that whereas in 1900 the entire net capital of the railroads of the United States was divided in the proportion of 49 per cent bonds and 51 per cent stock, in 1910 the net railroad capital of some $14,000,000,000 was divided 56 per cent bonds and only 44 per cent stock. In the year 1912 industrial companies were able to market from three to four times as much stock as the railroads. The investors of the world do not want our railroad stocks, because they are not sufficiently attractive. If the investor is simply looking for a safe yield, he will buy bonds, and it is impossible to build up any industry in any country on mortgage alone. The railroads must be able to earn a sufficient surplus to insure a safe return to the stock investor, and at the same time provide means for increasing the intrinsic worth of the property through additions and improvements. It has been shown that the Pennsylvania Railroad, for example, can and does put a dollar back into its property for every dollar that it pays in dividends, and were all of our railroads able to do this now the question would not be of as paramount importance as it is.

The American policy of not capitalizing railroad improvements makes it necessary to pay for betterments out of surplus earnings. In Europe net earnings go to the stockholders and improvements are charged to capital account. The increase of capitalization per mile of railroad in England and Wales in 19 years, from 1890 to 1909, was 24 per cent more than the total capitalization per mile of all the roads in the United States in 1909. We have in this country no mysterious abilities denied to the rest of the world, and whether improvements are paid for directly out of the surplus earnings or indirectly through interest on new capital is immaterial so long as our railroad income is large enough for the purpose. The American plan is undoubtedly wiser, as it tends to prevent inflation of securities.

It is easy to show that a large amount of watered securities have been issued by some railroads, but it is not so easy to show that the original acquirement of these watered securities was improper, in view of the financial risk assumed by the investors in these properties at that time, and it is also not easy to show that the uncapitalized investment of earnings and the intangible assets of good will and franchise have not grown to such large proportions that they have caught up with the original water in just the same way that the modern method of filling in land of no value is to pump water and mud into the hole in such quantities that eventually the place becomes solid land and of equal value with contiguous land that had never been subjected to the water treatment.

There have been many improper uses of water, but I am sure that had it not been for water in a number of our railroad securities we would have no railroads in those places to-day. It has been suggested that this question of watered securities can be disposed of by taking a present valuation of railroad property and by trimming the securities to suit the valuation. This operation seems to me to be impracticable with reasonableness and fairness to all parties. These watered stocks are now in the hands of innocent people, your hands and mine, and I see no reason why I should be made to suffer because years ago some man is now thought to have been paid too much for the chance he took to build up certain property. It seems far more reasonable to me to leave matters as they are in regard to the securities of our railroads, and if in all cases we have not now in actual value dollar for dollar of securities issued, we soon will have with the ever-increasing growth of our country in population and wealth, and in this idea we can certainly be comforted by the thought that our capitalization per mile of railroad is so far below that of any other country in the world that it would seem that we have really only used water from a leak in some pipe. England's capitalization per mile is more than five times greater than ours.

I am entirely in favor of legislative regulation for the future that will adequately protect the investing public against improper issues of all kinds of securities, but I do not see how the Government can legislate retroactively without confiscating our property.

Now, then, you credit men, consider this question of surplus earnings. In the line of your business the first thing that you do in looking up the financial standing of one of your customers is to figure out his liquid surplus; dependent upon that surplus is the credit that is extended, so I maintain that the argument made in 1910—that the railroads needed no increase in income because they did not need so much surplus earnings as they had enjoyed in the past—is fundamentally wrong. I maintain that the railroads of the country need more surplus revenue to properly and adequately provide the facilities that we are constantly demanding through the Government, and which can not be bought without money to pay for them. As an instance of this, a bill has been introduced into Congress requiring all the railroads to equip themselves with steel passenger cars, at a cost of approximately $633,000,000. I think this bill is not a bit more logical than for New York State to pass a law after the big Rochester fire requiring all buildings not strictly fireproof to be pulled down and replaced with buildings of fireproof construction. This bill is typical of many laws already passed that have been brought about by public hysteria, and, while not necessary for the public welfare make large inroads on the railroad's treasury.

The railroads are entirely willing to meet the public's demand for steel passenger cars gradually, and, as a matter of fact, when this question came up no less than 97 per cent of all the passenger cars being built were of all-steel or steel-underframe construction, and the railroads were doing this without being compelled to do it by law, but simply to provide the very best and safest transportation within their knowledge.

The impression seems to prevail that steel passenger cars will prevent wrecks and the killing of people by the railroads. It hardly seems possible that the authors of this particular bill knew that in the year 1912 only 3.5 per cent of the people killed on railroads in the United States were killed in train collisions. These are interstate commerce statistics and can not be questioned.

Before any law goes into effect requiring the railroads to equip with steel passenger cars they are making splendid progress in this direction, but these cars must be paid for, and must take the place of cars that are scrapped, so that the cost must come out of surplus.

My business is to sell the railroads car equipment, so that I may be considered an interested advocate, but I know and you know that when the railroads are busy and in a healthy financial condition you are all in a similar condition. I know and you know that the railroads are such tremendously large consumers that when their purchasing power is curtailed the contagion gradually spreads to us all. Fortunately for me my business in more dependent on the railroads' gross earnings than on the net, and in this respect I am better off, I think, than you are. The railroad must handle its freight regardless of earnings, and the larger the gross earnings the more cars are required.

In reference to the argument in 1910 that the railroads' increased expense account could be met by a greater efficiency of operation: This is perfectly true and yet certainly no sane man can believe that railroad owners and managers are not trying to the best of their ability to achieve the maximum efficiency of operation. This efficiency problem is made up of facilities and men. It is easily shown that our railroad facilities are vastly superior to those of any in the world, based on the unit cost of hauling 1 ton of freight 1 mile, and it is easily shown that these facilities are increasing in efficiency by leaps and bounds in this country. We shippers get the benefit of this efficiency in having the lowest freight rates of any country in the world. England's railroads' net revenue per ton per mile is nearly five times greater than ours. Our railroads' progress in efficiency is indicated by the fact that our average freight rate per ton per mile was 23 per cent higher in 1890 than it was in 1910, and it is still decreasing. In one month in 1912 the rate reductions below the disputed tariffs of 1910 resulted in a loss of revenue of over $100,000 on the Baltimore & Ohio Railroad alone. Surely the railroads are entitled to a part of this saving occasioned by their own increase in efficiency, even though their expenses had decreased instead of increased during this period: but the increases in the wage scale alone amount to some $300,000,000, more per annum than the railroad employees would have received under the wage scale of 1899.

The man factor in efficiency, however, is not so easily controlled, for the man factor extends throughout the organization from the top to the bottom, and I state flatly that man efficiency on the average is not as great in this country to-day as it was. The tendency of all humanity to want to find an easy way to comfort and leisure has had an easy outlet in the feeling of the people that we can legislate ourselves into individual positions of security and opulence.

We have legislated our workingmen into a false position of fancied security and well-being, and automatically we have legislated them into less efficient units not only of the railroad organization, but of yours and mine as well.

In all competitive business to-day the owner who is fortunate enough to find a really able manager and build up an efficient organization is successful, and with poor management or a weak organization he can not get far ahead. Some railroad owners have been very fortunate in securing the services of very able men to lead their properties and some have not, and I can not see the fairness of demanding a higher efficiency of railroad operation than can be obtained by the average management, because the average management is the best that can be obtained.

When the cost of your production and my production goes up we raise the price of what we sell, and if we are average efficient managers we will prosper. Business would be chaotic and impossible if, to succeed, it was necessary for us to be more than average efficient.

Is it logical, then, to demand that the railroads meet their increased cost of production of transportation by more than average efficiency of operation?

Now, then, I maintain that railroad rates must be adjusted to take adequate care of the average railroad—average in operating efficiency and average in location and opportunities. Because some lines, through fortunate circumstances, do not need any increase of rates to maintain themselves in strength and security, and at the same time pay a fair return to their stockholders, is no good reason why the average road can not charge enough for what transportation it has to sell to hold its credit good before the whole world.

It has always been, and always will be, natural and proper for every man to be interested in his own welfare, as the moving force for progress in this world is enlightened self-interest, and every citizen of the United States must figure out how this advance in freight rates is going to affect him—how much is it going to increase his living expense?

A few random rates will, I think, indicate to any man that his living expense will not be appreciably affected by this proposed advance.

The freight on beef from a western packing house to New York is 4.7 mills per pound. A 5 per cent advance in the freight rate adds one-fiftieth of a cent to the cost of 1 pound of beef in New York.

The freight on a suit of clothes from Rochester, N. Y., to St. Louis is 4 cents. A 5 per cent advance in the freight rate adds one-fifth of a cent to the cost of the suit of clothes in St. Louis.

The freight on a pair of woman's shoes from Rochester to San Francisco is 5 cents. A 5 per cent advance in the freight rate will add one-fourth of a cent to the cost of the shoes in San Francisco.

The freight on a camera with tripod, from Rochester to Jacksonville, Fla., is 5.4 cents. A 5 per cent advance in the freight rate adds slightly more than one-fourth of a cent to the cost of the camera in Jacksonville.

An ax made in Pittsburgh sells for the same price in Denver as in Pittsburgh, and a Dunlap hat costs as much in Newark, where it is made, as in Los Angeles, Cal. The freight rate is such a minute part of the cost of these articles that it does not enter into the price of the retailer.

This list might be extended indefinitely to prove that the cost of the freight on what we consume is a negligible factor in our cost of living.

If you are satisfied of this, and you must be if you look into the question, your self-interest will demand that you personally do your utmost to put the railroads—the largest consumers directly or indirectly of your products—in a sound condition, and this can only be done by giving them this 5 per cent rate advance now.

We can not sit down and trust to the other fellows to do our duty to ourselves with any assurance of its being done.

It takes years to crystallize any public sentiment in this great country of ours, and the arbitrary acts of some railroad managers years ago who assumed the position "To hell with the public" ultimately worked to the great disadvantage not only of the bad railroads but of the good as well through this very same public opinion.

There has been punishment enough. I venture to say there is not a railroad man in this country to-day who does not fully realize the importance of his duties to the public as well as his duties to his stockholders.

The present favorable change of public sentiment toward the railroads that we all see everywhere will, of course, ultimately bring about the desired results for them, but meanwhile you and I are bearing the larger part of the burden.

Let us wipe the old slate clean and give our big neighbor what he is entitled to and I am convinced that we will have gone a long way toward the opening of a period of wonderful prosperity for us all. If we do not do this we will cease to make progress as a Nation, because our business can not grow without ample and sufficient transportation requiring the investment of billions of dollars of new capital; and even now we have delayed so long that we will inevitably realize the utter impossibility of the railroads handling our business long before the needed facilities can possibly be provided.

The question will be decided by the Interstate Commerce Commission, which in this case is representing the American people, and this commission can not fail, gentlemen, to be influenced by the weight of enlightened public opinion.

Address by Ivy L. Lee, executive assistant Pennsylvania Railroad Co.

To the public:

Having heard Mr. Lee make his address before the City Club in St. Louis, I resolved, as a matter of duty, to have same printed and to ask my friends to read it. If the facts related appeal to them as strongly as they did to me, I would ask that they write the Interstate Commerce Commission urging them to grant the railroads 5 per cent increase in rates in order that the railroads, as a whole, may meet the new conditions calling for such enormous expenditure of money.

The railroad is the greatest artery of commerce in the country. It has done more to build up the Nation than all other branches of commerce combined. It represents fully one-third of the purchasing power of the Nation. Any economic condition that affects the railroad is bound to reflect injury upon the State, the Nation, and all its people.

I ask a careful reading and most serious consideration of Mr. Lee's address.

Respectfully, FESTUS J. WADE.

Mr. Chairman and gentlemen, it is a source of very great satisfaction to know that business men like yourselves are willing to take a short time off in the middle of a busy day to consider a serious problem like that of transportation, which must be settled and settled aright if the prosperity of this country is to continue.

To obtain some idea of the extraordinary conditions that surround the management of railroads at the present time, consider the fact that last year there were 42 State legislatures in session. In those legislatures there were introduced 1,395 bills regulating the operation of railroads, and of that number 230 were passed. Railroad regulation is a good thing, and I should be the last to quarrel with it. But the difference between the legislator passing bills for the arbitrary regulation of railroad-operating methods and the man who is actually conducting the operation of the railroads is simply this: The railroad manager is responsible for the financial result, whereas the railroad legislator up to the present time has not recognized any such responsibility.

Railroad managers dream of double tracks, heavy ballast, steel cars, automatic signals, perfect service to shippers, and all those things which go to make up a first-class railroad. But such things are absolutely impossible without the money with which to pay for them, and the struggle of the railroad manager is to do the best he can with the funds at his disposal.

I want to call your attention to a few concrete illustrations of respects in which those who seek to manage railroads from legislative halls have thus far failed to take account of their responsibility for the financial result:

1. One of the measures which has been enacted in many States is that called the "extra crew" law, a law which seeks to make the number of cars in a train the sole determinant of the number of the crew which that train shall have, regardless of all other operating conditions. The Pennsylvania Railroad Co. has on many trains more men than are required by these "extra crew" laws, but they have also on a great number of trains men who are exacted by this law but who are not required by any consideration of safety or efficiency. The operation of "extra crew" laws in three States alone costs the Pennsylvania Railroad Co. to-day $850,000 a year; and $850,000 a year is the interest at 5 per cent on $17,000,000 of capital.

2. The Federal Congress a few years ago passed a law restricting the hours of railroad telegraphers to nine hours a day. Before that time a large number of railroad telegraphers having heavy work were not on duty more than eight hours. But the application of that law has had a curious effect. Instead of reducing accidents or contributing to that result, instead of making men more apt to take adequate rest, the actual experience has been that we have found more men asleep on duty since that law has been in effect than we did before. That law cost the Pennsylvania Railroad Co. $500,000 a year; and $500,000 a year is the annual interest at 5 per cent on $10,000,000 of capital.

These two laws—the "extra-crew" law and the railroad telegraphers law—alone represent the annual interest charge on $27,000,000 of capital; a charge which gives no increased or improved service to the public, no increased efficiency to the railroads and no increased safety to the passengers. We could spend $27,000,000 in permanent improvements for the benefit of the public service and not earn 1 cent of revenue on the improvements, and be better off, and the public much better off, than we are to-day operating under these laws without other result than the employment of unnecessary men.

3. Another respect in which public opinion and the influence of politics are increasing our difficulties without regard to the financial result is this: During the past three years there have been numerous labor arbitrations. How do these work? Before three years ago, when this procession of arbitrations started, the railroads in the territory between St. Louis and the Atlantic seaboard had within 10 years increased the wages of their men roughly about 20 per cent. The unions, however—and I am not here to make a diatribe against labor unions, for they do many excellent things—but the unions, desirous of increasing their own power and accomplishing the utmost for their men, without regard for the ultimate result on the railroads or the public, brought demands on the railroads as a whole.

The public was confronted with the possibility of an absolute stoppage of railroad traffic in this entire territory. Now, the public thinks primarily of its own convenience. The public gave unmistakable indications that it did not want and would not tolerate any stoppage of railroad operations. Those indications were given on three separate occasions with the result that, much against their judgment as to what was wise, either for the men themselves, the railroads, or for the ultimate and permanent interests of the public, the managers of the railroads agreed to submit all questions in dispute to arbitration. Experience shows that arbitrations never reduce wages but always increase them, and they increase them without consideration for how the money is to be obtained with which to meet the obligations created thereby.

On the Pennsylvania Railroad system we paid out last year some $196,000,000 in wages, the rate of payment being about 37 per cent higher than the rate prevailing in 1900. In other words, if we had paid the same rate of wages last year that we did in 1900, instead of paying out $190,000,000 we would have paid out about $120,000,000.

4. The public is constantly calling for steel cars, and every railroad officer wants all-steel cars; but to equip all the railroads in the country with all-steel passenger cars would cost about $625,000,000. A bill now pending in Washington proposes to compel the use of all-steel passenger cars by the railroads of the country just as soon as they can be built, and that bill in Washington makes no provisions for paying the cost of those steel cars.

5. The State of New Jersey has just passed a law imposing the entire cost of the removal of railroad grade crossings on the railroads themselves, no matter who is to be benefited by such removals. To remove all grade crossings on the Pennsylvania Railroad alone would cost about $600,000,000. To remove all grade crossings on all railroads in the United States would cost, at a very rough but conservative estimate, about $5,000,000,000, a sum equal to more than one-third the market value of all the railroads in the United States to-day.

Everybody recognizes that grade crossings are one of the inconveniences of progress. They must be removed as fast as conditions will permit. But in the presence of such a stupendous problem it is perfectly obvious that we must proceed with some consideration of the cost and some thought as to how to obtain the means with which to accomplish this desirable end.

6. There are in some States laws calling for automatic block signals. The State of Indiana, through its commission, has imposed upon the Pan Handle Railroad an obligation to install automatic block signals on lines of that railroad in the State of Indiana; with what result? So much of the company's available revenue has had to be paid out for this purpose in Indiana that it does not have the available money with which to make installations which are more necessary in the State of Ohio, where the traffic is much heavier.

In the midst of all these demands for improved equipment, better tracks, heavier bridges, and safer operation generally we are confronted by a disposition on the part of legislators to pass 2-cent passenger fare laws, to arbitrarily reduce freight rates, to compel railroads to supply cars to shippers whenever wanted, without regard to the average business of such shippers.

Another point: The parcel post is a very popular enterprise in the United States, and the parcel post has certainly been a great public convenience. But here again we find this same indisposition to pay the cost. The report of the Postmaster General, recently submitted to Congress, pointed with considerable pride to the fact that last year the post-office revenues showed a margin over the expenses of operating the department. The Postmaster General, however, failed to point out

that during six months of that time, when the parcel post had greatly increased the revenue of the Post Office Department, not one cent had been paid by the Post Office Department or by the Government of the United States to the railroads for carrying the increased burden of the parcel post.

It is true that on July 1, under an act of Congress, it was made optional on the part of the Postmaster General to permit an increase of payment to the railroads for carrying the parcel post, not exceeding 5 per cent, on those railroads on which the mail had not been weighed during the period from January 1 to July 1. You understand that the policy of the Post Office Department is to weigh mail once in every four years for a period of three months, taking the average weights and distances, and arriving at the compensation for the ensuing four years on the basis of the average figures for those three months.

On the railroads, which had no weighing from January 1 to July 1, last year, the Postmaster General was given permission to add not to exceed 5 per cent. But what happened on August 15? At that time the Postmaster General increased the weight limit of the parcel post from 11 to 20 pounds, and on January 1, from 20 to 50 pounds. On the Pennsylvania Railroad, the weights were taken between January 1 and July 1, and our payment for the ensuing four years, in the absence of an adjustment, is to be on the basis of those weights.

The result is that we must carry for the next four years, without any payment whatever, the increased burden of the parcel post represented by the increase of the weight limit from 11 to 50 pounds, and in the event that the Postmaster General still further increases the weight limit of the parcel post, we must carry that burden without any further remuneration. All this assuming that a fair adjustment is not made. It certainly has not been made yet.

The American citizen is fair, and I am sure that any man, conceding that my statement of these matters is correct, would agree that these are unfair methods on the part of the Government, legislators, and others. These methods would never be pursued if somehow or other legislators and men in the Government did not feel that these were appropriate and, perhaps, the only ways they had to make reprisal against the railroads for past misdeeds, the only ways whereby the public might come into its own. This feeling is not often expressed; perhaps, it is seldom analyzed, but that there is such an underlying sentiment is unmistakable.

But we are facing a practical problem, a problem which can not be solved by any orgy of indignation over past mistakes. And what is that practical problem? To sum it up, let me give you the gist of the case the railroads which are now seeking a 5 per cent increase in rates are now presenting before the Interstate Commerce Commission:

During the past three years the railroads in the territory between St. Louis and the Atlantic Seaboard have increased their property investment $660,000,000. During that same time, by using the facilities thus provided, they have increased their revenue $186,000,000. But, due to such causes, as I have indicated and to many others during that same period, their expenses have increased $203,000,000. So that, at the end of the fiscal year 1913, the railroads in that territory find themselves worse off by $17,000,000 in net revenue than they were at the end of the year 1910, before this $660,000,000 had been spent.

The figures are still more startling for the railroads between St. Louis, Pittsburgh, Chicago, and Louisville for the five months following this three-year period of declining net revenue. The latest figures show that for the five months from July 1, 1913, to December 1, 1913, the railroads in the Mississippi Valley, between St. Louis and Pittsburgh, increased their gross revenue $2,800,000, but that their expenses increased $19,000,000, so that at the end of that period, five months, the railroads in this entire territory were worse off in net revenue by $16,200,000, or 27 per cent, than they were at the end of the same five months of the preceding year.

There have been a number of reasons advanced as to why this situation should not be met by an increase in freight rates. The Interstate Commerce Commission, a few days ago, stated that the railroads were paying out about $15,000,000 for allowances to terminal railroads, of which the railroads should have the benefit. This is not the time and place to go into detailed examination of this decision. But let me point out this obvious fact to you, that these $15,000,000—conceding that this is the correct amount—is paid by the railroads to the industries and others who performed a service in transportation. The payment was based on a claim of those industries that they themselves were doing a part of the railroad's work, and, therefore, should be paid for it. Now, if the commission rules that we should cut out such payments, and there is no complaint from the railroads that the ruling is proper, is it not a practical business possibility that these terminal industries will go to the commission and ask for reduced rates, or for compensation in some form for what they are losing? The decision of the commission was sound and is in the right direction, but I suggest the possibility, at any rate, of that $15,000,000 being somewhat decreased under the influence of these demands of shippers which are certain to be made.

It is suggested that we must wait until the railroads are valued. We are cooperating with the commission in the fullest possible manner to make the Federal valuation a success. We shall probably have to bear about one-half the total cost. The probable cost of that valuation and the extent of the work involved I believe is little realized by the American people. It is likely that the railroad portion of the cost will be something between $12,000,000 and $14,000,000. It is likely that the Government portion of the cost will be equal to that amount. And when, after some five years or more, the task is completed it will have to be started all over again. Values inevitably fluctuate, and those of railroad properties are no exception to the rule.

There is a class of people who believe that railroad rates should not be increased until the Government can regulate the issue of securities. There seems to be a widespread public demand that the Interstate Commerce Commission should have the power to say whether or not railroad securities are to be issued. So far as our company is concerned, it has no objection to the Interstate Commerce Commission having this power. It is now subject to such regulation in the States of Pennsylvania and New York.

But let us consider in this effort to prevent in the future evils we think might have been prevented in the past, whether this proposed plan is the ultimate or can be the ultimate solution of the question. Suppose the Government sanctions an issue of railroad securities and the money is honestly but unwisely spent. Suppose fair earnings are not obtained upon the investment. Has not the State incurred a certain moral obligation to permit increased rates with which to permit the earning of a fair return upon this capital unwisely invested? Ought the Government to act in the position of a wet nurse for the people in making their investments? Should not the policy of the Government be to see that the game is played fairly, that the cards shall be on the table, that the people shall have all proper information? Having every opportunity to make the wise investment, should not the people be compelled to take the consequences thereof and not let the blame, in case a mistake is made, rest upon the Government itself?

You in this part of the country realize as few people can the amount of undeveloped territory which yet remains in the United States and the amount of single-track railroad which remains. There is only one double-track railroad west of the Missouri River, and you have to go on that railroad 372 miles to Julesburg, Nebr., before you reach the half-way point between New York City and San Francisco. Our country, with its 3,000,000 square miles of area, has been built up by 250,000 miles of line, which must be double tracked, four tracked, and which must have increased terminals, improved roadway, and all the other facilities which go to make up a first-class railroad machine if the people are to have proper service, if our country is to grow as it should.

The constitutional guaranty of freedom of trade between the States will be of little avail unless we can insure the normal and healthy development of this transportation machine. The cotton of the South, the manufactured products of New England, the fruit of Florida and California must be moved to where they are needed, and they must be moved quickly and cheaply.

Railroads in this country are capitalized at $60,000 a mile, against a capitalization in England of $275,000 a mile. It is perfectly obvious that the normal development of this country can not be effected by railroads with a capitalization of merely $60,000 a mile. If the increased capital is to be obtained, we must be prepared to pay for the use of it. Then, unless we are prepared to submit to the enervating, the benumbing, the debauching, results of Government ownership, we must concede the point that enterprise shall not be discouraged, that initiative shall have freedom instead of repression and restriction in which to exist. We must make it understood that if railroads are built and facilities provided fair payment will be made for the necessary capital. Insure honest management and fair treatment for all, then encourage investment and promote enterprise.

The courts have decided that they will not interfere with any restriction or burden merely because they reduce the profits of transportation companies. But you can not obtain the capital if the Government is merely to guarantee that property shall not be confiscated. You must give property an opportunity to earn something if you are going to get capital to take the risk of losses.

So the whole matter resolves itself down to people in such organizations as this exerting their influence to make it understood in legislative halls, in State capitals, in Congress, and among the people that we must have railroads, and that the railroads shall have a chance to live and prosper. The salvation of our progress depends on it.

In closing let me leave with you these lines, by Edward Everett Hale. Let me ask you to apply them to the whole railroad proposition:

"Look up, not down;
"Look out, not in;
"Look forward, not back;
"Lend a hand."

—

THE DEAN ELECTRIC CO.,
Elyria, Ohio, March 9, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I have read with interest the remarks of Ivy L. Lee, of the Pennsylvania Railroad Co., before the City Club, of St. Louis, Mo., in reference to the railroad company's request for a 5 per cent increase in freight rates.

The facts pointed out completely convince me of the justice of their request for the freight increase, and I want to take this opportunity of requesting you to kindly give their increase in freight rates your most earnest consideration, as it surely seems equitable.

Very truly, yours,

GEO. A. SCOVILLE, *Sales Manager.*

—

[From the Commercial and Financial Chronicle, New York, Nov. 29, 1913.]

RAILROAD INVESTMENT LOSSES AND WHO BEARS THEM.

At the present time, when the Interstate Commerce Commission is giving hearings on the petition of the eastern railroads for a moderate advance (5 per cent is all that is asked) in freight rates in order to partially compensate for the tremendous rise in expenses which has occurred within the last few years, it seems timely to pause for a moment and consider whether any class of the population can claim to be exempt from the effects of the great shrinkage in the value of railroad securities which has followed from the cause mentioned and from the generally harsh treatment to which the rail carriers have been subjected. The railroads of the United States have come to a pass where, if the margin of net income above expenses and fixed charges is not increased, they will no longer be able efficiently and satisfactorily to perform their functions as public carriers or command sufficient investment confidence to enable them to raise the new capital needed for their extension and development. Furthermore, if the tendency of the margin of profit to diminish is not arrested, the decline in security values which has been the feature of recent times will go on and the properties themselves will be heading for inevitable bankruptcy. The demand for a slight increase in freight rates is made with the serious purpose of averting such a deplorable catastrophe.

Yet the slight concession asked for is being seriously opposed by many well-meaning people who think it good policy to antagonize every effort of the railroads to improve their income standing. Unfortunately, there are still a great many persons who think the railroads, and the investment represented by them, stand in a class apart from the community itself, and that blows aimed at them can do no harm to anyone else. It seems not to be generally recognized that the people own the railroads and that any hardships to which these transportation agencies may be subjected will in the end fall upon the people themselves. A few capitalists may hold large blocks of railroad securities, but the great bulk of the securities is owned by large masses of the population. The number of shareholders of all the leading companies is steadily increasing, as is evident from the reports of these companies. As a matter of fact, however, the interest of the general public in these highways of commerce is not confined to direct investments. The indirect ownership in the properties is equally if not more important. By indirect ownership we mean ownership through savings banks, life insurance companies, and the like. Consider the huge number of depositors in savings banks and the enormous amount

of their aggregate deposits, large portions of which are invested in railroad securities. Then go a step further and contemplate the enormous shrinkage that has been experienced in railroad security values as a result of the harmful governmental policies that have been pursued. In special instances imprudent management may have served to accentuate the losses sustained, but these losses are so general, so pronounced, and so widespread, being manifest in the case of the stanchest and best administered properties as well as those not distinguished in that way, that they can be referred only to a common cause which is dragging them all down.

If it be deemed an exaggeration to say that the people themselves are the chief sufferers from the shrinkage in values that has come with the impairment of the earning capacity of the properties, we would refer to the fact that in New York State alone, according to the report of the banking department for July 1, 1913, there were over three million depositors (3,119,205), and that the aggregate deposits of these institutions at that date reached $1,724,607,279. These deposits have to be invested in interest-bearing securities, and such has been the decline in the market value of these securities that on July 1, 1913, there was a loss to the institutions from that cause in the very large sum of $71,501,584. The proof that such a loss has been endured is seen in the fact that, whereas the surplus on the investment value, or purchase price, of the securities held was $177,899,452, the surplus on the market value of the same securities was no more than $106,397,868.

Of course, not all the shrinkage has occurred in railroad investments, but a very large part of it has, and what may not be ascribed directly to the shrinkage in railroad investments may be ascribed to it indirectly. To be sure, municipal securities have likewise declined, and the savings banks hold twice as much of these as they do of railroad-mortgage bonds, but the decline in municipal bonds may be said to have followed as a consequence of the decline in railroad securities. These latter constitute the largest body of investment obligations of any single class to be found in the world. The funded indebtedness alone of the steam railroads exceeds $10,000,000,000. The decline in this great mass of investment obligations, because their position was being rendered steadily less secure, enhanced the interest return from such securities and raised the rate of return the railroads have to pay on their new borrowings. Whether these securities were high grade or merely good or indifferent, they depreciated all the same, and under this depreciation the interest return advanced. With the investment yield which could be obtained on railroad investments steadily rising from the causes mentioned, municipalities, in floating their obligations, had to follow the rising tendency—that is, had to advance the interest in their bonds, until now it is possible to buy good municipal bonds yielding 4½ to 4¾ per cent, where a decade ago 3½ to 3¾ per cent was the prevailing income yield on good municipal securities. The best grade of railroad bonds appeals to the same classes of investors, such as savings banks, life insurance companies, and other financial institutions, as the higher grade of municipal obligations; and when the rate of return on the former moved upward, the rate on municipal issues was bound to go up also; otherwise it would have been found impossible to place any considerable additional further amounts of the same.

A whole train of evils thereupon developed. As municipal bonds now could be bought to yield 4½ per cent or better the municipal bonds previously purchased by the savings banks on an interest basis of, say, only 3¾ per cent, naturally depreciated, and the large loss in the market value of the surplus has resulted from that cause. But as the shrinkage in municipal bonds came as the direct consequence of the shrinkage in railroad securities, the whole of the loss in surplus which the savings banks have sustained must be regarded as having come, directly or indirectly, from the wrong governmental policies pursued and which have proved so damaging. To these harmful policies are due the disfavor and ill repute into which railroad securities have fallen.

Some may entertain the mistaken notion that the shrinkage in the surplus has been of little consequence to the individual depositors in these institutions. But that is a serious error. It is necessary for the savings banks to maintain a certain surplus as a matter of prudence and precaution and to insure their solvency beyond peradventure. Therefore, as the existing surplus began to dwindle because of the depreciation in the market value of the securities held, it became necessary to restore by degrees the lost portion by making appropriations for the purpose out of current earnings. Such appropriations in turn diminished the amount which could be distributed in dividends to the depositors, and hence these depositors have been receiving considerably less than would otherwise have been the case. New York savings banks are all mutual institutions, the profits going entirely to the depositors, and on the basis of the current rates of return on the investments in which savings banks are allowed to employ their funds, the depositors in these institutions ought to be getting 4½ per cent per annum in dividends. As a matter of fact, there is not a single savings bank in the whole State that is paying over 4 per cent, and some of the largest institutions are paying only 3½ per cent, having had to reduce to that figure owing to the necessity of using part of their current earnings in order to make good the impairment of their surplus accounts. There are altogether 140 savings banks in the State, and of these only 71 pay dividends as high as 4 per cent, 62 pay no more than 3½ per cent, 6 pay 3¾ per cent, and 1 pays but 3 per cent. And the experience of this State in the matter of shrinkage in security values and resultant loss to the depositors has been duplicated in other States.

We have discussed this subject of the ownership of the railroads before, and in an article in our issue of September 24, 1910, dealt quite at length with the matter. Following the panic of 1907 considerable prominence was given to statistics bearing upon the point under consideration. At that time a statement was prepared which showed that in the six States chiefly distinguished for their savings deposits the aggregate of railroad securities of steam railroads owned by the savings institutions was no less than $442,354,086. The aggregate deposits in the six States then amounted to $2,177,859,256, showing that over 20 per cent of the entire total was then invested in railroad securities. There were 5,174,718 depositors in these six States at the time. In other words, over 5,000,000 persons were interested as depositors in the savings institutions in these States, and these institutions had one-fifth their entire funds out in railroad investments. The savings banks in 30 other States, according to incomplete private reports, at the same date (1907) showed $128,677,191 more of railroad securities owned, this constituting over 26 per cent of the deposits as represented by over a million depositors.

But indirect public interest in railroad investments is not confined to the holdings of the savings banks. Other points of contact exist through life insurance and fire insurance companies, though it is only too true that the public does not realize that impairing the efficiency and standard of railroad properties may be endangering the value of a fire insurance policy or reducing the income of a life insurance policy. The life insurance companies at the time of the compilation of the statistics already referred to had $668,262,896 invested in railroad bonds and railroad shares, this forming over 31 per cent of their aggregate assets of $2,128,131,253. The fire insurance companies then held $113,702,893 of railroad bonds and shares, and the accident and guarantry companies held $15,756,249. Altogether the three classes of insurance companies owned outright $797,722,038 of railway bonds and stocks and held $48,167,000 more as collateral, making no less than $845,889,038. It was also found that certain educational institutions held $47,468,327 of railroad securities, this forming a little over 33 per cent of the total endowments of such institutions. Combining the railroad investments of insurance companies and educational institutions with those of the savings banks, it was found that the aggregate of railroad securities held reached $1,464,388,642.

It would be interesting to bring these statistics down six years later to the present time, but the magnitude of the task and the difficulty in getting authentic and reliable data forbids. This much, however, can be said with entire confidence, namely, that the aggregate amount invested in this way is to-day very much larger than it was at the time the compilation from which we have been drawing was prepared. In our issue of September 24, 1910, we brought the figures for the savings banks in the six States already referred to down to the date of that article. We now go a step further and give the results for the same States at the present time. We find, as was to be expected, that the amounts of the railroad investments have very greatly increased in the interval and that the aggregate for the six States to-day stands at $641,250,504, as against $442,354,086 six years ago. The details for the different States appear in the following table. In Maine it will be observed nearly 50 per cent of the deposits are invested in railroad securities; in Connecticut over 38 per cent; in New Hampshire almost 33 per cent; while in New York, Massachusetts, and New Jersey the ratios run from 15.96 per cent to 19.61 per cent. The number of depositors, it is worth noting, in these six States now reaches over six and five-eighths millions.

State.	Number of depositors.	Deposits of savings banks.	Railroad (steam) securities owned.	Per cent of deposits.
New York	3,064,905	$1,689,453,168	$269,762,569	15.96
New Jersey	315,335	116,923,632	22,933,163	19.61
Massachusetts	2,200,917	838,635,097	154,589,906	18.48
New Hampshire	215,885	99,268,055	32,537,542	32.77
Connecticut	606,142	298,512,048	115,272,553	38.64

Total	6,636,343	3,136,297,538	641,250,504	20.44

Doubtless the investments of other classes of institutions at this date would also be larger than they were six years ago. Making a rough estimate, it will probably be no exaggeration to say that the aggregate investment of savings institutions, insurance companies, and educational institutions all over the United States must range somewhere between $1,750,000,000 and $2,000,000,000. Anything, therefore, that threatens the stability and integrity of this mass of railroad securities so held is of direct concern to the large mass of the public, which has such a vital interest in these investments. What folly, therefore, it would be to deny to the railroads the slight increase in rates which their welfare and that of the general public so imperatively demands.

Starve the Railroads and We Starve Ourselves.

[By Frank A. Munsey.]

The railroads are structurally a part of our national life—fiber of our fiber. They are the arteries of our very being through which courses the lifeblood of the Nation. We can not do them harm without doing ourselves harm. Starve them and the pinch of poverty grips us.

The railroads were built by private capital and are owned by private capital, and yet they have little of the inherent freedom of private property. Their charters constitute them common carriers, public-service concerns, and as such they are in a sense owned in common by the public and by private capital—no actual public ownership in them, dollars and cents ownership, but in the outworking the "senior-partner" influence and dominancy of the public makes it amount to about the same thing.

Such a partnership between the public and private capital, the latter putting up all the money and taking all the risks, is a soft thing for the Government, arrogating to itself, as it does, absolute control. Of course, it wasn't this way when railroads were built, when capital risked itself in these venturesome undertakings. If it had been—if the Government's attitude toward railroads had been just what it is now, the same narrow picayune policy in force—we should have no railroads to-day except Government built and Government owned.

Private capital in any measure worth while would never have gone into the upbuilding of railroads, knowing in the outset the extent to which it would be fettered and hampered and harassed, as it knows it now.

I have no fault to find with Government control as such. It is the kind of Government control we have with which I am finding fault. As a matter of fact, there is nothing else for us but Government control or outright Government ownership.

With strong, able, wise Government control—a kind of control that embodies constructive cooperation with railroads—we should have a far better railroad service than we could well hope for from Government-owned and Government-operated railroads. I don't believe there is any doubt about this.

Though capital went into railroad construction with the idea that railroads were private property, the change that has come about, putting them so completely under Government control, was inevitable. Neither the Government nor capital foresaw this change in the early days of railroad development. Indeed, it was the very vastness of this development and the incomparable power railroads had come to be that compelled public control and gave rise to the present conception of the proper relations of the railroad, common carrier that it is, to the public.

The Government, therefore, can not be charged with luring capital into railroads under former railroad freedom with the knowledge that this freedom later on would be taken away from them. Until within a little more than a decade ago there was no serious conflict of opinion between the Government and the railroads.

At the outset no one ever dreamed of the power the railroad has come to be and the part it plays in our daily lives, to say nothing of its inconceivable contribution to the opening up and development of the country.

It follows naturally that changes in our laws must be made suited to this new development—a development so vast in its power that, unchecked and uncontrolled, it would in time contest for the mastery with the very Government itself.

So Government control had to come, but in the exercise of its control it has frightfully crippled and maimed the entire railroad business of the country. Capital has lost heart, and would get out if it could do so without too great a sacrifice. Dividends on railroad shares have dwindled until they have no appeal to fresh capital. The Government stakes out the lines within which capital must work, fixes its rates of income, and then says to capital, "Give us the best railroad service in the world."

All this would be well enough if the Government's conditions were such as to make this possible, which is not the case. The fact is, the railroads can not give us the service we demand, pay the wages and taxes they are paying, and live on the income to which the Government is grudgingly holding them down.

But the chaotic condition of the railroad business is only a little worse than that of business generally throughout the country. There is no snap and go to anything, and everything is in a blue funk. In view of these conditions, what are our chances of having good times? We hear the question all the while. It is on everybody's lips. The answer is vital. It affects our entire population, 100,000,000 human souls. No one is beyond the sphere of its influence. Our expenditures, our incomes, the scope of our undertakings, the scale of our living—our necessities, our comforts, our pleasures, our luxuries, our savings, and our very future—all depend upon it.

We are a temperamental, impressionable people. When we have good times we hurl ourselves on enterprise and sweep everything before us. When we have hard times and feel the pinch of poverty and see idle cars, idle factories, and idle labor, we get a fit of the blues which makes us distrust our institutions, distrust ourselves, and look upon life as one weary grind.

We have wallowed in the slough of despond since the beginning of 1910, and to-day our securities, battered and tattered, find little favor with European investors. Every enterprise has felt the lack of confidence, the lack of courage, and has per force squared itself to that grim, ill-shapen thing—the thin pocketbook.

But human nature, and particularly American human nature, can not be kept down forever. We have had enough of the valley, with its fogs and chills, and want to get away from it all and once more look out on the world from the sun-swept heights. And, too, we want to hear the old, old story of what a wonderful country we have, of the vastness of our resources, the colossal measure of our undertakings, the bulging of values, and the song of opulence and wealth and riches—enthralling music to our ears.

Starving the railroads and hostility to capital are responsible for our business depression and industrial stagnation. The Government has overplayed its hand in humiliating capital and breaking up our big enterprises. Its obvious worry lest somebody, somewhere, somehow, might make a dollar has been overdone.

But Wall Street says good times are here. Wall Street may be right and may be wrong. Things have been deadly dull down there for so long that every one clutches at the very suggestion of hope. Hope in Wall Street is perhaps father to the wish. It looks to me as if it were in this instance. Wall Street is amazingly elastic in its conclusions. When it comes to shifting its opinions it puts a lightning-change artist out of the running.

I am not writing as a pessimist. I am an optimist through and through, but optimism must take cognizance of facts. And what are the facts on which to base the hope for business activity, with our new low tariff, unless we get a gigantic impetus from some source or other?

It is clear that with our high wage we can not get this impetus from such exports as come into competition with the products of the low wage of the rest of the world. And if not from exports, when shall we get the quickening influence? The new currency law won't bring it. The new currency law will perhaps make money easier, but money is already easier than need be, both at home and abroad.

The lower price of money will no doubt benefit the farmer and perhaps stimulate him to wider activities. This will be good in itself, and may have some effect in lowering the cost of living, and then again it may not. But cheaper money to the farmer can not and will not prove the impetus to revive business.

The lower rate of money will make it easier for borrowers, but in itself it will not be sufficient to impart activity to a dead calm, to break the grip of paralysis. Unless it so happens that the new currency bill proves to be a measure of inflation, it won't have the dynamic force to create energy, overcome inertia, and start things going. If, on the other hand, it brings about inflation we shall have a short hurrah run for our money, followed by such a reaction as will make the whole Nation cry to heaven from the very hurt.

A great international war might set business going, and so might a change in our tariff—the kind of change that gives courage and confidence to home industries. But we have just had a revision downward, so there is no probability of an immediate revision upward, and there are no instances on record where revision downward, or low tariff, or no tariff, has ever reenergized anything here at home. On the ground of precedent, therefore, we haven't much to look for from our recent tariff legislation, and we are not now at war with any nation; so just what is there in sight, when we get down to the raw, cold facts, to justify a belief in an immediate onrush of good things?

Agriculture can not bring it about; war is not likely to bring it about; our new tariff is certain not to bring it about; the iron and steel trade can not bring it about; the textile manufactories can not bring it about; mining in all its different phases can not bring it about; and all the scattered, smaller manufactories can not bring it about.

It may well be doubted if anything can bring it about, as matters stand to-day, except the railroads, and the railroads can bring it about if they are allowed freight rates and passenger rates that will enable them to do business at a rational and fair profit—such a profit as will give place and value to their securities in the markets of the world.

This is what we want at this juncture to give us good times—temporary good times, at least—and good times for a long run, if the policies of the Government with regard to business, the tariff, the currency, and in other respects are right. If these are not right it is pretty safe to assume that we, as a people, have the good sense and the patriotism, irrespective of politics and politicians, to make them right.

But just why can't agriculture give this impetus to business, and why is it that railroads alone can give this impetus to business? Briefly, the answer is this: Agriculture is a producing and selling industry. If we were growing a vast surplus beyond our own requirements and could sell it abroad, the new money flowing across the ocean would give us the impetus we need. But unfortunately we have no such surplus and are not likely to have.

The steel and iron industry, vast as it is, in the aggregate, and well concentrated as it is, can not in and of itself revitalize business. Like farming, it is a producing and selling industry. This is equally true of the countless scattered enterprises of one kind and another. Merchandizing doesn't even produce anything. It has to do merely with barter and sale. Banking, likewise, produces nothing. It is parasitic in its very nature.

The railroad, unlike these other enterprises, has nothing to sell but its service. It buys, buys, buys, and all the while buys. It is a purchasing and consuming business, which ranks next to farming in its vast scope. The wages of railroad employees have so far increased that now they call for practically one-half of the gross receipts of railroads. The sum total paid out to labor by the American railroads is greater than that paid to labor by any other enterprise in any country of all the world. The railroads hold the key to the present business situation. Give them a chance and they will set the wheels of industry going. But they can do nothing for business and nothing for themselves impoverished and starved as they are by the Government.

With a chance to live and to earn enough to make their securities safe and attractive to investors the world over they could sell them like a shot.

What we need and must have at this juncture is new money and lots of it. The railroads alone can find this new money. But it is up to the Government to decide whether they shall find it or not. So far the Government, in its nonconstructive or, if you will, destructive policy, has refused the railroads a chance for their lives.

If the Government would get back of the railroads and give them a lift the railroads would get back of business from one end of this country to the other and give it a lift—would get its great broad shoulder under business and heave it into action. Assure investors that our railroads have back of them the great American people, the good feeling and spirit of cooperation of the American people, and have back of them as well the strong, helpful hand of the Government, untold money would flow into this country from abroad and vast sums of sleepy money tucked away in odd places here at home would straightway come out of its hiding and go into railway securities.

And what wouldn't this money mean to us—all this vast aggregate of new money in the coffers of the railroads to be spent for labor, for betterment, and for new undertakings? The railroads must have new rails, new cars, new engines, new ties, new bridges, new stations, better roadbeds, and a thousand other things. They must add to their sidings, double their trackage, and extend their roads into new territory. All this means work for idle men and full envelopes on Saturday nights.

Indeed, the railroads would begin buying on so tremendous a scale that our steel mills and other concerns having to do directly and indirectly with railroad supplies would be taxed to their capacity and beyond their capacity. And the high-pressure activity in these lines would electrify the whole country and set every spindle spinning and every wheel of industry bounding into action. And there would be no idle men, no idle cars, no shuttered factories, no depression, no blues. Activity and enterprise and achievement would grip the country from ocean to ocean and from the Gulf to the northern border.

This is not an idle fancy. It is the very thing that would happen, and such a happening is the very thing we all want. And if we all want it, why shouldn't we have it? We are the Government; the Government is the thing of our creation, the servant to do our bidding.

The question, then, is this: Shall we give the railroads a square deal, or shall we continue to punish them for the sins of a former period, when the relations of railroads to the public were not understood as they are now? In the old days people held to the idea as a matter of course that railroads, owned by private capital, were private property. We didn't know much about public service concerns then. We accepted the theory as a matter of course that the biggest shippers should get the lowest rates. Wholesalers bought at lower prices than retailers, so why not wholesale rates to big shippers?

But once the public service conception was fixed in our minds we saw the railroads in an entirely different light. Naturally railroad managements fought for the independence they had always had, and doubtless fought honestly, influenced by their interests. But all this has changed now. Ten years of discussion has brought capitalists and public, the fair-minded men among each, to a common understanding of the relations of capital to the people, of trusts to the people, of the railroads to the people, and of the relation of telegraph, telephone, and all other common carriers to the people.

We ought to have, and I am satisfied that the American people demand, the best and safest railroads in the world. It is a certainty that we can not have them without paying the price—railroads with every new device, every improvement that means safety and better service. And we can well afford to pay the price when the failure to do so means inferior railroads, dangerous railroads.

Forcing railroad managements into a position where they have been compelled to squeeze paltry dividends out of half-fed, half-nourished properties that they might keep their roads out of bankruptcy is a rotten policy.

Legitimate economies are fundamentally necessary to honest, able management, and whatever the Government has accomplished in the way of cutting out waste and introducing first-rate standards of economy is, of course, very much worth while. But to starve railroads into other economies, such, for instance, as skimping on roadbeds, skimping on bridges, skimping on rails, skimping on rolling stock, skimping on safety devices, and skimping all along the line, is quite another matter. They are costly savings to the people, dearly bought savings.

I hold no brief for the railroads; I am not speaking for myself, as I hold no railroad stocks, and don't wish to hold any under present conditions. Neither am I speaking for those who do hold railroad stocks. I am speaking for idle men, speaking in the interest of better business,

speaking for a square deal for the railroads, for safe railroads, sound railroads.

For the Government to stand back of railway labor, morally sustaining it in its demands for shorter hours and better wages, as the Government has done, at the same time denying railroads the right to increase their incomes sufficiently to meet the increased cost of operation is of the nature of confiscation, and no honest citizen of this country believes in any such thing or would himself, with full realization of the facts, be a party to it.

THE INDIVIDUAL AND THE TREATMENT OF RAILROADS.

(By Civis Americanus.)

DEAR SIR: Men have a clearer vision of integrity as individuals than as representatives of the people; for if a man does a dishonest act as an individual he must accept the sole responsibility, and can not blind himself to the fact that he gets the whole profit, whereas, if he does such an act as the representative of the people, he shares the responsibility with other men, often of high standing in the community, and gives the whole profit to the people. The absence of personal gain; the sharing of responsibility; above all, the generosity to the public, all tend to obscure the clarity of vision. Therefore, if one desires to reach the morality of a nation, he must appeal not to the Government, but to the citizens. It was in this way that the Abolitionists awoke the conscience of the North.

The tendency on the part of the Government to take from the individual and give to the public has strengthened greatly in the last few years; and it brings forward with ever-increasing insistence the question, "How far, if at all, should this generosity go?"

I am taking the liberty of writing to you about one of the phases of this matter. In doing this I am writing merely as one American citizen to another, and think it is perhaps fitting therefore that I subscribe myself simply

CIVIS AMERICANUS.

A railroad company is undoubtedly under a legal obligation to carry freight and passengers at reasonable rates. It is equally true, however, that it is entitled by law to charge reasonable rates for that service. If a railroad company charges higher rates than are reasonable, it is dishonest. If the public, through their various representatives, compels a railroad company to carry at lower rates than are reasonable, the public are dishonest. The matter is not one of policy or even of generosity, complacent as that often is; it is a matter of integrity.

The questions that present themselves at the outset are, (1) what is the true basis for reasonable rates, and (2) on that basis, what are reasonable rates? These are questions which are variously answered.

The generally accepted basis for reasonable rates is not the amount of bonds and shares that the company has issued, for it may have issued far more than it ought to have issued on any basis of valuation, and it is not entitled to compel the public to pay on such excess valuation. Again, the generally accepted basis is not the amount of money that the company has put into its property, for it may have put in a good deal of money unwisely, and it is not entitled to compel the public to pay rates based on its failures; the consequences of its bad judgment must be borne not by the public but by its stockholders. The generally accepted basis for reasonable rates, it seems, is neither the bonds and shares that a railroad company has issued nor the money that it has put into the property; but instead the reproduction value of its whole property, terminals, roadbed, and equipment, as a going concern.

Upon this basis, assuming it to be correct, what rates are reasonable? Here, again, the generally accepted principle is a fair return on the risk of the investment. In the opening up of the West many years ago a railroad company could not have obtained the needed money from the public if it had offered them 10 per cent dividends if it proved successful and total loss of investment if it proved a failure. It could only obtain that money from the public by offering shares and bonds at a par value considerably in excess of the money actually invested. In that case an investor knew that he would make a large profit if the company proved successful, and that he would suffer a large loss in case the company failed. That this chance of profit was certainly not unreasonably large is shown by the number of great western railroad companies that have failed and been reorganized, with their shares wiped out completely or allowed to exist only on payment of heavy assessments.

To-day in New England, with the present attitude of the various railroad commissions a new railroad company could not possibly obtain the needed money from the public, the chance of obtaining at the best a very low return for the investment being far more than counterbalanced by the chance of a very heavy loss. Fortunately for the public no new railroad company is needed in New England.

But the Boston & Maine and the New York, New Haven & Hartford are in a different position. They are here (and they can not escape). They have opened up the country, have developed the cities, have a large and established business. What ought they be allowed to earn on their reproduction value? Men will differ about this rate. Some will put it as low as 4 per cent on par—a rate which, in connection with the risk, is so low that it would deflect money into other investments, even into Government bonds. Some will put the rate at 10 per cent or higher. For the sake of this article, let us assume that 8 per cent on the reproduction value of the property is a reasonable rate; in other words, that a railroad company is entitled to charge such rates that it will earn—if it gets the business—8 per cent on its reproduction value; and that whenever it earns more than that it must return such excess to the public in the form of lower rates or better service.

The matter of just rates is one of the utmost importance. It involves millions of money. On the one hand, it concerns travelers and shippers; on the other hand, it concerns investors—not only the men who are rich, but the men who deposit their all in savings banks investing heavily usually in railroad securities. And through these two classes of people, and indeed in other ways, it concerns very seriously the public.

The decision of these important issues by the Government officials calls in the highest degree for capacity, wisdom, courage, and a white integrity—the courage to withstand popular clamor, an integrity unsusceptible to place preferment or popularity. It calls, above all, for the impartiality of the perfect judge. Indeed, according to the newspapers a member has recently said that the power of the railroad commissions is greater in certain respects than that of the Supreme Court.

Let us apply these views to two or three matters now in the public eye, and let us begin at the top

THE GOVERNMENT.

It is generally believed that the Government compels railroad companies to carry the mail, including the parcel post, not at a reasonable profit above the cost of service, but at a heavy deficit below it. Estimates of this deficit vary. One estimate, apparently on good authority, was $15,000,000 a year. According to the newspapers, the Government boasts of the success of the parcel post, of the lower cost to the public. But what do you as an individual think of a success obtained by such methods? What do you think of a man who pays his tailor half what he knows that he honestly owes and then boasts of his financial astuteness? You would despise him, of course. But here it is not enough that you despise the act of the Government as the act of some other man. It is not the act of some other man. It is the act of your representative. It is your act. Think of the insult of it—that the citizens of this country are glad to sell their honesty for $15,000,000 a year—that is, for 16⅔ cents apiece.

Again, the Government has strongly and wisely attacked all forms of rebates whereby one competitor is given any advantage over another. Yet in establishing the parcel post it has entered into competition with the express companies, and in compelling railroad companies to carry its parcels at rates below cost it receives rebates which go far to account for the very heavy current decreases in the earnings of its rivals, the express companies. The Government has attacked both those who receive rebates and those who give them. It will hardly be consistent enough to sue itself for receiving these rebates, but perhaps it may be consistent enough to sue the railroad companies for giving them.

THE INTERSTATE COMMERCE COMMISSION.

This commission is, of course, one of very great power in passing upon rates. It should be imbued, above all things, with the spirit of judicial impartiality. Judging by the newspaper reports, this commission usually acts against the railroads in the matter of rates. Of course, it may be absolutely impartial in doing this. The very small percentage of decisions in favor of railroads is by no means conclusive evidence that the commission is biased; yet it is suggestive.

But apart from this, perhaps a doubtful question, the Interstate Commerce Commission has employed Mr. Louis D. Brandeis as its counsel in the current hearing for a 5 per cent increase in railroad rates. Now, Mr. Brandeis may be a demagogue or he may be an idealist. It matters not here. It is sufficient that he is generally considered to be a very capable lawyer and the strongest opponent in the country to any increase in railroad rates. Is the appointment of such an adviser a suitable thing for those who sit in a judicial capacity to do? Suppose that you and your neighbor should disagree about your boundary line and should go to court, and, in order to pick a flaw in your title, that the judge should employ as his personal adviser a man who is a very capable real estate lawyer and who is also your bitterest enemy. Should you think that a suitable thing to do? Would your neighbor even, if honest, think so? What would happen to the judge who should do this? I think I can answer that. He would be impeached.

I have never met the members of this commission. I have not the slightest doubt of their personal integrity. I believe that they could not be bribed any more than any other men of good standing in the community could be bribed. The trouble with the members of the Interstate Commerce Commission is not their personal honesty; the trouble is that the commission should act solely as a judge, while it does act in the double capacity of judge and of counsel opposing the railroads.

THE STATE RAILROAD COMMISSIONS.

Although endowed with less power, the typical State railroad commission takes substantially the same attitude that the Interstate Commerce Commission takes and is open to the same criticism. The members are doubtless men of a high degree of personal integrity. But they are also men who are imbued but in a slight degree with the spirit of judicial impartiality. They prove this statement practically every time they open their mouths. Here, too, the commission should act solely as a judge, while it does act in the double capacity of judge and of counsel opposing the railroads.

Let us now take up the attitude of the railroad commission of Massachusetts—the present storm center—toward the increase in rates asked by the Boston & Maine and by the New York, New Haven & Hartford. Assuming that rates should be sufficiently high to pay 8 per cent on the reproduction value of these two properties, what are those values? This is a question which men of ability, courage, and impartiality might answer with a considerable degree of variation, and yet answer in substantial accord. Assuming that the members of the Federal board to ascertain such values have these qualities, especially that of impartiality in the highest degree, they will not be able to reach their decisions apparently for several years. In the meantime some substantially accurate valuation should be obtained and used; so that, on the one hand, the public should not pay higher rates than they ought to pay; or, on the other hand, that the railroad companies should not be compelled to charge lower rates than they have the legal right to charge.

The Boston & Maine Railroad Co. has recently been estimated by a great railroad expert at a reproduction value of $250,000,000—an increase over its outstanding bonds and shares of many millions. If the company were permitted to put rates up so as to earn 8 per cent of that value, after payment of all running expenses, including proper maintenance of roadbed and equipment, it would earn very large dividends, considerably in excess of 8 per cent. It is true that this expert, Mr. Felton, was employed by the Boston & Maine; and that he may have been biased in favor of the company, or, indeed, may heve been mistaken, for such valuation calls for a very great degree of ability as well as of integrity. But his ability and integrity have not been questioned, and his valuation, in the absence of anything to the contrary, should certainly be given great weight. It is suggestive also that the capitalization of the Boston & Maine; that is, its outstanding bonds and shares, are very much less per mile than those of many of the great and prosperous railroad companies of the country.

Again, the New York, New Haven & Hartford was appraised two or three years ago at the reproduction value of more than $100,000,000 above its outstanding bonds and shares. Here again, if that company were permitted to put rates up so as to earn 8 per cent on that value, after payment of all running expenses, including proper maintenance of roadbed and equipment, it would earn very large dividends, far in excess of 8 per cent. Unlike the case of Mr. Felton, here the expert, Prof. Swain, was employed by the Railroad Commission of Massachusetts. Under such circumstances he is little likely to have been biased against the commission. Moreover, he is generally considered to be a man of capacity, integrity, and high standing in the community. Here, too, his appraisement, in the absence of anything to the contrary, should certainly be given great weight.

In refusing to grant increases of rates the members of the Railroad Commission of Massachusetts have not to my knowledge offered proof or even assertion that the reproduction values of the Boston & Maine and the New York, New Haven & Hartford are not substantially greater

than their outstanding bonds and shares. They base their refusal apparently on the following reasons:

In the first place, they say that the companies have spent money with bad judgment, and that the public ought not to pay rates on the companies' failures. Assuming that the companies have spent money unwisely, they are certainly not entitled to charge rates on such failures. But the appraisals of reproduction values by Mr. Felton and Prof. Swain estimated such failures, not at the prices paid but at the true value of the property bought. Indeed, the appraisal of Prof. Swain reduced the value of certain property from $24,000,000, the price paid, to $6,000,000.

Secondly, the commissioners say that if they permit a substantial increase in rates, they will inflict a great hardship on shippers. Assume that this is true, do the commissioners really believe that they should be guided by generosity—with other people's money—rather than by honesty? Do they really believe in robbing Peter to pay Paul? They may, but the ordinary citizen does not. Yet, although foreign to the purpose of this article, is the assumption true? Will increased rates, say of 5 per cent, inflict great hardship upon shippers individually; and in the somewhat rare cases where they do, will the shippers be unable to recoup their loss from the consumers? It is true that a shipper of national prominence is reported to have said recently that the increase of 5 per cent asked by the railroads in the East is impossible because it would add $50,000,000 a year to the cost of living in the United States. Assume that it does, what does that really mean? What will it add to the cost of 90,000,000 of people individually? It means that it will add a little less than 56 cents a year for each individual. Apparently there are people who believe that the citizens of the United States will sell their honesty for such a sum. But the ordinary citizen has a better opinion of his countrymen.

Third, the commissioners say that they do not feel sure that the Boston & Maine did not make unwise contracts with the American Epress Co. and with the Pullman Co.; and that until they are assured of the wisdom of those contracts they can not grant a substantial increase in rates. The possible overpayment in these contracts, if any, seems rather a small factor among the large ones that go to determine just rates. However, assuming that the company did make unwise contracts, the true view is that the company is entitled to a reasonable rate on its reproduction value; and receiving this, that if it makes bad contracts it simply earns so much less money for its stockholders. Of course, if the officials have made unwise contracts the stockholders can sue them; if they have made dishonest contracts—as is sometimes alleged—the Government should certainly indict them as criminals.

Fourth, instead of raising rates the commissioners are said to take the view that the Boston & Maine Railroad Co. should repudiate the contracts with its leased lines and with the holders of its notes. Repudiation is so abhorrent to an honest man that this can hardly be the well-considered opinion of the commissioners. If it is not their opinion, one does not, of course, wish to discuss it. If it is their opinion one does not need to.

So much for the reasons that the commissioners give for their refusal to increase rates. Now for the reasons that they have for granting an immediate and substantial increase:

The railroad commissioners of Massachusetts know that the railroad companies are entitled to a reasonable return on the reproduction value of their property. They know by the great weight of evidence that the companies are undercapitalized by many millions. They know that the companies have been obliged to pay much higher costs for labor and materials in the last two or three years. They know that the purchasing power of the rates actually received is much less than it was a few years ago. They know that the companies, while they continue to show about as large gross earnings as in previous years, show very heavy decreases in net earnings. They know that these decreases in net earnings are so heavy that both the New York, New Haven & Hartford and the Boston & Maine have been obliged to give up payment of dividends on their shares.

And for these reasons, for and against, the commissioners refuse to grant a substantial increase in rates. But what do we as individuals think is the right thing to do—we who have, I presume, as high a degree of personal integrity as the commissioners have? We wish to do the honest thing; we wish to brush aside all trivial and technical factors and do, and do at once, substantial justice; don't we? So the final question comes to us.

If we believe that the Government is honest toward the railroad companies, and, indeed, toward the express companies in compelling the railroads to carry the parcel post at a heavy loss; if we believe that the Interstate Commerce Commission, sitting in a judicial capacity, is doing an honorable thing in employing Mr. Brandeis as its personal counsel to act against the demand of the railroads for a 5 per cent increase of rates; if we believe that the Interstate Commerce Commission, or a State railway commission, again sitting in a judicial capacity, is honest in refusing to grant a substantial increase of rates despite the great preponderance of evidence in favor of such increase—if we believe all this, then we should surely approve their acts. But if we do not believe it; if, on the contrary, we believe that our Government officials, despite their personal integrity and their good intentions, are as our agents committing us to dishonest acts, then we should resent their action, resent it with the same indignation with which we should refuse to do a dishonest act ourselves. That is all that we need to do, for no Government can withstand a great moral demand by its citizens.

You who read this article, if such there be, may think the matter concerns only the investors in railroad securities. If you think so, you are wrong. The matter concerns the investor, yet only as a payment of his just dues. But the matter concerns you, a citizen, in a far greater degree; for it concerns your personal honor.

Again, you who chance to read these words may wonder that I do not lay stress upon the great increase in prosperity that would accrue to the poor as well as to the rich through a policy of honesty toward investors. It is true that I lay no stress upon this. Indeed, I am not concerned here with our commercial prosperity. I am concerned with something far more important than that. I am concerned with the integrity, the honor of our country.

[From Cypress Association Bulletin of December 17, 1913.]

ARE THE WAGES WE PAY THE RAILROADS HIGH ENOUGH?—A STUDY IN CYPRESS FREIGHT RATES.

Chapter 2.

When we printed, in our issue of December 3, the article on this subject we were somewhat skeptical as to how rates are made and were not satisfied in our own minds that the value of the commodity transported in reality had anything to do with the freight rates named by the railroads, although we believed the value should be considered. The belief was also expressed that class of equipment and rapidity of movement were also factors having a bearing upon this general subject.

Now, however, we are in receipt of a pamphlet entitled "Are the wages we pay the railroads high enough?" issued by a railroads' publicity bureau in Chicago, this pamphlet having been received by us on December 13 and it being based upon practically the same ideas used by us in our statement of December 3. We have made a careful study of this statement and intend quoting herewith the actual wording used by the railroads in making their case. At the top and bottom of each page are illustrations, and there is a long list in the back of the pamphlet giving a number of articles figured out upon a basis of the percentage of cost of each article paid to transportation companies in freight. The main difficulty with this whole pamphlet is that lumber is not included, and in the statement, which is herewith copied bodily from the pamphlet, we have merely added a last paragraph to cover cypress lumber. The statement is as follows:

"Railroads now carry 1 hammer a thousand miles for 1¼ cents, or 54 hammers the same distance for the price of 1 hammer—65 cents.

"Railroads now carry 1 pair of shoes 1,025 miles for 2⅜ cents, or 166 pairs of shoes the same distance for the price of 1 pair of shoes—$4.

"Railroads now carry 1 pair of socks a thousand miles for one-seventeenth of a cent, or 425 pairs of socks the same distance for the price of 1 pair of socks—25 cents.

"Railroads now carry 1 suit of clothes a thousand miles for 6⅛ cents, or 220 suits of clothes the same distance for the price of 1 suit of clothes—$15.

"Railroads now carry 1 negligee shirt a thousand miles for nine-tenths of a cent, or 111 negligee-shirts the same distance for the price of 1 negligee shirt—$1.

"Railroads now carry 1 suit of summer underwear a thousand miles for 1 cent, or 100 suits of summer underwear the same distance for the price of 1 suit of summer underwear—$1.

"Railroads now carry 1 motor cycle a thousand miles for $3.83, or 59 motor cycles the same distance for the price of 1 motor cycle—$225.

"Railroads now carry 1 set of harness a thousand miles for 43⅛ cents, or 80 sets of harness the same distance for the price of 1 set of harness—$35.

"Railroads now carry 1 winter undershirt a thousand miles for 1⅜ cents, or 107 winter undershirts the same distance for the price of 1 winter undershirt—$1.50.

"Railroads now carry 1 derby hat a thousand miles for 2 cents, or 100 derby hats the same distance for the price of 1 derby hat—$2.

"Railroads now carry 1 hammock a thousand miles for 4 cents, or 75 hammocks the same distance for the price of 1 hammock—$3.

"Railroads now carry 1 shotgun a thousand miles for 7½ cents, or 666 shotguns the same distance for the price of 1 shotgun—$50.

"Railroads now carry 1 overcoat a thousand miles for 6 cents, or 300 overcoats the same distance for the price of 1 overcoat—$18.

"Railroads now carry 1 coffeepot a thousand miles for three-fourths of a cent, or 40 coffeepots the same distance for the price of 1 coffeepot—30 cents.

"Railroads now carry 1 pair of suspenders a thousand miles for one-fifth of a cent, or 125 pairs of suspenders the same distance for the price of 1 pair of suspenders—25 cents.

"Railroads now carry 1 umbrella a thousand miles for 1 1/10 cents, or 91 umbrellas the same distance for the price of 1 umbrella—$1.

"Railroads now carry 1 typewriter a thousand miles for 45 cents, or 222 typewriters the same distance for the price of 1 typewriter—$100.

"Railroads now carry 1 saw a thousand miles for 1 1/10 cents, or 135 saws the same distance for the price of 1 saw—$1.75.

"Railroads now carry 1 pair of ice skates a thousand miles for 2½ cents, or 64 pairs of ice skates the same distance for the price of 1 pair of ice skates—$1.50.

"Railroads now carry 1 ax a thousand miles for 2½ cents, or 30 axes the same distance for the price of 1 ax—75 cents.

"Railroads now carry 1 pound of ham a thousand miles for one-third of a cent, or 54 pounds the same distance for the price of 1 pound—18 cents.

"Railroads now carry 1 rake a thousand miles for 1¾ cents, or 27 rakes the same distance for the price of 1 rake—50 cents.

"Railroads now carry 1 wringer a thousand miles for 13⅔ cents, or 44 wringers the same distance for the price of 1 wringer—$6.

"Railroads now carry 1 cigar a thousand miles for one forty-second of a cent, or 210 cigars the same distance for the price of 1 cigar—5 cents.

"Railroads now carry 1 piano a thousand miles for $6, or 42 pianos the same distance for the price of 1 piano—$250.

"Railroads now carry 1 collar 825 miles for one-eighteenth of a cent, or 225 collars the same distance for the price of 1 collar—12½ cents."

Railroads now carry $100 worth of cypress lumber a thousand miles for $26.29, or slightly less than 4,000 feet the same distance for the price of 1,000 feet.

As stated, the last paragraph, pertaining to cypress lumber, is our own and was not included in the statement issued by the railroads. Our figures on cypress lumber are based upon the rate of 29 cents, which is the rate now in effect New Orleans to Cleveland, Ohio, and the points intermediate taking the Cleveland rate (almost exactly 1,000 miles of railroad haul). The values were calculated as an average on several thousand cars and placed at $375 per carload of cypress lumber. A minimum weight of 34,000 pounds was used.

We are merely issuing this statement for the purpose of further studying actual railroad rates on cypress lumber in comparison with rates on other commodities. We can again call attention to preferred equipment, preferred movement, and salvage in case of wreck on the other articles named compared with lumber, but other than this wish to refrain from further comment.

THE PENNSYLVANIA RAILROAD CO.,
General Office, Philadelphia, March 17, 1914.

To the Stockholders of the Pennsylvania Railroad Co.:

In view of numerous requests made by stockholders and others, and in pursuance of instructions of the board of directors, the following statement made by Mr. Samuel Rea, president, at the annual meeting of the stockholders of the company on March 10, 1914, is sent you:

LEWIS NEILSON, *Secretary.*

"Before adjournment, I think it is proper to call the attention of the meeting to the report of yesterday's proceedings before the Interstate Commerce Commission on the application of the railroads for increased rates, in which the allegation is made that in effect many railroads, including the Pennsylvania Railroad Co., have technically manipulated their accounts to show increased costs of operation. We have not yet seen an official confirmation of the statement, but the

charge, so far as it relates to the Pennsylvania Railroad Co., and I am sure to other lines as well, is absolutely untrue.

"Your management is determined that, within the limits of reason, it will hereafter allow no statement to go unchallenged that reflects on the management or the integrity of its officers. Your property is honestly, economically, and efficiently operated and maintained, and in addition to the information furnished to the Interstate Commerce Commission and the State commissions, and the report published for the stockholders, any further details desired by the Interstate Commerce Commission will be at once furnished upon request. At the inception of the freight-rate hearings we promised to produce officers who will not only explain the operating expenses, but prove their necessity.

"What the commissions, the public, and the shippers have so far apparently failed to appreciate is the cumulative effect of legislative enactments and regulation, both State and Federal, dealing with almost every phase of railroad operations—increased wages, limitations affecting working conditions, extra crew laws, and other wasteful expenditures imposed upon the railroads without their consent. The result is higher maintenance and operating charges, large outlays resulting from the use of steel cars and consequently heavier trains, additional ties, better track structure throughout, more modern stations, and other facilities and appliances. Railroad costs have been very materially increased and we can not avoid them.

"In addition to maintaining this safe standard of railroad, the Pennsylvania Railroad Co. has put into its accounts a fair charge for depreciation, renewals, and obsolescence, i. e., 3 per cent on freight cars, which means a life of 33⅓ years, and 4 per cent upon passenger cars and locomotives, which means a life of 25 years, and who can say that these charges are unfair or anything but moderate?

"The truth of the situation is that the railroads as a whole have not been spending enough for maintenance. They have been operating economically, but the enforced economies due to the loss of gross revenues, and the failure to grant them the right to charge reasonable rates for the transportation service performed, force them in years of depression to reduce operating costs, but remember it is only deferred maintenance and, therefore, in the end not a real saving.

"No serious public consideration is at present being given to the investors who have furnished the capital for all the railroads, and thereby provided the most substantial foundations for the past and present progress of the country, and without the prosperity of the railroads the country can not prosper.

"What is the present situation? The railroads are prevented from charging reasonable rates; they have sustained a serious loss in revenues; they are prevented from furnishing facilities so as to be prepared to meet the reasonable transportation needs; every occasion is being used to publicly discredit them, and the result is that there must be enforced economies. If large numbers of railroad men and others depending on railroads for every character of supplies and work are out of employment, and a general loss of confidence exists, and suspicion has been engendered, no attempt must be made to place this responsibility upon the railroad management. They have issued warnings and made petition for fair dealing, but without effect. The time has come when all fair-minded men and investors as a whole must individually and collectively impress on State and Federal Senators, Representatives and Government that they are a part of the Nation entitled to at least fair consideration.

"This statement is not made to predict calamity, but it is made to prevent calamity, and because heretofore we have used our efforts to influence investors from asserting their rights, but we will no longer occupy that position while every other interest in this country petitions for their own special welfare and is having the benefits of legislative protection.

"Your company is in good condition physically and financially because for over 60 years it has regularly paid a reasonable dividend and devoted a portion of its annual surplus income to the betterment of the property and did not issue either capital stock or bonds for these expenditures, thereby conserving its capital account, and only by the continued practice of that policy, which has been commended both at home and abroad, does your management believe its prosperity can be assured.

"May I add just one word more with respect to the so-called extra crew laws? You may have seen that we have petitioned the Legislatures of New York and New Jersey for the repeal of that obnoxious and unjust law. Unfortunately the State of Pennsylvania will not convene its legislature until next winter. We propose to go before that legislature, because, under the unjust law of the Legislature of Pennsylvania, this company has paid about $500,000 a year which has been wasted. I hope when the time comes that the stockholders of this company will interest themselves so far as to find out how their representatives are going to vote on a question of that kind. Fully one-third of the stockholders of the Pennsylvania Railroad are residents of the State of Pennsylvania. This State is the home of the Pennsylvania Railroad, and it ought to be protected like other citizens of the State."

—

[Bureau of Railway News and Statistics, 1529 Railway Exchange Building, Chicago. Leaflet No. 26, July 3, 1913.]

HOW THE RATE DECISION APPEARS TO ENGLISH EYES.

The London Statist analyzes the relation of intra and inter state railway traffic as shown in the Minnesota case. Also reviews the conflict between State and Federal regulation and what constitutes "adequate compensation" as decided by the Supreme Court.

[From "The Statist," June 21, 1913.]

The decision of the Supreme Court of the United States in the Minnesota rate case not unnaturally caused a heavy drop in Wall Street, as it reversed the decision of the lower courts, which would have enabled the Great Northern and the Northern Pacific to maintain a higher scale of charges for important traffic. The Supreme Court has, in fact, decided that the State of Minnesota is entitled to reduce certain local rates, even though this reduction necessarily implies the reduction of interstate rates, which are inextricably mixed up with them; and the same line of argument has this week resulted in a similar decision in the Missouri rate cases, affecting a large number of railways in the Southwest.

Apparently even Wall Street did not understand the decision when it was first pronounced. Certainly no one in London could possibly do so from the meager reports published by our great English newspapers, which were apparently constrained by the demands of their readers to reserve many columns of space for the doings of the international polo players and their ponies at Meadowbrook. The decision is, however, so important that it deserves further explanation.

First, the geographical situation: Grand Forks and East Grand Forks, two halves of what is really one town, are—to take one instance—situated on opposite sides of the Red River. The one half is in North Dakota, the other half in Minnesota. Traffic thence reaches the steamers on the Great Lakes at one of a pair of closely adjacent towns—Superior, in Minnesota; Duluth, in Wisconsin. If the traffic starts from East Grand Forks and goes to Superior, it is local to the State of Minnesota, or "intrastate." But, if it starts from Grand Forks, whether it goes to Superior or Duluth, it goes beyond the frontier of a single State, and so becomes interstate traffic.

Secondly, the legal question involved: Everyone knows that the Constitution of the United States reserves to the Federal Government (1) the right to regulate commerce among the States, and (2) the right to interfere to prevent the confiscation of private property. The Minnesota case deals with both these points.

Speaking broadly, the Federal Government never attempted to regulate commerce among the States till it passed the interstate commerce act in the year 1887. That act left each State as before in possession of the power to regulate commerce inside its own borders. The Minnesota Legislature, or rather the Minnesota railway commission, acting under the delegated authority of the legislature, accordingly regulated—in the usual fashion of American State railway commissions, by reducing—certain intrastate rates. And that this regulation, owing to the natural economic connection between the rates on traffic wholly inside and on traffic passing beyond the frontiers of the State, substantially affected the interstate rates with which the Minnesota Legislature had no power to interfere, there is no real doubt. For there can no more exist two rates between the two halves of the same town and the world beyond than there can be two prices for the same commodity at the same time in the same market. The lower courts held, therefore, that the action of the State of Minnesota was unconstitutional.

The Supreme Court has overruled their decision. It holds that it is competent for the Federal Government to take such action as will prevent the several States from interfering by indirection with interstate commerce; but that the Federal Government has not in fact done so; and that, until it does do so, the right of the State to regulate commerce that is bona fide instrastate is not abrogated. In effect, the judgment may be said to be not only an invitation to Congress to pass legislation making it impossible in the future for States to do what Minnesota is doing at the present moment, but also an intimation that such legislation would be constitutional.

That such legislation, if passed, would be for the benefit of the railway companies, as well as for that of the public at large, may be taken for granted. At present State legislatures and railway commissions (Texas, perhaps, most conspicuously) deliberately use their control over railway rates for the purpose of giving towns within their borders an advantage over towns situated outside. Whether the Democratic Party—the traditional upholders of the rights of the State against the Federal Government—will pass such legislation remains to be seen.

The decision of the Supreme Court on the second point is nothing new. It has long been held that the prohibition against taking property without adequate compensation covers not only the actual property itself, but the income from it. In other words, a State may not reduce the rates of a railway company below the point at which they yield an adequate return on the capital involved. And there is a sort of tacit understanding that 6 per cent, at least, is the minimum of an adequate return. Now, the Great Northern and the Northern Pacific pay a 7 per cent dividend, while the Minneapolis & St. Louis is only earning about 3 per cent on its capital. Accordingly, the Supreme Court holds that it is within the power of the State of Minnesota to impose upon the two rich companies a reduction of rate which still leaves them with an adequate return; whereas the same reduction of rate in the case of the third company would amount to confiscation, and is, therefore, unconstitutional.

The president of the Minneapolis & St. Louis is, probably, asking himself to-day, of what value to him is a permission to charge rates higher than those at which his competitors are compelled to carry the traffic if offered to them? But, of course, as this question, though the really important one, is a mere practical question, and not a legal one, the Supreme Court of the United States can not be expected to concern itself with it.

—

GOVERNMENT OWNERSHIP OF RAILWAYS.

[By Samuel O. Dunn, editor of the Railway Age Gazette, author of the American Transportation Question, and lecturer on Transportation at Northwestern University.]

This book is a comprehensive discussion of the desirability of Government ownership of railways under different political and economic conditions, and especially of the desirability of Government ownership of railways under the political and economic conditions existing in the United States. It gives concisely the history of the relations between railways and the State in the leading countries of the world, and outlines the causes which have led to the adoption of Government ownership in the countries where it now prevails.

It then discusses in the order mentioned the following points:

(1) The relative economy and efficiency of public and private ownership and management.

(2) The adequacy, quality, and safety of the transportation service rendered by railways under the two policies.

(3) The policies followed and the results of rate making under public and private management.

(4) The financial results to the public of State ownership.

(5) The effects of public ownership on the condition of labor.

(6) The political effects of Government ownership.

(7) The concluding chapter summarizes the discussion in the preceding parts of the book and the conclusions reached.

The author has drawn on the experience with public and private ownership of many countries, including the United States, the United Kingdom, France, Prussia and other German States, Belgium, Italy, Spain, Austria, Hungary, Switzerland, Russia, Canada, Japan, Australia, New Zealand, India, Argentina, and so on. The work should be hardly less interesting to students of railway problems in other countries than to those in the United States.

Mr. Dunn is probably the greatest authority on railroad problems in this country not directly connected with a railway organization. The extent of his knowledge is attested by the effect of impartiality which the book gives, an effect which could not be attained by a writer who knew only a few phases of the subject.

Contents: Chapter I. The question of Government ownership in the United States. Chapter II. Relation of railways to the State. Chapter III. Relation of railways to the State (continued). Chapter IV. Causes of Government ownership. Chapter V. Cost of capital. Chapter

VI. Organization and official personnel. Chapter VII. Effects of consolidation under Government ownership on economy of management. Chapter VIII. Influence of political and labor conditions on economy of management. Chapter IX. Economy of management of State and private railways. Chapter X. Adequacy of service. Chapter XI. Quality of service. Chapter XII. Safety of service. Chapter XIII. Rate making; general considerations. Chapter XIV. Rate making; the adjustment of rates. Chapter XV. Rate making; the amount of rates. Chapter XVI. Financial results. Chapter XVII. Condition of labor. Chapter XVIII. Political effects. Chapter XIX. Conclusion. Appendices and index.

EXHIBIT B.

The daily press has for months exerted its influence to create public opinion favorable to the rate advance so that the pressure on the Interstate Commerce Commission would finally become irresistible.

The press freely admits that an extensive campaign is on to secure a favorable decision. The letters below show that the public was affected by this propaganda.

[Town Topics, New York, Jan. 15, 1914.]

The Interstate Commerce Commission is getting an avalanche of resolutions, petitions, and requests that the plea of the railways for a 5 per cent increase in freight rates shall be allowed. These come from chambers of commerce, boards of trade, industrial companies, manufacturers associations and large shippers, and the reason for the demand is "that present service for the shipper may be maintained and improved." This is the pith of the whole question at issue. Shippers demand the best possible service; railroads must have their permanent way in condition that freight trains may safely make rapid time; the rolling stock must be of a standard that insures a quick delivery of freights in good order; terminal facilities must be so elaborate and so well equipped as to insure the prompt dispatch and receipt of freights. All shippers demand these things. Thoughtlessly, without due consideration of the conditions involved, a propaganda of assault upon railway rates was begun some years ago, and was carried on with such success that Congress became largely impressed with the idea that railroad rates were too high, and beyond doubt the Interstate Commission has been strongly influenced by this unwarranted expression from the shippers. With a suddenness almost inconceivable a change of sentiment has come over the public interested in the problem, and now it is very generally urging the Interstate Commerce Commission to grant to railways the relief which is now a necessity "that present service for the shipper may be maintained and improved." After all, to what does it amount? Suppose a 5 per cent increase of rates be granted, and that under it railways may be able to accomplish necessary financing, to extend their facilities, put their roads in first-class condition, repair and increase rolling stock, elaborate and improve terminals, all of which they have been compelled to neglect for the last year, who would be harmed and to what extent? While the cost of freights is an item more or less important to commerce and different industries, its increase of 5 per cent would not be prohibitive, and would cut so small a figure in the expense of carrying on the business of the country that the effect would quickly disappear in a new adjustment of accounts and prices. On the other hand, such an increase of rates would rehabilitate the whole system of transportation, insure prosperity to railroad companies, enable them to finance needed extensions and improvements which would react advantageously to many of the industries. The people of all classes are beginning to see that the real prosperity of this wide nation depends so largely upon the railways that they will no longer tolerate inimical legislation, and urgently demand that the Interstate Commerce Commission shall promptly grant the relief asked.

The SAUNTERER.

[Financial America, New York, Jan. 14, 1914.]

DELAY IN RAILROAD CASE.

The feeling of the public relative to the reported intention of the Interstate Commerce Commission to take no definite action as to the 5 per cent advance in freight rates until the railroads have supplied most of the data called for by Mr. Brandeis' 78 questions is undoubtedly one of disappointment.

There are in the hands of the commission appeals from representative commercial organizations and from associations of purely shipping interests—the latter being the interests which will be directly affected by a rate advance—urging early if not immediate action.

Some misapprehension seems to exist, however, as to the scope of the decision which the commission will make. A New York newspaper reveals this misapprehension in the suggestion that the commission make its decision now with the provision that in cases where rates should be subsequently found unfair they should be corrected with allowance for the overcharges made to the shipper.

That the commission would attempt to fix any individual rates as to specific commodities, in connection with the pending application, is highly improbable. The decision will have to do merely with whether there shall be a horizontal advance in rates or not. It is said that if the commission attempted to consider the individual rates involved it would require several years more, at least, to complete the case.

[Philadelphia North American, Feb. 16, 1914.]

EQUITY AND RAILROAD RATES.

One basic fact is vital to a clear understanding of the rate hearings now in progress before the Interstate Commerce Commission. This is, that the application of the eastern railroads for authority to increase their freight rates 5 per cent is, in essence, a proceeding in equity.

Such may not be its strict legal character, but such is its real character. The issue is to be determined not according to the fixed rules or technicalities of law, but according to the principles of equity—the natural, reasonable rights and obligations of the railroads and the public, the two parties concerned.

This truth is supported by the history and the functions of the judicial body hearing the case. The commission was established, in response to public demand, after the people had suffered for years under unjust railroad exactions and discriminations. It has power to regulate the rates and the service of common carriers engaged in interstate transportation.

Now, it is obvious that when the Government assumes the right to regulate rates and service it necessarily, or automatically, goes far to assume the obligation of protecting honest investments in the enterprises affected. This is a matter of equity, residing in the nature of the contracts that exist between the public and the railroads.

Charter rights, conveying wide powers, are granted to a railway corporation, because it agrees to build and operate a common carrier with private capital and to give equitable service to all classes of persons and communities. And it is the very essence of such an agreement that the railroad shall be allowed to charge for its services rates adequate to pay fair dividends upon the private capital invested.

It follows that the Interstate Commerce Commission has a dual duty to perform—to protect the public from extortion or discrimination and to see that the railroads shall receive revenue sufficient to yield legitimate investment returns.

Far-sighted railroad men discerned long ago that the logical outcome of such Federal regulation would be a moral underwriting by the Government of dividends upon railroad capitalization. Those persons who believe that Federal and State regulation of privately owned railroads will provide the best solution of the perplexing problems involved feel that their judgment is about to be vindicated. On the other hand, extremists, who demand full public ownership, say the inevitable end of the policy will be the taking over of all the lines by the Government.

Regardless of these views, however, the present issue clearly rests upon the equities of the relation between the railroads and the public, as interpreted in the light of their respective covenant obligations. Therefore the demand for a 5 per cent increase in rates, to be successful, must be shown to have a foundation of unmistakable equity. And if the commission refuses the plea, it likewise must show that equity supports the decision.

There are two vital principles of equity which are familiar even to laymen. First, that he who seeks equity must come into court with "clean hands," and, second, that he who seeks equity must do equity. By these requirements, therefore, must the railroad demand be measured.

Since equity, based upon proved facts, is the governing consideration, and the issue is to be tried before a judicial tribunal really second in power only to the Supreme Court of the United States, the course pursued by the railroads has been astonishingly ill advised. For months they carried on a nation-wide campaign to create public sentiment to influence the result. Railroad employees' unions were led to indorse the companies' demands. Interviews from leaders of big business and resolutions from commercial organizations swelled the chorus. Not only financial and trade publications, but daily newspapers amenable to influence, united in appeals to the sympathies and the fears of the public.

We do not charge that the railroads directed the calamity campaign also; but it is a fact that when the air was filled with manufactured predictions of industrial disaster, the special-privilege newspaper and politicians tried to convince the public that the freight rate increase was the price of prosperity. Without any pretense of inquiry into evidence, they vociferated that the people must pay higher rates in order to revive industry and business. So impressive was this campaign that some of the highest officials in the Government were favorable to granting the railroads' demand before a line of testimony against the railroad demand had been taken.

It is curious to remark, by the way, that these efforts to incite popular clamor to influence a judicial decision were made by the interests that profess to be the guardians of the judicial ark of the covenant.

In spite of all this, the commission, proceeding in an orderly way, gave the railroads the unusual privilege of presenting their entire case without interruption or cross-examination. The newspapers printed columns of ex parte statements, which were intended to show, and really did show, the need of increased revenues.

Much to the railroads' surprise, however, the commission did not deny that more money was needed, but considered only the equities of the case. Its inquiry, directed chiefly by Louis D. Brandeis, has developed enough to show that the commission, far from rejecting the plea for additional income, intends to cooperate with the railroads in finding it.

But instead of approving off hand the exaction of higher rates from the public, the commission has undertaken the singular task of persuading the railroads to collect vast sums fairly due for services now performed free for favored shippers—amounts which, in the aggregate, expert opinion declares, approximate the increase in rates requested.

This sounds fantastic, but it is a perfectly correct statement of the case. Earnings adequate for all legitimate purposes are available to the railroads whenever they choose to collect them. In a word, the commission has uncovered another huge system of rebates and discrimination.

Secret refunds, rate-schedule "jokers," exorbitant payments to "tap" lines—these familiar devices have long been condemned and forbidden. But now the commission has revealed an abuse just as old and just as bad as any of these. That it existed was generally known, but its amazing extent was unsuspected. Let us cite a few examples from last week's evidence.

Services performed free for powerful shippers in populous centers include switching to and from private sidings; ferriage and lighterage transportation from warehouse to freight yard, saving cartage expense; special transshipment as to points on the Chicago tunnel; switching of cars on private spurs to points designated by shippers; holding of loaded cars as long as 10 days without charge; loading and unloading at the carrier's expense; and even actual payments in cash to shippers for loading, unloading, and carting their own goods.

The revenues wasted in rebates of this outrageous description reach an enormous total. Inquiry shows that at Toledo free ferry service amounted to 26 per cent of the freight paid on 50 cars selected at random; in another case, on 25 cars, it was 46 per cent. On 10 cars, at Chicago, the cost of the free service was 49 per cent of the total revenue. Instances in Toledo show that the railroads rendered free service costing from 27 to 64 per cent more than the freight collected.

Free tunnel transportation in Chicago costs the roads from 4 to 6 cents per 100 pounds; on first-class freight from New York it amounts to a refund of 8 per cent of the rate, while on consignments from nearby points it runs as high as 45 per cent. Records are given of payments of thousands of dollars to New York sugar refiners for loading and unloading their own goods from cars. On shipments to Chicago 2 cents a barrel is allowed for storage, equaling a rebate of 9½ per cent.

On 25 cars from Chicago stockyards to New York the gross freight revenue was $665.19, and the allowances for switching, weighing, yardage, and lighterage $297.10, or nearly 45 per cent. In June of last year nearly one-half of all the cars received at a New York Central station, on Manhattan, were unloaded at the company's expense. Special switching service on private sidings costs the railroads in Philadelphia

from $3 to $4 a car; and it is estimated that 40,000 cars a day are handled in this manner free of charge throughout the country.

Only a few cities have been touched in the testimony, but it is notorious that the scandalous conditions outlined prevail in large communities, including Philadelphia. This is one of the reasons why railroad influence has been so potent in the commercial organizations of this city. The free services performed for big shippers explain the inaction or indifference of many Philadelphia business men in regard to movements for increasing general transportation facilities and developing the port.

It is at the cost of giving free service, averaging 4½ cents per 100 pounds, that the Pennsylvania Railroad carries millions of tons of western freight to and from New York, which could be handled more cheaply and expeditiously here. It is free service that enables the railroads to neutralize the natural advantages of this port, which should handle the bulk of the export and import freight of a dozen States.

The demand for increased freight rates, we repeat, is in reality a proceeding in equity. And the railroads can not expect to gain their point until they can show, first, that they have "clean hands," and, second, that they perform equity. The daily revelations being made in the investigation being conducted by the Interstate Commerce Commission seem to show that the railroads have not gone into court with clean hands, and that they are not doing equity to the other party in the proceeding, which is the public.

—

[Town Topics, New York, Jan. 29, 1914.]

The Interstate Commerce Commission is now having hearings on the question of a 5 per cent increase in the freight rates as asked by the eastern railroads. It is said that many shippers will present arguments against the increase. I doubt it. A few months ago there was a general sentiment among shippers that they should have, if not lower, certainly not higher rates. There has been a remarkable change of view since then, and I do not believe that there are a baker's dozen of the big producers of freight who will raise a voice against the admitted justice of the demands of the roads for this modest increase in rates, which means to them ability to live, while it is of trifling import to the business interest of the shippers. The continued development, improvement, and prosperity of the railways of the country are vital to all its business interests. Railroads have made our vast territory possible to its enormous population and its many great industries. The public will not permit them to be strangled.

—

[St. Louis Times.]

RAILROAD FACTS AND FIGURES.

The application of the railroads in the territory east of the Mississippi and north of the Ohio and Potomac Rivers for an increase of 5 per cent in freight rates would, if granted, produce in revenue approximately $49,000,000. In this section there is a population of more than 50,000,000, so that the whole amount involved, if prorated over the population, would mean a cost of less than $1 per capita per annum.

The Interstate Commerce Commission has had under consideration an advance in the railroad freight rates in this territory since June, 1910.

After a long period of investigation the request for an increase was denied. The decision providing for further consideration of the rate question "if actual results should demonstrate our forecasts of the future is wrong."

The eastern railroads waited and economized, with the prices of supplies advancing, wages increasing, taxes growing heavier, new burdens being imposed by legislation and by commission orders, removal of grade crossings, construction of steel equipment and other unproductive requirements.

The commission assumed that business would improve and that expenses would be lessened, but in the year ending June 30, 1913, the gross earnings of these railroads were $186,775,000 higher than in 1910, while their expenses and taxes showed an increase of $203,087,000. That is to say, the companies were $16,312,000 poorer, although during this period there was $660,000,000 of additional capital put into the railroads.

The present situation is intolerable. While the conditions generally in the country as to crops are favorable to a prompt and general resumption in business now that tariff and currency legislation is out of the way, there is no substantial recovery.

Notwithstanding the statements that have been made, the industrial situation is improving very little, and the present business depression bids fair to prolong itself, all because the largest single buyer of material and supplies and the largest employer of labor is being held in check, its purchasing power annulled, its credit destroyed. The investing public realizes that the Government has control of the earning power through the medium of rate regulation, yet has no responsibility for expenses or results. Naturally, therefore, they seek other channels of investment rather than take the chance of further losses in railroad securities, which have been depreciating.

It is practically impossible at the present time to market even the securities of the highest grade railroads. In order to meet current expenses some of the largest lines recently put out bonds that have been in their treasury for years, and for expansion they have had to get the money from their present stockholders by issuing new stock.

It is safe to say that if a popular vote was taken on this question to-day there would be an overwhelming majority in favor of granting the 5 per cent increase in the rates, and doing it promptly, for, as President Wilson has stated, this is the most important thing on the docket at the present time and should be settled without further delay.

—

[St. Louis Republic.]

SUSPICIONS NOT WANTED.

Clifford Thorne, railroad commissioner of Iowa, has taken a large part in the discussion of the proposed increase in freight rates for eastern roads. In a formal statement given out in Washington he discusses the fact that the roads have discontinued many trains and that two roads have laid off about 40,000 men. If this curtailment is made with a view to influencing the Interstate Commission in its decision of the rate question, then, he says, it is a colossal exhibition of arbitrary power, a method of browbeating the commission, a policy tending to make laws regulating interstate commerce farcical. Mr. Thorne distinctly says that he does not charge any such intent to the railroads, but couples the disclaimer with the assertion that railroads have done such things before.

If Mr. Thorne were a nobody, the insinuations contained in his statement would be of no consequence, but his prominence in the controversy over the rate question and his official position make his hint more weighty than another man's assertion. The railroad situation is delicate. Labor leaders are already charging that the roads which are laying off workers are violating the rights of union men. Insinuations that those dismissals are the result of a vast and evil railroad conspiracy are certain to add to the resentment which the dismissals caused, while they can be no assistance to the orderly processes of adjudication now being carried forward by the commission. When such men as Mr. Thorne have furnished the commission such facts and figures as they have collected and have presented their arguments upon them they have done their duty. When they go beyond that and acquaint the public with their inflammatory suspicions they are mischiefmakers. What does Mr. Thorne really know?

—

[Sent to Interstate Commerce Commission. Paper unknown.]

WHY DOES THE RATE DECISION HANG FIRE?

The period of grace given the New Haven Road in which to carry out the process of separation from its subsidiaries is a healthful sign of the President's unwillingness to hit business while it is down. None the less does the continued delay of the Interstate Commerce Commission to grant the hoped-for increase in rates keep business squarely on its back.

The railroads, the shippers, and, so far as it be represented by the press, the public have all asked that the increase be given. It is needed for the railroads' temporary as well as more lasting relief. The commission has doubtless been well advised in seeking to search out economies that might reduce the heavy operating charges; and whatever of success it has attained in its search should be made good use of. But even were the present methods of railroad administration found to be so extravagant that the total wastage comes to more than would be the hoped-for gain in revenues, it by no means follows that they could be put in force at once and have at once the same psychological effect upon investors as would the assurance of those revenues by a rate increase. The methods of administration are fairly well ingrained and can not easily be changed.

The commission seems to be trying for a solution that might gradually be applied, that in 10 years or so would perhaps result in much higher net incomes. But the installation of economies, of charges for spur-track service, and the like, would not operate to enhance any railroad's immediate borrowing facilities. If all the agitation of the last two decades has had no other effect, it has at least taught us how slowly reforms move and how intangible are the first results of them.

To the roads the proposition is less one of daily receipts and expenditures than of opportunity to finance their coming needs and refinance their maturing obligations. A company with little cash can not meet with the promise of economy its short-term notes that fall due next June. The holders of those notes are only too likely to think when the money is not forthcoming that the economies should be inaugurated by receivers.

The roads are trying to deal with a practical situation. Their only means of retrenchment now is in saving on equipment and service. The curtailment of trade dependent on the roads' purchasing activities is enormous. Still more serious in its effect on general business is the natural hesitancy of capital to aid in any enterprise—which means practically all industrial and almost all commercial enterprises—that a serious setback for railroad securities would injure.

The roads, the shippers, the public, all wait on the Interstate Commerce Commission to cut the Gordian knot. The commission should feel that they do not wish to wait for its untying. They want it cut, and to grant the increase seems the only way to cut it.

—

TEXAS ROLLING MILL CO.,
Fort Worth, Tex., March 5, 1914.

Mr. JAMES S. HARLAN,
Washington, D. C.

DEAR SIR: I am taking the liberty of mailing you under separate cover copy of an article written by the president of this company, Hon. George W. Armstrong, which is self-explanatory. This article appeared in every daily newspaper in the State and is the third of a series which we hope in the end will accomplish a great good. I doubt if there is any other individual in the Southwest who creates more tonnage of freight than does Mr. Armstrong.

Yours, very truly,

TEXAS ROLLING MILL CO.,
Fort Worth, Tex., March 5, 1914.
General Manager.

—

PROPOSED ADVANCE IN RATES DISCUSSED—LETTER TO THE NEWS COMMENTS ON RAILROAD SITUATION—BELIEVES PRESIDENT WILSON FAVORS GRANTING OF APPLICATION OF CORPORATIONS FOR TARIFF INCREASE.

TO THE NEWS:

President Wilson, according to a dispatch from Washington, has conferred with the chairman of the Interstate Commerce Commission regarding the application on the part of the railroads for a 5 per cent increase in freight rates. While the report states that the President has refrained from expressing an opinion as to the merits of the application, it is clear that he regards the subject as one of far-reaching importance, which, in the interest of the general public, should be disposed of as speedily as possible. In fact, he expressly disapproves of its postponement until September, as ordered by the commission. It is apparent that he thinks the application should now be granted.

We can not have the prosperity that is due and that would naturally result from the adoption of the new banking and currency system, and the settlement of the tariff question until this problem is settled, and this has prompted the President's action. The railroads are the largest employers of labor of all our industries, and, besides, they are big buyers of iron, steel, and lumber, which in turn gives employment to hundreds of thousands of men. These industries must shut down or reduce their force when the railroads are out of the market.

The hearing so far before the Interstate Commission has developed the fact that the shipper is opposed to the proposed increase in rates, because it affects his business. But there is a larger view. From the public's standpoint the question is solely one of whether or not the increase is necessary to enable the railroads to properly handle the commerce of the country and give efficient service.

DECLARES SERVICE NOT GOOD.

We know both from observation and from experience that railroad equipment is run down and getting worse, and that the service is poor and constantly becoming more so. We know, too, that it takes money to provide equipment and that they can only get this by earning it, or borrowing, which in turn depends on their ability to earn and repay. We know also that labor, materials, and everything has advanced and from their annual reports we see that, while their gross receipts are always increasing with the increased volume of commerce, their net income is ever diminishing. It may be that they are overcapitalized, but the commission is now engaged in the valuation of the roads as a basis for making rates, which they estimate will require years to complete. In the meantime the public demands reasonably good railroad service, and it is willing to pay its reasonable worth.

There has been some prejudice and misunderstanding in the past on the part of the people toward the railroads, which is happily disappearing. The railroads have not always been considerate of the public and the public has not always been fair to them. We must remember that the railroads are our servants and that they are indispensable to us. We can not confiscate them, and we can not make them render us good service unless we pay them for it. We should not forget that when we inflict a penalty or a hardship on the railroads we only punish ourselves. We pay the freight. We pay the labor, from the section hand to the president. We pay the damage claims, the interest on their bonds, and for the graft or extravagance, if any there be, in management. They are allowed by law to earn all of the charges imposed on them and a reasonable return on the investment besides, and freight rates are prescribed accordingly. We are, therefore, interested in the railroads being capitalized at their reasonable value; in their being dealt with justly and fairly by the commissions, legislatures, and courts of the country, and in their having an efficient and economical management free from any sort of graft. When the increase is granted it should be allowed on condition that the commission is given authority to supervise the expenditure of the money. Let the commission have full power to enforce efficient and economical service.

WOULD BENEFIT SOUTHWEST.

So far as this section of the country is concerned, the increase in interstate freight rates will be of advantage to it. As long as we have a low long-haul rate and a high short-haul rate the East will continue to do our manufacturing. When the reverse becomes true, we will do it ourselves. We would now be importing most of our goods from Europe but for the tariff, which caused manufacturing to spring up in this country and enabled them to become established. The factory will not come nearer to us until there is a decided advantage to it to do so. Under present conditions the advantage is the other way. Apart from the fact that manufacturing is already established in the eastern section of our country and that there is more or less conservatism and inertia about making a change, there are many disadvantages to the manufacturer here. There is a scarcity of skilled labor and wages are higher. Credit is more limited and interest rates are higher. We have no water power and fuel is dear. The market is restricted, and the high short-haul rate and the low long-haul rate puts his powerful competitors in competition with him. There is no hope for manufacturing here except in a small and limited way until there is a readjustment of freight rates.

I have learned this in the hard school of experience. I therefore speak with authority on the subject.

GEORGE W. ARMSTRONG.

FORTH WORTH, *Tex.*

THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: It is hardly possible that your commission can or will find the time to read all the communications received for and against the argument of a 5 per cent increase in freight rates.

While the writer is only in the middle class of life, I am actuated by purely patriotic motives in registering, with no uncertain voice, my opinion against any increase in freight rates being allowed to the railroad lines applying for it.

For the following general reasons mainly. In presenting them for your consideration, I do so with diffidence and hesitation, and leave out all statistics and figures which are not based on the general conditions of the country or the public need.

There can be no doubt but what there is a concerted movement of all the railroads affected toward distributing broadcast literature of their own manufacture. Certainly they are maintaining a costly advertising campaign to gain their end. Not thoroughly satisfied with this they have further attempted to impress their demands on the people by a rather wholesale discharge of employees. This eleventh-hour economy is far-fetched. Better indeed had they laid these men off five years ago. For if they can maintain the same service without the men discharged, why did they have them on their pay rolls?

The people who will be hit the hardest by a 5 per cent increase in freight rates will be those who are dependent on the railroads for short-haul freights. These are certainly high enough at the present time, without any additional burden. If the railroads want a 5 per cent increase, let them reduce their short hauls 5 per cent. This will then help the smaller towns out, who rely for their existence and that of their business in getting their products to sell from their neighboring towns.

In our own particular case, between Hagerstown and Sharpsburg, a distance of 12 miles, over the Norfolk & Western Railway, our L. C. L. freight rate on most merchandise is at the present time all the way from 18 to 35 cents. From Baltimore to Hagerstown, a distance of 87 miles, the L. C. L. freight rate, considering classifications, is less than the above in most instances. When asked for redress the roads say they can not do better. They will not even sell a round-trip passenger fare ticket between our town and Hagerstown, Md. Yet they sell the same ticket (round trip) in a reverse direction. And yet they want more freight rate increase, all of which the consumer must pay in the end. I can well imagine this is of not much interest to you gentlemen, but I can assure you it is a question of much concern to the people of this country, inasmuch as it is a deciding time for them as to what they can expect in the future. We are well aware that the prosperity of a community and that of the railroads go hand in hand. But should we always pay the burden? Should not the stronger party display the most generosity? And how this generosity has been displayed by the railroads toward the shipping and the traveling public is a matter of general record for the past 10 years and is not a matter of figures.

Yours, respectfully, HARRY J. E. THOMAS,
Sharpsburg, Md.

APRIL 11, 1914.
This communication is not for publication.

BALTIMORE, *March 24, 1914.*

Mr. JAMES S. HARLAN,
Washington, D. C.

DEAR SIR: I am a machinist out of work for nearly two months with a wife and five little ones depending upon me for their bread and butter and now our savings nearly all gone. My work much depends upon business with the railroad companies, and with thousands of others we find it impossible to get work. How much longer this is to last God only knows, but what I gather in the papers, and what I am told, it all seems to be on account of the commission holding up the railroads.

Why don't you men get together, settle this rate question, and start the wheels of progress. Any of the railroad captains that have been robbing the people, put them behind the bars, but don't make the thousands of unemployed men and their innocent children suffer the blunt. Clear the records of all past frauds and start in new, and whatever is coming to the railroads give it to them, and we will again have work and prosperity. If this thing is not settled soon, and that very soon, there will be trouble in camp, for we can not hold out much longer at the present state of conditions. With exception of three weeks lost for sickness this is the first time I have been out of a job for nearly 12 years. Those fool hypocrit lawyers and others giving you so much chin music about the poor shippers is all tommy rot. Those fellows will take either side and don't care a rap about the people or the country. I am writing you this appeal by request of many of my fellow workmen as well as for myself and hope for the good of everybody you will give it your prompt attention.

FRANK BORDINLOE.

ST. LOUIS, *April 5, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

Mr. CHAIRMAN: For fear this article may escape your notice I take the liberty of sending it to you.

I have marked a clause in the article that especially appeals to me, and while I do not wish to in anywise criticize the splendid work of your commission, may I suggest that some kind of an appeal be made to the newspapers that before publishing any statements, at this juncture, those statements be submitted to your bureau of publicity before going broadcast to the country?

The railroads have been able by such propaganda as I have recently seen to largely influence a number of people, I mean substantial business men, that their claim "for an advance in rates is theirs by right," and when I ask them why the answer invariably is, "Well, that's what the paper said and they are laying off men."

Confident that your decision in the matter of rates will be based upon fact and will be acceptable to the country, I am,

Yours, very truly,

PRICE LANE.

RAILROADS DO NOT FACE A CRISIS—SOME OF THE STATEMENTS GIVEN BY THE ROADS ARE TRULY MISLEADING.

[Special dispatch to the Globe-Democrat.]

NEW YORK, *April 4.*

Daniel Willard, president of the Baltimore & Ohio, appeared before the Interstate Commerce Commission this week as a witness for the eastern railroads in their fight for an increase of 5 per cent in freight rates. Mr. Willard was asked by his counsel whether or not, in his opinion, a crisis at the present time confronted the railroads. That question is being heard to-day on all sides. Mr. Willard's reply was that the railroads were facing a crisis; the net earnings were so small that a fair return could not be maintained, and a large number of men were being deprived of their positions, not because of the lack of need of their services, but because of the inability of employers to pay. "As I conceive it," he concluded, "all these conditions of crisis or approaching crisis are at hand in full measure to-day."

Unbiased experts who are qualified to express an opinion have reached the conclusion that an increase in freight rates is due the eastern railroads. When the engineers, firemen, and trainmen threatened to strike for higher wages, the public insisted upon arbitration. The railroads reluctantly bowed to public sentiment, and the result was victory for the employees. Again, representatives of the public added to the operative expenses of the railroads by passing the full-crew laws. There has been a substantial increase in taxes, and then the railroads have been put to a large expense in preparing information demanded by State and Federal commissions representing the public. The public is strongly in favor of regulating the railroads, and the bills accruing from such a policy should not be left unpaid. The way to pay them is to grant an increase in freight rates.

It does not follow, however, that the railroads should get all that they are asking for. All of the items mentioned above have not added $15,000,000 to the operating expenses of the railroads. If the proposed 5 per cent increase in rates is granted, the gross earnings of the companies involved will be increased $50,000,000.

A great deal of false and misleading information is being circulated by the railroads to prove that they are face to face with a crisis. That is a serious charge, but it can be substantiated. This week, for example, President Smith, of the New York Central, stated on the witness stand that 25,000 men had been discharged since last September. The facts are that every large railroad lets thousands of men go every year after the middle of September, or as soon as the season for outdoor work ends. The Erie Railroad put out a statement this week that it had discharged 17,000 men. Investigation proved that in the departments named the company employs only 22,000 men, and the number that was or will be discharged was 6,000 instead of 17,000. An Erie official laughingly admitted: "Why, if we fired all those men, there wouldn't be anybody left to run the road."

The fact that the railroads have found it necessary to lay off men by no means spells calamity. Last year the gross earnings of the railroads, with one exception, were the largest on record. A poor showing was made in net, but that is easily explained. Last spring, when the decision was reached to apply for a 5 per cent increase in freight rates, every company involved immediately began to increase its maintenance appropriations. For the last six months of 1913 the 50 roads involved showed an increase of only three-tenths of 1 per cent in gross earnings, but a gain of 7.3 per cent in maintenance appropriations. The additional outlay for upkeep of roadbed and equipment accounts for most of the falling off in net.

In October of 1913, in common with all lines of trade, gross earnings of the railroads began to show decreases. That tendency has continued, and naturally, in view of the enormous amount of extra maintenance work that was done last year, the decision was reached to lay off men.

That decision, it will be found later, will mark the end of the long period of small net earnings. When the turning point will come in gross no one can say, but it is perfectly safe to predict that it is not a great way off.

At this time in 1910 it was being predicted from the housetops that unless freight rates were increased 10 per cent all of the large companies would be forced into the hands of receivers. The proposed 10 per cent increase in rates was not granted; but, on the other hand, new high records were established for both gross and net earnings, and many dividends were increased.

It was the same in 1908. In the early spring of that year the railroads insisted upon a 10 per cent increase in rates. Instead President Roosevelt started on his campaign to give the Interstate Commerce Commission more power in regulating rates, etc. In February of that year there were 342,000 idle freight cars in the country on the sidetracks. By April the number had increased to 413,000, and they were being referred to by railroad men who advocated the rate increases as "Teddy bears." This is what the Financial Chronical, the mouthpiece of the railroads, then had to say regarding the proposed increase in freight rates:

"Remember, likewise, that while the retrenchment in industrial affairs is going on and labor is being discharged, the elections are approaching. We say that because a good many think there is no good in the suggestion for higher rates for the railroads. They tell us that Mr. Roosevelt will not allow it. There are some things that even the Almighty can not reverse. Two and two will always make four and never five. Look at the evidence at hand. Note, first, the changes in earnings. Study each recurring month's reports. There is evidently a constantly developing decline. Nearly everyone was preaching before the new year opened that there would be a turn. There has been no such reaction. Instead of that the losses in earnings have increased. There can be no turn except by a process that strikes at the root of the disease."

The railroads did not get their increase in rates, but in 1909 they did establish new high records for earnings. Those high records, however, have since been raised, and it is only a question of a short time until, with or without higher freight rates, they will again be raised to new high levels. In the meantime, as a matter of justice, the railroads should be allowed an increase of something like 2½ per cent in rates to cover increased wages, taxes, cost of complying with full-crew laws, and other burdens which have been imposed by the public. But if that increase is not granted, despite the continued calamity howling of railway presidents, the railroads will continue to enjoy higher credit than any other industry whose securities are represented on the stock exchanges of the world. To what extent the campaign of the railroads for higher freight rates has hurt general business is another story.

H. L. B.

—

356 PINE STREET,
San Francisco, April 6, 1914.

Mr. JAMES S. HARLAN,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: The subsidized press is determined to have you grant the eastern railroads the 5 per cent increase in freight rates. Of course, you know that if there was no Wall Street there would have been no such demand; consequently, the incentive for the demand is Wall Street.

Wall Street has never produced a new dollar nor added a new idea to the world—she simply lives out of the other fellow's pocket—her production is mostly watered stocks and degenerates.

The dividends on watered stocks alone amount to 25 per cent of the average yearly income of every workingman. The dividends on the Steel Trust stock alone (all water) add 10 per cent yearly rental to every occupant of class A buildings for the structural steel alone. The Reading Co. (a holding company) earned 30 per cent last year on its stock (originally all water), and yet is asking for increased freight rates for the railroad company which it owns.

Wall Street will die a natural death if nothing is done to stimulate it, as the new currency bill will keep most of the surplus funds away from Wall Street, where it is now used to float their watered stocks, or loaned on such stocks within 10 per cent of their so-called market value. If such men as Willard, of the Baltimore & Ohio; Smith, of the New York Central; and "Honest" Jim Hill would devote their time and energy to running the railroads on their merits instead of hovering over the stock ticker there would have been no necessity for increased freight rates.

They are hardly sincere in their pessimistic reports to the Interstate Commerce Commission, when at the same time they are giving out tips to their personal friends to buy the stocks.

I hope you will continue your investigations even if it takes another year, as the public are just awakening to the situation and depend on you to do them justice as well as the railroad companies.

Yours, very truly,

W. O. MANSON.

"With cheering assurances from Washington that the eastern railroads would be allowed the full 5 per cent increase in rates, it was anticipated that to-day's market would show activity and strength."

—

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We desire to file our objections, informally, to the proposed increase of rates by the eastern railroads, and to except to the proposition that any increase whatever shall be accorded them, and assign the following reasons to sustain our protest:

First. We observe that the representative of the Erie Railroad, on March 30, 1914, importuned the sitting commissioner to speed as fast as possible the proposed advance in rates. In this connection, we call your attention to the fact that this particular railroad—the sick man of the railroad world—voluntarily filed with your honorable body a reduction in certain freight rates, which it was impelled to withdraw later on by the usual combination of railroads, who threatened a rate war unless the Erie did withdraw the voluntary rates it proposed to publish or had published. This railroad, therefore, ought not to be heard at this time to demand an increase of rates when it has heretofore voluntarily offered a reduction of rates.

Second. The American people have expended upward of $400,000,000 in the construction of the Panama Canal. The transcontinental railroads and their connections have evidently arranged to deprive the people of the benefit of the Panama Canal by increasing first the rates in eastern territory, and then in western territory, upon the principle that two bites of the cherry would be easier to put across than to swallow it whole.

Third. The evident object and purpose in advancing the idea for the repeal of the exemption provision of the Panama Canal tolls is to place as much of a handicap as these transcontinental railroads can devise against water shipments, so as to enable these to retain as much of the transcontinental business as possible, and at the same time to increase the rates on their lines on water hauls inland on both coasts.

Fourth. No agency in this country is more familiar than your honorable body with the devices by which railroads have concealed their earnings and have appropriated vast sums of money to permanent improvements, and thereafter have increased their rates by attempting to secure interest upon excess charges as so capitalized, which create the surplus so expended, upon the principle laid down by Judge Noyes of increasing returns. In other words, create excessive rates, put the profits into permanent improvements, charge the people increased rates to cover the interest in such permanent improvements, then again investing the added surplus in permanent improvements, increasing the rates to the people; and thus, by one continuous progression of charge, surplus, and charge upon surplus, these have appropriated to themselves a very material part of the entire wealth of this country. The American people can be depended upon to resent in no uncertain terms a further incursion of the sort planned. That these have remained quiescent during these investigations has not been because they will patiently submit, but has been because they believe in the integrity, ability, and fairness of the Interstate Commerce Commission, which has enjoyed, and does enjoy at this time in enviable measure, the confidence of the people, who have long been suspicious of their agencies of the Government as to their good intention to protect them, the people, from the incursions of the insatiable demands of railroads in America. The English system of requiring the capitalization of permanent improvements, and then permitting a fair return upon such capitalization, we think, should be the principle upon which railroads in this country should be conducted.

Fifth. Perhaps the most insidious methods of the railroad combination have been effected through circulars, anonymous in character, inclosed in blank envelopes, coming from persons whose relations with the railroads are not disclosed in the pamphlets or the paper itself, and who pretend to be interested only as citizens with a common interest in the masses. Among these pamphleteers are railroad representatives masquerading in the light of a freight of the people. On the 30th of March, 1914, a pamphlet appeared by a well-known magazine writer, in which he presumes to advise the people upon their best interests. He is well known by persons familiar with the subject; but the mischief in the pamphlet lies in the fact that it appears to be wholly disinterested. One can not read the pamphlet with a full knowledge of all the facts without feeling that it is not disinterested, notwithstanding that he therein protests to the contrary. This pamphlet is distributed in an envelope which in no manner indicates the interest which caused the distribution. Not only are the arguments made where they can be made, and refuted for the proposed advance in rates, but by the insidious newspaper and the pamphlet the people are led to bow their heads to a new yoke by arguments which are based upon the proposition that the country is going to destruction unless the railroads are permitted to add new burdens to those already carried. Possibly an investigation of the amount of money spent in the country in the promotion of newspaper utterances would account for a part of the expense of publicity which the railroads seem to have found necessary to advance their interests.

In conclusion, we most respectfully request your honorable body not to add new burdens to bowed shoulders unless you can read into any action of yours such justification as may convince the American people that your position is beyond question correct.

Respectfully, yours,

TUESDAY CLUB, Scranton, Pa., April 7, 1914.

EXHIBIT B2.

PRESIDENT WILSON AND THE RATE ADVANCE.

[From the Buffalo (N. Y.) Courier, December 29, 1913.]

FOREMOST QUESTION OF THE HOUR.

A special dispatch from Pass Christian, Miss., tends to confirm reports heretofore made to the effect that President Wilson believes that the Interstate Commerce Commission will act favorably upon the request of the eastern railroads for the moderate increase of freight rates, and that this action will result in the release of millions of dollars of equipment orders. The President is represented as believing that with the relief of the railroads and the new currency law in operation a wave of prosperity is near at hand.

This reassuring attitude of the President is bound to have a wholesome effect upon business conditions, especially in view of the rapidly growing belief that the freight rate question is the most important question now confronting the country.

William C. Brown, the retiring president of the New York Central lines, is abundantly justified in saying that the railroad situation is worthy of the serious consideration of every commercial, manufacturing, and agricultural interest, as well as all governmental authorities charged with the duty of regulating and conserving the transportation instrumentalities of the United States.

Mr. Brown asserts that if the moderate advance of freight rates asked for is denied, it will be impossible for the railroads to secure the funds with which to make improvements, without which expansion of the commerce of the Nation must gradually come to a halt; that in this event the demand that the Government provide funds necessary to supply adequate transportation facilities will be well-nigh irresistible.

Mr. Brown emphasizes the consideration that with income fixed by governmental authorities, with large increases in wages brought about by arbitration under Federal laws, with advancing prices and inelastic rates, the margin between income and outgo has become so slender as to make it very difficult to sell long-time securities. In 1908 the railroads found it necessary to raise money on short-term notes to the amount of $187,500,000, which was spent in permanent improvements. For the same purpose $319,000,000 was raised on one-year notes in 1909, and in 1912 the amount was increased to $368,000,000.

[From the Washington (D. C.) Post, January 21, 1914.]

SPEEDING UP JUSTICE.

President Wilson's intimation that the railroads are the sore spots, financially speaking, in this country at the present time, will have its effect upon public opinion with reference to the railroad rate cases. Already the President's words have been interpreted generally as meaning that he would not be averse to an early decision by the Interstate Commerce Commission allowing the 5 per cent increase which the roads say is essential to their development. This interpretation has brought the reassurance that the President wishes to help business, not merely in a theoretical manner, but practically.

There is no ground for criticism in the fact that President Wilson has seen fit to acknowledge the weakness of the railroads under present conditions. He knows, as do most other men, that the roads have been put to tremendous expense in recent years, with the necessity for increasing wages and spending money for new safety devices.

It is the function of the Interstate Commerce Commission to consider broad policies as well as the narrow questions of fact presented by the railroads. Even if the President had gone so far as to confer with the commissioners and give his views on the effectiveness of the proposed increase in rates, he would not have been straying outside of his province.

The exact justice of the increase of rate on each commodity can not be determined for months. The questions which have been sent out by the commission will postpone the final presentation of the case of the railroads for many months, if not a year. Evidently the President is disposed to look at the question from the standpoint of national policy and, recognizing that the railroads need more money, is inclined to speed up justice in order to secure the greatest good to the greatest number.

—

[From the Louisville (Ky.) Times, January 23, 1914.]

MR. WILSON AND THE RAILROADS.

The appeal of the eastern railroads for authority from the Interstate Commerce Commission to make an increase of 5 per cent in their freight charges is now under consideration by that body. The grounds for the appeal are: That the railroads for the past 10 years have been compelled to pay a steadily increasing price for every element that enters into the producing cost of their one commodity, transportation, and in the same period have been compelled steadily to decrease the selling cost of that commodity; that the railroads, by enforced economies, have been able so far to meet the demands of existing conditions, but that they are unprepared either to weather a panic or to meet the requirements of additional trackage, terminals, and equipment that a full return of prosperity will bring with it.

The securities of the railroads are held by individuals. When the earning power of the railroads is lessened the value of their securities is lessened, and with it the ability to borrow money to carry on the everyday work and at the same time to provide for improvements. Over the acts of the individual security holder the Government has no authority. It has already assumed a large measure of authority over the action of the roads. Manifestly this authority must be extended to its logical extreme of Government ownership, so as to eliminate the individual security holder, or there must be a halting place somewhere if the railroads are to have a sufficient voice in the management of their affairs to guarantee to their stockholders the protection necessary to avert the unloading of their securities. Manifestly, that is, if the prosperity of the railroads is to be considered inseparable from the prosperity of the country and therefore deserving of the best thought of the administration constituting the country's Government.

In the opinion of no less informed a student of affairs than Woodrow Wilson the halting place is already in sight. It will be reached when there has been vested in the Interstate Commerce Commission "the power to superintend and regulate the financial operations by which the railroads are henceforth to be supplied with the money they need for their proper development to meet the rapidly growing requirements of the country for increased and improved facilities of transportation," and Mr. Wilson adds: "We can not postpone action in this matter without leaving the railroads exposed to many serious handicaps and hazards, and the prosperity of the railroads and the prosperity of the country are inseparably connected."

It does not logically follow from Mr. Wilson's confession of faith that the eastern railroads are to get their 5 per cent increase in freight rates.

It appears, however, logically to follow that the day wherein no consideration has been given to supplying them "with the money they need for their proper development to meet the rapidly growing requirements of the country for increased and improved facilities of transportation" has passed. Against the proposal to vest in the Interstate Commerce Commission the power to superintend and regulate future issues of securities the railroads have entered no protest. They have in effect given to it their hearty assent.

The one question to be determined is the means by which the railroads shall get the money they need for improved and increased facilities of transportation. If it can be obtained in any other way than by an increase in the selling price of transportation, that way is not clear.

—

[From the Washington (D. C.) Post, March 20, 1914.]

RAIL DATA TO WILSON—PLEAS FOR HIGHER RATES RECEIVE CLOSE STUDY—KEEPS IN TOUCH WITH INTERSTATE COMMERCE COMMISSION—PRESIDENT SAYS PROPOSED INCREASE IN FREIGHT RATES IS "THE BIG THING," BUT EXPRESSES NO OPINION ON MERITS OF QUESTION—POINTS OUT THAT NEW HAVEN CASE IS PROGRESSING SATISFACTORILY.

President Wilson manifested yesterday deep interest in the financial condition of the railroads of the country, expressing a desire to help in every legitimate way to bring them relief. The President had been asked by callers if he had heard any particular complaints from the railroads about their financial condition, and remarked that he had heard what everybody was discussing—the uncertainty of their position. He let it be known that the Government was giving consideration to the general facts of the continued increase in operating expenses with the decrease in net revenues.

FREIGHT INCREASE "BIG THING."

The President revealed, too, that while he had not been consulted by the Interstate Commerce Commission as a whole, when individual members called on him he discussed everything they had brought up with frankness. Mr. Wilson considers as an important factor in the railroad situation the question of whether or not the railroads would get the proposed increase in freight rates now being argued before the Interstate Commerce Commission. He made it clear that this was "the big thing" in the situation, but did not express any opinion on the merits of the increase. No legislative action to afford relief to the railroads had been suggested to the President, according to his talks with callers.

REFERS INFORMATION TO INTERSTATE COMMERCE COMMISSION.

The President did not point out any particular way in which he could help the situation, though it is believed he intends to keep the Interstate Commerce Commission constantly informed about opinion throughout the country as it comes to him. Many letters sent to the White House about pending rate increases already have been referred to the commission for the information they contained.

During the course of his talk about railroads Mr. Wilson pointed out that the New Haven situation was proceeding satisfactorily and that he had not heard of the New Haven case influencing the financial condition of other railroads, as had been reported.

—

[From the Baltimore News, March 22, 1914.]

SHORTSIGHTED POLICY OF I. C. C. IS COSTLY—BUSINESS AND LABOR WORLD NOW IMPATIENTLY AWAITING DECISION WHICH, IT IS HOPED, WILL START THE WHEELS OF PROGRESS.

(By A. K. Darby.)

There is growing impatience in business and financial circles over the long—and what many persons consider unnecessary—delay in deciding the railroad freight case. The Interstate Commerce Commission seems to be about the only body in the United States that is not impressed with the serious consequences that further delay in disposing of this matter may bring about.

The President of the United States is awake to the harm being done to the business interests of the United States by the dilatory tactics of the commission, and his friendly attitude toward the railroads will, it is hoped, stir the commission to quick action. It is not believed for a moment, however, that the Executive will go beyond the bounds of propriety and make representations to the interstate commissioners while the latter are acting as judges in this particular case. There is, however, the best reasons for believing that the President believes that an increase in railroad revenues is necessary for the efficient conduct of the transportation facilities of the country.

The mere fact that the attitude of the Executive is becoming so well known—and there seems slight reason to doubt the accuracy of recent reports—in this respect seems to merit consideration as an important market factor. Interstate commerce commissioners are human, and it is not improbable that consciously or unconsciously they will permit the President's view to carry distinct weight in the course of their own investigations into this subject.

The appointive power in the case of commissioners lies with the President, and he may not unnaturally be expected to appoint only men with whose views he personally agrees. The same argument will, of course, apply to reappointments as to appointments.

Trade reports continue to indicate very clearly the check under which business is proceeding. The sort of encouragement, both practical and sentimental, which would be afforded by a grant of the rate increase could pretty confidently be counted upon to infuse greater life into trade.

A rate increase would mean speedy and valuable assistance to the railways, and in a broader sense would no doubt be accepted as proof that the regulatory power of Government is to be used for the protection of the railroads as well as for the protection of those who use the facilities which the railways offer.

Students of the situation agree that fundamentals are all right and that the only restraint to a forward movement in general trade is the failure of the Interstate Commerce Commission to recognize the embarrassment of the railroads and grant them the relief they ask.

The money value of the country's last crops was phenomenally large; its trade balance has up to this time been largely in its favor; from all sections come reports that conditions so far as they affect this year's crops were never better, and yet the wheels of commerce move slowly. In all cities there are armies of unemployed and some of these are marching on to Washington.

What for? They have no grievance against the President. He has done more real constructive work in his first year of service than many Presidents have done throughout their whole terms.

They have no grievance against Congress. Congress has in important matters to a greater extent than for many years, forgotten party lines in legislating in the interest of the whole people.

The tariff bill was not a radical one, and not only meets the demands of the Democraic Party, but the approval of many Republicans as well.

The currency bill was wisely handled, and, in the opinion of many of the best bankers, will put the United States in the forefront of the great banking nations of the world.

It is not Mexico which holds the country back. If we have war, it will at least open the gates to business to some extent. Peace will open them wider.

No; it is not with the executive, judicial, or the legislative branches of the country that the hungry has to look in sorrow and suffering. The people of these United States are at heart, and as a general rule, honest; they are sterling and industrious people; they have worked hard and played hard, and have built up the greatest country on the face of the earth. Suddenly, and with little warning, enterprise has stopped. Foreign purse strings have been drawn tight, prosperity has ceased, and the idle swarm our highways.

The answer: A Government-appointed board of detectives has taken charge of the house. This board of detectives is known as the Interstate Commerce Commission, and it is casting suspicions upon railroad management. They are not hurting Mr. Rae, the president of the Pennsylvania Railroad, or Mr. Willard, of the Baltimore & Ohio, or Mr. Elliott, of the New Haven, or Mr. Bush, of the Missouri Pacific, or the officers of other roads. The officers are not the railroads. The railroads are the stockholders and bondholders, and the stockholders and bondholders are men, women, and children, and the widows and orphans, the savings banks and charitable institutions of this country, located in all parts of it, and the people and institutions in foreign countries who have had confidence in us in the past and have sent their money to us. It is these who are being mercilessly injured by the Interstate Commerce Commission.

This country has never heretofore stood as breathless, waiting the result of any election or any other great question as it is standing to-day waiting the decision of the Interstate Commerce Commission.

The rich and the poor, the employed and the unemployed, are all suffering from this great crime, this taking of value from the greatest of all enterprises in our country, the railroads, impairment of credit from heretofore the most prosperous Nation under the sun. What

will the answer be? On the answer depends the welfare and prosperity at least of this generation. No compromise is going to accomplish any good.

The voice of the people will finally win, although it may take a whole generation to overcome the destructive work of the few men of the Interstate Commerce Commission and their misguided leader, Brandeis. This destruction of credit has been the great crime of our age. The question is how long will the people submit to it. If the armies of the unemployed on arriva. at Washington are looking for the cause of their suffering, they have only to go to the Interstate Commerce Commission.

—

[From the New York Sun, March 23, 1914.]

WISHES THE PRESIDENT WOULD EXERCISE HIS INFLUENCE WITH THE INTERSTATE COMMERCE COMMISSION TO SETTLE THE RAILROAD RATE QUESTION.

ATLANTA, GA., *March 21.*

To the EDITOR OF THE SUN.

SIR: I have been reading with much interest many published articles regarding the great amount of influence that President Wilson has exercised over Congress with reference to the Panama Canal tolls question. I do not agree or disagree with these articles condemning the President's views on the matter, for the reason that it is a question about which I know very little. However, there is one thing I believe I do know, and that is that the Interstate Commerce Commission is taking an awfully long time to settle the railroad rate increase of 5 per cent, which has been asked for by the railroads and approved by a great number of shippers. The business of this country is at a standstill awaiting the decision of the Interstate Commerce Commission.

Now, if our President is able to exercise such great influence over Congress, as it appears he has done in getting the tariff, currency, and tolls bills through, I think it would be wise for him to exercise some of that same influence over the Interstate Commerce Commission, and get the rate question settled, so that business may be resumed and the great army of unemployed people may secure employment. The success of the Democratic Party depends largely upon immediate action on this very important question. The currency and tariff bills may do all for the good of this country that has been predicted by the party, but neither so far has had the effect of stimulating business, and I fear it will be some time before the predicted good that is to be derived from these bills will be felt by the unemployed.

The Interstate Commerce Commission has the right to increase freight rates, and it also has the right to decrease the same; therefore it appears to me that it would be good business on the part of the President to insist upon the granting of this increase now, and later, after the physical valuations of the railroads have been completed by the Government, and it is found that the railroads can earn fair returns on the actual value of their properties, then the rate may be decreased. In view of the uncertain values that may be placed upon railroad properties by the Government and the long period of time that may be required for the United States Government to get the proper data with which to fix these values, it is impossible for the railroad companies to sell securities to make much needed improvements, and the kind of improvements that afford employment for thousands of people while they are being made, and since the situation has been made so acute by reason of the physical valuation laws that were passed by the Republican Party, it would be quite proper for our President to insist upon increased freight rates in order to afford immediate relief.

C. W. LANE.

—

[From the St. Louis Times, March 31, 1914.]

UNFAIR TO THE RAILROADS.

Notwithstanding the intimations received from Washington that President Wilson is in favor of an increase in freight rates and that it is the President's desire that the Interstate Commerce Commission should render an early decision in the matter, the commission has again postponed the date for hearing the shippers in opposition to the proposed increase. Furthermore, the commission has engaged counsel to represent it and present the case of the shippers against the railroads. Why the Interstate Commerce Commission should be prejudiced against the claims of the railroads is difficult to understand, since it was supposedly created for the purpose of righting the wrongs of the railroads.

The Interstate Commerce Commission is a quasijudicial body, and as such ought to be unprejudiced and protect the rights of all parties in all matters which may come before it. Recently the commission employed an attorney to represent the Interstate Commerce Commission and the shippers in the hearing of the petition filed by the railroads for an increase in rates.

If the railroads are to receive a fair and impartial hearing, what occasion was there for the Commerce Commission to employ an attorney? Was it to enable him, as one who seems to be in political favor with the administration, to earn an extravagant fee?

Such action on the part of the commission does not appeal to fair-minded people, and if the shippers wish counsel to represent them in opposition to the proposed freight increase, such counsel should have been employed by the shippers and not by the commission. The duty of the commission is not to employ counsel, but, as judges, to pass upon the reasonableness and fairness of the claims of the railroads for increased freight rates, and the merits, if any, of the opposing claims of the shippers.

The employment of counsel by those who are supposed to pass upon the matter is a new departure in American justice, and can not meet with popular approval. Such action on the part of the commission immediately smothers the promise of a square deal to the railroads.

The St. Louis Times believes in fair play and a square deal, and condemns the action of the Interstate Commerce Commission as dangerous and as an attack upon American justice and the spirit of our jurisprudence.

—

IX.

[From the Manufacturers' News, February 26, 1914.]

PRESIDENT WILSON DISHEARTENED.

Certain railroad officials, whose methods are suspected, may defeat the 5 per cent advance in freight rates, that many believe is needed to restore business prosperity.

President Wilson made up his mind several months ago that he would use his influence for the horizontal advance in freight rates for which the official classification territory railroads had filed requests with the Interstate Commerce Commission.

The increase meant that all the railroads in the United States would get an advance of 5 per cent, whether they were entitled to it or not, and the feeling of the President was largely shared by the business interests from one end of the country to the other, because it was believed the business situation was critical, and that the advance would help restore confidence and prevent a smash.

So far as the general public was concerned, it was willing to stand for whatever President Wilson said was the right thing to do.

President Wilson is now disgusted and disheartened because it has developed that certain large railroad interests in the country are still pursuing questionable methods, and facts, that have been brought to his attention, have caused him to hesitate as to whether he will favor the advance that has been asked.

The foregoing statements are made on the authority of a public man who has the interests of the Wilson administration at heart, and who is also in close touch with the Washington situation. He also said:

"An event is likely to occur in Chicago in the course of a few days in connection with one of the railroads that will startle the country as much as the revelations connected with the New Haven. The President regrets exceedingly that this situation has arisen, as he was in favor of an advance in freight rates because he believed that it was the best thing for the country generally, regardless of the inequities which now exist as to rates. He had thought, however, that the grafting had been eliminated and that the railroads which had been guilty of such conduct in the past had turned over a new leaf. He took the position that he would let the past be bygones and would start out with as few investigations as possible, on the theory that the railroad officials had made up their minds to do the right thing by the public He was also assured by certain financial interests in New York that the grafting on the part of the purchasing agents, railroad presidents, and others, had been eliminated, and he took these gentlemen at their word. There are certain roads that have been clean all the time. There are others in which more or less grafting did go on, but the practice has been practically eliminated. Others are carrying on their nefarious vocations more aggressively than ever before, and the wail they have made for an advance in freight rates has bumped the moon.

WHY PRESIDENT WILSON HESITATES.

"The President, I understand, has not abandoned the idea of allowing the advance, but is hesitating and wondering if it is really true that the money is needed. He wants to know. He also wants to help. He wants good business.

"The astonishing revelation which I understand is about to be made is extremely unfortunate at this time on account of the general business situation, and the President greatly deplores it. He has been doing everything he can to restore confidence. On the other hand, he feels that the public is entitled to the information, and has not put any stones in the way of taking the cover off the particular situation to which I have reference. It may be, however, that he will change his mind and conclude that it would be better to delay matters for a while. I earnestly hope so. The country needs the advance in freight rates notwithstanding the disgraceful action of certain men connected with the carriers."

—

SHIPPERS WILL FIGHT SERVICE CHARGES—ILLINOIS MANUFACTURERS' ASSOCIATION, NATIONAL TRAFFIC LEAGUE AND ASSOCIATION OF COMMERCE TAKE ACTION.

Shippers throughout the country are gradually becoming aroused to the meaning of the Harlan decision and the efforts of Louis D. Brandeis, special counsel for the Interstate Commerce Commission, to saddle on the public terminal charges which have heretofore been regarded as part of the freight rate, and an obligation of the carrier. The commission will resume its investigation at Washington tomorrow, and will no doubt hear further statements from Mr. Brandeis as to particular cases which he wishes to cite.

The plan outlined in the Harlan decision, coupled with what seems to be the new policy of the commission, means a revolution in the handling of freight on the railroad terminals at all great industrial centers. Mr. Brandeis has evidently succeeded in reversing the views of the commission, because the position which it has taken in the pending investigation is diametrically contrary to the position taken in the California case. In the latter litigation it held that the Southern Pacific and other railroads entering San Francisco and Los Angeles were wrong in charging $2.50 for spotting cars. These were th only two cities in the United States where the practice of charging for spotting cars obtained. The railroads refused to comply with the order, and the commission instituted proceedings before the Commerce Court to enforce its decision. The Commerce Court held for the railroads and the Interstate Commerce Commission appealed the case to the United States court. The matter is now pending.

DECISION ON SWITCHING CHARGES.

Saturday the commission handed down a decision in the case of the Chicago Board of Trade against the Santa Fe and other railroads, involving the absorption of switching charges on cars loaded with grain at Chicago. In the general rearrangement of switching charges a few years ago grain was not included, and the commission now holds that the railroads are not compelled to absorb the switching charges on grain at Chicago, notwithstanding they absorb the charges in cases of other commodities, and that the position of the railroads in not absorbing switching charges on grain is not a discrimination.

In connection with the controversy as to allowances the question of industrial railways again pops up. A number of short lines connected by industrial houses were in operation at the time the reform wave struck the commission several years ago. At that time they were getting a division of 20 per cent of the rate, and the Interstate Commerce Commission ruled that the division was ridiculously high. In the case before it, it ruled that $3.50 a car was sufficient to charge. When this decision was rendered, a number of industrial concerns which had not had the foresight to incorporate their switch tracks immediately did so and collected from the carriers $3.50 for every car turned over, on the ground that that amount had been established as an allowance for the industrial railroad.

—

CAR-SPOTTING CHARGES.

ILLINOIS MANUFACTURERS' ASSOCIATION OPPOSE THE BRANDEIS SCHEME.

Colin C. N. Fyffe, general counsel; Secretary John M. Glenn, and influential members of the Illinois Manufacturers' Association and other industrial organizations are in Washington to appear to-morrow before the Interstate Commerce Commission.

They will present the formal objections of the Illinois Manufacturers' Association and other prominent industrial and shippers' organizations to the proposed charge for car spotting, trap-car service, and other similar service performed by the carriers after the vehicles leave the main lines.

The position of these shippers is defined in the following resolution passed after an all-day meeting on Tuesday at the rooms of the Illinois Manufacturers' Association in the American Trust Building:

"*Resolved*, That the representatives of the associations named below oppose the proposal to permit the carriers to impose an extra charge for so-called spotting of cars for the following reasons:

"1. That this service is and always has been a part of transportation service.

"2. That it is always included in the rates.

"3. That the spotting service as defined at the hearings of the commission is not actually performed except in a very small percentage of deliveries.

"4. That if the spotting of cars is not a part of the transportation service it is a local service and the question of an imposition of any charge therefor is for the State commissions and not for the Interstate Commerce Commission.

"*Resolved*, That the trap car and similar service of carriers is a legitimate extension of their terminal facilities, open to all shippers, reciprocal among railroads, and properly included within the through-line charge, and that it should be maintained as at present.

"*Resolved*, That these resolutions be submitted to the several organizations and they each be requested to communicate their action thereon to the commission with such facts as their individual members may be able to furnish."

The resolutions were passed at a meeting of the joint committee which had been created at a conference held in Chicago, December 3, under auspices of the Illinois Manufacturers' Association. The official call stated that the meeting was held to consider united action in reference to the proposed allowances for serving the industries under the Interstate Commerce decision of January 20. Those present were:

Illinois Manufacturers' Association: Henry G. Herget, Pekin; Chas. Piez, Chicago.

Iowa State Manufacturers' Association: G. A. Wrightman and Walter Huncke, Des Moines.

Rockford Manufacturers' & Shippers' Association: A. E. Johnson and C. S. Bather.

Manufacturers' Association of Racine, Wis.: W. M. LaVenture, W. T. Harvey.

Fox River Valley Manufacturers' Association, Aurora, Ill.: C. A. Krause, R. L. Ruble, A. C. McDonald.

Tri-City Manufacturers' Association, Moline, Ill.: H. A. Jansen, secretary.

Indiana Association of Manufacture & Commerce: M. W. Mix, Mishawaka.

Also present were the traffic committee of the Illinois Manufacturers' Association: R. A. Hale, L. F. Berry, W. M. Caves.

Al. Birkenstein, S. Birkenstein & Sons, Chicago.

S. C. Hunter, Marquette Cement Manufacturing Co., La Salle.

F. A. Coapman, Whitman & Barnes Manufacturing Co., Akron, Ohio.

A. J. Byrne, Joseph M. Eisendrath Co., Chicago.

A. J. Kingsley, Oregon Manufacturers' Association, Portland, Oreg.

Mr. Piez occupied the chair.

[From the Albany Evening Journal.]

THE PRESIDENT AND BUSINESS.

It seems to be settled now that the plan to enact specific definitions of restraints of trade will be eliminated from the program for supplementary antitrust legislation, so that the United States Supreme Court's interpretation of the Sherman law according to the rule of reason will remain as the guide to decisions in all cases which may be brought into court under that law.

This is thus far the best evidence of the good faith of President Wilson's declaration that hostility between the Government and business is at an end. The proposition that a law should be passed listing all possible acts of corporations which should be unlawful under the Sherman law seemed to be in conflict with that assertion, since if the specification of such acts were made comprehensive enough to include all which might be for illegal purposes, many must be included which might as well be, and as a rule would be, for purposes entirely legitimate. It appeared inevitable, therefore, that the enactment of such supplementary legislation would place such restraints upon business as would make profitable operation exceedingly difficult, if not impossible.

This view must have been convincingly presented to the President, since otherwise he would not have consented to the withdrawal of a legislative proposition which seemed desirable to him when he recommended it in his message.

If now the President would in some way indicate his desire that the Interstate Commerce Commission should give the railroads a square deal, that would be conclusive evidence of the end of hostility between Government and business. Thus far he has carefully avoided expression of opinion as to that, on the ground that the commission is a quasi judicial body and it would be therefore improper for him to try to influence it. In fact, some time ago, when it was reported that he had expressed himself in favor of a rate advance, he hastened to make denial of it.

But he has not hesitated to influence the action of the Congress. Indeed, he has not at all tried to make a secret of what he desired it to do. Since that is not improper, and it is generally conceded that it is not, a word from him indicating his attitude toward the rate question would not be a breach of propriety.

Moreover, it would be entirely proper and in order for him to remind the Congress that it should provide for just compensation for the railroads for carrying the greatly increased parcel post tonnage.

Not accelerated from any source, progress of the commission toward decision is slow. It is still giving hearings, mostly to those who contend that the railroads should be compelled somehow to get along with inadequate compensation for service to the public. Anyone who wants to talk against a rate advance seems to be welcomed with open arms. The latest individual who was heard at length is a railroad commissioner of a western State who said he represented the commissions of eight southern and western States. One may wonder why State officials are permitted to intervene in a matter between the railroads and those whom they serve before an agency of the Federal Government.

It can not be successfully disputed that the financial embarrassment of the railroads, due to insufficient earnings, does more to check business revival than any other thing that influences industrial and commercial activity. Since that is so, the President could do great good if he would make it known that the policies of his administration, through the operation of which he hopes to restore prosperity, include relief for the railroads from the undue restraint that has been put upon their earning power.

Hostility between the Government and business will not be at an end while that restraint remains, for the railroads are a large part of American business.

IMPEACHMENT OF THE MEMBERS OF THE INTERSTATE COMMERCE COMMISSION.

[From the New York Evening Telegram, March 8, 1914.]

MR. LEVY ASKS RATE DECISION IN 30 DAYS.

Impeachment of the members of the Interstate Commerce Commission will be asked unless a decision in the so-called "Eastern railroad" rate cases is rendered within the next 30 days, according to an assertion made to-day by JEFFERSON M. LEVY, Representative from the fourteenth New York district. Charges are made by Mr. LEVY that there has been willful delay in announcing decisions reached in the last two years in rate cases affecting practically every railroad and every industry in the country.

These delays, he says, seriously hurt business and create a chaotic condition among the railroads. He declares that efforts which he has made to hasten long-delayed decisions have met with no success, although he has appealed directly to President Wilson.

The eastern railroad rate case was closed December 15 after extended hearings, during which representatives of all the great railroads east of the Mississippi River presented cause for a 5 per cent increase in the prevailing rates. On January 1, 1914, the commission sent all the railroads a list of 68 questions, involving the conduct of the business for the last 10 years, which must be answered before a decision will be announced.

"These questions are elementary," said Mr. LEVY. "They have nothing to do with the case which the railroads presented to the commission and will take years to answer, as they require an extensive search of old records. The commission itself has filed away in its archives answers to these very questions, and if the members cared to they could set clerks to work finding them.

"Louis D. Brandeis, counsel to the commission in this rate hearing, recommended the increase asked, and still, instead of decisive action, the railroads are told to answer a lot of historical questions.

"This is but an index to the manner in which the commission conducts its affairs. The men comprising this body are not men of sufficient caliber or experience to handle the great problems which come to them, and the result is a most unfortunate condition, which is seriously affecting the business of the country. I believe that politics has entered too largely into the appointment of these men."

QUESTIONS DELAY IN FREIGHT RATE CASES—REPRESENTATIVE LEVY OFFERS RESOLUTION CALLING ON PRESIDENT TO INVESTIGATE COMMERCE COMMISSION.

HERALD BUREAU,
Washington, D. C., Saturday.

Representative JEFFERSON M. LEVY, of New York, who all along has maintained that the Interstate Commerce Commission was delaying too long in deciding the application of the eastern railroads for a general increase in freight rates, offered a resolution in the House to-day calling upon the President to inform the House of the causes for this delay.

Mr. LEVY'S resolution recites that in some cases pending before the commission, in which the railroads have asked permission to increase their rates, the shippers interested have filed no objections, as is their right under the interstate-commerce law. In other cases the shippers have even indorsed the applications of the railroads. In such circumstances Mr. LEVY can not understand the reason for the delay.

Mr. LEVY had intended to ask for the impeachment of the commission, but decided that before he undertook such action it would be wiser to submit a resolution calling for a statement of the commission's reason for the delay.

House resolution 447.

IN THE HOUSE OF REPRESENTATIVES,
March 21, 1914.

Mr. LEVY submitted the following resolution, which was referred to the Committee on Interstate and Foreign Commerce and ordered to be printed:

Resolved, That the President of the United States be, and he is hereby, requested to report to the House of Representatives, for its information, the cause and reason why the Interstate Commerce Commission has failed to grant an increase in freight rates to the railroads where no objection to such an increase have been filed, and where the shippers have requested that an increase be granted on the ground that they were just and equitable.

EXHIBIT B3.

MANY EDITORIALS AND NEWS ITEMS SEEK TO INTIMIDATE CLAIM—A CRISIS IS NOW ON, AND PANIC WILL SURELY FOLLOW A DENIAL OF THE RATE ADVANCE.

THE RAILWAY CRISIS.

American railroads have reduced their forces by fully 250,000 men and have cut working hours.

And this staggering total will be seriously swelled unless conditions promptly improve.

These statements are based on signed communications the New York American has received from the presidents of our leading railroad systems.

Normally, our railways employ approximately 1,700,000 men. A 15 per cent reduction—which is under rather than over the mark—means 255,000 men.

One point emphasized by all railroad heads is that retrenchment is not a matter of this week or last, but has been in force for several months.

Also, the reduction in forces, it is pointed out, has not been equal to the falling off in net earnings.

Withdrawal of passenger trains is now engaging the attention of officers. Economy in this direction is likely to be carried a good deal further.

Among the companies already heard from, with the reduction in forces, as compared with a year ago, are the following:

Pennsylvania Railroad	38,000
New York Central	25,000
Norfolk & Western	8,000
Northern Pacific	3,660
New Haven	4,500
Lehigh Valley	3,000
Baltimore & Ohio (unofficial)	10,000
Missouri Pacific (unofficial)	12,000

—B. C. Forbes, in New York American.

THE CRISIS.

President Willard, of the Baltimore & Ohio Railroad Co., told the Interstate Commerce Commission that the railroads were facing a crisis. What else but a crisis is a rapidly decreasing margin between earnings and expenses? What else is the failure of increased investment to keep earnings up to the point formerly reached with a smaller outlay of capital? What else is the necessity for laying off vast armies of employees? We speak of this blow to labor as a crisis for the railroads, because it is always a critical thing for an employer to be compelled to disorganize his staff of workmen gradually built up and educated to a state of efficiency. The railroads will not recover in many months from the setback caused by the present period of enforced economy.

The figures with regard to earnings and operating expenses introduced by Mr. Patterson, general counsel of the Pennsylvania Railroad Co., tell how serious the crisis is. Operating revenues of eastern railroads declined $51,000,000, or 22.5 per cent, in the seven months preceding January 3, 1914, as compared with those of the corresponding seven months of the preceding year. In the same period the operating revenue of the railroads of the Central Freight Association showed a decrease of $25,000,000, or 30.7 per cent. On the three principal railroads of the East—the New York Central, the Pennsylvania, and the Baltimore & Ohio—revenue declined $26,000,000, or 24.8 per cent.

It is not only a crisis for the railroads. It is a crisis for public regulation of the railroads. The Tribune says this with reluctance, having been forced to the conclusion. This paper has long been an advocate of public regulation and has urged and defended all sensible extensions of it. But it is a serious thing that public regulation should have brought the railroads to the condition in which they are to-day and should be slow to afford relief—almost incompetent to make up its mind as to the necessity for relief. The Interstate Commerce Commission has grave responsibilities, but seems unequal to them. Its work requires great understanding, but it is full of the suspicions which beset minds that do not understand. It prescribes accounting systems, yet hesitates as if it might be deceived by what they show. It chooses strange and noisy advisers, uttering wild charges. Mares' nests possess an irresistible attraction for it. It should know, but it plainly does not know. Public regulation must do better than this.

A crisis it certainly is, however you look at it.—New York Tribune.

UNTENABLE AND RIDICULOUS.

The Interstate Commerce Commission now for the first time in many months shows a disposition to expedite the rate-advance cases.

This is well. The dilatory position of that body had become untenable and ridiculous. The petitioning railroads, in demonstration of their need, have been offering to the commission earnings and expense figures not only prepared in accordance with an elaborate system of bookkeeping prescribed by the commission, but accepted by the commission and carried on its own records as a true exhibit of traffic conditions.

The commission therefore ought to know whether the railroads are in honest need of increased rates or not. It ought to know whether or not President Willard, of the Baltimore & Ohio, talks facts when he describes the railroad situation as critical. If it does not know, it only condemns its own system of railroad reports and its own capacity to sit in such a judgment.

The delay in this case has already been carried to a farcical length. It should end at once with a decision one way or the other.—New York World.

A BILL TO PROTECT THE INTERSTATE COMMERCE COMMISSION.

Senator LA FOLLETTE aroused a great deal of curiosity by his remarks yesterday in introducing in the Senate a bill for the purpose of preventing attempts to influence the action of the Interstate Commerce Commission, "except under the rules and regulations of the commission." The Senator, it would appear, is the custodian of something in the nature of a sensation, which he is about to let loose, for he gave notice of his intention to speak to-day on the bill in these significant words:

"I desire to present some remarks upon the bill and some evidences of a hearing that is under way in this country that I believe to be the most serious in its prejudicial effect upon the work of the Interstate Commerce Commission of anything that ever has before been witnessed."

Senator LA FOLLETTE'S bill is drastic in its provisions. It would prohibit any person from attempting to influence the members of the commission by writing to them, or by "writing or sending to the commission or member thereof any letter or any written or printed communication, circular, or paper, or by writing or printing or circulating, or causing to be printed and circulated, any communication, matter, or thing addressed to the commission or any member thereof, or by communicating with the commission or any member thereof." The penalty for violation is to be fine or imprisonment, or both.

Without discussing its constitutionality, the bill may be pronounced as far-reaching. The Herald recalls publishing not so long ago an editorial on the railroad situation, intended, of course, for the consideration of all its readers, but for the sake of emphasis bearing the caption, "A word to the Interstate Commerce Commission." Clearly such publication would be unlawful and might subject the publisher and editor of the Herald to a term in jail if Senator LA FOLLETTE'S bill should become law. Happily, however, there seems little danger of such enactment in this enlightened age, given though we are to legislating copiously.

Even though the bribery laws are presumed to protect them amply, the bill indicates a lack of confidence in the stability of the commissioners' judgment, or else a desire to relieve them or their secretaries of the burden of opening and disposing of a mail that might be unduly swollen while important cases are under consideration.

[Mailed to Interstate Commerce Commission. Paper from which taken unknown.]

IT WERE WELL IT WERE DONE QUICKLY.

We publish in other columns of this issue an excerpt from the annual report of J. H. Wheelright, president of the Consolidation Coal Co.

Two years ago the Consolidation Coal Co. purchased 100,000 acres of coal land in eastern Kentucky, upon which it has built the cities of Jenkins and McRoberts. According to the report of Mr. Wheelright, the 14 mines that have been opened in Kentucky by this company have a producing capacity of approximately 3,500,000 tons of coal a year. Because of the purchase of this land, and the guaranty of the Consolidation Coal Co., which for 50 years has been one of the most successful producing coal companies in the country, the Louisville & Nashville, the Chesapeake & Ohio, the Baltimore & Ohio, and the Clinchfield & Carolina railroads have spent millions of dollars to reach the coal fields in eastern Kentucky.

The total annual output of the Consolidation Coal Co. from its various fields in Kentucky, Maryland, West Virginia, and Pennsylvania aggregated for 1913 over 11,000,000 net tons.

The part of Mr. Wheelright's report to which we wish to call special attention is his statement that—

"Notwithstanding the fact that an increase in freight rates to the carriers would in many cases fall directly upon your company, we have written the Interstate Commerce Commission, urging them to grant the increase of freight rates to the railroads, for the reason that we believe the facilities so urgently needed to be of greater importance to the future development of the country and the welfare of your company than the burden that will fall upon us by reason of increased freight rates."

There could be no more striking evidence of the imperative need for an increase in the freight rates railroads are allowed to charge than this testimony of the president of a company which ships annually over 11,000,000 tons of freight, which would be affected by that increase. But as pointed out by Mr. Wheelright, it would inure to the benefit of the company of which he is president to have the railroads able to secure the money necessary to make the extensions, to build the sidetracks, and to purchase the equipment to handle the full output of its mines, which under present circumstances the railroad companies are unable to do. It is for similar reasons that business men in every line of activity have earnestly urged and anxiously await the decision of the Interstate Commerce Commission giving to the railroads permission to increase their rates.

Upon the prosperity of the railroads depends the prosperity of the country. They are the greatest consumers of material, the greatest employers of labor. It requires millions of dollars for them to maintain their tracks and equipment so as to handle economically and expeditiously the business they now have; it requires added millions for them to extend their tracks, to build new sidings, to purchase new equipment to take care of the increased business that comes from the increase of population and the development of the natural resources of the country.

That the plea of necessity for an increase in freight rates is not fictitious the monthly reports of earnings are proof, as is their inability to provide facilities for traffic ready at their hands, as pointed out by Mr. Wheelright, additional proof. The decision rests with the Interstate Commerce Commission, and upon that commission rests the responsibility for the business of the country prospering or lagging.

The railroads can not secure money through the sale of stocks or of bonds unless the investing public are assured that the revenues of the railroads are and will remain sufficient to pay interest and dividends. With the present freight rates there is danger that many even of the strongest railroad systems will be unable to maintain their present rate of distribution to their stockholders. It is only by an increase of revenue through an increase of freight rates that the railroads can hope to persuade investors to furnish the money to make the extensions and purchase the equipment that is necessary to do the business of the country.

Every man interested in any form of business is proportionately as much interested as is Mr. Wheelright in having the Interstate Commerce Commission quickly grant that which it is inevitable it must ultimately grant, unless the railroads are to go into bankruptcy and the business of the country to become stagnant.

[From the St. Paul Pioneer Press, January 9, 1914.]

RAILWAY RATE PROBLEM.

The conviction seems to be forcing itself upon the public that the Interstate Commerce Commission will grant the request of the group of eastern railways to put in force an increase of 5 per cent in the general freight rates, and that it will do so as a necessity. It is in the air that such a course will be taken to give the carriers the additional revenue that some of them at least must have to meet actual maintenance and operation costs.

But right there comes the only difficulty which presents itself to the public mind. Where existing rates might enable one railway to meet its charges of maintenance, betterment, and operation and yield a fair return to its shareholders, they are insufficient in the cases of other systems. Where the increased rate would be justice and no more to one system, it might be a handsome gratuity to another. An efficiently managed and operated system might be able to show a fair profit under existing conditions, where another railway would show a loss chargeable wholly to faulty management, extravagance, and lack of efficiency.

Must the cost of inefficiency and all other faults expressed in bad management, as well as the dividend cost of watered stock, be taken up by the people and paid in the form of increased freight rates? Is there any avenue of escape through which a deserved increase of revenue might be given and an unmerited increase be withheld? This is a problem which even the Interstate Commerce Commission would find difficult of solution.

As a practical proposition, however, the proposed 5 per cent increase will not be the terrible burden it might be imagined. In a little brochure prepared by the railroads and entitled "Railroad Freight Primer," some striking figures are given to show the insignificant relation the proposed rate advance bears to the cost of many commodities:

"A pair of shoes now pays 2 cents and 4 mills from Boston to Chicago, and the 5 per cent increase would not bring this to 3 cents. How should that affect the average selling price of $4 per pair? The increase on a pound of sugar for 1,000 miles is $0.00015; on a barrel of flour for 1,380 miles, $0.0275; on a bushel of potatoes for 1,088 miles, 1 cent; on a dozen eggs for 1,000 miles, $0.00057. A piano carried 1,000 miles for $6; the householder may pay $5 to move one a few

blocks. A hammer is carried 1,000 miles for 1.4 cents, or 54 of them the same distance for 65 cents, the retail price of one. A suit of underwear goes 1,000 miles for a cent, or a hundred suits for a dollar, the retail cost of one. And so on; it is needless to multiply examples."

It must be remembered also that freight rates in the whole country have dropped steadily for years. In 1880 the average per ton-mile was 1¾ cents, as against three-fourths cent to-day. The recent statement will not be forgotten that "a 2-cent postage stamp pays for hauling a ton of freight 3 miles." The railways have been compelled to an increase of pay in nearly every department of labor and service, while they have stood from the public a stationary wage where they have not been called upon for a "cut." As a matter of sheer argument the railways have the better of it. But for the matter of discrimination, the inability to separate the sheep from the goats, the necessity of helping the undeserving with the deserving, there would be no room for hesitation.

—

[From the Baltimore Evening Star.]

WHY RAILROADS NEED THE RATE INCREASE.

While it appears that the press of the country and the most progressive shippers overwhelmingly favor the plea of the railroads, now pending before the Interstate Commerce Commission, for permission to increase their freight rates 5 per cent, in the majority of public references to the question the main point seems to have been missed.

It is urged that the request be granted on various grounds, most frequently that it will enable the roads to expand their territories and increase their usefulness. While this is in a measure true, the one compelling reason why the increase should be allowed is that nearly every road in the East faces an actual and growing loss due to the immensely increased costs of operation, brought about principally by the substantial additions to the pay rolls resulting from the widespread increases in pay obtained by the employees on the lines generally during the last two years. At the same time other costs—those for rails, equipment, upkeep, and the like—have likewise increased, although not proportionately.

If the roads are compelled to support an annual deficiency on the income side, trade can not fail to suffer. Adequate income is necessary to efficient operation of the railroads, without which the business of the country can not be effectively done. The need of relief is an immediate one, not one relating to future betterments. That this is realized among the well informed is shown by the fact that the Consolidation Coal Co., the largest coal shipper in the country, has indorsed the plea, and that coal dealers are widely favorable to it, although they will have to shoulder the burden under their existing contracts.

—

[From the Rochester (N. Y.) Union Advertiser, Dec. 26, 1913.]

As a presumably unprejudiced view of the application of the railways to the Interstate Commerce Commission for permission to increase their freight rates 5 per cent the opinion of a Canadian paper is of value. Here is what the Toronto Mail and Empire says: "The passing of the New Haven Railroad dividend recently following the tremendous decline in the strength of its financial position has attracted increased notice to the question of increased rates for the United States railways. At first the pressure upon the Interstate Commission for a 5 per cent increase had no effect, but events have been consistently and undeniably demonstrating that the railways must increase their earnings or gradually get into serious financial difficulties. The impairment of the New Haven standing is due principally to the Mellen attempt to get control of all New England transportation—to 'high finance,' in fact—but there is a connection between its present plight and the common railway necessity of larger traffic earnings. It may be that the Interstate Commission and the authorities at Washington will insist, as a condition of a rate increase, that the commission undertake the supervision of all security issues in order to direct the application of funds thus received. But higher costs of operating, maturing indebtedness, and the heavy decline of railway securities in public favor, making new financing much more onerous than the old was, point directly toward higher rates. Between 1901 and 1911 the gross earnings of American railroads increased 75 per cent, operating expenses 85 per cent, net earnings 56 per cent, operating expenses other than wages of labor 68 per cent, and wages of labor 98 per cent. Thus out of every dollar added to gross earnings 26 cents went to net earnings for return on capital, additions, and betterment, 25 cents for material, fuel, equipment, official salaries, and 48 cents to wages of labor. The latter is the most conspicuously oppressive of all the railway burdens. In 10 years the wages of enginemen increased 27 per cent, those of conductors 31 per cent, machinists 35 per cent, firemen 36 per cent, and trainmen 44 per cent, and while net increases have been justified from the men's standpoint they are none the less draining upon the railway exchequers when the increases can not be passed along in the form of higher rates." The question is simply one of whether the railroads need the increases or not. They do need new equipment and other things, and the commission must decide whether they can afford to purchase these things out of present earnings. The railroads must be regulated, but they must not be regulated out of existence. We can not afford to do that.

—

[From the Chicago Inter Ocean, Jan. 4, 1914.]

HIGHER FREIGHT RATES.

The directors of the Illinois Manufacturers' Association have unanimously approved the report of their special committee urging the Interstate Commerce Commission to grant the request of the railways for permission to advance freight rates in "official classification" territory, which includes, roughly speaking, all points east and south of Chicago.

The action of the Illinois manufacturers may cause surprise in some quarters, in view of their well-known activity the other way in 1908 and 1910, when they organized the shippers of the country against the advances then asked, with the result that in 1908 the railways withdrew their request and in 1910 it was denied.

The explanation is that the situation has changed and these representative leaders of Illinois industry are clear-eyed and broad-minded enough to perceive the fact and act accordingly. The essential and governing factors of the situation are succinctly stated in the following extract from the resolutions passed by the directors of the association last Friday:

"The increase in wages, in taxes, in expenditure to insure greater safety, and caused by legislation of the 'full crew' type have so increased the operating expenses of the railroads that net revenues are insufficient to provide for that rehabilitation and extension of facilities which prompt and efficient service to the shipper demands."

Under the pressure of a public sentiment which had been so aroused against the past offenses of railway management that it was often blind to the beneficial services of the railway and to the vital necessity of their efficient continuance, the railways have been so hammered and squeezed for some years past that they are approaching a condition of exhaustion and practical paralysis.

The punishment has gone so far that its possible benefits to shippers and the general public are visibly less than its growing injuries. The representative manufacturers of Illinois see what the situation has become and find upon it this verdict of enlightened self-interest and hard common sense:

Shippers can better afford to pay a uniform advance of 5 per cent than to suffer in the future any impairment of railroad service.

All the railways have to sell is their services. The cost of rendering the services has notably increased. Unless the railways are permitted to distribute a fair proportion of that increase upon the buyers of their services, the quality of the services must decline. There is no escape from the conclusion.

The Illinois Manufacturers' Association looks the facts in the face without quibbling or shirking and draws the necessary conclusion. The Interstate Commerce Commission will do well to heed the advice of this representative organization of producers and shippers.

The commission would also do well to heed the recent request of the traffic committee of the Chicago Association of Commerce for speedy action of some kind. A number of railways are virtually gasping for breath financially and relief should be speedy. Prompt action is also demanded to end the feeling of uncertainty from which all lines of business are suffering.

—

[From the Wall Street Journal, January 30, 1914.]

WHO'S AFRAID.

There appear to be two national cowards in the United States—one the railroads before the Interstate Commerce Commission, and the other the Interstate Commerce Commission before the public.

The railroads have a right to a living wage, both for their labor and their capital, and when men and supplies have been advanced 30 per cent the right of the railroads to increased rates should be undisputed. The only question is as to the amount and the distribution of the increase.

The fairest way would appear to be the granting of general or specific increases as asked for, and then the revision of any injustices or uneconomic workings as these develop.

The railroads ask for a modest general advance of 5 per cent, as compared with an increase in wages already granted of several times 5 per cent.

If the railroad managers owned the property which they operate, they would speak more loudly and more emphatically. Their appearance, however, is: "It is immaterial to us; we simply state the facts. Please kick us or our stockholders as you will. In time you will find out your error."

When the railroad Humpty Dumpty has been pulled off the financial wall that makes for safe and sound transportation, it will be found that "all the King's horses and all the King's men can not set Humpty Dumpty up again."

Railroad credit is a matter of growth over a long series of years, and the Government can frost it in a night and kill it in two or three.

Where fifteen millions are needed to repair railroad credit, the Interstate Commerce Commission comes back with questions that will require millions of expenditure and months of delay to answer and years to debate and argue with its Mr. Brandeis thereafter.

Mr. Brandeis held up one proposed rate increase with the declaration that the railroads, by scientific management, could save a million dollars a day or three hundred and fifteen millions a year.

Three years afterwards the Interstate Commerce Commission says nothing about scientific management, but has reduced the Brandeis claim from three hundred and fifteen millions to fifteen millions, and asks the railroads to recover fifteen millions for services of short lines into "various big industries."

Then the Interstate Commerce Commission says most grandiloquently the railroads must make "every service rendered by them contribute reasonably to their earnings. This having been done, the commission upon an adequate showing of the need of additional revenues will not shrink from the responsibility of sanctioning such measures, including even a general advance in rates, as may be required to bring about reasonable prosperity to the railroads."

One does not note any such shuddering of public service commissions when it comes to increasing wages. There is no talk then that the commission "will not shrink from the responsibility."

Of what is the commission afraid?

What it ought to be afraid of is the decadence of railroad credit and the rising rates of wages upon railroad money, competing with the merchant borrower and taxing him more in money rates than he will be taxed on his goods by the proposed 5 per cent increase.

Does anybody note any fear on the part of the commission that railroads may be hurt by the commission's delay or inactivity?

Is the cowardice that is manifested here by this admission of the "shrink from responsibility" moral, ethical, or political?

—

[Clipping from New York Sun March 1, 1914, sent to Commissioner Harlan.]

RAILWAY NET INCOME DROPS—FIRST SIX MONTHS OF FISCAL YEAR SHOW DECREASE OF $58,000,000:

CHICAGO, *February 28.*

The railways of the United States during the first six months of the current fiscal year, from July 1 to December 31, 1913, in order to carry a $10,000,000 greater business than in the corresponding period of the year before, were compelled to increase expenditures by $68,000,000. There was a resulting loss in net operating revenues of the railways for the half year of $58,000,000.

The figures, covering the total mileage of the country, have been compiled by the bureau of railways news and statistics. How unfavorable an outlook this offers for the entire fiscal year may be inferred from the fact that the net showing for the first six months, $510,000,000 against $568,000,000 for the year before, confronted the railways despite the fact that only two of the months showed large losses in business compared with the previous year.

October showed the total mileage of railways practically at a standstill as to gross business, though losing $12,000,000 in net. With November came a more decided slump in gross business. December brought for the entire railway mileage, slightly over 250,000 miles, a drop in gross business of $12,000,000.

[From a Boston paper.]

SHOW SPECIAL CAUSE FOR FREIGHT INCREASE—MIDDLE WESTERN ROADS HAVE PARTICULAR REASON—FIGURES COVERING 78.6 PER CENT OF MILEAGE SUBMITTED—LOSSES IN OPERATING INCOME SHOWN—COMPARISON BETWEEN 1913 AND 1908—INCREASE IN COST DUE TO TRANSPORTATION AND MAINTENANCE OF EQUIPMENT.

As part of the presentation by the railroads of the need for an increase in freight rates, the railroads of the Middle West, operating in what is known as Central Freight Association territory, have filed with the Interstate Commerce Commission elaborate statistical data covering the condition of those companies.

Figures covering 78.6 per cent of the entire mileage in the territory show that these companies enjoyed in 1913 an increase in operating revenues of $76,000,000 over 1910; nevertheless, after paying operating expenses and taxes, they suffered a loss of $12,000,000 in operating income.

This result was due to an increase in the ratio of operating expenses and taxes on gross, as between 1910 and 1913, from 72 per cent to 78.2 per cent. This showing was made despite the fact that large sums of new capital were invested in the property.

Besides the loss in net revenues for the year ended June 30, 1913, as compared with 1910, the figures for these same roads for the three months of July, August, and September, 1913, show a decrease in net operating earnings of $6,937,353, or approximately 20 per cent.

In addition to the tables covering figures for all the roads in this territory, special attention has been directed to the condition of a special group of roads which, as stated by F. A. Delano in his opening statement the previous day, were more particularly representative of the "whole situation" in Central Freight Association territory.

This group embraces 28 roads, with 23,167 miles of road, or 51.5 per cent of the entire mileage in the territory, and including such important lines as the Big Four system, Vandalia, Chicago & Eastern Illinois, Grand Trunk, Western, Grand Rapids, Illinois Central, Chicago & Alton, Nickel Plate, and Wabash railroads.

In 1913 roads in this group earned $63,000,000 more than in 1908, which is known as the panic year, and operating expenses and taxes were $62,000,000 more. Net operating revenues, after paying expenses and taxes, were only $811,000 more than in 1908.

The net corporate income of these properties was actually $8,000,000 less than in 1908, although during this five-year period $180,000,000 new capital was put into these properties.

In 1913 the roads in this group earned $36,000,000 more than in 1910; operating expenses and taxes were $45,000,000 more than in 1910; and the net, after operating expenses and taxes, decreased $9,500,000. The net corporate income decreased almost $17,000,000.

If in 1913 the railroads in this group had been able to operate at the same ratio as in 1910, their net operating revenues, after paying taxes, would have been almost $18,000,000 greater than it was in 1913.

The increase in cost is largely in two items—transportation and maintenance of equipment.

Mr. F. A. Delano, one of the receivers of the Wabash Railroad, in presenting the situation of the Middle Western railroads to the Interstate Commerce Commission, says:

"It will be obvious that a 5 per cent increase in rates will not be adequate to meet the demands of the territory. The rates in that territory, both freight and passenger, are the lowest rates prevailing in the United States, and the interests of the people of that rapidly growing and developing section of the country, to say nothing of the railroad companies, require in the near future a readjustment of the rates, both freight and passenger, to a basis which will enable that territory to have good railroads and the people to have efficient and adequate service, and to progress measurably with the other sections of the country."

—

Dr. Head wrote to the Interstate Commerce Commission as follows:

"The question of allowing the railroads of the country to increase their freight rates 5 per cent has been discussed pro and con by the railroads, the manufacturers, the jobbers or wholesalers, by the politicians of all grades and degrees, but not publicly by the ones who pay the freight, the consumers. I take the liberty of addressing your honorable body as one of the latter, and give you my reasons for wanting the request of the railroads granted. There are retarding influences affecting the roads that are very active to-day, which, if allowed to continue, will seriously affect the continued prosperity of this country, and I believe a 5 per cent increase of freight rates would immediately destroy or dispel those conditions that now threaten us.

"The tariff and the currency bills have been passed by Congress, with their attendant hopes of prosperity, but I believe that we can insure the prosperity of this country, as in no other way at the present time, by the above-mentioned increase, and am ready and willing to pay my part of the premium if you will only permit me. I have calculated the number of pounds of everything that my wife and myself eat, wear, or otherwise use in a year, and I take the present freight rates on these things from New York, Chicago, New Orleans, Kansas City, and Fort Worth, and find that the total freight paid by me in one year amounts to approximately $11.04, and an increase of 5 per cent would mean only an additional expense of 55 cents a year—an amount so small as not to affect me in the least if I paid it.

"This is a very small premium to pay to insure me an income of several thousand dollars a year and prosperity, for there would be a difference of several thousand dollars a year in my income or earnings if, through not allowing this increase in freight rates, there should be more receiverships in some of our large systems of railways and consequent disturbance of business to the extent of a panic. So why take a chance of letting this condition go on to the breaking point, when it would be too late to avert a calamity?

"There are several hundred thousand men in this country to-day out of employment. Do you suppose that one man out of all that great number would hesitate to pay 50 cents, a dollar, or $5 to insure him a job that would pay him average wages for a year? They would all be only too glad of the opportunity of doing so; and I have the honor to respectfully request that you permit me, as a consumer who pays the freight and as an American citizen who wishes to insure his own prosperity, to pay to the railroads of the country an increase of 5 per cent in freight rates on what I consume and is handled by them; and I believe I voice the views of the large majority of the consumers who pay the freight."

—

"RAILROADS YOUR ONE WEAK SPOT"—SIR GEORGE PAISH—EUROPEAN CONFIDENCE IN OUR RAILROADS HAS BEEN HARD HIT.

Sir George Paish, of London, editor of The Statist, and one of the foremost British financial authorities, declared to a reporter last week that he fully agrees with the maxim credited to the late J. P. Morgan: "The man who is a bear on the future of the United States is going broke."

The distinguished Briton added that the present outlook is excellent. Then he introduced a "But." "But the weak spot," he said, "is the situation with reference to the railroads."

And when he mentions railroads Sir George is surely qualified to speak. He won his knighthood in recognition of his work on the revision of the accounting and statistical systems of the British railroads, and has written largely on the railroads both of Great Britain and the United States.

This is his fourth visit to America, and he is now here for a tour of several weeks to study financial conditions. He has conferred with many of New York's leading financiers, and will have conferences with financiers in Boston, Philadelphia, and Washington. At the National Capital he is to see members of the Interstate Commerce Commission.

"Apart from the railroad situation," continued Sir George to the interviewer, "conditions here seem to be unusually sound. As to the railroads, they did not realize that the rate of interest on capital had risen to a higher level which was likely to be maintained at that higher level, and their desire to raise capital from the investor on the lowest possible terms induced them to put out a relatively large amount of short-term notes, which they expected to refund on favorable terms.

These notes are now maturing in a period when the rate of interest is still higher than it was when they were issued, and it is evident that some of them must be again renewed on terms less favorable than before.

"Indeed, the financial situation of American railroads is such that it is of the greatest importance to themselves and the community that a greater measure of confidence in their stability should be imparted to investors to enable the roads to refund their notes and to provide the capital which they will need to take care of the traffic of the country in the next few years.

"Apart from the general economic conditions making for higher rates of interest and increasing the difficulties of raising cheap capital for the railroads has been the fact that railroad expenses are rising more rapidly than the gross earnings, and that net income to meet increased interest charges has been declining. Such a condition, of course, does not help the sale of bonds or stocks.

"Whether or not the railroads will be able to fund their notes and issue new capital for urgent needs will, in a large measure, depend on the Interstate Commerce Commission. If the commission in the coming rate case, in which the taking of evidence will begin at the end of this month, decides that the railroads are not entitled to higher freight rates, notwithstanding the great increase in operating expenses in consequence of the rise in rate of wages, then the railroads will experience much greater difficulty in securing new capital than will be the case if the commission permits the railroads to raise their rates to such an extent as to provide in part, at any rate, for the higher wage scale.

"Of course, the commission will have before it a very much larger volume of evidence than is at the command of any individual, and its decision will be in accordance with the evidence. I am, however, hopeful that the evidence produced will satisfy the commission that the railroads are entitled to increased freight rates and that in this manner a defect in the situation will be removed through the ability of the railroads to refund their notes and to raise the capital they require."

"What will happen if the commission decides against the roads?" asked the reporter.

"In that instance I foresee very grave difficulties," said Sir George. "The railroads will be in serious stress to get the capital actually needed to carry on the transportation business of the country."

"Would an adverse decision by the commission mean a boycott against American roads by English and other European investors?" asked the reporter.

"I would not like to answer that question in that form," was the reply. "But, I will say that English and European investors are holding back to observe the course of events in the railroad situation here. Confidence of foreign investors in American railroads has been very hard hit by the fact that the commission has not yet given power to raise freight rates, and by developments regarding the Frisco, the New Haven, the Rock Island, the Illinois Central, and other roads.

"The faith of the English investor has been severely shaken by the happenings of the last few months. The same is true of the French investor and of other investors on the Continent. It may be said that it is problematical whether these investors will put any more money in American railroads should it be decided that freight rates must remain where they are. If the commission gives permission to raise rates, that fact will materially aid the railroad companies to refund their notes or renew at a lower rate of interest.

"As I have said, the American condition is otherwise sound. I think that the banking trouble of 1907 caused you to put your business in order and it has caused you to go slow for six years. You will move forward more solidly for that experience.

"There has been and is no inflation. Everyone for some time past appears to have been pursuing a cautious policy, and a setback in world prosperity and world trade would not have a serious effect upon American prosperity.

"The United States has not had the high expansion in recent years which some other parts of the world have received. Argentina, Brazil, Canada, and other lands have had intense expansion. America has not. It has not received the amount of capital other countries have, and therefore would not feel in the same way the lack of investments from abroad.

"Indeed, in that part of the country in which the cost of living has risen faster than the rate of wages, a moderate setback, attended by a lowering of the cost of commodities and a reducing of the cost of living generally, would bring in the long run increased prosperity rather than diminished prosperity. In other words, a moderate reaction in trade would probably, because of internal conditions, have a greater influence on the prosperity of the West and South of the United States than on the East. The East has, in a measure, suffered from the rise of the cost of living, whereas the farming communities of the West and South have derived very great advantage from the high prices of food, cotton, and other natural products.

"It is evident, however, that a reaction in international trade, due in part to the recent heavy war outlays in Europe and to the hoarding of money on the Continent and to the difficulties experienced in raising capital for many important works now under construction, will not be a very serious one or of long duration.

"Already gold is tending to accumulate in continental money markets. Considerable sums have returned this year from South America to

Europe. If the hoarding of money in France comes to an end next year in consequence of the issue of the various government loans awaiting a favorable money market to be placed, the stock of gold in the Bank of France will very largely increase. And it has to be borne in mind that the world will be producing nearly $500,000,000 of gold per annum at a time when the demand for gold will be relatively small. These conditions will bring about an immense accumulation of gold in all the international markets.

"In former times a great stock of gold in the banks has always brought a renewed expansion in international trade, and there is no reason for assuming that the accumulations of gold in the international markets, which is likely to occur next year and the year after, will not produce the same effect as former accumulations.

"In brief, I anticipate that the United States will not suffer seriously from the reaction in international trade, which now seems inevitable, and will, after a short interval, resume the wonderful progress that was so severely checked by the banking troubles of 1907. I have found general optimism over the long-range outlook among financial men with whom I have talked, although here and there is a man who is pessimistic because affairs are not more lively at present. You may be sure that nothing can very seriously affect the prosperity of your country."

The reporter asked Sir George whether he thought that the Mexican situation was likely to have much effect on financial conditions.

"I do not think," was the reply, "whatever may be the developments in Mexico, that financial trouble on this side will result. Indeed, whenever a country engages in a controversy with a neighboring State the feeling of patriotism strengthens confidence rather than diminishes it. Everyone is desirous of making some contribution to the success of his nation, whether it be by loans of money or by personal service.

"As to the merits of the Mexican controversy, I do not care to express any decided opinion. I find here a great many men who think that the United States would have acted wisely in recognizing Gen. Huerta, while others are equally strong in approving the policy of President Wilson. But all of them express their intention of loyally supporting any action that the President may take in the interests of the American people."

The interviewer asked Sir George how he views the labor situation in the United States.

"I don't see any serious trouble in sight," he said. "Your very prosperity has produced much of the labor unrest of which we hear. When times are good, when work is plentiful, when there are few idle men, when wages are high, labor is more exacting than when times are bad, when labor is plentiful, and when work is scarce. If there is a moderate reaction in trade the labor troubles will disappear.

"Some labor difficulties are incidental to all progress. You have progressed so much that you are bound to have labor troubles as a consequence. But I do not perceive anything ahead in this regard which need cause grave concern."

—

[Probably from the New York American.]

WHY DOES THE RATE DECISION HANG FIRE?

The period of grace given the New Haven road in which to carry out the process of separation from its subsidiaries is a healthful sign of the President's unwillingness to hit business while it is down. None the less does the continued delay of the Interstate Commerce Commission to grant the hoped-for increase in rates keep business squarely on its back.

The railroads, the shippers, and, so far as it be represented by the press, the public, have all asked that the increase be given. It is needed for the railroad's temporary as well as more lasting relief. The commission has doubtless been well advised in seeking to search out economies that might reduce the heavy operating charges; and whatever of success it has attained in its search should be made good use of. But even were the present methods of railroad administration found to be so extravagant that the total wastage comes to more than would the hoped-for gain in revenues, it by no means follows that they could be put in force at once and have at once the same psychological effect upon investors as would the assurance of those revenues by a rate increase. The methods of administration are fairly well ingrained and can not easily be changed.

The commission seems to be trying for a solution that might gradually be applied, that in 10 years or so would perhaps result in much higher net incomes. But the installation of economies, of charges for spur-track service, and the like, would not operate to enhance any railroad's immediate borrowing facilities. If all the agitation of the last two decades has had no other effect, it has at least taught us how slowly reforms move and how intangible are the first results of them.

To the roads the proposition is less one of daily receipts and expenditures than of opportunity to finance their coming needs and refinance their maturing obligations. A company with little cash can not meet with the promise of economy its short-term notes that fall due next June. The holders of those notes are only too likely to think when the money is not forthcoming that the economies should be inaugurated by receivers.

The roads are trying to deal with a practical situation. Their only means of retrenchment now is in saving on equipment and service. The curtailment of trade dependent on the roads' purchasing activities is enormous. Still more serious in its effect on general business is the natural hesitancy of capital to aid in any enterprise—which means practically all industrial and almost all commercial enterprises—that a serious setback for railroad securities would injure.

The roads, the shippers, the public, all wait on the Interstate Commerce Commission to cut the Gordian knot. The commission should feel that they do not wish to wait for its untying. They want it cut; and to grant the increase seems the only way to cut it.

—

[From the Philadelphia Record, March 29, 1914.]

HOLDING PROSPERITY IN CHECK.

It is a self-evident proposition, even to those who at first were disposed to hold tariff changes responsible for business hesitancy, that the prosperity of this country is being held in check by the financial difficulties which confront its railroads. The expense of operating the railroads has been greatly increased by regulative legislation, which at the same time prevents them from increasing their revenues to meet the added charges. Decreased earnings are forcing upon the roads a policy of radical retrenchment, the effect of which is inevitably reflected in the condition of other industries, notably those from which they buy their equipment and supplies. Thus an industrial ailment, which might be checked by the prompt application of clearly indicated treatment at its source is rapidly spreading and daily becoming more difficult to cure.

The Interstate Commerce Commission, which for several months has been pondering upon the application of the railroads for permission to meet the situation by an increase of their rates, must surely be aware of the grave consequences of its unwarrantable delay in reaching a decision. Besides the voluminous testimony it has taken, it has at its disposal a mass of significant statistical evidence in the shape of the monthly reports of railroad earnings. These reports, almost without exception, point in the same direction. They show a continuous and progressive falling off in gross earnings, and an even greater decline in net, due to the steady rise in operating expenses. What more proof does the commission need to convince it, as the country is already convinced, that the revenues of the railroads, prescribed by the Government, are inadequate to meet their growing obligations and sustain their credit? Are not these reports prepared from books in accordance with the dictates of the commission, so that there can be no room for statistical juggling?

Nero fiddled while Rome burned. But the fire was kindled at his instigation. The Interstate Commerce Commission, a nonpartisan body, can have no desire to witness an industrial conflagration. Why, then, having been called upon to render first aid to the injured, should it spend all these months in solemn deliberation upon treatment which its members must have privately determined upon long ago? Why let the patient bleed to death while gathering and digesting medical opinion from a host of experts who, if disinterested, can but agree upon the conclusion that the bleeding should be promptly stopped?

The latest word from Washington is that the Interstate Commerce Commission will hold further hearings on the subject in the latter part of April, and will subsequently invite a witness, who has already appeared, to come before it and repeat his testimony. Our senior Pennsylvania Senator, whose political fortunes are bound up with industrial depression, could wish nothing better.

Are the interstate commerce commissioners deaf, dumb, and blind? Are they oblivious to the consequences of their interminable delay in deciding a vital question? If their future usefulness to the country is not to be irretrievably impaired, the Record would advise them to buckle down to the real business before them, and render a decision on the railroads' application for a 5 per cent rate increase while there is still time to avert the approaching crisis.

—

[Mailed to Interstate Commerce Commission; paper from which taken unknown.]

A SUICIDAL POLICY.

The Brunswick Banner quotes from The Macon Telegraph the statement: "The railroads of the United States, with their 250,000 miles of track, are perhaps second only to agriculture as makers of general prosperity," and adds:

"This alone ought to incline the political powers toward sympathy for these great and now embarrassed public carriers, even if a continuation of general prosperity were not involved in the struggle of the railroads to keep out of bankruptcy."

It is justice and not sympathy that the railroads need, and that they are not getting. Even if they were prosperous they should be honestly treated, and they are not.

It is strange how people will take a prejudice against inanimate things. Railroads are inanimate things, but behind them are the men and women who own them. In some cases these same people own other things against which there is no prejudice. One man who owns stock in a railroad may own a grocery store, and another a manufacturing plant. These may charge as much as they please for their products, but every politician who seeks to convince the people that he is dead in love with them thinks it necessary to prove his love against the individuals who own the railroads, who direct their policies and make them what they are, for they are not attacked except as to their railroad investments. The prejudice seems to exist against the steel rails and wooden crossties.

But the sufferers from this prejudice are the men and women. This is not generally true of the big capitalists who own stock in them, for these are generally more heavily interested in industries whose products the railroads are required to carry at reduced rates. While they lose on their railroad earnings they gain on their industrial earnings. It is the smaller class of investors who have little except railroad property who are the first sufferers.

Then men who sell supplies to the railroads suffer. The railroads can't buy. The chief cause of financial depression in Florida to-day is the inability of the railroads to buy lumber and crossties for which Florida was one of their principal sources of supply. Sawmills are closed down, tie camps are deserted, thousands who worked at the business are unemployed, and general trade suffers because they are unable to buy. Not a State in the Union is suffering as much as Florida from the persecution of the railroads. In fact, we doubt whether the railroads themselves are suffering more. Florida's chief industry is the sawing of lumber and the cutting of crossties, nearly all bought by the railroads. While we haven't the figures, we think we are making a fair estimate when we say that in prosperous years the railroads of the country buy $15,000,000 worth of lumber and crossties from this State, and they are not buying more than one-tenth of that amount now. A stream of $13,500,000 a year which has been flowing into Florida and which ought to be flowing into the State now has, for the time, been dried up by the men who bid for popular support by denouncing the railroads.

And all the time during the last 20 years that railroad rates have been steadily forced down, the consumer has seen prices rising, and despite the decrease in charges for transportation the difference between what the consumer pays and the producer receives has been constantly widening.

EXHIBIT B4.

PROSPERITY, THE RESULT OF A RATE INCREASE, IS OFTEN PAINTED IN GLOWING TERMS.

[From the Chicago Inter Ocean, January 27, 1914.]

WHY PROSPERITY HALTS.

Why is it that prosperity, bringing peace, contentment, and happiness in its train, seems to hesitate on palsied feet when every material prospect of farm, factory, and mart is big with promise and assurance of plenty?

In every gathering where men discuss the paradoxical situation there is but one answer: "Everything is set for better times except the railroads." Like Charles Lamb's poor relations, they are the death's head at our banquet, the Mordecai in our gate, the Lazarus at our door, the lion in our path, the fly in our ointment, the hail in harvest, the ounce of sour in the pound of sweet.

To the average citizen this is vaguely known to be so. But why it is so baffles his comprehension. Every week or so he reads that the receipts of such and such a railroad have exceeded all records. He also reads that last year these gross revenues exceeded three billion, and he wonders why, with such incomprehensible earnings, all should not be well with the railroads.

From the railroad point of view the explanation is simple. The cost of railroad service has increased more rapidly than the receipts. Stated in a nutshell, the average cost of railway labor and railway capital has increased 25 per cent during the past decade, while the average freight rates have remained stationary where they have not actually declined. After paying increased wages, increased taxes, and increased interest there is not enough railway revenue left to buy adequate materials and supplies at increased prices.

Under similar conditions every other industry in the United States is free to meet increased cost of production with an advance in the price of the product. Why not the railroads?

The answer is simple—the Interstate Commerce Commission won't let them. The same situation confronted the railroads in 1910 when Mr. Louis Brandeis created a sensation by asserting that through the adoption of nebulous efficiency theories the railways could save a million dollars a day. The statement took like wildfire, although the commission in denying the advance dismissed the theory.

To-day Mr. Brandeis is special counsel for the commission. He has brought the whole inquiry to a standstill by the formulation of 78 questions in a bound volume of 9 by 12 inches, an inch thick, that will take the railroad companies months to answer at enormous expense. The answers will be so voluminous as to require freight cars to transmit them to Washington, where they can not be intelligently summarized and analyzed inside of six months.

When this is all done the result will not have any bearing on the present case. It may demonstrate that here and there the railroads might have been managed more intelligently, safely, and economically; that here and there they may have been mismanaged; that here and there a dollar might have been saved; that here and there the last word in human efficiency may have been disregarded. But no answers to this inquiry can controvert the verdict of the railroad world expressed by a high official of East Indian railways that American railway managers "have managed to do what no other country in the world has done—carry their goods traffic profitably at extraordinarily low rates, notwithstanding the fact that they pay more for their labor than any other country."

Written 10 years ago, this was coupled with the irrefutable statement that "the present prosperity of the United States of America (1903) is, to no small extent, due to the low rates charged for transportation."

The low rates of 2.006 cents per passenger mile and 7.63 mills per ton-mile in 1903 have declined to 1.995 cents and 7.43 mills, respectively, in 1912. In the meantime the average compensation to over 1,750,000 railway employees has risen from $1.97 per day to $2.44, and the rate of interest has advanced from an average of 4 per cent to the neighborhood of 5 per cent.

Therefore, it is a condition that confronts the railways which no 78 varieties of Brandeis theories can possibly cure or alleviate.

And so prosperity, like the pig in the tales of Mother Goose, balks at the stile while waiting for the Interstate Commerce Commission to plug up the holes Mr. Brandeis and other amateur economists have recklessly shot in the bucket with which the railways have been wont to nourish the haymakers of this broad land. When the commission has plugged these holes with adequate rates, whether 5 per cent, 10 per cent, or 20 per cent increase, we shall see the spectacle that rejoiced the heart of the old woman of our childhood days. The haymakers will slake their thirst, the cow will eat the hay, the cat will get her milk and begin to kill the rat, and so set in motion the whole interdependent series of events culminating with—

"The stick began to beat the dog;
The dog began to bite the pig;
The little pig in fright jumped over the stile,
And so the old woman got home to supper."

All depends on the plugging of the holes in the railway bucket by the commission. If it waits until the railways answer Mr. Brandeis's 78 varieties of questions and until it has time to analyze the tons of returns, there will be many a fireless grate and supperless table in this land, where plenty waits on adequate and profitable transportation revenues and facilities.

—

[From the Washington Post, January 15, 1914.]

THE I. C. C.'S OPPORTUNITY.

A number of important contracts for steel rails have been closed for delivery this year, and a considerable number of others are pending, but as the latter are contingent on the granting of a 5 per cent increase in carrying rates by the Interstate Commerce Commission, a period of uncertainty must prevail as to additional steel orders in the immediate future.

This hitch in the resumption of steel making is ascribed to the action of the commission in calling for a mass of new data that will take a year or more to collect and probably five years to sift out and determine as to its weight as a factor in calculating rates. Since the steel trade and railway traffic were the first of the greater enterprises to feel the ill effects of antibusiness agitation and enactment, it follows that other lines of business, many of which revolve around traffic and steel, can hardly succeed in speeding up until the leadership has been got under headway.

This state of affairs is true also of the security markets, which antedated everything else in showing the effect of the change in governmental policy. As most of the shares available for investment and speculation are railways and industrials, it is seen that the inauguration of an upward movement on the exchanges is interlocked, through traffic and steel, with the rate question. Hence it is clear that the settlement of the rate question is the key to success in giving he needed impulse to business—a powerful application of energy at the vital point that would set all the forces at work at the same time.

In the matter of fixing rates the commission is the court of last resort, and that being true, there is no reason why it should not approach the question in the spirit of the Supreme Court under like circumstances. Politics nor programs, either partisan or personal, should be permitted to sway the commission's judgment as to the merits of the case before it or the timeliness of its decision. The railroads, the shippers, and the public in general are agreeable to the rendering of the judgment of the commission without unnecessary delay.

[St. Louis Post-Dispatch, December, 1913.]

THE ROAD TO PROSPERITY.

Replying to the insistent plea of President Howard Elliott, of the New Haven system, for increased freight rates, Chairman Prouty not only indorsed the Post-Dispatch's demand for Federal regulation of railroad finances, but emphasized our statement that it would solve the problem of railroad rates. On the point of rate increase Chairman Prouty said:

"The railroads ask for increases in rates. Gentlemen, when it is no longer possible for railroads to spend money save for railroad purposes, when the railroads can not buy securities of other railroads, and when railroads can not issue any securities save with Federal supervision, then, and not until then, can you safely permit any increase in rates."

This ultimatum from the head of the Interstate Commerce Commission that the fundamental condition to an increase of rates is a guarantee through Federal regulation of railroad securities that the money will be applied to railroad purposes should awaken the Wilson administration to the importance of immediate legislation.

There is a general belief that railroad rates should be increased. There is a general desire that the railroads be put on a prosperous basis that will enable them to take care of traffic and provide for needed improvements and developments. But there is a general fear that increased rates would not mean increased efficiency, but increased source of graft for bankers, promoters, brokers, unscrupulous railroad officers, and high financiers.

The revelations of plundering methods which have brought some railroads to bankruptcy and others to the verge of it are obstacles to increases of rates, as they are barriers to further railroad investment.

President Wilson should realize the importance of clearing up the railroad situation. With the tariff and currency questions out of the way the question of railroad rates and investments overtops all others at this time.

Railroad conditions are vital factors in general business conditions. Railroad uncertainty and stagnation mean inefficient transportation and checked development. They mean industrial and commercial depression. Adequate rates and renewed confidence in railroad securities would cause a radical change in the business outlook. All wheels would begin to turn.

Railroad managers and business men should now turn their efforts to get action in Congress.

It would not be difficult to amend the interstate commerce act so that the regulation of railroad securities would be provided. Several States have admirable models of regulation acts. Long hearings and debates are unnecessary.

A pertinent message from President Wilson asking for prompt legislation would assure quick congressional action. There would be little opposition. The valuable results to be gained justify haste.

—

[From the St. Louis Times, Nov. 26, 1913.]

THE TURNING TIDE.

We are glad to note that an official commission has decided that the Boston & Maine Railroad must increase its freight and passenger rates or go broke. This commission consists of a member of the Interstate Commerce Commission, Mr. Prouty, and the railroad commissioners of Massachusetts, Vermont, New Hampshire, and Maine, a formidable body of careful experts.

The St. Louis Times is glad to note that a light is breaking. This newspaper, owning no railroad shares and having no connection with railroad shares, has consistently fought for a square deal for the roads. Until the St. Louis Times took up the cudgels on behalf of this form of fairness, it was the newspaper habit to "jump the railroads" when there was nothing else to "jump" and little else to print.

Railroad managers have been and are merely human. Some of them have lapsed. This will always be the case. There will be crooks in churches at times, but this is no reason that all churchmen should be assailed. The railroads have made possible this great country's development. Without the railroads this country would hardly be where it is. Without the railroads, the United States would be about where it was in the early part of the last century, with only the normal growth of a post-road country. The railroad builders who blazed the way through the forest, who bridged rivers, leveled mountains, and made habitable the desert, were the real fathers of the United States as we know it.

Railroad building has come close to a standstill in this country. Railroad improvement has about stopped. Maintenance is questionable. These conditions mean hard times, stagnation, and, in the last instance, danger to human life.

We are glad to note that the Boston & Maine Railroad will be allowed to receive rates that will enable it to keep what it has and maintain a policy of development in the public interest. We trust that this step will be but the first of many in a general reversal of the national policy toward our media of transportation. We have in St. Louis two receiverships—the Wabash and Frisco. There will be others here and elsewhere throughout the country if the roads are not given a chance to draw their corporate breath.

The railroads are not owned by a coterie of "big business men," as the ready writers and loose jaws would have us believe, but by the people. There is not a man who carries a dollar's worth of life insurance or who has a dollar in a bank on interest who is not concerned, because, back of his savings bank and back of his life insurance lie the bonds and stocks of railroads.

The good work begun in New England should not stop. There is room for it in every part of the land.

—

[From the Philadelphia Telegraph, January 13, 1914.]

THE RAILROAD RATE CASE.

The Interstate Commerce Commission has been deferring for many months its decision on the application of eastern railroads for an increase of 5 per cent in their freight rates; and now when a decision is looked for a new set of questions has been sent out to answer which will require months more time, if indeed some of them can be answered at all.

Doubtless a matter of so much importance as this requires time for proper consideration. But the commission has had time. The conditions should not call for much in the way of new information for a commission whose continual business it is to know all the ins and outs of the railroad situation at all times. If it had the records and the knowledge that should be kept on hand it would know without a very

great deal of argument, in addition, whether the claim for a slight increase in rates is a reasonable one or not.

The question ought to be decided without further delay. To continue holding it up is an injustice to the railroads. Their operations must be more or less hesitating while the uncertainty exists, and in some respects an adverse decision would probably be less disadvantageous than to have the matter hanging on in uncertainty. It is the uncertainty that kills. Delay also will endanger the credit and position of the commission.

The enactment of the tariff and banking bills, creating, as they do, radical changes in our economic and financial policies, has caused a hesitation in business operations of various kinds. The time has not come to know whether they are to be any benefit to the country or not. In the present condition nothing could be more immediately helpful than a decision granting the modern increase in freight rates requested by the eastern railroads. It would at once overcome some of the drawbacks of the tariff legislation, for it would arouse the railroads from hesitation to activity and the effect would be felt in many channels of business.

That is the natural law. Why should it not be applied in this instance without delay? New obligations and new expenses are constantly being imposed on the railroads, and they must meet them. So far as observation goes there is no popular opposition to the request for an increase of rates which the commission is treating in so leisurely a manner as to cause suspicion that its most recent step was an excuse for delay rather than a thirst for additional information.

For its own credit and to relieve the railroads of the uncertainty hanging over them, the commission should determine this question one way or another with promptness. Remove the suspense, and make the conditions known to which there must be an adjustment.

[From the Buffalo (N. Y.) Times, Jan. 27, 1914.]

RAILWAY FREIGHT RATES.

It is announced that the hearings begun in Washington by the Interstate Commerce Commission on the proposed 5 per cent increase in railroad freight rates will last a month or more. This will give ample time to lay the whole subject fairly before the commission. The freight rate topic is in an especially well-arranged shape for presentation. In the past few months an extensive body of data has been collected on the theme, which has also been widely canvassed by the press, and has become familiar to the public.

Thus this important matter goes to adjudication without any of the disadvantages which attach to a novel or unexplored topic. The request of the 52 eastern railroads concerned for a 5 per cent increase in freight charges has commanded an unusual degree of favorable attention, not only by the people and the business public at large, but among the shippers whose interests are affected.

It appears to be the prevalent feeling that the proposal is worthy of receptive consideration on the part of the commission, as a request, reasonable in itself, and which in the event of its being granted would give a strong impetus to general business prosperity. It would have an invigorating effect on the railway supplies industry, which by enabling the railroads to purchase new rails and rolling stock, and to extend their safety appliances, would insure continuous employment to more than a million workers, whose prosperity would be shared by tradesmen and many branches of business.

A result of such extensive benefits, direct and indirect, to so large a portion of the population can not be superficially passed over. The conditions bespeak a careful and impartial survey by the Interstate Commerce Commission, with a final decision which shall inure to the good of the community as a whole.

[From the Altoona (Pa.) Times, Friday, Nov. 14, 1913.]

SHALL FREIGHT RATES BE ADVANCED?—AN OPEN LETTER TO THE INTERSTATE COMMERCE COMMISSION.

(By W. E. Russell.)

It is perhaps a fact that every man and woman in the United States is infected with some one or more "false-economy" fads. To save 5 cents and lose a dollar in some one line of action at least, is an individual inconsistency, easily discovered by a few minutes' self-introspection.

Is there such a thing as a national "false-ecohomy" fad, made up, if you please, by an incongruous intermixture of all our silly individual "penny-wise and pound-foolish" mistakes?

Are we, as a people, losing right now hundreds of millions of dollars by "putting in our thumb and pulling out a plum" and saying what a wise boy are we, when we save a million and lose a hundred times more?

The balance of this paper, it is hoped, will prove the above two questions to be logically answerable only in the affirmative.

Wishing, however, that the matter herein be judged upon its own merits and not discounted by any prejudices concerning the motives of merits and not discounted by any prejudices concerning the motives of have been in past life, an employee or official of any railroad corporation, nor a holder of even $1 in either stocks or bonds of any railroad; again, that if the railroad freight rates are increased that I would be required to pay, from time to time, my portion on many tons of materials entering into building construction.

RAILROADS ASK INCREASE.

The various railroads of the United States, by concerted movement, are asking of your honorable body the privilege of advancing their respective freight rates 5 per cent in uniform manner. Representing as you do the entire population of this country, and having at heart their individual prosperity, the question at issue casts upon your shoulders a burden of responsibility so gigantic in its potentiality for weal or woe of this great Nation that I am justified in claming it as actually foremost among the present national issues. Tariff modifications can find adjustment if prosperity continues; the currency vessel will have smoother sailing on the placid lake of national prosperity than upon the stormy ocean of adversity.

One cent a day saved to each inhabitant of our country would be of trivial benefit to the individual, and yet the aggregate of that penny, contributed to the public welfare by our hundred million of people, would pay in one year for the Panama Canal, the greatest engineering feat and most costly national work in the world's history. That same aggregate penny would in 10 years furnish a sum of nearly $4,000,000,000, a sum ample to give magnificent public roads in every portion of the United States; would pay for all the feasible inland waterway projects and enable the Government to conserve all valuable forests. That same mighty penny in another 10 years would pay off our national debt and stop the enormous annual interest charges on that debt.

The superb advantage of such a daily penny contribution for mutual benefit, even to the hired girl, the ditch digger, and up the scale to every other inhabitant of the United States is so self-evident as to need no proof.

CAN'T "PASS HAT."

But even so, if the "hat was passed around," would that daily penny be forthcoming? Not by a long shot; for millions of people would say: "Let the other fellow do the contributing." Imagine, if you please, the result of trying to obtain municipal, county, State, and national taxes by voluntary contribution only. That result would be municipal, county, State, and national bankruptcy, culminating in national chaos and a quick slide back to savagery.

Are we not in the kindergarten stage of the knowledge of correct cooperative effort and its magnificently wonderful advantages to all of us?

Will it take another century of civilization to pierce the skulls of humanity with a "horse-sense" idea of the superbly grand mutual benefits of real mutuality in both effort and pocketbook?

Will we ever learn to avoid the absurd stolidity of "being penny-wise and pound-foolish"?

Let's give another illustration: Suppose, for some magical reason that every railroad in the United States was blotted out to-morrow; how many days would it take for universal individual and public bankruptcy to ensue? Fortunately such a magical calamity is not probable, but have we not blotted unintentionally the railroads which could have been built in the past five years; railroad extensions absolutely essential to our growth and commerce?

OVERCOMING ANTAGONISM.

Through your honorable body many excellent results have been accomplished in curbing wrong moves in railroad transactions, and no doubt there is much yet to do in a restrictive sense for the advantage of our whole Nation. The writer realizes that your body is the delegated authority for the expression of the wishes of the people, in a rational manner. Your actions, along lines of present economic wisdom, are made far more difficult through the creation in by-gone years of a sentiment of antagonism to the railroads produced, at that time, by financial jugglings and a practical disregard to the interests of the general public. Such outrageously absurd mistreatment created a boomerang of public retaliation, part of which is a legacy cast upon your shoulders for effective corrective results. Such action on your part, coupled with a common-sense change in the policy of the railroads themselves, has produced a present condition in which the retaliatory spirit ceases to be of any public advantage, but, on the contrary, is apt to be of the cut-off-the-nose spiteful character, resulting in tremendous loss in far greater degree to the people themselves than to the railroads. The general danger in all public movements of a corrective nature, even though founded on correct and just principles, is to go to extremes, and in the case of the railroads there exists, indeed, the peril of swinging the pendulum too far and killing the goose that lays an enormously large golden egg.

REPRESENTING WISDOM OF PEOPLE.

I trust that I am echoing your own sentiments concerning the dignity of your high office when I mention that upon your body devolves the responsible duty of separating the wheat from the chaff in rational action toward the railroads; that while representative of the people, such delegated power to you means to truly represent the wisdom of a vast body of people and not their foibles nor follies; in fact, to be a stanch wall guarding them against wrong moves not only upon the part of the railroads, but from ill-considered, unjust, and unwise demands on the part of the people themselves; in a word, to give equity to both to the best of your ability.

If a small mercantile corporation were to allow perishable goods to decay because of false economy in providing more delivery wagons or autotrucks for hundreds of orders which could not be filled otherwise, it would be pointed to in derision as a type of a stupidly conducted concern. Shall the United States, in itself the largest corporation in the world's history, continue to commit a similarly imbecile action, on a mammoth scale, by so handicapping the railroads as to actually prevent their enlargement now essentially necessary for the delivery of millions upon millions of dollars of products which now go to waste, or at least must be sold locally at absurdly low figures?

But how have we committed such a piece of national folly? We simply cut off our "daily penny" contribution to the railroads, and we gloried in the fact that we could each buy one more box of matches, or a 1-cent postage stamp, or a stick of candy, and "filch away from the greedy monsters of railroads" our little petty daily penny. We argue that such an insignificant saving could not hurt such enormous corporations, forgetting that in the aggregate we "filched away" $365,000,000 a year; forgetting that such a sum was ample for thousands of miles of railway extension and for thousands of cars for additional equipment.

SAVING AND LOSING.

In fact, we followed somewhat the policy of a certain farmer, as the story goes, who sought to reduce gradually the expense of feeding his mule. He reasoned out that one straw of hay withdrawn each day from the mule's feed would certainly be of no consequence, and afterwards, in narrating the result of his experiment to a neighbor he said: "Don't you know it was a grand success for several weeks, as I saved a lot of hay, but somehow or other, just as I was getting down to the point of taking the last straw away that fool mule up and died." He neglected to state, however, that he saved a dollar in hay and lost a $200 mule.

In our vociferous demand for lower, and still lower freight rates, even while material price increase and wage increase was the lovely portion thrown on the shoulders of the railroads, we most naturally hit them a solar-plexus blow in lopping off their freight-rate charges and, not satisfied with this, we gave them a straight right to the jaw when we added on higher prices all along the line in their expenses. Somehow or other, we got "agoing" and we didn't know when to stop. We were like the "wise" man who yoked himself along with the calf, and when the calf bolted down the hill at full speed the "wise" man yelled to the top of his voice: "H-e-r-e we come; h-e-r-e we come; darn our fool souls, we are running off, somebody stop us, or we'll break our consarned necks." Let us not forget that a whole nation can at times suffer from a half-way crazy spell, as did Holland during the "tulip bulb craze," which so permeated that entire land at the time that a hundred thousand dollars was given for a single tulip bulb because it was black, and other ridiculously large sums for other bulbs on account of various peculiarities. As a result, when the farcical balloon exploded, hundreds of bankruptcies ensued. In a few

years thereafter the people of that country considered their mental lapse, in wholesale degree, as some wild nightmare.

NOT FOR STOCKHOLDERS.

Why should the requested 5 per cent advance in freight rates be given to the railroads? To increase the profits of stockholders? No, indeed, it is not necessary for us to indulge in any such fantastic philanthropy with our "daily penny"; as a rule, stockholders in railroads are not "marching over the hills to the poorhouse"; not even the "poor widows and poor orphans" class of railroad investors. Why, then, should we volunteer to contribute our "daily penny"? In this answer is the kernel of the nut, and it is rather striking: To save ourselves a daily dollar, two, five, or more, to begin with, and to save thousands of us from bankruptcy and hundreds of thousands—nay, some millions of us from the distresses of being pauperized.

Very strong words. Can I prove them? Yes; most emphatically.

In order to do so we must take a brief inventory of the present status. There is a rush and crush in railroad tonnage, and this stupendous business makes profits in spite of the extraordinary increase in expenditures, due to higher prices of materials and higher wages. (And right here I pause to state that I hope the railroads will always be able to pay those higher wages, and, furthermore, I make the bold statement and dare anyone to controvert it, that our "daily penny" contribution, the 5 per cent advance in freight rates, will enable the railroads to continue the higher wages now given.)

Well there is nothing gloomy about the railroad situation so far as above stated. No, it's quite rosy. I am an optimist myself, and wish I could logically stop right here. But I happen to be a conservative optimist; I do not plunge around corners at full speed in my auto with the hope that there is no danger ahead.

THE BOND QUESTION.

If there is such a crush of business, why is there not more railroad extension of lines to take care of it? Now comes our little dark cloud. If you ask a railroad president why he didn't build more branch roads to gather in enormous tonnage waiting for him, he would almost explode with the vehemence of his earnestness. "Great Scott," he would say, "we are wild to do that very thing, and I grow sick with exasperation because we can't." Then ask him, "Why?" And another darker cloud appears in the answer: Because the railroad bond market is inactive. Ask "why" again, and the cloud darkens more and more, for we are getting closer to the real cause of danger in our present rosy condition. In fact, to be brief, the bond investor is not pleased with the railroad outlook. He is aware of the fact that the railroads can not continue to pay higher prices for materials and wages and show profits at present freight rates unless the abnormal crush of tonnage also continues. Mr. Bond Investor is also watching out for danger "around the corner."

Let us find out if possible the reason why Mr. Bond Investor believes he has a right to be cautious. Let us assume that he has no political ax to grind; that he is not endeavoring to create "hard times" for any pecuniary gain, but on the contrary is solely concerned in the future value of his railroad bond investment. Perhaps it would be wiser to let him speak for himself, as a matter of fairness.

LOOKING AT FACTS.

He says: "I look at facts, not theories. I am not concerned which political party is in power or may be in power. Prosperity of the railroads, not only at the present time but in the future, will make their bonds profitable; prosperity at present and adversity in a year or two will make the investment very risky. Therefore I am justified in taking a lesson from the past. You admit," says he, "that tariff reductions will cause all manufacturers to proceed cautiously until they can adapt themselves to the new schedules. When 25,000 manufacturers slow up, as a matter of caution, it means naturally an enormous reduction in their employees. It may mean attempted reduction of wages. The raw-material men must also slow up with corresponding reductions. The wageworkers thus thrown out of employment become hand-to-mouth consumers, thus setting in motion an adverse circle affecting the merchants, wholesalers, and manufacturers of household necessities, as well as comforts and more especially of luxuries. This, in turn, causes larger reductions of employees all along the line, and the dismal wheel of adversity takes on a faster motion. But, alas, all is not said, for the farmers commence to feel the pinch of lesser demand and lower prices, and their purchasing ability becomes depleted to a minimum, resulting in stagnation for the agricultural implement and farm-supply manufacturers, thus giving another woeful turn to the wheel of misfortune. But if to all this is added the daily increasing depression in building construction trades, affecting hundreds of thousands of employees direct and indirect, it can easily be seen that the motion of our wheel is fast approaching the panic stage, and it gains greater momentum as the banks find it necessary to curtail their loans. However, I have not yet mentioned the railroads in this dismal cycle, but they along with their hundreds of thousands of employees have suffered from the direful procession of disasters until a wage reduction becomes the only alternative for many of them to escape bankruptcy. Now, then, you can well see why I hesitate in making my bond investments at the present moment, for while I am cognizant of the present prosperity and hope it will continue, I must, as a matter of personal caution, look into the future as far as I can to see any formative clouds of adversity. Therefore, I am on the waiting bench, willing to invest when there is more certainty of a continuance of our present prosperity."

CHANGED CONDITIONS.

It is permissible, perhaps, for the writer of this article to answer in colloquial form the supposed comments made by Mr. Bond Investor.

"Eschewing for the present any political preferences, desirous only of a maintenance of our prosperity, regardless of whether the credit goes to one party or any other, I admit the logic of your illustrations, but nevertheless must contend that the conditions are far different now from what they were in the year 1892, when our prosperity was transformed soon afterwards into the panic of 1893. At that time the tariff tinkering had a brother source of disaster in the silver issue. Again, we have at the present time no similar confidence-destroying companion to cling around the neck of the tariff-reduction program.

"On the contrary, Mr. Bond Investor, we have a phenomenal opportunity to offset any tendency toward the industrial depression by placing in immediate action a very powerful counteracting agent for greatly increased prosperity. Thus we have the opportunity to apply at once a sure antidote for the poison you fear might permeate through the industrial arteries of our Nation. At no other time in the history of this Nation were we so fortunate as to have at hand an ample method of modifying downward our tariff rates without causing a severe depression in business.

IMPETUS TO PROSPERITY.

"That remedy, right now at hand, is the using of our 'daily penny' to give such a grand impetus to prosperity that the very start of any adverse movement would be nipped in the bud. I frankly confess that I am not much concerned, Mr. Bond Investor, concerning the safety or profits of your individual investments, but I believe that you yourself would frankly state that your fears would vanish for our future national prosperity if the requested 5 per cent advance in freight rates were granted at this particular time, and therefore, although unconcerned about your individual welfare, we are very much concerned that you help the wheel of prosperity to move at a rapid gait by your heavy investments in railroad securities, and especially those issued for additional construction and equipment.

"When, as a matter of fact, a single $10 bill spent at one end of a business street could easily produce in one day a thousand dollars of business by passing through a hundred hands, it is manifest that an extra $100,000,000 set loose in the channels of trade will produce results almost startling in the magnitude of resultant extra business. What, then, would our 'daily penny' to the extent of $365,000,000 yearly accomplish?

CREATING CONFIDENCE.

"If we create new confidence in a continuance of our prosperity by granting the 5 per cent advance in freight rates, we undoubtedly induce a far larger purchasing inclination upon the part of the 2,000,000 employees of the railroads, and we can conservatively estimate this increased consumption at $10 each per month, making a total of $240,000,000 of increased trade from that source alone. It would be futile to endeavor to give any close approximation of the vast increased expenditures that would be made in the coming year by the railroads themselves, but it certainly would not be less than $260,000,000 per year. Thus from the railroads and their employees we would have the grand impetus of half a billion dollars pushing our wheel of prosperity. Add to this the wonderful power of invigoration that such a sum would cause in hundreds of channels of trade, and then in turn to the farmers, and back again from them to the manufacturers; and, again, the enormous increase in building construction throughout the land, giving a tremendously enlarged business in the building trades and continuous employment to hundreds of thousands of skilled and unskilled workmen; add again the greater prosperity of the merchants, the professional men, the newspapers, and the banks and we have combined an irresistible force making our prosperity wheel hum with such a grand momentum that any slight tendency toward depression would die 'aborning.'

"Thus, Mr. Bond Investor, we would have an antidote so powerful that your supposed poison would have no chance to have injurious effect to any appreciable degree."

ANALYZING PROTESTS.

If the 5 per cent freight advance were granted there would no doubt be a "penny-wise and pound-foolish" antagonism from some who would be affected by the proposed increase. Let us for a moment analyze such protests. The wholesaler would pass the charge on to the retailer, unless competition forced him to bear a part of it, as he could well afford to do on account of his largely increased business; the retailer would endeavor to pass it on to the consumer, unless he also had to stand a small fraction by competition, which he also could well do by reason of larger business and better pay and less losses in his accounts. The great consuming class would probably have to shoulder at least half of the 5 per cent advance; would have to contribute their "daily penny" in order to have the daily dollar, two, five, or more. There is no class in our Nation that needs prosperity more than the wageworking and salaried people. To them a steady and continuous income is an actual necessity to keep the wolf from the door; to them, indeed, more than to any others, does the monster of "hard times" assume a dragonish appearance; the piteous appeals of their children who are then denied even a large portion of the actual necessities, added to the grief of the parents in being forced to deny the sobbing requests, make a combined national moan of anguish which pleads to us in advance to use our sincere endeavor to prevent such a direful calamity. Surely we should not strain at a gnat of expense and swallow a camel of woe. Foresight to avoid disaster is worth a hundred hindsights after the damage has been done.

RAILROADS' PROSPERITY.

If we needed some concrete illustration of the grand benefits ensuing from the prosperity of railroads, there could be placed in evidence the conditions existing in various towns and cities which are to a large extent dependent for sustenance almost directly upon the railroad or railroads passing through them. Perhaps no other city in the United States, of equal size, has its "sum and substance" of prosperity, in accordance with the proportional prosperity of a railroad, as has Altoona, in the State of Pennsylvania. At this point the Pennsylvania Railroad pay roll of $15,000,000 yearly becomes a boon to all the citizens; if such an amount were cut in half, or even more, by the adversity of the railroad, Altoona would swallow the dregs of severe misfortune, perhaps of serious disaster. On the other hand, if, through additional prosperity of that road, the pay roll would be increased to $18,000,000, or even $20,000,000, then Altoona would blossom in more roseate manner than even at present. No doubt, in a similar way, although perhaps to a less degree, would thousands of other towns and cities in the United States have additional prosperity through the grantal of the 5 per cent advance in freight rates.

CONSIDER THE CITIZENS.

In conclusion, gentlemen of the Interstate Commerce Commission, permit me, I beg, to suggest that your deliberations upon the gravely serious and potentially important subject at hand include due consideration of the welfare of all the citizens of the Nation, since all are benefited by prosperity, and if there should arise any protest from a comparatively small number of the people (blindly against their own real interest in the long run), to kindly remember that the greatest good to the greatest number is the foundation principle of our Government, and in this instance that the greatest number includes at least nine-tenths of our entire population.

The history of the world from time immemorial is strewn with the whitened sepulchers of "lost opportunities" due to intolerance and economic ignorance. The day is at hand when we should cast adrift from the water-logged boat of absurd faddism and board the stanch vessel of common sense. The time is ripe for a master stroke, hitting at the very foundation of national false economy, to start in immediate action a phenomenal movement, leading onward and upward, bestowing blessings upon every hand, and culminating in a far greater prosperity of our people and grander prestige throughout the world to America as a land of progress, liberty, and happiness.

[From the New York American, B. C. Forbes, business editor.]

PROSPERITY HINGES ON RAILROAD-RATE CASE, SAYS CLAFLIN—LOOKS FOR BETTER TIMES IF FREIGHT INCREASES IS GRANTED.

"I will have a good deal to say about prosperity if the railroads get the 5 per cent increase in freight rates," declared John Claflin, dry goods king, yesterday.

Asked if he believed great prosperity awaits the country if the railroads get a rate advance, Mr. Claflin said:

"I can not say anything about a period of prosperity, but I look for immediate improvement after the advance is granted."

Mr. Claflin believes practically every thinking man now sees that the country can not be prosperous unless the railroads are. He believes the merchants in general are now in favor of the advance, although at one time they were not.

—

[From the New York Times, Mar. 24, 1914.]

AMERICAN PUBLIC OPINION OUGHT TO RULE; HEED IT!—TO BRING PROSPERITY—GRANTING 5 PER CENT INCREASE TO RAILWAYS WILL DO IT, CLAFLIN SAYS.

John Claflin said yesterday that he earnestly hoped for an early decision by the Interstate Commerce Commission giving the eastern railroads the 5 per cent rate increase asked for. To a question about the outlook for prosperous business he replied:

"I would talk prosperity quickly enough if the 5 per cent case was settled in favor of the railroads."

"Would that insure a period of prosperity?" he was asked.

"I don't know about a period, but it would certainly mean an immediate improvement," said Mr. Claflin. "You know what it means to industries in this country to have the railroads' buying power curtailed. I think the merchants here are practically all in favor of the rate advance now, although they were not a few years back."

—

[From the New York Times, Mar. 24, 1914.]

RAILROAD-RATE PROBLEM.

The Interstate Commerce Commission has had before it for a long time the application of eastern railroads for a 5 per cent increase in freight rates. The delay of the commission in reaching a decision is most unfortunate. The railroads are structurally a part of our national life—fiber of our fiber. They are arteries of our very being through which courses the blood of the Nation. We can not do them harm without doing ourselves harm. Starve them and the pinch of poverty grips us. Railroads are now contending with decreased net earnings and are not spending more money than they must to meet immediate requirements.

Extensions and improvements come out of the net earnings and net earnings are being reduced to such a degree that extensions and improvements are not being made as they were when the income justified it. As a result of the halting of activities on the part of the railroads, business is halted. If the railroads are prosperous, the country usually is prosperous, too.

It is the opinion not alone of railroad men but of others engaged in widely separated lines of business that if railroads were granted the increased rates they are after it would be the means of booming general business and bringing back prosperity. The Interstate Commerce Commission ought to decide one way or the other without any more delay than is absolutely necessary the question of increased rates.

—

[From Lexington, Ky., paper unknown.]

IT WERE WELL IT WERE DONE QUICKLY.

We publish in other columns of this issue an excerpt from the annual report of J. H. Wheelright, president of the Consolidation Coal Co.

Two years ago the Consolidated Coal Co. purchased 100,000 acres of coal land in eastern Kentucky, upon which it has built the cities of Jenkins and McRoberts. According to the report of Mr. Wheelright, the 14 mines that have been opened in Kentucky by this company have a producing capacity of approximately 3,500,000 tons of coal a year. Because of the purchase of this land and the guarantee of the Consolidation Coal Co., which for 50 years has been one of the most successful producing coal companies in the country, the Louisville & Nashville, the Chesapeake & Ohio, the Baltimore & Ohio, and the Clinchfield & Carolina railroads have spent millions of dollars to reach the coal fields in eastern Kentucky.

The total annual output of the Consolidation Coal Co. from its various fields in Kentucky, Maryland, West Virginia, and Pennsylvania aggregated for 1913 over 11,000,000 net tons.

The part of Mr. Wheelright's report to which we wish to call special attention is his statement that—

"Notwithstanding the fact that an increase in freight rates to the carriers would, in many cases, fall directly upon your company, we have written the Interstate Commerce Commission urging them to grant the increase of freight rates to the railroads, for the reason that we believe the facilities so urgently needed to be of greater importance to the future development of the country and the welfare of your company than the burden that will fall upon us by reason of increased freight rates."

There could be no more striking evidence of the imperative need for an increase in the freight rates railroads are allowed to charge than this testimony of the president of a company which ships annually over 11,000,000 tons of freight which would be affected by that increase. But, as pointed out by Mr. Wheelright, it would inure to the benefit of the company of which he is president to have the railroads able to secure the money necessary to make the extensions, to build the sidetracks, and to purchase the equipment to handle the full output of its mines, which under present circumstances the railroad companies are unable to do. It is for similar reasons that business men in every line of activity have earnestly urged and anxiously await the decision of the Interstate Commerce Commission giving to the railroads permission to increase their rates.

Upon the prosperity of the railroads depends the prosperity of the country. They are the greatest consumers of material, the greatest employers of labor. It requires millions of dollars for them to maintain their tracks and equipment so as to handle economically and expeditiously the business they now have; it requires added millions for them to extend their tracks, to build new sidings, to purchase new equipment, to take care of the increased business that comes from the increase of population and the development of the natural resources of the country.

That the plea of necessity for an increase in freight rates is not fictitious the monthly reports of earnings are proof, as is their inability to provide facilities for traffic ready at their hands, as pointed out by Mr. Wheelright, additional proof. The decision rests with the Interstate Commerce Commission, and upon that commission rests the responsibility for the business of the country prospering or lagging.

The railroads can not secure money through the sale of stocks or of bonds unless the investing public are assured that the revenues of the railroads are, and will remain sufficient to pay interest and dividends. With the present freight rates there is danger that many even of the strongest railroad systems will be unable to maintain their present rate of distribution to their stockholders. It is only by an increase of revenue through an increase of freight rates that the railroads can hope to persuade investors to furnish the money to make the extensions and purchase the equipment that is necessary to do the business of the country.

Every man interested in any form of business is proportionately as much interested as is Mr. Wheelright in having the Interstate Commerce Commission quickly grant that which it is inevitable it must ultimately grant, unless the railroads are to go into bankruptcy and the business of the country to become stagnant.

EXHIBIT B5.

MANY VITRIOLIC, DEROGATORY, AND INSULTING EDITORIALS AND ARTICLES HAVE APPEARED.

A very large percentage of comments about the Interstate Commerce Commission, its members, and its employees, have been derogatory, insulting, and many times disgraceful. The commission has frequently been accused of being incompetent. Its members are represented as theoretical economists and lawyers, who have no knowledge of business and who would be incompetent to conduct any mercantile establishment, and so forth.

Sometimes they are represented as being prejudiced and unfair to railroads. It is intimated that they have already made up their minds which way to vote on the rate advance, and that they are holding up the final announcement of the decision as long as possible in order to embarrass and cripple the railroads and cut off dividends to security holders.

It is intimated that they are a political body and that their decisions are based upon political expediency with an eye toward coming elections rather than upon evidence and argument properly before the commission.

They are sometimes pictured as a ridiculous body, not deserving of the respect or notice of competent people; in short, they are a body who are unable to think or act for themselves; a body which supinely receive the harangue of any and all comers without discernment or proper understanding of the true relation of things. They are also accused of being cowards.

Some of the people even go so far as to attack in a subtle manner the integrity of the commission and of those connected with it.

It has been faintly hinted that some one close to the commission gives out advance information as to the decisions to be rendered, and that people in Washington have profited by such knowledge in their purchases on the New York Stock Exchange. The commission is also pictured as a menace, a body undemocratic, and are charged with the ideas of socialism, disrupting business, and wrecking credit.

They are also charged with gross ignorance and stupidity.

[From the New York American, Mar. 15, 1914, by B. C. Forbes, business editor.]

GRAVE BUSINESS CRISIS LAID TO GOVERNMENT FLOUNDERING—RAILROADS, IN SERIOUS STRAITS, AWAIT IMPATIENTLY LONG DELAY OF INTERSTATE COMMERCE COMMISSION IN DECIDING FREIGHT RATES—FINANCIAL WORLD DISTURBED BY MANY THREATS AND DON'T-KNOW-WHAT-TO-DO OF LAWMAKERS.

I don't like the way things are going. The trouble is under rather than on the surface.

It lies chiefly in the murderous spirit—I use that word deliberately—existing between Washington and the business world.

There is a growing danger that the upshot will be disastrous alike to labor, to investors, to employers, and to the administration.

Capital has made up its mind not to submit meekly and silently to any more governmental misrepresentation or unjust attacks.

President Rea, of the Pennsylvania Railroad, voiced the new attitude last week in a formal statement heavy with underlying significance. He warned the authorities that antagonism and burdensome legislation, if continued, might drive the country into an abyss. He spoke thus gravely, he said, "to prevent calamity."

ACUTE PERIL OF SITUATION.

With the same motive, and without the remotest desire to be sensational, I feel it a duty—a regretful duty—to state the situation in very plain terms. It is this:

There are half a dozen railroads so near the precipice of bankruptcy that if the authorities give them a few more pushes they will topple over with a crash.

Once one goes, all will go.

Already their securities are on or near a receivership basis, but those in control are striving to avert insolvency, buoyed up by the hope of a very early announcement of an increase in eastern frieght rates.

But the latest outbursts by the Interstate Commerce Commission, and the allegations against conservatively managed railroads, including the Pennsylvania, have raised acute fears in responsible circles that those in power at Washington are utterly blind to the red lights confronting the railroads and the financial community.

Developments are awaited with concern.

President Wilson and Democratic Leader Underwood are, I am told, exercised over recent events, and over the thickening uncertainties. I

understand also that Mr. Brandeis is now alive to the urgency of the situation and will not counsel any rabid antirailroad action by the commission.

COMMISSIONERS DELAY CRITICIZED.

The commission, however, has lost its strongest members. Not one of those now intrusted with the life and death of the country's railroad system has ever had business experience. The chairman was a conductor on the railway, another member was a professional theorist, and the three others were—need it be added—lawyers.

These gentlemen have been so swamped with work that their annual report for 1912—yes, 1912—has not yet been issued. Were a railroad to show similar dilatoriness, the commission would have something very pointed to say.

The current tendency is to pile more and more responsibility upon the already choked commission. That being so, it may be well to ponder the facts here printed.

The momentous rate decision is now looked for about the middle or the latter part of April.

The possibility of unearthing other sources of relief has appealed strongly to the commission and its counsel, Mr. Brandeis, but while tangible results may be achieved therefrom by and by, it is believed no immediate succor can be expected and that the commission will feel compelled to allow an advance in rates now on the understanding that if developments warrant reductions may be ordered later on.

SHORT INTEREST IN STOCKS; BE WARY.

The repeated onslaughts by Washington have been accompanied by such extensive selling of securities that frightened and pell-mell covering might be precipitated at any moment.

Everybody in the "inside" has been bearish.

The consequence is that much stock has been sold short—that is, people have sold stocks they do not own but which they figure upon being able to buy back much cheaper on the publication of bad news.

Wall Street is wicked enough to suggest that a few selling orders have come from the direction of Washington. Indeed, Wall Street—always suspicious—hints that people of higher repute than Lamar have taken advantage of advance knowledge of plans and proclamations calculated to send stocks down.

The desirability of having men above temptation on such bodies as the Interstate Commerce Commission will be apparent when it is noted that Commissioner Harlan's sensational attack upon the St. Paul immediately knocked $9,000,000 off the market value of the road's stock.

Were men susceptible to the allurements of riches ever to find a place on the commission, the opportunities for making rapid fortunes by speculation would be incalculable.

Of course the game, which in the past has been considered safe by certain Washington gentlemen, might prove dangerous, now that the New York Stock Exchange has a "police committee" which pries into members' books, for it is conceivable that something might come to the surface were questionable practices to be discovered.

BUSINESS REVIVAL IS STILL RETARDED.

The hoped-for revival in general business has not yet made satisfactory headway.

Unemployment is rife and is exciting uneasiness in certain cities.

Unfortunately, employers—particularly the railroads and the hundred and one industries affected by them—do not feel encouraged by events at Washington to adopt any conspicuously optimistic course that would help to provide additional work.

Antibusiness legislative proposals are being hashed and rehashed daily without any manifest master mind to guide the rank and file toward any definite, sensible goal.

Employers, therefore, do not yet know what to expect.

Banking interests are acting cautiously. They want, among other things, to learn the personnel of the Federal Reserve Board before assuming avoidable commercial risks.

In New York the more powerful groups are worried mainly about the railroad position and prospects in view of Washington's attitude.

Stocks, consequently, have reflected nervousness.

But brokers declare that the market is oversold to such an extent that important good news could easily start a bear stampede. To sell what you do not own is always fraught with danger. It is a game the ordinary investor had better leave alone.

My opinion is that there will be a drastic movement either up or down within the next month or more. Which direction the market will take is not at the mercy of bankers or brokers. That responsibility rests in other hands.

FACT AND COMMENT ON FINANCE AND BUSINESS.

A knowledge of current conditions and of possible dangers impels me to address the following open letter to the Interstate Commerce Commission:

GENTLEMEN OF THE INTERSTATE COMMERCE COMMISSION:

Are you aware that, partly owing to your course of action, the country is in peril of suffering an upheaval disastrous to labor, to the railroads, to investors, to industry, to the public at large, and to the administration?

Do you realize that in your hands have been placed responsibilities comparable only with those devolving upon the Supreme Court of the United States?

You have been given control of the greatest industry in the country, its system of transportation, on whose welfare depends, directly or indirectly, the welfare of every man, woman, and child in the Union.

You are responsible to Congress alone.

You are more than a quasi judicial body; there have been reposed in you administrative functions of the gravest importance.

Now, rightly or wrongly, your actions have created the very general belief that, instead of holding the scales of justice even between the railroads and shippers, you have become an antirailroad body.

In ruling—perhaps wisely—against the increase in freight rates applied for in 1910 you gave reasons which were supported by arguments and statistics embodying serious misrepresentation of facts. Your misuse of figures on that occasion raised doubts in well-informed minds of your desire, or your ability, to be strictly impartial in dealing with large railroad and financial problems.

Since then the position of our railroads has grown distinctly worse.

The confidence of investors, both in Europe and at home, has been so shaken that many roads are to-day in a parlous financial state.

During the years 1914, 1915, and 1916 maturing railroad obligations alone will call for upward of $1,000,000,000—this without providing one dollar of additional capital for any purpose whatsoever.

How debts falling due are to be met and new capital necessary to maintain solvency is to be raised are problems now exercising grave concern in the financial and railroad world.

Whether these problems can be handled without plunging the country into general disaster depends in large measure upon the course you choose to follow. The eyes of financial Europe and of thinking American citizens are upon you at this moment, anxiously awaiting announcement of your policy.

The state of mind existing to-day in the most responsible circles is not conducive to that speedy return of prosperity which the deplorable prevalence of unemployment and discontent renders so extremely desirable.

Without overstating the facts, it can be said that those who are charged with the task of directing and managing the country's railroads are in danger, if further denied the cooperation of the Government and your body, of abandoning as hopeless all efforts to overcome multiplying difficulties.

I beg you to ponder these words uttered this week by Samuel Rea, president of the Pennsylvania Railroad:

"There is more need than you, perhaps, realize for efforts to prevent calamity."

What are you gentlemen of the Interstate Commerce Commission, you guardians of the Nation's railroads, doing to prevent calamity?

One of your number has just caused to be published, in sensational manner, charges of "serious irregularities" against the Chicago, Milwaukee & St. Paul Railway, which "irregularities"—confined wholly to bookkeeping—were committed several years ago and pointed out at that time by the financial press.

Has it taken you three years to discover what the financial press discovered immediately the company issued its financial report?

If not, why is the subject treated by you so sensationally at this unfortunate juncture, when the solvency of numbers of railroads and the position of the railroads as a whole are occasioning so much concern and militating so strongly against a revival in business which, if much longer delayed, can not but lead to unhappy consequences to Government and governed alike?

Not content to aggravate the unrest by harking back at this juncture to a three-year-old incident admittedly indefensible, you add the alarming statement that "in many instances" similar irregularities have been perpetrated.

Why this vague, panic-breeding allegation?

Are you concealing wrongdoing by many other roads?

Is it your intention to explode these bombs periodically, whenever your fancy, or what you may regard as expediency, dictates?

Why single out one railroad for exposure and shield many others you know to be equally guilty?

Can you not see how disquieting is the effect of your very serious allegation?

How are investors to know that the road whose securities they hold is not one of the many who have juggled their accounts to flimflam the public?

The St. Paul's shares shrank $9,000,000 in market value on your unexpected and alarmist announcement.

Are other stocks to be forced down equal amounts from time to time, whenever you see fit to expose the many guilty companies?

Gentlemen, I ask you to consider whether the time for purposeless recrimination has not passed.

I ask you to consider whether the time has not come to cease destructive action and to concentrate upon a constructive policy.

You have before you, and have had before you for many months, an application by eastern railroads for permission to increase their freight rates 5 per cent.

The railroads have cooperated with you in supplying all needful facts to judge their case.

Can you not expedite your deliberations?

An attempt has been made of late to cite other avenues of relief, and the impression has been spread that the railroads have been "discovered" indulging in various practices calculated to unreasonably deplete their income.

You gentlemen know that these practices, one and all, have been done in accordance with established usage and under arrangements never once prohibited by you.

Yet I am not aware that you have put the public right in their conception of the position, although a statement from you would have clarified the atmosphere and tended in some degree to allay the antirailroad sentiment now so prevalent and so injurious to the whole Nation.

Abolition of these various intrenched practices can not be ordered or effected hastily. Exhaustive investigation will be necessary before overthrowing the status quo.

Hence no adequate relief can be obtained at this time from such sources, although later on substantial readjustments may be possible for the benefit of the railroads.

I would respectfully ask you to consider the advisability of granting, at the earliest possible moment after the conclusion of your present hearings, the increased rates petitioned for, supplemented, if need be, by a statement that if developments ameliorate the circumstances of the railroads the higher rates may be canceled at some future date.

A patient is beyond medical aid once he has died.

—

[From the Journal of Commerce, New York, December 30, 1913.]

The questions sent by the Interstate Commerce Commission to railroads as an incident to the discussion of the 5 per cent rate case indicate that the commission has fallen into the familiar governmental error of calling for information from sources that have already supplied all the data they possess and have nothing more to furnish. In many instances, it appears from time to time that congressional committees and administrative departments institute investigations that are totally unnecessary, and the results of these inquiries are retabulated as if they contained fresh information of a valuable kind. In this case the railroads have repeatedly supplied such data as seem to be called for, either to the commission, the Post Office Department, or other branches of the Government, and there does not seem to be good ground for the delay that will necessarily grow out of the transmission of such inquiries.

—

[From the New York Times, January 12, 1914.]

REGULATION OF REGULATORS.

The president of Stevens Institute, Dr. Alexander C. Humphreys, is reported in the Times of Saturday as making some general remarks upon the regulation of public utilities, which gain strength by application to the occurrences of the day. President Humphreys gave his opinion

that the various commissions as a rule do not know what they are about or how to do it, and that, therefore, they are not giving the corporations that instruction in their duties to the public which the commissions were created to give and which the corporations have a right to expect. The commissioners as a rule lack technical qualifications. Often they are mere politicians, guided by popularity rather than by principle either of economics or of law. He had been unable to discover any policy as guiding the commissioners of one State where he had tried to advise corporations, and neither he nor the lawyers had been able to tell their clients what they should or should not do. President Humphreys declared that he did not limit his remarks to any one State, and he expressly declared them applicable to Federal commissions.

Take, for instance, the manner in which the Interstate Commerce Commission is dealing with the application of the railways for permission to advance their rates The commission as a whole, not individually, has been regulating rates for a generation, and now for the first time it asks 78 questions such as never before were asked of any carrier. In reply the railways profess their readiness to cooperate with the commission, but deprecatingiy suggest that the commissioners do not know what a task they have given the railways. To answer these questions would require the examination of countless documents, which the railways are willing to place at the disposition of the commission for its own labors. Months would be required to formulate replies, or even years, if the task were to be done thoroughly. The remarks of President Humphreys suggest what the railways did not say—that the commission has no idea what use it would make of the replies if it had them. The decisions of the commission may be searched in vain for the formulation of any principle of rate making which should control either the railways or the commission. No sooner has the germ of a principle appeared than it has been knocked on the head by more exceptions than the rule covered cases. When rates were made in the old, unregulated way, they at least were controlled by economic considerations. But the commission is animated by a morality which applies to public utilities alone. They must do right even though they go broke. They must reduce rates though the requirement slays them. The commissioners have never shown perception that regulations and protection should walk hand in hand. They are too often blind leaders of the lame, and both are stumbling along together, nobody knows whither. Yet the commissioners are good men, meaning well, and doing their best. They simply are not as big as their jobs. It may be doubted whether any men are as big as this job.

The decision in the New Haven bond case is also an illustration of President Humphrey's point. The Massachusetts commissioners exceeded their authority when they allowed the railway to issue convertible bonds. They had only to read a statute to learn their duty, and they erred in such a simple task, although they were to instruct the railway on points incomparably more difficult. How can business be done when commissions are set to instruct railways and themselves need instructions from the courts? Since the managers of the railways have to consult the wishes of investors as well as the instructions of both courts and commissions, it must be clear that the matter is pretty well snarled up. If stock must be issued at par which can not be sold at par, why then the State will have to run the railway itself "for the account and risk" of the taxpayers, of course.

Still another example is afforded by the comparison of the new express rates with the postal parcel rates. The parcel post has no need to pay dividends nor to pay the railways. It does not offer the same service as the express companies either in gathering or delivering parcels. The parcel-post rates must be right, because enacted by infallible legislators. Yet the Interstate Commerce Commission orders the express companies to perform a superior service for less money. From New York to Chicago the postal rate for 20 pounds is $1.22. The express rate is 64 cents, of which a good part must be paid to the railways. That leaves 32 cents, with which the stockholders must pay their men at both ends of the journey and on the journey must provide a fund to pay their insured losses.

They may take what is left for their profits. It would be easy to pick out other cases in which the postal rate is less than the express rate and many in which it is much higher. Here are two authorities setting rates for a public utility which alternately are above and below each other and in which the private service is ordered to be rendered at less than is allowed to the public service, which requisitions its costs in part and in part obscures them by charging them to taxpayers. This is simply bedevilling the subject. There is neither rhyme nor reason, neither wisdom nor justice, in such methods. Is it not possible for the Government to find competent agents?

—

[From the New York Times, January 27, 1914.]

HODGE-PODGE RATE REGULATION.

The Interstate Commerce Commission began yesterday a six weeks' hearing of protests against advances of specific commodity freight rates under the railways' request for a general living wage. When the railways propose to advance commodity rates they are advised to make a general advance which will not disturb the relation of rates. That happens to be the answer made to the express companies by the commission on the same day that it begins a not altogether consistent policy with reference to the railways' 5 per cent advance all around. To the express companies the commission says it is "unwilling to consider the reasonableness of individual rates on particular commodities until after it is found how the general reduction in express rates is going to affect the express companies." Can it be that the commission does not care how the railways are affected by a rate schedule declared to be too low which they wish to raise ratably?

Also of concurrent interest is the elaborate address by Commissioner Prouty declaring that experience has led him to alter his opinions about rates. Consistency is the vice of small minds, and nobody would deny that the commissioner has had experience enough to change his mind without reproach. He used to favor elasticity of rates, he says, but now he thinks that stability of rates is better for both railways and shippers. He says that within 10 days there were 15,000 advances and 29,000 reductions of freight rates, and 60,000 advances and 86,000 reductions of passenger rates. In express tariffs there were 4,000 advances and 32,000 reductions. It seems that the commission is rather bewildered by its job, and has the feeling of the passengers on a steamship who want the captain to hold the boat still. Now Mr. Prouty admits that there must be seasonal rates, and emergency rates, and various other changes of a compulsory sort, but the great mass of rates should be of the same permanency as the laws which have made rates laws. He was not disposed then and there to argue whether it would be a physical possibility for the commission to make all the rates, but he was sure that the railways ought not to make them. There is no hope until the commission makes all rates and classifications and generally takes charge of the railways in all respects except—it may be imagined—guaranteeing the balance between their incomes and expenditures.

As much might be guessed by the commission undertaking hearings on a schedule already fixed until March and beyond. The indispensable Mr. Brandeis has responded to an invitation from Mayor-elect Curley to straighten out Boston's affairs, "that he is so engrossed with his work for the Interstate Commerce Commission that he will be unable to take on other work until November." Nobody could expect the commission to make a decision on such a difficult subject without some months' deliberation. By that time—say in 1915—it may be hoped that the railways' affairs will be so prosperous that there will be full justification for the commission's decision that the petitioned advance is not then justified. The time to have allowed it, of course, was when shippers did not care what rates they paid if only they could get transportation. Then business could have borne the added burden, and when the present lean time came it would have been possible—if elasticity rates were desirable—to reduce rates and stimulate traffic. It is evident that stability of rates is better. It saves the commission an impossible task, or a task which would be possible only when the laws exactly suit the commission. It might be as well to abandon hope that the rates will suit the railways until the laws suit the commission.

Meanwhile, if the curiosity is pardonable, it might be asked on what principles the commission would base its action when it gets the facts which Mr. Brandeis wants. There are cases where the commission's decisions have been challenged as sharing the unreason of any railway rates whatever, and suits have been brought to compel the commission to justify the reason of its rates. But that is absurd. Only the railways are held to the rule of reason. The commission is sole judge of facts and legislates rates. The duty of the railways is not to reason why, but to do or die.

—

[From the Philadelphia Ledger, April 2, 1914.]

GIRARD'S TOPICS OF THE TOWN.

What would you think of a school-teacher who should spend an entire year in examining the pupils under her control to find out if they deserved promotion?

Your wrath would impel you to take your child out of such a silly school.

All the figures relating to earnings of all the railroads are in the office of the Interstate Commerce Commission. The system of bookkeeping was devised by the commission itself. There is no escape, no evasion, no hiding of profits.

Every dollar of income and outlay is clearly set forth. Having all these facts in its office, you would think the commission might decide in one day whether or not the railroads need increased rates.

Dallying for a year to find out something it should have known 364 days ago shows what a Government bureau can do in the way of conducting business.

Under such a scheme of things we may soon all have time for 4 o'clock tea just like our British cousins.

—

[From the New York Times, April 15, 1914.]

RAILWAY REGULATION, IDEAL AND THE ACTUAL.

Nobody objects or would be heard to object to railway regulation of the sort described by those who provide it. The sort of regulation actually provided must be condemned with equal unanimity. Take yesterday's news, for example. The Supreme Court heard argument upon appeal regarding the tap-line cases. These cases, it will be remembered, cover the so-called "free services," for which the railways were to charge hereafter, and thereby collect $15,000,000 to stay their stomachs while the commission was thinking about allowing the 5 per cent advance. But that installment on account seems indefinitely distant. It is disputed before the Supreme Court that the commission has power to forbid the making of rates which it is the commission's duty to regulate when made. The commission's order was annulled by the Commerce Court, and the commission instead of submitting made as a recommendation what it did not venture to put into an order while its procedure was under an appeal. The Supreme Court's decision lies in the distant future, and the commission itself, on the day that the court heard argument, suspended a tariff filed by several leading railways in accordance with the commission's recommendation. The commission itself runs away from its own plan on the day that the Supreme Court hears it denounced.

The Interstate Commerce Commission's proposal of procedure regarding the 5 per cent advance was also published yesterday. This has been pending for several years in one form or another, but the commission always begins at the beginning, as though nothing had occurred previously. The commission's sole duty is watching the railways and telling them what to do or not to do, and it might be supposed that it had a mind of its own. On the contrary, it lets somebody else write for it 78 questions which had never occurred to the commission. The blanks necessary to answer 1 of the 78 questions weigh 15 pounds, but not all are so weighty. The answer of all the railways to all the questions would fill a freight train. The answers and the arguments must all be in by April 27. And then the railways will soon get their decision?

Not in the least. That is only on the first division of the subject. When the commission has digested these tons of information it will be in position only to say whether rates ought to be raised. It will then begin an inquiry as to how they should be raised. Under this head will come a rediscussion of the propriety of stopping expenses instead of raising rates. It is clear that if the railways spend less money upon "free services" they will not need to collect more money. By that time the commission perhaps will be clear in its own mind about allowing the railways to do what it has recommended, while the Supreme Court is hearing argument about whether the commission has the power it has assumed to exercise. No dates are set to this second division of the argument, so there can be no disappointment about it.

This is a sample of actual regulation. If the investigation and suspension files of the commission were to be searched, most of the questions now disturbing business men would be found buried there. Its indecisions and idealities are only one of the handicaps in the obstacle race which legislators have set for business men to run. If business can not go ahead it must go backward.

—

[From the New York Times, March 26, 1914.]

RAILWAY RATE CASE DELAY.

The Interstate Commerce Commission is so sorry that it was unable to hear the testimony of Clifford Thorne, regarding the application of the railways to advance their rates, that it has asked him to repeat it "in substance." If the railways desire to rebut this testimony the com-

mission will give them opportunity next month. If adjournments were what the railways wanted, how happy they ould be. They first asked for this advance some years ago. The commission refused it for reasons since shown to be bad. Months ago the railways renewed their request, and the commissioners still want to be shown how to change their minds. To assist them they employ as their counsel the counsel whose argument they should regret accepting on the first application. As a friend of the court they admit to argument Mr. Thorne, chairman of the railway commission of Iowa and authorized spokesman for the commissions of the States of Iowa, Kansas, Nebraska, North Dakota, South Dakota, Arkansas, Oklahoma, and Missouri.

The list of States sufficiently indicates the sort of decision which would result from crediting the arguments advanced by Mr. Thorne. There is a double impropriety in hearing him as the representative of State commissions. The Interstate Commerce Commission has constitutional support in advising or even in directing the State commissions, but the State commissions have no such standing before the Federal commission. The State commissions represent neither shippers nor railways, and as commissioners they have antagonized the Federal commission, presuming to reduce the rates in their States which the Federal commission has declared to be reasonable in interstate commerce. The Interstate Commerce Commission is forgetful of the proprieties, if not of the legalities of the case when it listens to such spokesmen. The Supreme Court listens to counsel representing litigants in the courts of the various States, but the Supreme Court never listens to State courts to plead in the person of its judges what the law ought to be, and particularly not to challenge the decisions of the Federal court.

The record of Mr. Thorne's original testimony ought to be available for the commission to read in its leisure, but he is asked to repeat it "in substance." Perhaps his revised version may be less insulting to the commission than his first, insisting that the records of the Federal commission were worthless. Commissioner Thorne's allegation was that the railways were padding their expense accounts. President Willard denied it on the spot. President Rea gave an indignant denial, which the Interstate Commissioners would do well to paste in the tops of their hats. This charge which the commission wants to hear repeated concerns the commission even more intimately than the railways. The country has more confidence in the Federal commission than in the State commissions, whose spokesman is asked to repeat his slurs. But the country can not defend the Interstate Commerce Commission against itself. If it wishes to be regarded as a judicial body it should act judicially, know when it is treated with contempt, and protect itself otherwise than by compliments to its traducers.

If the Interstate Commerce Commission has any confidence in itself or in its accounts of the railways' condition it is in a better position than any other authority to decide for itself forthwith, asking for no arguments. The official figures show that the commission has heretofore misjudged and acted in error upon the reports to it. That is the substance and the merit of the railways' appeal. The railways are now suffering one of the most serious reverses in their history. Their suffering is so severe that it is reflected among industrial investments. It can not be long before the country in general must suffer from the reductions of dividends in both railways and industrial corporations. The Supreme Court itself has flinched from the results of the rigor of its law, and has reconsidered judgments which were impolitic. The Interstate Commission need not fear the country's reproaches for a retreat from its untenable position that it is infallible and must refuse advances of rates because it has been accustomed to do so.

This is a case where to give quickly is to give twice. It still seems probable that an advance of rates would increase revenues, but there will come a time when the reduction of the volume of traffic will nullify an advance of rates. The time to have advanced rates was when the railways first asked. Then trade was so robust that it could have paid and not missed the money. Now trade is in a decline, and an advance of rates is burdensome. No more could be asked of the commission than that its administrative acts should be as nearly right as its judicial decisions. More than half of them resist challenge. It is a good administrator who is right half the time, provided he knows his own mind, and gives decisions with reasonable quickness after they are asked and the case is sufficiently presented. This case has been talked to death.

—

[From the Baltimore News, Mar. 31, 1914.]

BUNCOMBE EVIDENCE ON THE RATES QUESTION.

The Pennsylvania and New York Central Railroad systems announce that they have laid off or are about to lay off a total of 50,000 employees. How many more wage earners have gone off the pay rolls of other railroads we do not know; but these two lines are not standing alone in their policy of curtailment of expenses. It is a self-evident fact that with this sort of thing going on all over the United States it will not do to underestimate the gravity and significance of the movement to the entire country.

It is also a self-evident fact that the man who talks about the railroads depopulating their pay rolls in such fashion to browbeat the Interstate Commerce Commission into permitting an increase of traffic rates is talking rot far beyond the mere degree of imbecility. Great business enterprises do not shut down their machinery when there is any safe way to keep it going. A plant idle in whole or in part is the cruelest kind of investment to the capital engaged. A lot of machinery and equipment is owing interest just the same, whether it is idle or busy; and it grows old—out of date; and it rusts; and altogether, not working as it was intended to work, it is a burden of pain to the capital that carries it, just as it gives an anguish of deprivation, want, and misery to the wage earners whom it was intended to employ, but whose work and pay are gone because the plant is down and the shutters are up.

The railroad is no different from any other industrial and economic instrumentality. It is built to run full force. It can not stop running without injury to itself; and great business enterprises do not cut their own throats to "browbeat" public officials with whom they are not in accord as to what is good treatment for industry and business.

When something is very clearly and very emphatically wrong it is a fool's job for anybody to say that it has been deliberately made wrong by those who are the sufferers so as to reproach those who do not relieve the suffering. The thing to do is to find out the cause of what is wrong, how it can best be corrected, and then correct it.

Such a charge should, at most, react upon the man who makes it. In the present event unfortunately it comes in the disguise of a supposition, confessedly without basis of proof, from one whom the Interstate Commerce Commission desired especially to hear upon the question of the rate increase, and it can not but cast doubt, accordingly, upon the commission's sense of discrimination as to what class of testimony would most contribute toward a wise decision.

Mr. Thorne represents a number of State public service commissions, which should primarily be judicial bodies, just as is the interstate commission, and which should stand to it in much the same relation as do State courts to the Supreme Court of the United States. In such a controversy as this they have not the slightest stake. They are not the representatives of the people against the railroads; and except they have made such exhaustive study of the subject as is supposed to precede their decisions on local matters, their opinions on the merits of the rate question are worth neither more nor less than those of the intelligent laymen. We doubt whether the Maryland commission, with all the other subjects it handles, has had either time or incentive to qualify as experts on this one.

The interstate commission has been in conflict with the State commissions again and again, and most of these conflicts have arisen over unwise, selfish, and more or less populistic rulings by the State bodies that were found to hamper the Federal body's plans. It would seem that the interstate commission should have learned long before this the kind of gallery testimony it might expect from some of the Western State commissions. Either those expectations are justified or the commissions made a most unhappy choice in selecting Mr. Thorne to represent them.

The trouble is not that the Interstate Commerce Commission is likely to listen to his vaporizing. It is that he tends to create popular suspicion of and antagonism to the railroads at a time when popular passion should be least in evidence and that, in the face of it, it will be vastly harder for the commission to reach an unbiased decision.

—

ERIE DROPS THOUSANDS.

NEW YORK, *March 31.*

The Erie Railroad, through A. J. Stone, general manager, to-day announced the enforcement of a general retrenchment order, including a reduction in the clerical force, wage cuts, and the lessening of working hours, to aid, according to the statement, in offsetting declining revenues. About 6,000 men have been laid off since December.

"Usually at this time of the year we increase our maintenance force gradually until we get to the maximum in the middle of the summer, but we will not do that this year," Mr. Stone said. "We now have about 18,000 fewer men at work than at the height of our maintenance work last summer. Our retrenchment is shown better by the fact that we are putting on less men than in laying them off.

"While we are anxiously hoping for an increase in rates, the retrenchment in progress is due to quiet business."

—

[From a New York paper.]

PROBLEM OF THE INTERSTATE COMMERCE COMMISSION.

The probable outcome of the pending rate controversy undoubtedly leaves the Interstate Commerce Commission in a position of some difficulty and opens problems with which that body will find itself obliged seriously to reckon. Of these the broadest and most important is that of the future of the commission itself. What will be the course of its development? How has it been affected by the drift of things during the past year or two? Is it losing or gaining in strength?

Nobody can deny that the position of this commission is significant in the very largest sense, since its success or failure will have a most important and direct effect upon the question of Government ownership of railroads and all that is implied therein. If the commission proves popular and its decisions are in the main correct, the plan of Federal regulation will grow gradually into our system of Government, and a departure from private ownership will be more and more remote. This has been apparent not only to students of the situation, but also to railroad men themselves, for a good while past. It is safe to say that, barring exhibitions of selfishness based on temporary interest to which almost any element in the community is likely to be subject, there has been no large group that was more concerned than were the railroads to see the commission attain a genuine success, and none that will be more disappointed than the carriers to see it suffer failure. Effective handling of the problems presented to it, far from being a radical triumph as many suppose, is essentially a triumph of the conservative forces in the community over the elements that are constantly urging nationalization of railway property.

Of course, this makes it the more disappointing from the standpoint of the conservative factors in the community that the commission should have lost some popular prestige as the outcome of its current attitude on the railway question. In proportion as its influence falls off, there will be a disposition to look for new means of dealing with what is generally known as the railway question, and in just that degree there will be agitation and friction of the undesirable type.

That the commission has thus weakened itself all the signs now indicate. The country at large is disappointed with its delay, its dilatory tactics, and its apparent indecision as exhibited within the past few months. It is displeased with the inaptitude of many of the recent decisions; it feels that the apparent tendency toward controversial treatment of the railroad issue is unworthy of the organization, and it naturally and properly regards the drift toward a political method of handling the rate problem as something that was not to have been expected and as wholly out of harmony with the judicial quality assigned to itself by the commission and by many of its apologists. In order to regain its position in popular estimate and to reassume the status generally given to up to about four years ago, it is therefore essential that the commission should overcome the fundamental objections to the work it has been doing. This, in one word, can be accomplished only by introducing a policy of equal justice to the railroads and the public. If the commission's work is to be worth anything whatever, it can be valuable only when it inspires absolute confidence in its fairness and disinterestedness. That the decisions of the past year or two, and particularly the indisposition to deal promptly with the advanced rate application, have left the impression of political timidity and of inaccurate knowledge is undeniable, and on the whole the belief that these have been the characteristics of the commission's action is well founded.

A reaction of public opinion, caused by the evidently difficult plight of the railroads, was to be expected. The workingman finds his interest served by prosperity and ability to pay his wages regularly. The shipper is not helped if the cuts in rates are so severe as to reduce and weaken the quality of the service. The traveling public finds itself best pleased when accommodations are good and service frequent and effective. These results can not be had without revenue, and the

country at large is wise enough to see that the commission has been playing the part of a dog in the manger, since it has refused to make its position clear or to grant or deny the application for the advances. The decline in average ability on its part has never been so strikingly evident as it has become within the past two years. No one, of course, who thinks about the situation with any sincerity or care, could for a moment overlook the fact that, if the commission has really studied the data supplied it in such generous measure for many years past, it must know, without any hearings or further investigation of any sort, whether or not the roads deserve or need rate increases, or whether they can provide for themselves successfully under existing conditions. It may be that the new appointments lately made by the President will add to the capacity of the commission and so make up for the losses it has suffered.

—

[From the New York Sun, Jan. 22, 1914.]

SEES COVERED ADVANCE IN RAILROAD CHARGES.

Roger W. Babson returned yesterday to New York from a long western trip. When asked what was the most interesting thing he heard while away he replied:

"When at the annual meeting of the American Economic Association at Minneapolis last week I heard an address by one of the Interstate Commerce Commissioners, followed by an exceedingly interesting discussion led by experts on railroad rates.

"After hearing this discussion and talking later with one of the officials of our largest railroad systems, I think that the railroads will be granted increases, but it will be largely in the form of increased storage charges or switching charges and various other charges which are more or less covered. In other words, from the talk which I heard in the lobbies among the convention people I feel certain that the flat increase of 5 per cent will be refused and rather doubt if any flat increases will be granted, thus appearing to the public like a turndown for the railroads.

"On the other hand, I feel that the railroads will be fully satisfied with the award of the commission.

"The most striking information which I obtained was that the commissioners apparently consider themselves an arm of Congress and not members of a judicial body. They apparently feel that as their decisions can be reviewed by the courts their duty is to please the people. In fact, I have the best authority for believing that the commission feels at perfect liberty to change decisions or reverse decisions in accordance with changes in administrations or changes in the views of one administration. This is an interpretation of the situation which I think few men realize and was to me the most sensational development of the convention.

"As to when a decision will be issued, I don't know, but I doubt if it will come so soon as is generally expected or desired. Feeling that the administration is very anxious for good times, I should not be surprised if the decision was rendered about the time we got a line on the 1914 crops. Certainly this will be the psychological moment from a 'salesmanship' point of view."

—

[From the Utica (N. Y.) Herald Dispatch, Dec. 30, 1913.]

GOVERNMENT AND RAILROADS.

The Chicago Tribune has lately asked the officials of some of the great railroad companies what they think of the plan to increase the power of the Interstate Commerce Commission so as to include supervision of the issue of shares of stock and of bonds as well as the regulation of rates. The replies indicate that railroad men are willing to consider almost any suggestion for relief from their present ills. They say that the Government is already regulating rates and wages and is thereby fixing the income and the outgo of the companies, but that it seems to pay little attention to the income of the capital invested. If the Government should supervise the issue of new securities when new capital is needed they hope that it might feel some sense of responsibility for the conservation of this capital.

The general counsel of the St. Paul road expressed the general view very well when he said that if there is to be any regulation of railroad stock and bond issues it should be national. There is regulation already in some of the States. In Massachusetts, for example, they have a law forbidding any railroad corporation to issue shares for less than par. When it was passed, an experienced railroad man, aware of the speculative nature of the railroad business, said that this statute had put an end to railroad extension in the State. Events have justified his prophecy, for almost no new railroad track has been laid since. But if the State of Massachusetts had such power over all rates as to make it possible for it to insure the earning of dividends on new capital, even though shares were issued at $190, as was done 10 years ago under order of the State Railroad Commission, then such governmental control might be debatable.

Through all the statements of the railroad men who have been quoted by the Tribune there runs the hope that the Government will assume some responsibility for the protection of invested capital as it now assumes responsibility for the protection of the users of the railroads and for the employees who operate the trains. The Government is just about to engage in the banking business on a new plan, and it promises a regular and assured dividend of 6 per cent to the shareholders in the new banks, and it will regulate the rates charged for banking service so as to earn this dividend with a surplus for safety. Now, nothing would please railroad shareholders more than to have the Government guarantee a regular dividend of 6 per cent on their shares. Such an arrangement would insure stability where there is now uncertainty and would make it possiole to build new railroad lines much more economically than they can now be built.

But why try new remedies, asks the Philadelphia Public Ledger, when the efficacy of the old remedies has not been exhausted? When all items of outgo are increasing in price and income remains stationary, why go about racking our brains for a remedy for railroad ills, while a child just beginning the study of decimal fractions could tell you what to do? If the rates are raised and the railroads let alone for a while they would soon get well.

—

UNITED STATES EXPRESS CO. WILL DISSOLVE—DIRECTORS VOTE UNANIMOUSLY TO CARRY OUT LIQUIDATION PLAN—STOCKHOLDERS MAY GET PAR FOR STOCK—ACTION, DUE PRIMARILY TO LOWER RATES, ORDERED BY COMMERCE COMMISSION.

Directors of the United States Express Co. yesterday voted unanimously to dissolve that corporation, which has been in existence since 1854, fulfilling previous statements that they would take such action, primarily because of the reduced rates ordered in effect by the Interstate Commerce Commission on February 1. While admitting that the parcel post has been a serious competitor, President D. I. Roberts declared the loss in business resulting was not sufficient to force the company to liquidate. This is the resolution adopted by the directors at yesterday's meeting:

"*Resolved*, That pursuant to the power and authority conferred upon the board of directors of the United States Express Co. by its articles of association, the board unanimously declares that it is for the best interests of the company that the company be dissolved as soon as may be, without awaiting the expiration of its term of existence; and that its business and affairs be settled up and finally adjusted as promptly as may be done. The president is directed to inform the stockholders of the company of said action of the board."

Unless some arrangement can be made with some other express company to take over its business, the passing of the United States Express Co. will throw 15,000 out of employment, 2,000 of whom are located in this city. These employees received in salaries and wages approximately $6,000,000 a year.

The stockholders, under the plan of liquidation, the terms of which remain to be decided, will probably get more than the present market value of the stock, as the company's liquid assets are valued in excess of $8,000,000. It is believed that the shareholders will get close to par for their holdings. The stock closed yesterday at 79, a loss of 2 points compared with Thursday's closing, but a gain of about 25 points over the low figure of the last week of February, when rumors of pending liquidation began to be heard.

There are 1,556 stockholders of record, of which 740 are women and 14 estates. The largest individual block, 21,000 shares, is held by the estate of the late E. H. Harriman. The Platt holdings of 850 shares are much smaller than was generally believed. Other holders of large amounts are:

Norman L. Bates, 250 shares; L. N. Bennet, 350; Helen De Witt, 500; Brown Brothers, 3,000; Metropolitan Life Insurance Co., 1,600; William Moss, 300; I. C. Potts, 1,015; William A. Read & Co., 1,500; Catherine Thayer, 500, and Werner & Brown, 600.

The committee of stockholders which recommended to the directors that the company be liquidated consisted of Charles A. Peabody, president of the Mutual Life Insurance Co.; Moreau Delano, of Brown Brothers & Co.; William A. Read; Haley Fiske, vice president of the Metropolitan Life Insurance Co.; and William Averell Harriman.

Mr. Roberts, who went from the Delaware & Hudson Railroad to become president of the United States Express Co. on January 1, 1913, spoke feelingly yesterday of the passing from existence of that corporation.

"If the parcel post had been competing as first inaugurated," he said, "and if the reduction in rates made on February 1 last had not become effective we would have continued in business. I want it understood, however, that our action is largely based on the latter, rather than the parcel post.

"As the parcel post was originally started and intended we could compete against it, for we recognized that it filled a long-felt want that the express companies never could duplicate. For instance, we could not make rural deliveries.

"The threat made that the rates on parcel post are going to be reduced and the weights of packages increased, on top of the February reduction in rates, brought about different conditions. You can readily see that ours is a condition, not a theory.

"Then, again, many States would not allow us to inaugurate the rates of the Interstate Commerce Commission, except where they were lower than their own. Only yesterday the railroad commission of Louisiana issued such an order. We don't know where we stand. We have reduced expenses largely, but we could not continue even then under such conditions as these.

"When 16 per cent of our revenues were cut off, as happened when the Interstate Commerce Commission ordered the reduced rates last February, I believed conditions then were threatening. That meant that we would have to increase our gross business 25 per cent to break even.

"In recommending the dissolution of the United States Express Co., the directors acted in the best of good faith and after careful consideration. Certainly nobody can accuse me of making the recommendation from a selfish standpoint. Three or four months ago our stockholders were apprehensive and asked about conditions. As more than half of our shareholders are women, it was only natural that they became uneasy, and for that reason I felt I occupied a position of trustee and promised that when in my opinion the day came their interests were jeopardized and we found it necessary to draw upon the company's capital, I would recommend liquidation.

"I have recommended it in the very best of faith. I have done as I would want to be treated if I were a stockholder instead of an employee."

With the passing of the United States Express Co. the question naturally arises how long can the other package-carrying concerns fight against present conditions. The February earnings of all the companies, the first since the inauguration of the reduced rates, will be the worst in their history. For the most part big deficits will be shown, and officials openly declare that it will be foolhardy to continue business under such conditions.

—

Comments of anonymous contributor:

"Do your hearts rejoice that about 15,000 men lose their positions through the policy of your board? Keep up the good work."

[From the Wall Street Journal, January 30, 1914.]

REVIEW AND OUTLOOK.

WHO'S AFRAID?

There appear to be two national cowards in the United States; one the railroads before the Interstate Commerce Commission; and the other the Interstate Commerce Commission before the public.

The railroads have a right to a living wage, both for their labor and their capital, and when men and supplies have been advanced 30 per cent the right of the railroads to increased rates should be undisputed. The only question is as to the amount and the distribution of the increase.

The fairest way would appear to be the granting of general or specific increases as asked for, and then the revision of any injustices or uneconomic workings as these develop.

The railroads ask for a modest general advance of 5 per cent, as compared with an increase in wages already granted of several times 5 per cent.

If the railroad managers owned the property which they operate, they would speak more loudly and more emphatically. Their appear-

ance, however, is, "It is immaterial to us, we simply state the facts. Please kick us or our stockholders as you will. In time you will find out your error."

When the railroad Humpty Dumpty has been pulled off, the financial wall that makes for safe and sound transportation, it will be found that "all the King's horses and all the King's men can not set Humpty Dumpty up again."

Railroad credit is a matter of growth over a long series of years, and the Government can frost it in a night and kill it in two or three.

Where fifty millions are needed to repair railroad credit, the Interstate Commerce Commission comes back with questions that will require millions of expenditure and months of delay to answer and years to debate and argue with its Mr. Brandeis thereafter.

Mr. Brandeis held up one proposed rate increase with the declaration that the railroads, by scientific management, could save a million dollars a day, or three hundred and fifteen millions a year.

Three years afterward the Interstate Commerce Commission says nothing about scientific management, but has reduced the Brandeis claim from three hundred and fifteen millions to fifteen millions, and asks the railroads to recover fifteen millions for services of short lines into "various big industries."

Then the Interstate Commerce Commission says most grandiloquently the railroads must make "every service rendered by them contribute reasonably to their earnings. This having been done the commission upon an adequate showing of the need of additional revenues will not shrink from the responsibility of sanctioning such measures, including even a general advance in rates, as may be required to bring about reasonable prosperity to the railroads."

One does not note any such shuddering of public-service commissions when it comes to increasing wages. There is no talk then that the commission "will not shrink from the responsibility."

Of what is the commission afraid?

What it ought to be afraid of is the decadence of railroad credit and the rising rates of wages upon railroad money, competing with the merchant borrower and taxing him more in money rates than he will be taxed on his goods by the proposed 5 per cent increase.

Does anybody note any fear on the part of the commission that railroads may be hurt by the commission's delay or inactivity.

Is the cowardice that is manifested here by this admission of the "shrink from responsibility" moral, ethical, or political?

"Unless there are safer ways for the National Government to deal with the stock exchange than Senator Owen has devised, by denying the privileges of the mails and telegraphs, it would be much wiser to leave this issue to the State."

Under the Constitution which provides for a free press, the Wall Street Journal leaves the New York World to say it.

[From The Washington Herald, Saturday, March 14, 1914.]

HARLAN'S EPISTLE TO ST. PAUL.

Regard for the old proverb, "Honor to whom honor is due," leads us to remark that Commissioner Harlan, of the Interstate Commerce Commission, has just rendered a distinct disservice to the community. By his recent manner of promulgating a month-old report of the commission, concerning certain accounting methods of the St. Paul road, in effect at least four years ago, he has done much once more to inflame the public mind over a matter which, at most, is not vastly important. And in doing so he has helped give another blow to the confidence and prosperity in business which our administration is earnestly trying to restore.

Nobody can be found to say that the St. Paul's accounting of four years ago was undeserving of criticism. What it did was this: Instead of taking over each year the earnings of its Puget Sound subsidiary, it allowed them to accumulate, and then in 1910, when its main line earnings were very lean, it took over all the Puget Sound credits in one year. That, of course, was bad accounting practice, and we say so, emphatically. But nobody was harmed or even deceived by this particular entry. The published reports told the whole story every year. The entire figures were open as daylight to the whole world, and the suggestion that the figures were manipulated for the purpose of selling securities at a higher price was absurd.

Being the editor of a newspaper, naturally we think we can run everybody's else's business even better than we do our own. And if we had been Commissioner Harlan we should have called atention (in words as brief and unimpassioned as these) to the effect that back in 1910 the St. Paul's bookkeeping had not been in accordance with good practice or with the commission's regulations, and would the company be good enough to observe all such forms with care.

What is the use of making a stump speech to the American people about it? If mother discovers that, year before last, little Willie disobeyed one of her rules, not so that he hurt any other little boy, to be sure, but still was disobedient, she doesn't—if she is a wise mother—march him down in front of the schoolhouse and disarrange his suspenders completely so as to make her spanking a more thorough and public effort.

In public officials a sense of proportion is almost as important as intelligence, character, and good humor. Just now millions of American business men and laborers are praying that the Interstate Commerce Commission will, in addition to the last three virtues which we know they possess, cultivate that vital sense of proportion. If they fail to do so, they will surely let the patient die before they finish examining him; and they will incidentally destroy all confidence in American railroad securities by investors here, just as they have already succeeded in destroying it completely among the rich and suspicious foreign investors abroad.

[From the New York Tribune, April 13, 1914.]

REDUCING THE "WATCHFUL WAITING" FOR BUSINESS.

The decision of the administration to restrict its antitrust program to the passage of one bill—the trades commission bill—will lessen the "watchful waiting" of business. This bill is innocuous unless it contributes to the "mania of investigation," as Mr. George W. Wickersham, ex-President Taft's Attorney General, says it will. At any rate, its discussion and final passage will offer no obstacle to the commercial recovery. Nothing of a governmental nature will stand in the way of returning prosperity, now that the antitrust program has been whittled down, except the Interstate Commerce Commission's delay in relieving the strain upon the railroads. And perhaps this commission will be influenced by the New Jersey congressional election to take a more serious view of its responsibilities. The administration appears to have been.

The Panama Canal tolls question will keep the Democratic Party busy for at least a month. After it is settled the party would have little stomach left for a big antitrust program. It would be in no mood for the record Mr. Wilson set out to make. The President intended his "constitution of peace" to be the big item of this session, but circumstances disposed otherwise. The tolls-bill repeal has been the big issue, compelling the administration to put forth all its energies as no other measure yet has. It furnishes a good excuse for dropping the ill thought out and utterly superfluous antitrust program which was unwisely proposed.

The trades commission should be made something other than a bureau of corporations with a new name. It should be more than a mere investigating body It should lift some of the burden of enforcing the Sherman Act off the Department of Justice. It might give permanency to the trust policy of the Government by assisting in the disintegration of unlawful combinations and by furnishing aid and advice to companies seeking to put and to keep themselves within the law.

We have in the Interstate Commerce Commission an example of the "mania for investigation" against which Mr. Wickersham warns the framers of the new bill. The Interstate Commerce Commission never knows when to stop investigating. Mr. Brandeis can always lead it upon a new trail. It always suspects that something which will alter the whole face of things is being hidden from it in some blind alley. Decisions are difficult for a body minded as it is. Common sense with it is at a discount. Nothing will be gained from having a trades commission upon its model. And the trades commission provided for in the administration bill goes back to an earlier and worse model—to the model of the Interstate Commerce Commission and the State railroad commissions before they had any real powers except to investigate. Something better than this should be created if it is to be worth while.

[Mailed to Interstate Commerce Commission; papers from which taken unknown.]

ULTIMATE EFFECT OF "PLAYING WAR WITH THE RAILROADS"—PENNSYLVANIA'S LAYING OFF THOUSANDS OF MEN AND A SUBSIDIARY'S DIVIDENDS CUT AMONG THE LESSONS— RAILWAY RATES AND THE UNCERTAIN CONDITIONS.

Under the caption, "Playing war with the railroads," the Times says editorially:

"It was announced yesterday that the Pennsylvania Railroad had laid off 15,000 men, about a tenth of its working force. On the previous day a subsidiary of this substantial railway reduced its dividend, and the shares fell 13 points. Thus, hard conditions for the railways are transmitted through society from the humblest workman to the criminal rich, who oftentimes depend upon dividends for food, clothing, and shelter. The earnings of 143 leading railways for the past seven months have been $8,995,000 less than the previous year, and the expenses have been $48,611,000 greater.

"Little James Falcone, 6 years old, of Belleville, N. J., played war this week with his younger sister, Rosa. He took her prisoner and stood her against a wall in true Mexican fashion. Then he took a revolver and was just able with both hands to shoot his sister dead. When the police came he was rather proud and rehearsed the crime, telling how and why he did everything. He did not understand what death was.

"We are living in an economic era which has forgotten the lessons of adversity. In the new era profits were to be secured to all by law.

"Wall Street was to be made safe for the careless, speculators were to be abolished, exchanges were to be made superfluous, and to be censored by men who, being officials, could not err. The men of business who knew how things had been done and could be done were to be bowed off the stage. The reduction of costs which had resulted from large scale production and distribution was to be hastened by competition of small units, and the millennium was to dawn.

"The tragedy need not have an end. The film might even be turned backward. A railway rate is a mere price, and should alter with other prices as business conditions alter. How much it should alter, and whether it should be raised or lowered, is a matter of business judgment. No decision on the subject is any more sacred than the edict of a union about a wage, or a shopkeeper's charge for his goods. It might be different if all prices were stabilized by law, so that when one altered all should alter. But this is not the condition produced by legislatures fixing railway rates. Before long those who have vivisected business in order to keep down railway rates will find a larger price structure tumbling about their ears."

CAPITAL RATES AND THE FLIGHT OF THE RAILROADS—BANKERS' MONEY STEADILY CHEAPER—CHARGES FOR INVESTED CAPITAL KEPT UP BY INTERSTATE COMMISSION PINCHING CREDIT LIFE OUT OF RAILROADS.

The Boston News Bureau said editorially yesterday morning:

"There are two interest rates, one the rate for bankers' money on turnover, and the other the rate on invested capital.

"The rate on invested capital again divides into two classes: First, the rate for money on time investments with full security; and, second, the rate of return on investments with some business risk. Therefore, in effect, there are three kinds of money rates, and to-day the money situation is immensely interesting the world over.

"The rate for mankers' money has gone steadily down the past nine months, from a 6 to 8 per cent basis to a 2 to 4 per cent basis. Call loans are approaching 2 per cent, and commercial paper is discounted at both under and over 4 per cent.

"Rates on invested capital with business risk would be lower but for the action of the Interstate Commerce Commission, which persists in pinching the credit life out of the American railroads.

"Railroads, therefore, have now to bid high for capital, on both long and short time loans.

"Whether the Interstate Commerce Commission, a majority of whom are Republicans, is endeavoring to put the administration in a hole politically by withholding prosperity, is an open question. If Commissioner Prouty is an example of the gray matter above the Interstate Commerce Commission table, one need not go beyond the size of their hatbands to find the cause of our country's arrested development.

"With the arrest of this development the money situation in all fields becomes of more than passing interest—2 per cent for bankers' money, 6 per cent for railroad money, and 4 per cent for commercial money."

Emphasis is still further laid upon the railroad situation by the slowly declining rates on city real estate mortgages. Although 4 to 4½ per cent is the quoted rate for first-class city mortgages, a recent real estate loan was made in Boston at 3⅝ per cent.

No sharper commentary could be made upon the railroad situation.

Every Washington smash against the railroad situation, whether in New England or in Nebraska, Texas or Illinois, only raises the rate

of interest on railroad capital, and in the end the public must pay the bill.

When an individual shoemaker sits at his bench and pegs upper and sole leather together, the shoes are very poor and the country lad is healthier and happier as a bare-footed boy.

When the Shoe Machinery Co. will furnish the machines to turn out good and uniform shoes at less than 5 cents per pair average royalty, American shoes become the admiration of the world for quality, price, durability, and artistic merit.

When the sugar companies came together and eliminated the unprofitable refineries, sugar was cheapened to every consumer. When Vanderbilt built a system between the seaboard and Chicago, he made uniform railroad rates between the seacoast and the graneries of the West and cheapened the price of bread to the whole world.

Now the reaction has set in, and the machinery that has made shoes, sugar, and transportation better and cheaper is being attacked by the Government, with the demand that such machinery must be broken into pieces or small individual units.

Let the glorious process go on! In the end it will be highly educational. Losses teach us what we have or once had.

—

RAILROADS IN GENERAL MOVE TO CURTAIL THEIR EXPENSES—NEARLY ALL THE LINES EAST OF THE MISSISSIPPI AND SOME WEST OF THE RIVER REDUCE FORCES—PENNSYLVANIA EXPECTS TO LAY OFF ABOUT 25,000 MEN IN ALL AND CANCEL ABOUT 64 PASSENGER TRAINS EAST OF PITTSBURGH—CALCULATES TO SAVE $150,000 A MONTH—NEW YORK CENTRAL STUDYING THE SITUATION—OTHER ROADS.

Reduction of railroad working forces is by no means confined to the Pennsylvania Railroad, though on account of the great mileage and tonnage of that system the number of men laid off from its employ reach imposing totals.

—

A TIME TO FIGHT.

The world loves a fighter. It has little respect for the man who, when smitten on one cheek turns the other to the smiter also. One who does not resent a wrong is looked upon either as weak or cowardly. Even a bad cause wins a following, if it has a fighter at its head.

The railroads of this country have had every man's hand against them. The Interstate Commerce Commission has slapped them in the face, the Post Office Department has robbed them by adding to the weight and costs of mail transportation without extra pay, State legislatures have passed full-crew bills, imposing unnecessary burdens on the railways without right or reason, and the Attorney General's department at Washington has sought to dismember systems whose strength lay in their unity and whose dismemberment meant their ruin.

Meanwhile what have the railroads done? They have yielded meekly to abuse, to robbery and oppression. They have been so cowed by the terrific onslaught of the muckrakers and persistent hammering of the demagogues that no spirit of resistance has remained. The worm will turn. The most wholesome sign of the times is found in the militant attitude of the Pennsylvania Railroad, voiced by President Rea, at the recent annual meeting of its stockholders, when he said that hereafter the management of that company was determined to allow no statement reflecting on it or on the integrity of its officers to go unchallenged. Good!

President Rea said some other incisive things. On another page of this issue we print his remarks in full. They will be read with interest and they deserved the applause they received from the assembled stockholders.

All over this country the people are rising in resentment against the unfair treatment the railroads are receiving. The people of Connecticut, and in fact throughout New England, are determined to give the new management of the New Haven Railroad fair play. "The stockholders have suffered enough," says Ex-Lieut. Gov. Blakeslee, of New Haven. They propose to fight the Government efforts to compel the New Haven to give up the Boston & Maine and other holdings. On the Pacific coast every chamber of commerce is entering a united protest against the absurd demand of the Department of Justice that the Southern Pacific shall give up control of the Central Pacific.

Bills for the repeal of the "full-crew" laws are now being urged upon the Legislatures of New York, New Jersey, and other States, though these laws were passed only a year ago. Behind this demand stand the security holders of the railroads. Organized, they can accomplish all that they seek, for at heart the people are fair-minded. It is only necessary to expose the injustice of a situation to secure relief.

The working masses are having the real truth driven home to them by the wholesale discharge of railroad employees going on throughout the country under the compulsion placed on the railroads to cut their expenses "to the bone." President Willard, of the Baltimore & Ohio Railroad, sorrowfully states that 6,000 of the employees of that railroad have been laid off during the past year. It is estimated that 25 per cent of the workmen in the railroad shops in the East and from 10 to 15 per cent in other sections are idle. Who will care for these employees? Will the Interstate Commerce Commission? Will the Department of Justice? Will all the politicians catering to class voters in our legislatures and at the National Capital?

The people are thinking of these things. They are discovering the impressive fact that a demagogue never filled a pay envelope and never will!

—

[From the St. Louis Times, March 31, 1914.]

UNFAIR TO THE RAILROADS.

Notwithstanding the intimations received from Washington that President Wilson is in favor of an increase in freight rates and that it is the President's desire that the Interstate Commerce Commission should render an early decision in the matter, the commission has again postponed the date for hearing the shippers in opposition to the proposed increase. Furthermore, the commission has engaged counsel to represent it and present the case of the shippers against the railroads. Why the Interstate Commerce Commission should be prejudiced against the claims of the railroads is difficult to understand, since it was supposedly created for the purpose of righting the wrongs of the railroads.

The Interstate Commerce Commission is a quasi-judicial body, and as such ought to be unprejudiced and protect the rights of all parties in all matters which may come before it. Recently the commission employed an attorney to represent the Interstate Commerce Commission and the shippers in the hearing of the petition filed by the railroads for an increase in rates.

If the railroads are to receive a fair and impartial hearing, what occasion was there for the Commerce Commission to employ an attorney? Was it to enable him, as one who seems to be in political favor with the administration, to earn an extravagant fee?

Such action on the part of the commission does not appeal to fair-minded people, and if the shippers wish counsel to represent them in opposition to the proposed freight increase such counsel should have been employed by the shippers and not by the commission. The duty of the commission is not to employ counsel, but, as judges, to pass upon the reasonableness and fairness of the claims of the railroads for increased freight rates and the merits, if any, of the opposing claims of the shippers.

The employment of counsel by those who are supposed to pass upon the matter is a new departure in American justice, and can not meet with popular approval. Such action on the part of the commission immediately smothers the promise of a square deal to the railroads.

The St. Louis Times believes in fair play and a square deal, and condemns the action of the Interstate Commerce Commission as dangerous and as an attack upon American justice and the spirit of our jurisprudence.

—

[From the New York Times, March 2, 1914.]

THE BELEAGUERED RAILWAYS.

The Pennsylvania Railway is not of such a character that inferences from its condition hold good regarding the average road. On the contrary, any hints of embarrassment on the part of the Pennsylvania Co. are stronger regarding any other road whatsoever. In only one respect is the Pennsylvania representative. Its traffic is so great and diversified that neither prosperity nor adversity in the Nation escapes reflection in its earnings. It is reassuring to learn from the Pennsylvania annual report that its gross earnings are the greatest known. There can be no dullness of trade when its takings were $10,000,000 above the previous maximum. But the road is so far from sharing the prosperity which it served that the hardest work it ever did was repaid by half a million decrease in its net revenue. On the old rule of a dollar for dividends and a dollar of investment for the production of other dividends $28,000,000 would have gone into the improvement of the facilities offered shippers. The year's surplus is near that figure, but it received a beggarly addition of a half million for the year. The road is plainly living on its fat, and the lean years are approaching unless the tendencies disclosed are checked.

President Rea makes no mystery of what is eating the road's substance. The laws, State and Federal, increase expenses and prevent the increase of rates. The unions compel the raising of wages above an economic level and without giving greater service. The extra crew law alone cost $850,000, a "needless expenditure," and is burdensome on all railways. The wage arbitration added $730,000 to operating expenses of the company, and $6,000,000 to all the railways concerned. The arbitrators had no control over rates, and the Interstate Commerce Commission has no control over wages. So rates and wages are regulated in opposite directions, although the one depends upon the other. President Rea indicates what must be done if the principle of regulation is to be applied reasonably:

"It is difficult to escape the conclusion that some way must be found whereby the serious but divided responsibility of Government regulation of rates, wages, and other railway matters shall either be concentrated under one administrative branch of the Government or the results of legislative acts, orders of commissions, and awards of arbitration boards shall be recognized by rate regulatory commissions so that regulation of wages, rates, and other matters may continue without working a manifest injustice to the railroads and those who have invested in their securities."

On the same day that this one company publishes its creditable but unsatisfactory report the bureau of railway news publishes its estimate that gross earnings of all railways increased $10,000,000 for the first half of the current fiscal year, and that net operating revenue decreased $58,000,000. The December results were the worst for that period. The Financial Chronicle on Saturday published its reckoning that gross earnings increased $142,000,000 for 1913, but that net earnings decreased $33,487,100. The greatest decrease of net known was $53,371,196 in 1908, as the result of the panic of 1907. It is clear, comparing the two statements that the results of the first half alone prevented the full year showing worse results as regards the railways at a time of unexampled activity of trade than during a time of prostration. If the second half of the fiscal year should fulfill the threat of the first half, the railways will be subjected to the greatest strain they ever endured. It required several panics and the loss of billions of money to reform the currency. As yet it has occurred to nobody—at least to no patriots among the lawmakers—that it would be easier and better to cure the deadlock in the railway situation without the same desperate remedy. As yet there are more votes in ordering the strangulation of the railway arteries of commerce than in opening them to the trade which is struggling for transportation. The unions rather than the railways have the ears of the lawmakers. The country must either abide the result or remedy the conditions which threaten the result indicated.

The condition of the railways' finances can be eased either by enlarging their incomes or conserving the incomes they are allowed to receive. Increase of efficiency in the production of transportation with present expenditures is the favorite remedy. But the unions will neither work longer hours nor for less money. The final alternative is the reduction of dividends. The railways are here and can not be removed. The law compels them to keep working. Why squander the dividend funds?

There are two objections to this policy. The railways expend 92 per cent of all income. All that remains for both dividends and betterments is 8 cents on the dollar. If money is to be saved it must be saved where it is spent, and nearly half of the railway disbursements is for labor. It is usually thought that railways were regulated, as President Rea says, by the commissions and unions. The fact is that railways, commissions, and unions alike are regulated by a power above them all, and which is in full, although unobserved, operation. The forgotten, insulted, outraged investor is supreme and is taking control. In January investors took $91,874,000 less railway securities than in 1913. It is clear that if the railways can neither earn nor borrow they can not spend. In that case the blight of the railways will become general over all industry, and the signs are plain in the investment market for securities other than railway. Even yet there is time.

MEMORANDUM TO COMMISSIONER HARLAN.

DECEMBER 23, 1913.

Calling your attention to the editorial, "How do they do it," which appears in the noon edition of the Times to-day, it may be well to note also that the last two columns on the same page contain excerpts from the annual report of the commission, in which are pointed out a large number of violations of the law, nearly all of which were first turned up by the division of carriers' accounts.

CARMALT.

—

[From the Washington Times, December 23, 1913.]

HOW DO THEY DO IT?

The incident of a Harvard professor of law resigning because an investigation proved that he had been drawing $10,000 a year on the side from the New Haven Railroad treasury, opens an interesting line of inquiry. When the Dolliver-Hepburn law, with its famous "section 20," was passed, it was understood that the supervision of railway accounts by the Interstate Commerce Commission was going to stop the improper expenditure of railroad money. It seems utterly to have failed to do that.

A very large amount of Federal money is being expended each year under the provisions of that statute. Yet there is little evidence that it has served to improve railroad practices in the matter, at least, of some of the most objectionable expenditures. It turns out, under the present inquiry, that the New Haven had a long list of people secretly in its employ because of their relations to the avenues of publicity. It is not gratifying to learn that newspaper men were numerous among these. Politicians, labor organizers, and about all the classes of people who might be of use in efforts to direct the formation of public sentiment were well represented.

The inquiry which developed all these facts in a sensational way was conducted by the Massachusetts Public Service Commission. One is tempted to inquire whether the Federal law is so lax, or its administration so imperfect, that these things are unknown, and have been unknown till very recently, to the national supervision authorities. If that is the case, it is apparent that better supervision, perhaps better law, certainly more money for getting the work well done, are needed.

From the time when the Dolliver-Hepburn measure passed it has been recognized that this provision for examination of railroad accounts and understanding of their expenditures was one of the very most important features of it. There was determined opposition to its inclusion in the law, and even after that law had passed a vigorous effort was made to prevent it being effective by cutting off the appropriations to hire accountants for its administration. These efforts failed, and there has been a test of the measure's actual working, covering a period of above five years.

It would seem that if any substantial supervisorship over the inner details of railroads' finances had been established by that measure the benefits ought to have become apparent in the cases of the Frisco and the New Haven. Yet they were not made apparent at all. On the other hand, those two notable cases seem to suggest very decidedly that this law is not doing the work and producing the results that Congress expected and the public assumed would follow. There is good reason why the Interstate Commission should be asked to make a report as to changes that it may have found needed in the law or in provision for its enforcement.

—

[From the Washington Times, December 23, 1913.]

BIG BUSINESS IS RESPECTFUL NOW, SAYS INTERSTATE COMMERCE BODY.

[By Ralph A. Collins.]

Common carriers, principally the great railways of the country, "big business" in the form of great industries and corporations, are becoming more law-abiding and respectful toward the act to regulate commerce.

In some few instances this respect may have been begotten of a newly realized sense of uprightness, but, according to the annual report of the Interstate Commerce Commission the lessening number of prosecutions would seem to be the result of sentences meted out for violation in the past. The commission magnanimously says that it is probably due to a better understanding of the law by the carriers, and a realization by well-intending railroad officials and shippers of the inherent wrong involved in practices which but a few years ago were prevalent.

SIXTY-ONE INDICTED DURING LAST YEAR.

Since December 1, 1912, 61 indictments for criminal violations of the act to regulate commerce and the Elkins act have been returned, many of which are against two or more defendants jointly. Of these indictments 28 are against carriers or carriers' agents, and 33 are against shippers, passengers, or other interested parties other than carriers.

During the last year 72 prosecutions have been concluded. In 50 cases the defendants pleaded guilty. In 1 case a jury returned a verdict of guilty; in 3 cases juries returned verdicts of not guilty; in 2 cases the jury disagreed. In 16 of the cases the Government nolle prossed. In practically all of these latter cases, however, alternative indictments had been drawn, based on the same facts.

Penalties assessed ranged in amount from $100 to $20,000, the aggregate fines imposed during the year amounting to $145,400.

Summing up the year's work in prosecutions for alleged rebating and other practices, the commission says:

"The number of indictments returned and prosecutions concluded, as well as the aggregate amount of fines recovered, for violation of the act during the past year are less than for the previous year. The value of penal and criminal laws generally is to be measured by the peace, order, and security of society resulting from their observance rather than by the amount of punishment for their infraction. Tested by this standard the year's showing indicates a gratifying tendency among carriers and shippers alike to understand and conform to the law. Not only is it true that the vigorous enforcement of the Elkins and Hepburn acts have discouraged willful violations of the rights declared by these laws, but it has also called to the attention of well-intending railroad officials and shippers the inherent wrong involved in practices which were but a few years ago prevalent.

FALSE BILLING PRACTICE STILL IS IN VOGUE.

"The false billing of freight by shippers continues. During the year a large number of instances of this kind have been investigated. In cases where it appeared possible that the offending shipper was honestly mistaken as to the proper classification under which to ship his goods a warning as to the future has been resorted to rather than prosecution. In many cases, however, the misbilling or false weighing has been clearly willful, and in all such cases prosecution has been undertaken. During the year fines for these offenses amounting to $16,750 in the aggregate have been recovered.

"A large number of other instances of false billing as to kind and weight of commodities shipped by firms in New York city have been investigated, and further indictments for this offense are expected in the southern district of New York within a short time. The temptation to the dishonest shipper to commit the offense forbidden by section 10 is in many cases so strong and the injustice resulting to competitors who scrupulously observe the law is so great that it is believed these offenses can only be effectually checked by the tendency of the courts, already observable, to increase the punishment for them.

"The amendments of 1910 to section 10 of the act make it an offense for a shipper or consignee to secure transportation at less than the published rates by means of false claims for damage. Investigation disclosed that several consignees of eggs located in New York City were, as a practice, making claims against the carriers for damage to shipments of eggs much greater in amount than the actual damage suffered. These false claims were made possible by the failure of certain agents of the carriers to properly inspect shipments before delivery. It developed that the shippers in question were bribing these agents of the carriers to discriminate in their favor by thus failing properly to inspect shipments and, further, by favoring these particular shippers of eggs with expedited service. Upon the above facts, William A. Scarborough, Charles T. Adams, De Winter & Co., John C. De Winter, E. M. Garrison, H. D. Wheeler, George Miller, R. B. Shimer & Co., H. C. Shimer, Adolph Fortang, Willard P. Brown, and W. H. Sanford were indicted for obtaining transportation at less than the lawful rate by means of false claims for damage and for inducing and also for attempting to induce agents of carriers to discriminate unjustly in their favor.

FINES AMOUNTED TO $30,000 IN PERIOD.

"All of these defendants except the last one above named have pleaded guilty. In the case of H. D. Wheeler and George Miller sentence has been suspended. Fines aggregating $30,000 have been assessed against the other defendants. F. E. Harris was also indicted in the southern district of California for making false claims, and upon pleading guilty was fined $500. These cases involved an offense by shippers for which the act provided no penalties prior to 1910. The offense of securing allowances by false claims for damage so clearly arises from a fraudulent intent and results in such substantial losses to the carriers, as well as in discrimination against other shippers, that it will be vigorously prosecuted whenever detected.

"Abuses of the transit privileges accorded by carriers were formerly explained by the failure of shippers to understand the strict requirements of the law. So much publicity, however, has been given to the proper limits within which these privileges may be used that ignorance can scarcely be urged in the future as an excuse for failing to conform strictly to the tariff rules and regulations governing these privileges. In January the Michigan Central Railroad Co. pleaded guilty of granting and Crapin & Co. of receiving concession by device of substitution in transit. Each defendant was fined $5,000.

FAILED TO COLLECT DEMURRAGE CHARGES.

"Failure on the part of several carriers to collect from certain shippers the demurrage charges lawfully filed by them has been the subject of an extended investigation. This is a kind of discrimination which is difficult of detection, because it is not disclosed by the shipping papers on which the regular transportation charges are recorded. It developed, however, that such charges were not being made by the New York Central & Hudson River Railroad Co. and the Erie Railroad Co. at Buffalo and by the Michigan Central Railroad Co. at Detroit. Indictments were brought against these carriers for granting concessions and failure to observe their lawfully published charges. The New York Central & Hudson River pleaded guilty to three distinct indictments and paid fines aggregating $30,000. The Erie Railroad Co. pleaded nolo contendere and paid a fine of $20,000. The case against the Michigan Central Railroad Co. is still pending. Other instances of this practice are now the subject of investigation.

"The year's work has been made significant because of the variety of cases in which the courts have shown a disposition to so construe the Elkins Act as to make rebating and the granting of concessions punishable, however ingenious may have been the device employed to defeat the published rates. The more important of these cases are summarized below.

"Investigation disclosed the fact that in the State of Colorado it was an established practice for certain carriers to issue free passes good only within the State for the purpose of influencing the routing of interstate shipments of freight. No violations of the antipass provisions of the act to regulate commerce were involved, since the passes applied only between points within Colorado. Such passes, however, were things of value to shippers, and when granted in connection with interstate shipments they amounted to concessions or rebates from the lawful rates. As a direct result the legislature of Colorado has enacted laws restricting the issuance of free passes between points in that State within proper limits. This case and the Imperial Rice case described above establish the proposition that concessions as to State transportation, either freight or passenger, are unlawful if allowed in connection with interstate shipments.

COAL BILLED TO FICTITIOUS DESTINATIONS.

"Two important prosecutions have been undertaken against carriers for having their company coal billed to fictitious destinations on their line in order to defeat the published rates to actual destination. Investigation showed that in the case of several hundred cars the Seaboard Air Line Railway Co. had carloads of coal shipped from Briceville, Tenn., and near-by points on the Southern Railway billed to the Seaboard Air Line at Williams, Ga. These shipments were delivered by the Southern Railway to the Seaboard Air Line at its junction at Helena, Ga. Many of the shipments were consumed at that junction point and others were diverted to other points, but none of them went to Williams, Ga., as the billing directed.

"The Seaboard Air Line was indicted in the southern district of Georgia in 13 counts for receiving a concession by the above device. An early trial in this case is anticipated. Similarly, the Grand Trunk Western Railway Co. was found to be practicing this device as to shipments of its company coal. This carrier had its coal shipped from Newark, Ohio, and near-by points on the Baltimore & Ohio Railroad, billed to Battle Creek, Mich., at a joint rate of $1.60, out of which the Baltimore & Ohio received a division of $1. The coal was actually delivered, however, at South Bend, Ind., to which the lawful joint rate was $1.55, and out of which the division of the Baltimore & Ohio was $1.15. Thus the Grand Trunk Western defeated the Baltimore & Ohio

proportion of the joint rate to South Bend to the extent of 15 cents per ton. The Grand Trunk Western Railway Co. has been indicted in the southern district of Ohio and the case is now pending.

EXHIBIT BG.

The following miscellaneous articles show the many other lines of attack taken by the press of the country. Delay in making the decision, extended unemployment, need of new capital to make necessary improvements, danger of Government ownership—all these are made use of frequently.

It is impossible to determine from what newespapers many of the articles come, since they were often sent to the Interstate Commerce Commission without such information.

Some of the newspapers have been entirely impartial in their treatment of the matter. The Christian Science Monitor is a good example of this sort of newspaper.

[From the Chicago American, April 2, 1914.]

TWO HUNDRED AND FIFTY THOUSAND RAIL MEN LOSE JOBS, OFFICIALS REPORT TO B. C. FORBES.

NEW YORK, *April 2.*

American railroads have reduced their working forces by fully 250,000 men and have cut working hours.

And this staggering total will be seriously swelled unless conditions promptly improve.

These statements are based on signed communications the American has received from the presidents of our leading railroad systems.

Normally, our railways employ approximately 1,700,000 men. A 15 per cent reduction—which is under rather than over the mark—means 255,000 men.

One point emphasized by all railroad heads is that retrenchment is not a matter of this week or last, but has been in force for several months.

Also, the reduction in force, it is pointed out, has not been equal to the falling off in net earnings.

Withdrawal of passenger trains is now engaging the attention of officers. Economy in this direction is likely to be carried a good deal further.

Among the companies already heard from with the reduction in force, as compared with a year ago, are the following:

Road:	Number men.
Pennsylvania	38,000
New York Central	25,000
Norfolk & Western	8,000
Northern Pacific	3,660
New Haven	4,500
Lehigh Valley	3,000
Baltimore & Ohio (unofficial)	10,000
Missouri Pacific (unofficial)	12,000

The following statements have been received:

NEW HAVEN DROPS 4,500.

The reduction in forces on the New Haven road on account of the decrease in earnings and poor financial conditions is equivalent to about 4,500 men, compared with the forces of November.

These reductions have been mainly in stations, yards, and shop forces.

A reduction of 1,900 train-miles a day in passenger-train service was made, effective February 15.

All improvement and construction work has been stopped or postponed, except work necessary for safety or work so far along that it could not be stopped.

HOWARD ELLIOTT.

NORFOLK & WESTERN LAYS OFF 8,000.

PHILADELPHIA, *April 1.*

Your telegram has been forwarded to me here.

My policy is at all times to hold expenses to meet business conditions, and there have been constant and continuous retrenchments on the Norfolk & Western Railway since July 1, 1913.

All work possible has been retarded and a considerable amount of additions and betterments work has been suspended and will be held in suspense until business conditions are very decidedly improved.

Passenger-train services will be maintained to meet requirements.

The property will not be permitted to depreciate either as to track or equipment.

Our gross earnings have increased from July 1, 1913, to March 1, 1914, $444,000, as compared with the same period a year ago, while net earnings for the same period have decreased $1,211,000.

From November 1, 1913, to date there have been suspended and relieved from service a total of 8,000 men, in round numbers, and still further reductions will be necessary unless business revives.

L. E. JOHNSON.

ATCHISON REDUCING EXPENSES.

We have pursued our usual policy of curtailing expenses as business decreased. However, we have not succeeded in reducing our expenses as much as our earnings have fallen off.

There has been no special curtailment since January 1.

E. P. RIPLEY.

SOUTHERN PACIFIC FORCED TO RETRENCH.

Our company's heavy loss in net earnings in this fiscal year necessarily forced us to adopt a policy of retrenchment in all branches of the service.

Our future retrenchment policy differs in no respect from that outlined above, which we have always followed in the past.

JULIUS KRUTTSCHNITT.

NORTHERN PACIFIC DROPS 3,663.

ST. PAUL, *April 1.*

To meet the situation forced upon us by less business this year than last, in February we were able to reduce train mileage 166,669 miles, compared with February last year.

The number of employees in February, 1913, was 28,037; in February, 1914, 24,374, a decrease of 3,663.

In addition to the shop force laid off, we are operating about 12 per cent short time.

We do not contemplate any material change until earnings improve.

J. M. HANNAFORD.

LEHIGH VALLEY LAYS OFF FULLY 3,000.

Lehigh Valley has laid off upward of 3,000 men, and the remaining 86 per cent of its normal force of 22,800 are working only two-thirds time.

With regard to the withdrawal of trains, nothing has been done in this connection as yet.

The management is considering making application in New York and Pennsylvania for the withdrawal of certain trains ordered by the State public service commission, which have proved unprofitable during the whole period of their operation. A few other minor trains may also be withdrawn.

ST. PAUL MADE CUTS EARLY.

The St. Paul Railway made such reductions in its force early last winter as were necessary on account of the decrease in traffic.

No further reductions are in contemplation unless there should be a further shrinkage.

A. J. EARLING.

CHICAGO & NORTHWESTERN NOT CUTTING.

Chicago & Northwestern and Omaha Railway Companies will not make any reduction in hours or forces at this time. We always have smaller forces and hours, both in maintenance of way and shops April 1, and will pursue this policy, taking effect to-day.

Increase in train mileage is made when summer travel starts, and we shall follow our usual plan in this respect.

W. A. GARDNER,
President.

M., K. & T. RETRENCHING.

Frank Trumbull, chairman of the Missouri, Kansas & Texas, said yesterday that the bad crops and floods had caused the road to start retrenching last November.

BUSINESS GOOD WITH ILLINOIS CENTRAL.

Because of the large cotton crop sold at unusually high prices, business conditions in an important part of the territory served by the Illinois Central lines have been exceptionally good. Earnings have, therefore, been so satisfactory we have not as yet found it necessary to adopt drastic methods of retrenchment.

C. H. MARKHAM.

CANADIAN PACIFIC REDUCING.

MONTREAL, *April 1.*

With the shrinkage of traffic during the last few months there has naturally been a reduction of staff, but we have made no drastic curtailment nor have we such a policy in contemplation.

T. O'SHAUGHNESSY.

PENNSYLVANIA TO DROP MORE TRAINS.

PITTSBURGH, *April 1.*

Retrenchment on the Pennsylvania lines west is to be extended. Ten passenger trains are to be taken off the Pittsburgh, Fort Wayne & Chicago Railroad next Sunday, six of them suburban trains. Shop forces also are being reduced.

[From the Tribune, East Liverpool (Ohio), January 21, 1914.]

DELAY IN RAILROAD CASE.

The feeling of the public relative to the reported intention of the Interstate Commerce Commission to take no definite action as to the 5 per cent advance in freight rates until the railroads have supplied most of the data called for by Mr. Brandeis's 78 questions is undoubtedly one of disappointment.

There are in the hands of the commission appeals from representative commercial organizations and from associations of purely shipping interests—the latter being the interests which will be directly affected by a rate advance—urging early if not immediate action. Some misapprehension seems to exist, however, as to the scope of the decision which the commission will make. A New York newspaper reveals this misapprehension in the suggestion that the commission make its decision now with the provision that in cases where rates should be subsequently found unfair they should be corrected with allowance for the overcharges made to the shipper.

That the commission would attempt to fix any individual rates as to specific commodities in connection with the pending application is highly improbable. The decisions will have to do merely with whether there shall be a horizontal advance in rate or not. It is said that if the commission attempted to consider the individual rates involved it would require several years more at least to complete the case.—Financial America.

[From the Utica (N. Y.) Observer, December 29, 1913.]

RAILROAD WAGES.

One of the strong arguments made by the railroads for an increase in rates is the increasing amount of wages which they are paying to employees. The records of the New York Central show that since 1910 it has paid $10,000,000 more than it would have paid if the increases in wages had not been made. In the year ending June 30, 1913, the railroads concerned in the application before the Interstate Commerce Commission paid $506,000,000 in wages and salaries. Estimates for the 29 of the 38 eastern systems shows an increase in wages for 1913 over 1910 of $48,618,927, due to increased pay and changes in working conditions. There has been an increase of 10.62 per cent in the average rates of pay on the eastern railroads during the past three years.

[From the Joplin (Mo.) Globe, January 23, 1914.]

WAITING.

It is expected that this week the Interstate Commerce Commission will continue the hearing on the proposed 5 per cent increase of freight

rates for eastern railroads. Unquestionably, interest in the outcome of this case and anxiety to have some decision reached is constantly increasing. It is reported that President Wilson has suggested that an early ruling would be helpful, and it is presumed the commission will do all in its power to hasten its investigation.

An interesting change in sentiment is reported from New York anent the rate-raise proposition. It will be remembered some of these eastern railroads asked for permission to establish higher tariffs in 1910 and their application was turned down. A representative from the Journal of Commerce, of New York, recently interviewed a number of shippers who actively participated in the opposition to the raise at that time and discovered that most of them now believe higher rates should be allowed.

Public sentiment has changed immensely in the past few years. Says the Journal:

"Despite the fact that individual and important shippers of such commodities as petroleum, coal, cement, brick, plaster, flour, packing-house products, iron and steel articles, lumber, and other products will shortly register their objection before the Interstate Commerce Commission against the proposed rate advances upon their respective commodities, local investigation in three of these lines and other industries proves conclusively that there are many shippers who are strongly in favor of granting an immediate increase to the carriers, and express their willingness, in the interest of general trade expansion, to contribute the additional rates."

If a favorable decision on the petition of the railroads should be handed down in February or March it would be a tremendous stimulus throughout the entire business world.

—

[From the Wilmington (Del.) Journal, January 21, 1914.]

CHAMBER FAVORS INCREASED RATES.

Civic organizations, corporations, firms, and individuals in all sections of the East are going on record as being in favor of the Interstate Commerce Commission giving to the eastern railroads the right to increase freight rates 5 per cent. They take the position that it is of prime importance to the industrial and commercial interests of the country that the railroads be put on a proper financial footing, and that as the present freight rates are too low to produce revenues sufficient to meet operating expenses and depreciation and to pay adequate returns to investors in railroad securities the increase asked for should be allowed.

In view of the favorable attitude taken by many other civic organizations it is not surprising that the Wilmington Chamber of Commerce has fallen in line. Its members seem to feel that it would be better business to pay a little more for good freight service than to pay the existing rate for what ultimately would become poor service because of inadequate returns and the inability of the railroads to keep it up to the standard desired.

—

[Providence (R. I.) Journal, January 25, 1914.]

HEARINGS FOR SHIPPERS.

Shippers who object to a 5 per cent advance in freight rates are to be given six weeks for presenting their protests to the Interstate Commerce Commission, the time being divided between the dealers in different commodities—oil, ice, cement, pipe, glass, stone, leather, shoes, timber, hay, grain and other products. The presumption is that the oil men will be found willing to have higher rates on salt and that the salt merchants will offer no remonstrance against an increase on boots and shoes. Each class naturally will desire to be let alone. It will be impossible to please every interest, and the duty of the commission is to decide whether or not the railroads are justly entitled to the new revenue without reference to any particular line of industry. Probably very little testimony would be offered if the hearings were open only to dealers who have not raised their prices to correspond with the higher wage schedules and other factors which add to the cost of doing business. Shippers who have done what the railroads wish to do can not consisttently oppose a moderate increase in freight rates.

—

[From the Financial America (N. Y.), January 28, 1914.]

RAILROAD OIL RATES.

Much justice lies in the arguments of the independent oil refiners presented before the Interstate Commerce Commission relative to the effects which the general 5 per cent freight rate increase sought by the railroads would have upon their business. But it is difficult to see how the matter can be adjusted. It is the misfortune of the independent companies that they do not possess pipe-line facilities which give the Standard Oil companies such as decided advantage.

Much interest will wait upon the supplementary evidence as to this point which the railroads expect to present. There is no reason to believe that the carriers have had a discriminating purpose in the proposed tariffs as to oil, nor that the Standard Oil interests have made any effort, relative to the new schedules, to obtain an advantage.

The situation is a natural result of conditions whose causes may be found, of course, only by harking back to the earlier history of the development of the petroleum industry in this country. The fact that the price of crude oil from the Pennsylvania fields to independents has risen from $1.30 to $2.77 a barrel, according to the statements of independent refiners, in the last 20 months, with no proportionate advance in sale prices, is a matter for adjustment through other means than in connection with the present freight rate question.

It is only fair, with the railroads obtaining the privilege of entering supplementary evidence as to the relation of the new schedules to the carriage of oil products, that the independent refiners also be given the right to make other formal protest. At the same time it is to be hoped that the presentation of additional arguments will not result in delaying a decision by the Interstate Commerce Commission as to the general question for business at large is waiting impatiently upon the result.

—

[From the Philadelphia Public Ledger, Jan. 26, 1914.]

It may be just as well for the Interstate Commerce Commission, if it decides in favor of the 5 per cent increase in rates, to specify likewise that the action is not intended as an invitation to the employees to demand a sufficient increase to absorb the additional revenue of the roads. Already the temptation for college professors to become conductors is more than some of them can bear.

[From the Providence (R. I.) Journal, Jan. 24, 1914.]

ABILITY AND FAIRNESS NEEDED.

Whether or not railroad development is to be resumed may be dependent upon the President, who is required to fill two vacancies in the Interstate Commerce Commission. It is stated that three of the five members favor the 5 per cent advance and that two are disinclined to take any action which will encourage investors to put their money into railroad securities and thus insure the extensive improvements which the country needs. The importance of selecting two men of broad views and sound judgment to pass upon the rate question is obvious. The Interstate Commerce Commission is no place for demagogues. The President can not be too careful in his selections, as the rate advance is to be decided by the full board.

—

[From the New York Times, Jan. 27, 1914.]

HODGEPODGE RATE REGULATION.

The Interstate Commerce Commission began yesterday a six weeks' hearing of protests against advances of specific commodity freight rates under the railways' request for a general living wage. When the railways propose to advance commodity rates they are advised to make a general advance which will not disturb the relation of rates. That happens to be the answer made to the express companies by the commission on the same day that it begins a not altogether consistent policy with reference to the railways' 5 per cent advance all around. To the express companies the commission says it is "unwilling to consider the reasonableness of individual rates on particular commodities until after it is found how the general reduction in express rates is going to affect the express companies." Can it be that the commission does not care how the railways are affected by a rate schedule declared to be too low which they wish to raise ratably?

Also of concurrent interest is the elaborate address by Commissioner Prouty declaring that experience has led him to alter his opinions about rates. Consistency is the vice of small minds, and nobody would deny that the commissioner has had experience enough to change his mind without reproach. He used to favor elasticity of rates, he says, but now he thinks that stability of rates is better for both railways and shippers. He says that within 10 days there were 15,000 advances and 29,000 reductions of freight rates, and 60,000 advances and 86,000 reductions of passenger rates. In express tariffs there were 4,000 advances and 32,000 reductions. It seems that the commission is rather bewildered by its job, and has the feeling of the passengers on a steamship who want the captain to hold the boat still. Now Mr. Prouty admits that there must be seasonal rates and emergency rates and various other changes of a compulsory sort, but the great mass of rates should be of the same permanency as the laws which have made rates laws. He was not disposed then and there to argue whether it would be a physical possibility for the commission to make all the rates, but he was sure that the railways ought not to make them. There is no hope until the commission makes all rates and classifications and generally takes charge of the railways in all respects except—it may be imagined—guaranteeing the balance between their incomes and expenditures.

As much might be guessed by the commission undertaking hearings on a schedule already fixed until March, and beyond. The indispensable Mr. Brandeis has responded to an invitation from Mayor-elect Curley to straighten out Boston's affairs, "that he is so engrossed with his work for the Interstate Commerce Commission that he will be unable to take on other work until November." Nobody could expect the commission to make a decision on such a difficult subject without some months' deliberation. By that time—say in 1915—it may be hoped that the railways' affairs will be so prosperous that there will be full justification for the commission's decision that the petitioned advance is not then justified. The time to have allowed it, of course, was when shippers did not care what rates they paid if only they could get transportation. Then business could have borne the added burden, and when the present lean time came it would have been possible—if elasticity of rates were desirable—to reduce rates and stimulate traffic. It is evident that stability of rates is better. It saves the commission an impossible task, or a task which would be possible only when the laws exactly suit the commission. It might be as well to abandon hope that the rates will suit the railways until the laws suit the commission.

Meanwhile, if the curiosity is pardonable, it might be asked on what principles the commission would base its action when it gets the facts rates whatever, and suits have been brought to compel the commis- decisions have been challenged as sharing the unreason of any railway rates whatever, and suits have been brought to compel the commission to justify the reason of its rates. But that is absurd. Only the railways are held to the rule of reason. The commission is sole judge of facts and legislates rates. The duty of the railways it not to reason why, but to do or die.

—

[From the Indianapolis News, Jan. 10, 1914.]

THE RAILROAD OUTLOOK.

In preparing its annual financial review, the New York Evening Post called on the heads of a number of the great railroads of the country for predictions as to the new year. The consensus of opinion was that railroad business during the first part of 1914 would not be so good as that during the corresponding period of 1913, but that conditions probably would improve as the year advanced. The principal unfavorable factor is the short corn crop. Corn, according to its scarcity or plentifulness, affects first of all the live-stock market. Its minor influences are, in due time, noticeable in many lines of merchandise on the transportation of which the railroads largely depend for income.

But as to the final reckoning for 1914 no one can say. The crops of 1914 we know nothing of, except that the prospect is now good. On the year's crops depends the condition of many of the railroads. The officials interviewed by the Evening Post are, almost without exception, certain that the Interstate Commerce Commission will grant the 5 per cent increase in freight rates recently asked by the railroads operating in the territory east of the Mississippi River and north of the Ohio and Potomac Rivers. On the whole, the eastern presidents express more confidence than do those of the West. President Ripley, of the Santa Fe, is much discouraged. This is hard to understand, considering that another western road—the Missouri Pacific—does not see all things through smoked glasses.

The officials unite in predicting that Government ownership is inevitable unless the common carriers are enabled to make adequate returns on their investments. But they do not believe that Government owner-

ship will develop. Some of them—and particularly the wiser ones—point to the expressions of disapproval of Government ownership which are heard from the public in all parts of the country. A. H. Smith, who, on January 1, succeeded W. C. Brown as president of the New York Central, takes a common-sense view of the situation. As to the future he says: "Await the harvest of 1914." He believes that rate increases are imperative and observes that if the Government would regulate it also must protect. He says: "The favorable points in the railway situation appear to be that the railroads and the people, as represented by the Government, have no widely divergent opinions as to railroad regulation. The major portion of the national regulation thus far enacted has upon the whole been helpful." Mr. Smith anticipates further regulation, but he believes that this regulation will tend to do away with points of conflict. One and all, the railroad men believe that an immediate increase in rates is necessary. This is the opinion expressed by some who, while not in the railroad business, realize how necessary railroad prosperity is to general business prosperity.

—

[From the Providence (R. I.) Journal, Jan. 23, 1914.]

THE PRESIDENT AND THE RAILROADS.

President Wilson in his plan for the betterment of business conditions presented to Congress yesterday, made it clear that "the prosperity of the railroads and the prosperity of the people are inseparably connected," and that the railroads should be supplied with "the money they need for their proper development to meet the rapidly growing requirements of the country for increased and improved facilities of transportation." This may be interpreted as a suggestion to the Interstate Commerce Commission to discontinue its "policy of strangulation" and to heed the general demand for the restoration of railroad credit. The railroads have proved that investors are neglecting railroad securities because the Government cuts down their earnings and increases the cost of operation. The country, accordingly, is damaged because railroad development is checked, and the 5 per cent advance asked by no means covers the rising cost of labor and commodities and the extraordinary increases in taxation.

The Interstate Commerce Commission's program as laid out is very suggestive of delay. There is no need of reviewing ancient history in minute detail; the commission has regulated rates for many years without the statistics required by the long list of questions, and the probability is that much of the information demanded is already on file in Washington. The point is that there will be no business revival until the railroads are enabled to place large orders. The records show that expenses are becoming more and more burdensome and that net earnings are disappearing. A prompt decision on rates is necessary, and the country is not inclined to favor months of haggling by lawyers over petty details. More plain talk by the President will hasten the business improvement for which all are waiting.

—

[From the Providence (R. I.) Journal, Dec. 30, 1913.]

REVISION OF PASSENGER RATES.

Why should passengers be exempt from rate increases? Apparently the Interstate Commerce Commission and the State commissions in the Boston and Maine territory believe that passengers as well as shippers should contribute something toward paying the higher wages and taxes which are principally responsible for the financial troubles of the road. The higher levels at present appear to be permanent; and in the readjustment no class of railroad patrons should be favored. The new passenger schedules now under consideration emphasize the fact that the public which approves the jumping of wages and taxes can not in the long run escape paying its proportion of the increased cost of doing business.

—

[From the Chicago Evening Post, Dec. 30, 1913.]

Employees of the Baltimore & Ohio Railroad at Newark, Ohio, are circulating a petition to the Interstate Commerce Commission asking that the application of the eastern railroads for the increase in freight rates be granted. The petition is being circulated in business circles, shippers, merchants, jobbers, buyers, public officials, professional men and others showing a willingness to sign it. Several hundred names have been affixed to the document.

The petition is being circulated on the initiative of the railroad men themselves and has the indorsement of all classes of employees.

The communication sets forth that the application of the railroads is believed to be wholly within reason, in view of the concessions made during recent years to employees, the higher cost of material and supplies and other items of expense having to be met. It also points out that both freight and passenger rates have been raised on foreign roads, while during the same period in this country many of the rates have been reduced.

"The undersigned urgently solicit your favorable consideration of the request for an increase in freight rates," reads the petition, "in order that railroad facilities may be developed to meet the demands of constantly increasing traffic."

—

[From the St. Louis Times.]

AN IMPERATIVE NEED.

At a recent dinner given at the Lotus Club in New York City in honor of Mr. Howard Elliott, a former citizen of St. Louis, the following statement was made by one of the speakers:

"The railroads have expended in improvements, extensions, and betterments for the people within the last three years nearly $660,000,000. Their gross receipts have increased about $200,000,000, but owing to the increase in wages in 1910 and 1913, amounting to over $60,000,000, and the increase in the cost of materials, the net this year was $16,000,000 less than it was three years ago. In other owrds, the railroads have not received a dollar of return upon their investment of $660,000,000 paid out wholly for the public convenience and benefit."

The speaker had prepared his figures from the latest statistics obtainable. We have no reason to doubt that these astounding figures are correct. If they are, the St. Louis Times feels compelled to call upon every merchant and every shipper, regardless of what his business may be, to use his influence, directly and indirectly, to bring about a condition whereby the Interstate Commerce Commission, as well as the public-service commissions of the several States, will realize it is the wish of the merchant, the shipper, and the public that the railroads be granted permission to advance rates to such an extent as will enable them to earn a fair return upon the capital invested.

This newspaper has for many months advocated the cause of the railroads, and has in recent months been supported, editorially and otherwise, by many papers published throughout the State. It is a fact well known that the railroads have been and still are retrenching and cutting down expenses wherever possible, because, under existing conditions, they are unable to show a fair interest return on the capital invested. Unless the railroads are permitted to show a return on the moneys already invested, it will be impossible to obtain new capital, because moneyed men will refuse to enter an enterprise which they know in advance will bring no return.

Capital, like labor, must earn and receive a fair and honest return. We sincerely hope the business men, manufacturers, and shippers, not only of this city and State, but of the entire United States, will unite in creating and establishing a sentiment in behalf of increased rates for the railroads, and will join in taking the necessary steps to enforce a demand for such higher rates.

An alarming condition, such as above reported, not only offers food for reflection, but demands action. A failure to act will mean a halting of prosperity and may possibly mean insolvency and bankruptcy for the railroads. The St. Louis Times believes in progress and prosperity, and for that reason calls upon Missouri, and its public-service commission, to extend a helping hand to the railroads.

—

[From the Miami (Fla.) Herald, Dec. 23, 1913.]

When the bill to create the Interstate Commerce Commission was pending in 1887, Cleveland being President, the bill was "viewed with alarm" just as the Underwood tariff bill was "viewed" and as the pending currency bill is now looked upon. John S. Williams, Assistant Secretary of the United States Treasury, has recalled some of the wild prophecies which the standpat men of those days uttered in connection with this legislation which has proved most valuable to the public and to the railroads themselves. The type is probably useful as a balance wheel to progress, although at times it causes delays during which "vexation," "disaster," "fatality," "uncertainty," and other evils are visible realities.—Attica Observer.

—

[From the Washington Post, December 29, 1913.]

DELAYING ACTION ON RATES.

Can the Government afford to play fast and loose with the railroads in the matter of an advance of 5 per cent in freight rates?

The Interstate Commerce Commission a while ago called upon the railroads for a mass of information, statistical and otherwise, which, it was stated, was to be used as a basis for determining the justice of the request for an increase in earning capacity. There is no complaint of failure to comply with the commission's orders. The desired data were submitted, hearings held for presentation of testimony and argument by both shippers and carriers, the inquiry closed, and the case taken under consideration for final decision. There is no public protest in any quarter against giving the railroads the square deal as between the public service they perform and the public that is served.

Suddenly and inexplicably the case is reopened by the commission. It is given out, apologetically, that while the railroads have submitted elaborate and helpful information showing losses in net operating returns and net income, "fundamental questions" have arisen in the proceeding which, the commission now feels, call for a world of additional necessary data in order to determine "the general course carriers may pursue to meet the situation," whatever that vague and unsatisfying use of terms may mean.

If at this late day the commission discovers that it has merely scratched the surface of the rate question, and must practically begin over again, the query presses for a response as to how far into the future the commission has flung definite reply to the request of the railroads. The circular calling for exhaustive information, which admittedly goes to the heart of both physical and financial operations of railroads throughout the years of their promotion and existence, fixes upon a month, expiring January 31, as ample time for the roads to comply with the order.

Scrutiny of the bill of particulars, however, shows that the data in question virtually are in detail and bulk what the physical valuation law authorizes the Interstate Commerce Commission to collect, classify, and publish—a monumental work, which the commission itself figures will require several years to complete, at an outlay of $3,000,000 to $5,000,000 by the Government and a still larger sum by the railroads.

As outlined in the law, the stupendous task presents almost insuperable difficulties to a full accomplishment of the object sought, and the fact that the commission is devoting a year to preliminary work before entering upon the collection and preparation of historical and financial data goes to emphasize the strangeness of its action in arbitrarily limiting the roads to 4 weeks' grace.

What does this new move suggest? Does the Interstate Commerce Commission mean to delay indefinitely its response to the railroads on the rate question, or does it seek to shift the entire burden of physical valuation, both time and cost, onto the shoulders of the roads, or both?

Is it in consonance with the "constitution of peace" between Government and business thus to postpone and complicate a question affecting the entire public, and which should be speedily determined one way or the other?

—

[From the St. Louis Globe Democrat, January 21, 1914.]

HIGHER RATES URGED BY UNDERWOOD.

President Frederick D. Underwood of the Erie Railroad says: "I anticipate that the volume of business done by the railways of the country will be less this year than last, and that the net results will be smaller accordingly. Nobody can forecast the decision of the Interstate Commerce Commission as to the advance in freight rates asked by the railroads. The most conclusive argument I know of in favor of such an increase is that the railroads can not go on with the improvements necessary for the use and benefit of the public on their present net income. If the railways have no money to spend for enlargements, the damage to general business will be quickly apparent. The 5 per cent advance in rates which has been asked for will work no direct hardship upon any class of people, while it is an axiom that hard times for railways are hard times for almost everybody."

—

[From the Financial America, New York, January 14, 1914.]

LEATHER MEN FAVOR FREIGHT RATE RAISE.

At meetings of hide and leather merchants in this city resolutions were adopted favoring the 5 per cent freight rate increase desired by eastern railroads and the Interstate Commerce Commission was urged to grant the same.

[From the Reading, Pa., Telegram, January 12, 1914.]

The Interstate Commerce Commission has received hundreds of letters from shippers and mercantile associations asking that the request of the railroads for a 5 per cent increase in freight rates be granted.

—

[From the New York World, Jan. 18, 1914.]

WHERE TO BEGIN IN RAILROAD WASTE.

John Wanamaker, in his paper to the Traffic Club of Philadelphia, very properly calls attention to the fact that a 5 per cent increase in railroad freight rates would add $50,000,000 to the burden on the public and the cost of living. He is right in emphasizing the need of greater economy and efficiency in railroad operation. He is right in intimating that the Government itself might find room for work along this line. He would have been right in adding that a Government which probably wastes $300,000,000 in expending $1,000,000,000 is in a poor position to preach economy and efficiency to the railroads.

But what the roads could do in reducing expenses had they been more honestly managed and more effectively regulated in the past is one thing. What they can do now under increased labor cost forced upon them by Government arbitration and State full-crew laws, and under contract obligations needlessly and often dishonestly incurred, is another thing less easy to prove.

It is more important now to close up the gaps of public regulation against future railroad waste than prolong a quarrel over so small a rate advance as 5 per cent. No such advance can be as important against the public economy as public regulation of future security issues will be on behalf of that economy.

The Interstate Commerce Commission can revoke a rate advance if experience condemns it as needless. But there is no recalling needless capital issues after they have once been made. Congress can not too speedily enact a law giving power to the commission in regulation of interstate railroad stocks and bonds.

—

[From the Mobile (Ala.) Item, Dec. 30, 1913.]

LAW FOR RAIL SUPERVISION.

With many of the most important railroad corporations acquiescing in the proposition, Congress is waking up to the fact that this is the psychological moment for the enactment of legislation providing Government supervision of railway financing and operation.

The advocates of such an enlargement of the authority of the Interstate Commerce Commission are encouraged by a perusal of the statements of railroad officials approving the suggestion. The presentation of the views of the carriers has given impetus to the movement in Congress for the passage of this legislation and an effort is to be made to obtain consideration of the question soon after the holiday recess.

One suggestion which the Democratic leaders in the House have under advisement is that a bill be passed granting a 5 per cent increase of rates, but further providing that such advance may be enjoyed only by those railroads accepting Government supervision of their financing. This plan of coupling such legislation with a freight-rate advance has been suggested as a means of heading off railroad opposition to regulation of security issues on the ground that it is unconstitutional. The railroad-securities commission appointed by ex-President Taft expressed doubts of its constitutionality.

This proposal is abhorrent to the members of the Interstate Commission, however, who brand it as a proposed purchase of a concession by the railroads. They regard it as a bargain that is not ethical, and contend that the justification of a freight-rate advance should be decided on its merits. Many Members of Congress share this view, contending that by authorizing higher freight charges in return for acquiescence in Government regulation of securities Congress merely would be buying what it has a right to require of the railroads.

—

[From the Richmond (Va.) Journal, Jan. 10, 1914.]

TAKING ITS TIME.

The efficiency of the Interstate Commerce Commission may be questioned. Undoubtedly it is composed of able men, almost without exception, and, in the main, it has an excellent record since it was clothed with real powers by the rate act of 1906.

The criticism which properly may be made of the commission is the deliberateness with which it is proceeding in the matter of passing upon the petition of the railway companies of the East to be allowed to make a general advance of 5 per cent in freight rates. The railways say that it is imperative that the advance be allowed if the companies are to meet their obligations—that is, interest on bonds—to say nothing of reasonable dividends. We believe the majority of those who have given the subject thought realize that the railways are entirely justified in making this demand. It also is realized that the general business of the country, as well as the railway business, would benefit through the increased prosperity of the roads following the granting of the advance in rates.

Yet, despite the overshadowing importance of the subject, and the fact that the commission has had it under consideration for months, no decision has been rendered, nor is there indication that one will be forthcoming at any early day. A decision adverse to the railways would be better for all concerned than the present state of uncertainty prevailing by reason of no decision at all.

—

[From the Rochester (N. Y.) Democrat and Chronicle, Dec. 29, 1913.]

RELIEF STILL WITHHELD.

The fact that the Interstate Commerce Commission has called for a mass of additional statistics from the railroads in the eastern territory seeking to increase freight rates 5 per cent will be rather discouraging to those who had hoped for an early resumption of railroad prosperity.

The railroads have already submitted figures showing that wages for 1913 on 20 of the 38 roads under investigation have increased $48,618,972.41 over 1910, due to changes in rates of pay and working conditions. In addition, increases in wages of firemen, conductors, and trainmen since last June, when the figures were compiled, will add about $8,750,000 to this sum.

Figures have also been submitted showing that the advance in the cost of material has kept pace with the advance in wages. The Interstate Commerce Commission, however, calls for information about the financial history of the roads, the financial interests of directors, officers, and employees as parties "to transactions in which the roads also are parties," sleeping-car contracts, parlor-car contracts, and the purchase of equipment and supplies and the uses made of them.

All these things might be pertinent to an exhaustive inquiry into railroad financiering, but the demand for such information now must postpone the granting of the relief asked. It is a matter of very little importance, in connection with the present investigation, what the practice in the matter of the purchase of supplies and equipment may have been, or what the nature of the contracts with sleeping-car and parlor-car companies.

The companies have presented proof that their expenses have materially increased since the present freight rates were established. Abundant evidence is available that the net returns of the railroads have decreased, that they are obliged to borrow money at high rates of interest to carry on needed improvements, and that the only way their revenue can be increased is by raising freight rates. Mr. Brandeis, who has an old quarrel with railroad financiers, is presumably at the bottom of this move to put the railroads to enormous trouble and labor to obtain facts that have only an indirect bearing on the present situation.

—

[From the Philadelphia Bulletin, Jan. 21, 1914.]

MAKING HASTE SLOWLY.

Announcement is made that the Interstate Commerce Commission, having become impressed with the serious situation in the railroad world, will undertake to "expedite" consideration of the 5 per cent freight rate increase on the eastern trunk lines now before it, and to that end will resume hearings next week, to continue for more than a month, ostensibly to give protesting shippers a chance to be heard, although commercial organizations all over the country are signifying by individual petition and formal vote their approval of the requested increase. Four months will have elapsed Friday since the railroads made application for approval of this increase of rates, alleging that they were necessary to provide for the increased cost of operation and to afford a margin not only for the payment of fixed charges and reasonable dividends, but to enable the expenditure for maintenance and upkeep required for safety and efficiency.

Monday, the commission made public its official report of the operating income and expenditures of the railroads of the country for the month of November, showing not only an increase in operating expenditure, but a decrease in operating revenue and fully confirming all that had been asserted by the railroads in the original presentation of their case, which had been otherwise confirmed and corroborated in arguments and briefs presented to the commission.

But, in spite of the fact that all this information is, and has been, in the possession of the commission, there has just been sent out to the petitioning railroads the revised Brandeis catechism, shortened and simplified it is said, and yet calling for compilations which it is admitted by the commission will require the greater part of a month to complete, and an indefinite time thereafter to digest and to apply to the problem before them.

Granting the desire of the commission to "expedite" its proceedings it appears that the middle of March, or nearly six months after the railroads formally presented their case of need, will be the earliest possible date of decree. In the meantime the busiest season of the railroads will have passed, nearly a half year's business will have been hauled at inadequate rates, losses will have been sustained that will not be made up in the balance of the year. If Government regulation is to be of practical service it must develop greater efficiency than this. When the arbitrators on wage increases, acting under semiofficial sanction, made their recommendation of higher wages, their decree was retroactive. The railroads do not ask for such a privilege in the application of their new freight schedules, but if they are entitled justly to their increase, it should be granted with reasonable promptitude.

—

[From Providence (R. I.) Journal, Jan. 14, 1914.]

BUSINESS, NOT POLITICS.

Now it appears that railroad employees are taking an active interest in the application of the eastern roads for a 5 per cent advance in freight rates. The Interstate Commerce Commission is receiving notices that the men in all departments favor the granting of the pending petition. The wage earners on the Baltimore & Ohio are among the first to urge the necessity of the advance; and, of course, they are in a position to speak with authority as to the cuts made in earnings by repeated raises in wages under Government authority. The Baltimore & Ohio men take the ground that higher wages and constantly increasing taxes and prices of materials call for larger revenues. They appreciate the fact that the railroads can not go on for an indefinite period under present conditions and that the stopping of railroad improvements because of a lack of money is not in the interest of men who have families dependent upon them. They emphasize the fact that in foreign countries freight and passenger rates have been raised and that in this country the Interstate Commerce Commission has ordered numerous reductions despite the rising operating costs which the railroads have no means of controlling.

What effect the action of the railroad employees will have on the rate decision can not, of course, be predicted. Doubtless the Interstate Commerce Commission is full aware of the needs of the railroads, for the records in Washington show most conclusively that while gross revenue increased the net earnings decreased, the losses being largely due to the wage awards made by commissions acting under Federal laws. But the movement of the wage earners is not without significance; it proves that the policy of strangulation is not favored by that large part of the public which is directly supported by the railroads. Stagnation in the wide field of transportation caused by the unremunerative rates forced upon the common carriers is certain to check the general revival of business which all are awaiting. The halting of the activities of the country is certain to be charged to the party in power; and a refusal of the petition for reasonable freight rates would have a depressing effect upon all lines of industry. The natural result would be the concentration of the attention of idle workers upon the congressional elections; and if the thousands of railroad men suspect that their interests are not receiving due consideration they might easily be induced to vote for candidates who are opposed to the administration.

It is better, however, to keep the rate question out of politics. Many business men in different States have served formal notice of their indorsement of the proposed 5 per cent advance, believing that the restoration of railroad credit is essential to a revival of trade. The arguments for the increase are convincing. The commission is asked for justice. A prompt decision should be rendered. If the case drags along for months it may become a factor in the fall elections. It should be disposed of without delay to the end that the railroads may be enabled to provide the improvements which the people need. It is a question of business, not one of politics, although a decision which appeals to business men will not damage the administration.

[From the Chicago Inter-Ocean, Jan. 17, 1914.]

SHIPPERS ASK HIGHER RAILWAY RATES.

The directors of the National Business League of America, at their meeting in Chicago Thursday unanimously adopted resolutions asking the Interstate Commerce Commission to permit the railways to make "an immediate uniform increase of not less than 5 per cent" in freight rates.

The National Business League is a Nation-wide association of prominent business men, mostly merchants and manufacturers. That is, their interest is that of the shipper—the buyer of railway service. While many of its directors are residents in and near Chicago, these resolutions do not express merely a local opinion but also that of the affiliated organizations in 30 States, ascertained through their vice presidents of the national association.

This is probably the first time that any large number of shippers has asked that freight rates be increased. The reasons for this about-face on the part of so many representative shippers are clearly shown by the resolutions adopted, of which we present the substance:

"Sufficient and efficient transportation is necessary to the prosperity of the whole country. * * * We believe that the present net earnings of the railways are insufficient for the proper maintenance of equipment, extension of facilities, efficient service, and safety of life and property, resulting also in curtailment of purchases from dependent industries, which seriously cripples the general business of the country."

Therefore the grant of permission to increase rates is asked "as a necessary measure, imperative to the prosperity of carrier, shipper, and business interests generally."

The logic of this is conclusive. The reaching of a conclusion so logical is a gratifying sign of a renewed perception of the truth that in the long run all material interests of the American people must go up or down together, and of emergence from the delusion that it is possible to impoverish and pull down the transportation industry without all of us suffering in the end and paying for the folly.

Theoretical "railway economists," such as Louis D. Brandeis, will continue to argue, of course, that what the railways need is not higher rates but "more efficiency." Here and there a prominent business man will still insist on what is, under existing conditions, putting the cart before the horse. We note that John Wanamaker is quoted as so doing. These gentlemen seem to forget that before improvements can be made there must be means, or a good prospect of means, with which to pay for them. Efficiency must often wait for income to support it. If Mr. Wanamaker will look back he will doubtless remember days when he had to get along with poorer equipment and less competent help than he wanted, because he could not yet afford to buy better.

That is, broadly speaking, the position of the railways. Under pressure of public sentiment which too long remembered injuries and forgot benefits, they have been brought by governmental power to semi-starvation. It is absurd to ask that a half-starved man or industry show the highest efficiency.

The Interstate Commerce Commission and the Wilson administration will do well to heed the counsel of the shippers. No administration can be popular or partly retain power whose name has become a synonym for industrial depression and business paralysis.

[From the Joplin (Mo.) Globe, January 14, 1914.]

A PLEA FOR BUSINESS.

Business activity is an accurate barometer of our Nation's prosperity. When business is checked, prosperity takes wings. And business is quite easily checked. The wheels of industry are as delicate as the works of fine watches, and while, like them, they may be slowed down or brought to a full stop without being seriously or permanently injured, the blessing of their steady operation is certain to be lost to their owners. Somebody always suffers, and temporarily it makes no difference whether the mainspring of industry is actually broken or merely slipped off its pinion.

It is conceded that the new tariff and currency bills will do much toward lifting the country from the slough of business despondency into which it has fallen. But they are not enough. If to their galvanizing influence could be added favorable action by the Interstate Commerce Commission upon the application of eastern railroads for a 5 per cent increase in freight rates, we might expect an immediate immense betterment of business conditions.

A large per cent of the slack in business to-day must be laid at the door of overenthusiasm in "regulating" the railroads. State after State and the Nation itself have enacted stringent laws and rules, presumably looking toward control, but actually acting as harassment of the railroads. Rates have been lowered in many cases when good business demanded that they be kept where they were or raised. The regulation has been so persistent and continual that investors have been frightened and it is virtually impossible for roads to raise money for needed improvements.

Considering how important railroads are in our industrial world, it is not strange that hampering them should result similarly to dropping a grain of wheat into the works of a watch. When railroads quit buying steel rails, steel companies make smaller profits, lay off men, and quotations on steel stock decline in open market. Taken just by itself, the coincidental decline of two such mighty industrial stocks as railroads and steel is quite enough to "bear" the entire market, cause investors to become frightened and discouraged and sell, and thus bring about general business depression.

But the mainspring of industry is not broken; it has merely slipped its pinion. Agriculturally, the country is in better shape than ever before. If immediate official and popular recognition could be given to the fact that the well-being of the railroad industry is of tremendous importance we would have an immediate return to full prosperity. If, for instance, the 5 per cent increase in freight rates asked by the eastern roads should be authorized, it would constitute a wedge that would split the hard-times talk wide open. To this extent the Interstate Commerce Commission, and not Congress, holds the key to the present situation.

[From the Philadelphia Enquirer, January 22, 1914.]

RATE HEARING DRAGS ON.

By order of the Interstate Commerce Commission hearings of witnesses against rate increases will take place from January 26 to March 5. Thereafter we may expect testimony in rebuttal, long arguments which may take weeks, and then the commission will take the matter under advisement and render a decision when it gets good and ready. It is not likely that an answer will be given before the late spring or early summer.

Why all this delay?

Months have already elapsed since the first application was made. The commission has demanded an immense amount of statistical information which can be of no possible use to it in deciding what is after all a broad principle. The membership of the commission includes men of practical experience. It is not a court governed by any ancient laws of procedure. It is composed mostly of laymen who are supposed to have common sense, to be able to see things before their eyes.

Whether or not the railways deserve a 5 per cent increase in freight rates is not to be settled by figures in camera. Every sensible person knows that the railway industry has been suffering through many months' lack of income; that because of this lack of net income it is impossible to borrow money for needed improvements, extensions, and betterments. The railways say that they can get the money and start a thousand industries if their requests are granted. The bankers say the money can be forthcoming immediately. The manufacturers say they are waiting only for the grant to start up at high speed.

Could anything be simpler than that? Ought not men of common sense to be able to decide inside of a week whether these statements are true or false? The constant delay is an injustice to business and an injustice to the army of unemployed. It is unfair to postpone so momentous a decision. Any private business would go to ruin quickly under such management.

And what do the railways ask?

They ask the enormous increase in rates of 1 cent for carrying a ton of freight 20 to 30 miles. That is all. Can anyone believe that this will injure any individual or industry? The commission probably knows very well at present what it will do. It ought to have given its decision months ago.

[From the Chicago Daily News, Jan. 27, 1914.]

PSYCHOLOGY OF A RAIL RATE ADVANCE.

There is a disposition in some quarters to favor the request of the railroads for a 5 per cent advance in freight rates on the ground that it would have an important psychological effect beneficial to business. The argument is entitled to some consideration. Still, it is not apparent at first sight how business in general could be improved by an increase in the cost of transporting raw materials for manufacture and also in the cost of sending the finished products to market.

If, however, the railroads are entitled to the suggested increase, the act of the Federal authorities in recognizing the justice of the demand would doubtless be beneficial in its general effect. The public does not desire the railroads to do business at a loss. If the Interstate Commerce Commission after a thorough inquiry is in doubt as to what is demanded by justice, the public might not be averse to seeing the doubt resolved in favor of a reasonable advance in railroad rates.

The public wishes its agents, the railroads, to be content with the compensation received for the service rendered, just as it wishes direct agents of the Government to be treated fairly. Still, the allowance for psychological effect and for mere contentment should not be more than is actually warranted by conditions. This means, after all, that the problem confronting the commission is to discover by careful analysis just what rates are necessary to afford the railroads a fair return upon their investment.

The argument based on psychological effect clearly can not justify an advance in lake-and-rail rates between the Atlantic seaboard and western lake ports, as those rates already have been advanced several times in recent years, the total advance being much more than 5 per cent.

[From the Wichita (Kans.) Eagle, Jan. 23, 1914.]

ANOTHER ROUND OF FAIRNESS.

When eastern railroads marched en masse to the Interstate Commerce Commission and demanded 5 per cent increase of freight rates, arguing that this is imperative if they are to prosper, the Wichita Eagle promulgated the doctrine that railroads can not be kept prosperous by such a system of artificial prosperity.

We have noted that the cause of disaster to some railroads was so hideously apart from actual railroading operations that the question is largely one of high finance, and frequently has nothing to do with ton-miles.

President Ripley of the Santa Fe took issue with the Eagle. He announced the doctrine that a railroad—meaning, of course, an honestly financed and honestly administered property—has nothing to sell but transportation, and therefore prosperity or lack of prosperity can be argued on nothing but rates.

At the risk of appearing impertinent, the Eagle still held to a fact, even when the fact is challenged by such a distinguished authority as the president of one of the greatest railroad systems in the United States.

So long as railroads are the victims of high financiering it is folly to attempt to keep them prosperous by letting the public pay for the damage with higher rates. So long as high financiering is permitted to run riot to the destruction of unwary investors in railroad securities, helpless patrons of transportation facilities, and to the danger of the whole transportation system, rates can not and will not be the only barometer of railroad prosperity.

A railroad or any other business enterprise which is in competition with railroads which are run not for service but for high finance reasons suffers from that kind of competition. One would think that President Ripley and T. H. McManus, of Newton, whose letter appears in another column, would join in with the attitude which seeks to free the transportation system of buccaneers. But although they may feel that high finance hurts the whole transportation system, they resent and deplore attacks upon the viciously conducted railroads.

What Mr. Ripley apparently fears is that if public opinion is directed at the bad spots in the railroad world the public is likely to mistreat friends as well as foes. He is afraid the public will not discriminate between the honest and the dishonest railroad, if any railroads are challenged to appear and show why they need more money from the public.

Mr. Ripley's railroad is well described by Mr. McManus. It is presented as the type of an honestly conducted property. But both Mr. Ripley and the Kansas business man in presenting their fears have not budged the basic fact of the whole discussion. The fact is that if the public is responsible for the prosperity of railroads the public ought to know where its money goes and what it goes for. Railroads can not march up in a body and ask for an increase in pay on the pretense of necessity in order to maintain efficient service. We know that some roads have not farmed their revenue to render service, but have looted, or have been financed dishonestly. Hence we claim that before the public hands over more money the public must learn what it is buying.

That basic fact stands like a Rock of Gibraltar in the discussion. Two and two still make four, even in the presence of death, as the great Tolstoi remarked. The basic fact when the public must understand still stands a fact, no matter what man bumps his head on it.

No matter what authority is brought to bear against it, no matter how many yards of argument are wrapped around it, no matter how many sheets of letter paper are piled on top of it, the Rock of Gibraltar in the discussion stands right where it is and what it is. You can not pour prosperity into all of the railroads so long as some leak at the bung.

Conservative business men resent the mentioning of the most notorious examples of railroad looting because they are afraid public opinion may deduct that a great many railroads are mulcted by financiers in control. But suppose we leave out the hideous examples and observe some plain and modest facts of railroad capitaliaztion.

We find such figures as these: Union Pacific is appraised at $27,459 per main-line mile in Kansas, as ascertained by the public utilities commission of this State. The same road is capitalized, according to figures presented to the Interstate Commerce Commission, at $151,019 per mile of road for the entire system.

The Santa Fe is capitalized at $55,770 per mile of road for the entire system, while the Chicago & Alton's capitalization is about $123,000 and the Chicago, Burlington & Quincy is about $36,000 per mile of road.

These figures are part of the arsenal of facts which guards the Rock of Gibraltar in this discussion.

Can railroad prosperity be figured on nothing but rates?

—

[From the Lowell (Mass.) Courier Citizen, Jan. 28, 1914.]

It will be some time yet before the eastern railroads will hear from the Interstate Commerce Commission a decision on their petition for a 5 per cent increase in freight rates. The commission has just begun a hearing of shippers on the question and it may last well into March. Lawyer Brandeis, who works for the commission, will steer the testimony against the increases. Most shippers will probably oppose the advance, but there are others who know the roads need the money and are willing to pay it. Those who ship f. o. b. are not so much concerned one way or the other.

—

[From the San Francisco Examiner, Dec. 30, 1913.]

The news from Washington that the Interstate Commerce Commission had formulated 75 questions, which it requires the 52 eastern railroads to answer before it will consider their application for a 5 per cent increase in general freight rates, caused dismay among operators on the bull side of the market, who have been looking for a quick determination of this disturbing matter. These questions are said to cover with great detail the physical and financial operations of the roads, and a dispatch from New York yesterday stated that much time would be consumed in obtaining the necessary data to answer them fully.

—

[From the Chicago Tribune, Feb. 27, 1914.]

CHICAGO SELFISH IN RATE DISPUTE?—COMMERCE BOARD COUNSEL CONTENDS CITY SHOULD NOT SEEK DELAY OF DECISION.—WHOLE COUNTRY WAITS.—FISHER SAYS INVESTIGATION OF CONDITIONS HERE SHOULD BE MADE BEFORE RULING.

WASHINGTON, D. C., *February 27.*

The development of Chicago's railroad terminal facilities was the subject of a spirited argument before Commissioner Harlan of the Interstate Commerce Commission to-day. The hearing is on the appeal of railroads for 5 per cent increase in freight rates.

Walter L. Fisher, formerly Secretary of the Interior, represented the Chicago association of commerce, asserted the commission should indicate no policy with regard to charges for special services performed by the railroads until a special study has been given to the Chicago situation.

Louis D. Brandeis, special counsel for the commission, replied that Chicago should not insist upon delay in settling the rate advance question while the whole country is waiting for the solution of the question.

CHICAGO VITALLY CONCERNED.

"The city of Chicago is perhaps more vitally concerned than any other community in the country in this matter," Mr. Fisher said. "Chicago has 29 railroads and its terminal situation has been permitted to develop in a way detrimental to the interests of the city, the country, and the railroads as well.

"There has grown up a network of terminal railroads in such a fashion as to retard the growth of the city and the railroads. The very fact that the roads have penetrated so far into the heart of the city has enhanced the value of their property and the adjacent property to such an extent that an increase of facilities is well-nigh impossible.

"Before indicating any policy, the commission should give assurances that steps will be taken to make the kind of an examination of conditions in Chicago that will be helpful to the commission, the community, and the railroads.

SAYS MOVE WILL BE DISASTROUS.

"If the commission takes action such as recommended by Mr. Brandeis it is apt to make one of the most disastrous moves in its whole history. Mr. Brandeis doesn't know, we don't know, no one knows if the cases he has cited are illustrative of the entire condition.

"If rates are based on the value to the shipper the entire theory of railroad rate making will be destroyed and we will start a disastrous retreat all along the line. To base rates on value to the shipper is to regulate the shipper and not the railroad.

"If we adopt that theory we shall have to put the shipper in the place of the railroad and regulate him instead of the public utility. If, on the other hand, railroad rates are based on cost of service and of return to the railroad, the question arises whether you are in possession even of illustrative cases. The railroads' charges, as between themselves, have no bearing.

FURNISH ADEQUATE FACILITIES.

"The real object of a railroad is to furnish reasonably adequate terminal facilities for the condition of business and handling of freight it invites. There is nothing in the record so far to show what that costs.

"I desire such a continuation of the hearings some time in Chicago as will permit us to get an intelligent understanding of the situation and enable the commission to indicate what lines of policy should be adopted. Then we may be able to show the railroads how they can save more than has been indicated by Mr. Brandeis in former hearings.

"I believe the proper way out of the Chicago situation is to increase, not decrease, the number of spur tracks with their trap or ferry car service, and by the elimination of downtown handling of freight. If this position or theory is correct, then a charge made now would be wrong."

WHOLE COUNTRY INTERESTED.

"The assumption that Chicago is more interested than the rest of the country is undoubtedly quantitatively so," Mr. Brandeis said, "but the problem of spotting exists throughout the country. We are here to get general information as to its costs and its advantages not only in Chicago and other cities, but even in the villages. Undoubtedly the terminal congestion presents grave problems, but it will take years to work them out.

"The ferry or trap car service is a recent addition, and recently it has been extended rapidly at an extraordinary expense to the railroads and a like advantage to those who enjoy it. Shippers, cities, and railroads must cooperate with the commission."

SIDETRACKS REDUCE COST?

H. C. Barlow, traffic manager of the Chicago Association of Commerce, said that the value of sidetracks to the railroads in reducing the cost of their handling of freight offsets its value to the shippers.

He pointed out that the railroads on trap car service were saved the initial handling of the shipment and were forced to make only the redistribution. On gateway service they are saved even from the redistribution, and frequently on the trap car service they are saved rehandling by reason of a nucleus for a through car having been picked up.

In reply to a question by Mr. Fisher he said there were a number of universal freight stations in Chicago. Mr. Fisher then stated to the commissioner that it was his belief that an enlarged application of the universal freight house was one of the ways out of the terminal congestion.

—

[From the Chicago Tribune, Mar. 3, 1914.]

FREIGHT REFORM WOULD BENEFIT SMALL BUSINESS—REFUSAL OF RATE INCREASE MEANS $20,000,000 ADDED TO THE BIG FELLOWS' COST HERE—MORE MONEY FOR RAILROADS—FREE SERVICE NOW GIVEN TO LARGE SHIPPERS MAY BE CHARGED FOR AT A DOLLAR A TON—BLESSING IN DISGUISE FOR CITY?—WHERE "WE WILL" THERE'S A WAY; CHICAGO'S NEW PROVERB.

[By Henry M. Hyde.]

The decision in a case now pending before the Interstate Commerce Commission in Washington may result in adding $20,000,000 or more a year to the cost of doing business in Chicago.

It will add that amount to the net earnings of the railroads which terminate in Chicago; it will take the same amount out of the earnings of the big shippers, manufacturers, and merchants of the city; it will put the small business man for the first time on an equality with the big, so far as railroad freight rates are concerned; and it is likely to have, in the long run, a great influence in forcing the railroads and the shippers of the city to cooperate in working out better and more economical methods of collecting and distributing freight.

When it is realized that the problem of down-town congestion in Chicago is largely a railroad freight problem; that the growth and prosperity of the city depend almost entirely on freight rates, then the importance of the pending case to all Chicago people may be gathered.

The railroads all over the country have asked the Interstate Commerce Commission to allow them to boost their freight rates by 5 per cent of the present figures.

Louis D. Brandeis, special counsel for the commission, retorts that before they are permitted to raise freight rates the railroads should be compelled to stop giving big shippers an advantage over small; that if the railroads stopped giving concessions to big shippers the saving which would result would be so large as to make any general advance in rates unnecessary.

In Chicago alone such concessions are estimated to cost the railroads something like $20,000,000 a year. The matter is complicated. It is not claimed that $20,000,000 is more than a fairly well-informed guess.

Here is the way in which the big shipper gets the advantage over the small shipper in the present methods of handling freight.

If you, a private individual or a small business man, order a package sent by freight, the railroad notifies you when the shipment arrives, and you send a truck to the freight house to get the goods and haul them to your house or place of business. On the average, you pay $1 a ton for hauling, provided you are located within the central business district.

If you have goods to ship by freight, you call a truck to haul the goods to the freight station, and again you pay at the rate of $1 a ton.

But if you are a big shipper; if your place of business is located on the river, so that it is served by lighter; if it is located on the freight tunnel of the Illinois Tunnel Co. and is equipped with a tunnel-delivery system; if it is located on or near a private switch track, so that it can be reached by a trap car, then your goods are collected and delivered at your door and all the charges are paid by the railroad companies.

In other words, the small shipper and merchant actually pays from $1 to $2 a ton more for freight than does the big shipper.

A careful estimate has been made of the amount of freight collected and delivered every day in Chicago under the two systems.

When railroad men talk of package freight they call it l. c. l.—less than carload lot freight. Of l. c. l. freight about 10,000 tons come into Chicago every day, and, strangely enough, 15,000 tons go out. Fifty per cent more goes out of the city daily than comes in.

Of the incoming freight, 4,000 tons daily is hauled away from the terminal freight stations in trucks at a cost to the consignees of approximately $4,000. The rest is delivered by the railroads bringing it into the city to another railroad, which either delivers it to the consignee or sends it on to its destination outside of the city.

About 1,800 tons a day are delivered to the other railroad in so-called trap cars, 3,120 tons by team, and the rest by the Illinois tunnel. The expenses of all these three systems of deliveries is paid by the railroad which brings the freight into the city, or, as railroad men put it, the delivery expenses are "absorbed."

Of the outbound l. c. l. freight which originates in Chicago, only 28 per cent is delivered at the freight houses by teams. On all of this the shipper is forced to pay $1 a ton haulage charges. All the rest comes to the freight terminals in trap cars, on lighters, or through the tunnel, and all the expenses of collection are paid by the railroad company over the lines of which the goods are shipped.

In other words, 28 per cent of the package freight shipped out of Chicago pays from $1 to $2 a ton more in freight charges than does the remaining 72 per cent, which is collected by the railroads free of charge from the factories and plants of the larger shippers.

It is not easy to get figures which will show how much this collection and delivery service costs the railroads. A basis for a reasonable guess may be found in the fact that on a single railroad line—and that by no means one of the largest entering Chicago—the total amount of such charges during last December was $84,000. For the whole year free

delivery and collection service to big shippers cost this one railroad about $900,000.

Since there are from 25 to 30 railroads of at least equal importance which have their terminals in Chicago, it would seem that for all of them a total expense of $20,000,000 might not be wildly inaccurate.

If the decision of the Interstate Commerce Commission be that such "absorption" of collection and delivery charges are a discrimination against small shippers—and well-informed railroad men seem to agree that it will be—one of two things must happen.

Either the shippers who now send 72 per cent of outbound package freight to the stations in trap cars and other free vehicles must pay for the service at the rate of $1 or more a ton or else they must hire trucks and have their freight hauled at their own expense.

The latter alternative is really impossible. Already the streets about the freight stations are terribly congested. With the number of trucks multiplied by four traffic would become absolutely impossible.

It is more than possible that such a decision as is expected from the commission would be a blessing in disguise to Chicago and all its people, including shippers of all kinds and sizes.

There are now nearly 300 different stations in the city where freight is delivered or received. Almost all of these stations, however, receive freight destined for only a single road and distribute freight received for the same road.

Only a very few are what are called "universal" freight stations—stations where freight is received for and delivered from all the railroads entering the city.

It is believed that the establishment of a "universal" station in every little industrial center would make most of the present trucking and hauling long distances by team or motor unnecessary. Either the railroads could then offer free service to all shippers or the charge might be largely cut down below the present cost of $1 a ton.

—

[From the Newark (N. J.) Evening Star, Jan. 29, 1914.]

THE QUESTION OF RAILROAD RATE INCREASE.

There has been a strong chorus of demands in the interests of the railroads for a 5 per cent increase in freight rates for shippers to pay. The New York City press, of course, are united in these demands. Railroad representatives have testified to the Interstate Commerce Commission that the increase asked for is vital to them.

The other side of the case is now being presented. In the first place, it is shown by the commission itself that the railroads, in violation of the law, are paying rebates to plant railroads amounting to $15,000,000 annually, and there are extravagances, such as excessive salaries for principal officials, in which large economies can be made. In the second place, the shippers are to be considered, and likewise the consumers. The shippers are having their say now.

To grant the railroads a large increase of rates at the expense of the public and permit them to subsidize plant railroads, pay enormous salaries, and use the money otherwise as they please would be indefensible on the part of the commission. The railroads are nothing more than common carriers, the servants of the public, and their manifest objective is to conduct their business in ways to economize expenses, keep within the law, and make their services as cheap as possible, with a fair interest on their investments. Only under such conditions should the Interstate Commerce Commission favorably consider an increase of rates.

—

[From the Railway Review, Chicago, Jan. 31, 1914.]

THE ADVANCE RATE HEARING PROCEEDS.

Hearings in the application of the eastern railroads for 5 per cent rate increases were resumed before the Interstate Commerce Commission in Washington January 26. The sessions will continue until March 1. The commission announced the following schedule under which the testimony on the various days will be segregated by the specific commodities indicated: January 26, petroleum; January 27, ice; January 28, tile, brick, clay; January 29, boots and shoes; January 30, flour; January 31, peanuts; February 2–4, bituminous coal; February 5, linseed oil, corn oil, etc.; February 6, glucose, starch, and other corn by-products; February 7, wooden barrels, pails, tubs, etc.; February 9, sand and gravel; February 10, cement; February 11, iron and steel articles, cast-iron pipe, and raw materials entering into the manufacturing processes of same; February 12–14, Lake-and-rail rates; February 16, glass; February 17, coffee; February 18, pulp and paper; February 19, plaster; February 20–21, lumber and forest products; February 24, packing-house products; February 25, limestone; February 26, salt; February 27, fruit; February 28, stone, marble, granite; March 2, hides and leather; March 3, sugar, molasses, and sirup; March 4, truck-farm products and fish; March 5, hay and grain. George S. Patterson, general counsel for the Pennsylvania Railroad, made a statement on Monday for all the railroads interested, saying they expected to present supplementary evidence in support of the advance as the hearing proceeded. Charges that the proposed increase on petroleum would discriminate heavily against independent refineries in favor of the Standard Oil Co. were made on Monday by F. W. Boltz, traffic manager of the National Petroleum Association, an organization of forty-odd oil companies. Robert S. Few, president of the Sun Oil Co., of Toledo, was the first witness for the petroleum shippers. He testified that the proposed increases were in many instances actually greater than 5 per cent, and that to allow the petroleum advance would be to grant to the Standard Oil Co. an advantage over independents, because the Standard was shipping oil through its own pipe lines to hotly competitive districts. H. W. Bahrenburg, of Hoboken, N. J., president of the Natural Ice Association of America and head of the Mountain Ice Co., the largest individual shipper in his territory, declared that the ice business would not stand the proposed advance. He said the records showed irregular shipments, deficient equipment, and slow handling added 6 per cent of the present rates to the carrier's cost of handling. Tile, brick, and clay shippers submitted a mass of data on their business on Wednesday and presented witnesses who agreed with those of other industries previously heard that the carriers could increase their revenues more than 5 per cent by improving their service and eliminating unnecessary expenditures.

—

[From the Boston Advertiser, Jan. 31, 1914.]

A POLICY OF DELAY.

Recently what purported to be an interview with Chairman Prouty of the Interstate Commerce Commission was printed. It has been accepted by the general public as undoubtedly correct, and Mr. Prouty has certainly made no denial of its exactness, so far as we have seen. Yet if the rest of the commission feel the same way as its chairman has been talking, the prospect of relief from the burdensome and unfair conditions on American railroads must be considered decidedly remote. Reading between the lines, it may be inferred that there is no relief in prospect for the railroads this year. Mr. Brandeis, it is true, has recently intimated that he expects a decision late in the present year, but it may be that he is far too sanguine.

In the published interview, Chairman Prouty was quoted as saying that he had seriously revised his views on railway charges. He was formerly very strongly in favor of such changes in railroad rates as the actual conditions of shipments and prices from time to time might justify. If 5 cents were a fair rate to-day, and 6 cents would be a fair rate two months hence, he would formerly have favored a change. But he is inclined to believe now that this view is wrong. He seems to be ready to insist that rates shall seldom, if ever, be changed. He considers it very advisable, from the Nation's standpoint, that "rates shall be stable," as far as possible, and he intimates that it will be the policy of the commission eventually to strive to have the least possible fluctuation in passenger and freight rates.

Of course this policy, if carried out inexorably, would make things very easy for the Interstate Commerce Commission. Its members, entrenched behind their settled policy of insistence upon the status quo, could refuse to consider applications or postpone hearings indefinitely, from month to month. In vain the roads might offer to show that increases in the pay rolls and increases in the operating totals made some change in rates absolutely indispensable, unless dividends were to become a forgotten institution. The commission could point to its policy of "stability of rates" as sufficient excuse for declining to submit themselves to the tedium of so uninteresting matters as mere bookkeeping totals. Chairman Prouty says that stability in rates will be better for shippers and for the roads alike. It occurs to us that he may have forgotten to consult either party before making that statement.

Of course, under absolutely stable conditions, Chairman Prouty would be right. That is, if the expense of running the railroads of the country should be practically unchanged, from year to year, it would be the wisest policy to find the proper rates, once for all, and then to stick to those rates. The shippers would prefer such a policy, if they were sure the settled rates would always be fair and reasonable. So would the railroads prefer it, if they could be assured that the rate would suffice for the payment of all fixed charges, under an efficient and economical policy of railroad operation. So, if one could be sure that neither prices nor wages would again advance, the "suitable rates" should be the very best thing possible for the commission to maintain.

But, unfortunately, that is just the trouble. There has been no time in the past two years when the railroads have not been confronted by increased prices on the necessaries of railroad operation. There has been no time for several years during which there has been no discussion of demands from some class of employees for higher wages.

Even when this idea of fixing stable rates was not under discussion, the predictions of an ultimate decision from the Interstate Commerce Commission upon the appeal of the trunk lines for permission to raise rates 5 per cent did not foreshadow a decision until next November. It is not believed that the hearings will be finished until well on in the spring. Then briefs may be submitted and further investigations may be made, and a mass of accumulated data may be collected. This will probably bring the work up to the period of the usual vacation season for Government employees.

—

[From the American Banker, New York City, Jan. 31, 1914.]

THE 5 PER CENT FREIGHT ADVANCE.

Although on a surface and at first blush the request of the railroads east of the Mississippi and north of the Ohio for a general 5 per cent advance in freight rates seems entirely plausible, and one would hear the evidence submitted on the investigation with an open mind, still it is apparent that all is not plain sailing, and that there are facts and reasons which may be adduced in support of the contrary proposition.

At Monday's first hearing before the Interstate Commerce Commission the proceedings were confined to petroleum, and the independent oil refiners were represented by F. W. Blotz, of Cleveland, Ohio, who testified that new rates under the present and proposed tariff showed discrimination against several cities where independent refineries were located.

The railroads, he said, had made no attempt to put through a horizontal increase of 5 per cent—the degree of advance for which they were applying—but that the tariffs they were asking the commission to approve contained increases varying from 2 per cent to 19 per cent.

Mr. Blotz said that the new rates proposed by the Baltimore & Ohio would put Bruin, Pa., at a great disadvantage in competing with shipments from Oil City and Franklin, which he described as Standard Oil points.

It is the duty of the commission to look into this matter very carefully and determine the facts for itself. If the statements of Mr. Blotz are correct, then the request of the railroads should be denied. It was represented that what was wanted was a horizontal increase of 5 per cent, but if under the pretext of getting this seemingly fair concession, the eastern roads are trying to get something quite different, this design should be nipped in the bud. The Interstate Commerce Commission can not be put in the position of promoting the objects of the oil trusts. It is easily possible that there may be a large-sized applicant behind the wood pile, and the determining of this point is the first thing to which the commission should give its attention.

—

[From the St. Louis Star, Feb. 3, 1914.]

SOME REASONS WHY RAILROADS SHOULD INCREASE THEIR RATES.

A reader of the New St. Louis Star, who signs himself "Fair Play," sends us a discussion of the proposed increase in freight rates, which goes so nearly to the heart of the question that we reproduce it in full. He writes:

"Freight rates to most people are a mystery. Very few of us can tell the net cost of a freight bill. Somewhere in the vast investment and cost of maintenance of railroad equipment, the net cost of a freight bill is set. All we know about it is that legislation sets the retail price of freight while the railroad is expected to meet the cost, whatever it happens to be, and do it without lowering the efficiency of the service in any way.

"For many years the railroads have given us their service without asking for more than the opportunity to serve for the compensation that we ourselves have scheduled for them. Now they ask for an advance of 5 per cent. Are they entitled to it? The railroads give as their reason for the request the fact that they are paying more for operating essentials. The increase is not for their own pocket—it is simply to meet the extra cost of giving us their service. Let us see what they give us. They now carry a $4 pair of shoes over

a thousand miles for 2⅝ cents. A pound of ham retailing for 18 cents is hauled the same distance for one-third of a cent, and a cigar for one-forty-second of a cent.

"In the above we see how little the freight rate has to do with setting the retail price A 5 per cent advance in the freight on shoes would still leave the freight less than 3 cents; on ham and cigars the increase would not be enough to notice. Of the tens of thousands of products now carried by freight, the rate is about the same ratio all the way down the line.

"It is only natural that a request for increased compensation should come from the railroads at this time. They are paying more for labor, steel, coal, and the countless essentials to railroad equipment. It is a just request, and as such it should be considered and granted."

—

[From the Toronto (Canada) World, Jan. 30, 1914.]

UNITED STATES RAILROADS AND REBATING.

On Tuesday last the Interstate Commerce Commission of the United States handed out a decision requiring certain railroads to discontinue the making of allowances, including remission of demurrage charges, division of rates and daily claims made to the iron and steel industries. This order, it is estimated, will add $15,000,000 to the revenues of the railroads affected. While it, meantime, only extends to iron and steel industries, it will later be extended to all industries having plant railways. Among the concerns involved the hardest hit is the United States Steel Corporation, which has been enjoying the largest share of the favors now branded as illegal. The decision is regarded in Washington as only the first of a series which will materially increase the revenue of the railroads.

This action on the part of the commission has unusual importance, since it bears on the pending application of the eastern railroads for a 5 per cent increase in freight rates. In this connection the commission observes that "the very carriers that are augmenting their expense accounts and dissipating their revenues in this manner to the extent of many millions of dollars every year, for the benefit of comparatively few shippers, are now complaining that their present earnings are insufficient and, on that ground, have asked our permission to make a substantial increase in their general rate schedules." This is the latest of numerous examples revealing how large shippers have been benefited at the expense of smaller competitors and adds another to the many reasons justifying the necessity of government supervision.

—

[From the New York Call, Mar. 31, 1914.]

REBELLIOUS RAILROAD LORDS.

The big railroads of this country are controlled by a very small group of powerful financiers. It has been said that half a dozen men can quietly sit down around a table and shape our railroad policies any way it suits their interests. Here, at any rate, we have nothing like a majority rule. We have the rule of a very small but very powerful minority.

That minority, naturally enough, looks out for its own interests. It is looking for returns, the bigger the better. It applies to transportation the common law of business—profit making. It is not much troubled by the consequences to the outsiders. If outsiders have any interests of their own, let them look out for themselves.

We have been trying to do something in that line, very feebly, indeed, it must be said. We have created an Interstate Commerce Commission to look after the outsiders' interests. That commission has, among other powers, the power to regulate railroad rates. It has used that power so far very cautiously, with highest regard for sacred dividends and interest, even on watered securities.

Now, lately it has hesitated to grant the railroads an increase of 5 per cent on freight rates. The answer of the railroads was to show who is actually the master They started a campaign of discharging employees in large numbers. It is reported that the Pennsylvania has kicked out 15,000, the New York Central 25,000, other roads following suit. That action is taken at a time when the problem of unemployment is to the fore, in a way shaking the cobwebs out of many heads.

The masters of the railroads, our financial lords, think this is a good time to give us an object lesson of their power. As things are, we can not stop them.

The question is, however, whether they have chosen wisely the moment when such a lesson will produce the result desired by them. Their action may have effects of another kind.

The people may look a little farther than dividends and interest on bonds. The people may come to look into the situation from another angle. The means of transportation in the economy of a nation are like unto the channels that circulate the blood in the human body. We must see to it that they perform their task without hindrance. If obstacles are in the way, they must be removed. That is plain, very plain.

A generation ago Judge David Davis, with singular foresight, uttered this prophecy: "The Government must own the railroads, else the railroads will own the Government." The rebellious railroad lords have chosen a very critical situation to remind us of that prediction. Their insolent defi ought to have consequences unforeseen by them.

Their position is that of vested rights. A good enough position as long as it is not questioned. History shows, however, many cases of vested rights reduced to dust and ashes when such rights came in deadly conflict with the interests of the masses. Vested rights in serfs, in chattel slaves, in land monopoly, in property of the dead hand, have heretofore been abolished ruthlessly. Let the railroad rebels beware. They are playing with fire.

—

[From the New Haven Journal-Courier, July 7, 1913.]

INCREASE OF BRITISH RAILROAD RATES.

To the Editor of The Forum:

An act of Parliament, effective July 1, 1913, has enabled the railway companies of the United Kingdom to increase their rates 4 per cent.

Surely it ought not to be unreasonable for the American railways to increase their rates 5 per cent, when they have to pay increased wages, increased taxes, and increased prices for supplies.

R. R. STOCKHOLDER.

NEW HAVEN, *July 2, 1913.*

—

TRAIN ACCIDENTS.

To the Editor of The Forum:

According to a return lately issued by the board of trade, only 20 passengers and 6 employees were killed in railroad-train accidents in the United Kingdom of Great Britain and Ireland during the year 1912.

The total number of servants of railroad companies or contractors that were killed, from every cause, was 343.

In parts of England is the railway traffic the most congested in the world?

BRITISH-AMERICAN.

NEW HAVEN, *July 1, 1913.*

[From the Washington Post, Oct. 10, 1913.]

TO ATTACK HIGH RATES—BRANDEIS RETAINED BY I. C. C. AS CHAMPION OF SHIPPERS—INCREASE IN EAST AT STAKE—BOSTON ATTORNEY WILL OPPOSE 5 PER CENT ADVANCE IN FREIGHT CHARGES—CARRIERS EXPECTED TO ISSUE TARIFFS OCTOBER 14—I. C. C. WILL SUSPEND THEM AT ONCE AND FIGHT WILL BE ON.

Louis D. Brandeis, of Boston, has been retained by the Interstate Commerce Commission to represent the opponents of the 5 per cent increase in freight rates proposed by the eastern railroads.

Announcement of Mr. Brandeis's selection and his acceptance was made yesterday by the commission. It was made clear that Mr. Brandeis was not to be regarded as a counsel for the commission, but that he was charged with the development and adequate preparation for consideration of all the facts of the controversy.

CASE AT ISSUE NEXT WEEK.

It is expected that the railroads will file their increases, practically simultaneously, on October 14 or 15. The new rates will be suspended at once by the commission, and the case then will be at issue.

It is the purpose of Commissioner Harlan, who will have direct charge of the proceeding, to have a preliminary hearing the latter part of November or in December.

Commissioner Harlan authorized this statement:

"It must not be supposed that the commission has retained Mr. Brandeis to advance or support any special theory or preconceived notion of the commission about the case.

APPOINTMENT IS EXPLAINED.

"The carriers who have asked the rate advance will be represented at the hearing by some of the ablest attorneys in the country. They will fully develop the concrete proposition that the carriers are in need of more revenue.

"The individual shipper is ill equipped to meet such a controversy, because his interest is confined largely to rates on his particular products; therefore, unless the commission takes steps to develop the other side of the broad question, it is likely to have a one-sided record upon which to dispose of the issue."

—

[From the New York Times, Oct. 10, 1913.]

TOPICS IN WALL STREET—THE COUNTRY BANKER'S DAY.

It begins to look very much as though the country banker, on whom the Wilson administration has been counting to support a new currency bill that was supposed to be objectionable to the New York City financiers, would sound the death knell of the Owen-Glass measure in its present form. So long as the sponsors of the bill felt that they had the majority of the bankers from the interior with them they could afford to scoff at the objections raised by the National Currency Commission, which, they felt, was dictated to by the New York members. Wednesday's remarkable demonstration by the small out-of-town bankers at Boston made the opposition raised by the metropolitan bankers appear half-hearted. Some of the men from the Middle West and the Pacific coast are to stop off at Washington on their way home and will have an opportunity to repeat before the Senate committee the protests voiced at the convention.

THE RAILROADS' NEMESIS.

Announcement from Washington yesterday that Louis D. Brandeis had been named by the Interstate Commerce Commission to present the shippers' side in the approaching rate hearings weakened the hopes of the railroad managers that the increase of 5 per cent would be allowed. It was Mr. Brandeis, principally, who defeated the earlier application. His argument against the increase before the commission at the end of the hearings killed the case of the carriers, and his flank attack, in which he attempted to demonstrate that the companies have it in their power to augment net earnings by reducing expenses through the adoption of scientific economies, has caused the roads embarrassment which is not yet ended. Naturally, they hoped that if he could not be eliminated from the coming discussion, he might at least be subordinated.

BRANDEIS TO OPPOSE ROADS—WILL REPRESENT OPPONENTS TO FREIGHT INCREASE AT HEARING.

WASHINGTON, *October 9.*

Louis D. Brandeis, of Boston, has been retained by the Interstate Commerce Commission to represent the opponents of the 5 per cent increase in freight rates proposed by the Eastern railroads.

Announcement of Mr Brandeis's acceptance was made to-day by the commission. It was explained that Mr. Brandeis was not to be regarded as a counsel for the commission, but that he was charged with the development and adequate presentation for consideration of all of the facts of the controversy.

It is expected that the railroads will file, practically simultaneously, their increases on October 14 or 15. The new rates will be suspended at once by the commission, and the case then will be at issue.

It is the purpose of Commissioner Harlan, who will have direct charge of the proceeding, to have a preliminary hearing in the latter part of November or in December.

Commissioner Harlan said to-day:

"Doubtless certain protestants will have their own attorneys, but Mr. Brandeis will be the general channel through whom the views of others opposing the proposed advance may be presented of record."

—

[From the Los Angeles Examiner, Saturday, December 6, 1913.]

RELIEVE RAILROADS THAT DO RIGHT THING.

Some of the railroads ought to be allowed by the Government to increase their freight rates, and some of the railroads should be denied the right.

The hard task of separating the deserving railroad managements from the undeserving devolves upon the Interstate Commerce Commission. Not all the railroads are entitled to relief.

On the very day, for instance, that Daniel Willard, president of the Baltimore & Ohio, made his able and convincing argument before the commission of the need of higher freight rates by deserving railroads, evidence was disclosed in St Louis of the looting of the "Frisco" road

by syndicates, in which its own officials took part, of more than $7,038,000, leaving the road bankrupt.

It is idle for the railroad managers to expect the public to forget the methods that wrecked railroad after railroad, methods applied so recently that every man living along the line of the N. Y., N. H. & H. R. R. still suffers and pays a penalty.

There would be no need of higher freight rates on the New Haven road if the Morgan-Rockefeller management had not spent more than $200,000,000 of the railroad's money in buying up trolleys, steamships, wharfs and legislatures in the effort to create a monopoly. Are the people of five States to be required to pay higher rates for everything transported in New England, simply because the unhappy stockholders of this railroad left everything to Mr. Morgan and Mr. Rockefeller and permitted them to wreck the most profitable railroad property, save one, in the world?

On the other hand, it is simple justice that the railroad managers who are attending strictly to the business of operating their roads and doing it well, and who find that in spite of all that they can do the cost of operation is increasing faster than it is possible to increase earnings, should not be punished for the sins of others.

Many good railroad managers to-day are suffering unjustly for the sins of their predecessors. Railroad rebates, bullying, and bribery, easy favors for a few and injustice to the many, corruption of public officials, and incessant political intrigue with bosses—these inveterate railroad sins of the past generation are rapidly passing and must soon end forever, but having sown the wind the railroads are reaping the whirlwind.

If the effort to promote the safety and comfort of passengers and elevate the condition of railroad employees has produced a condition which makes it impossible to operate the honestly capitalized railroads at present rates save at a loss, the rates necessarily must be raised.

Not the argument, but the figures, presented by the railroad spokesmen need dissection—the argument is self-evident. Upon this question no prejudice, no rancor, bred however justly by the scandalous misconduct of railroad managers in the past, should be allowed to enter. The commission's action should not, and will not, be influenced by the very general and justified distrust of railroad financiers.

The Supreme Court, in the recent Minnesota rate decision, pointed a way for the railroad commission. The highest court set aside certain orders by the State commission in Minnesota, Wisconsin, and Nebraska on the ground that they were confiscatory as to certain railroads, but ordered the lower rates put in effect in every case where the railroad could, under the lower rate, earn a fair return on the capital actually invested in the railroad itself. Such discrimination could not, of course, be applied to two competing railroads between given points, but to apply it to roads monopolizing certain territory, and managed contrary to the public interest, would be both feasible and just.

—

[From the Evening Mail, New York, Wednesday, March 18, 1914.]

GOVERNMENT REGULATION WAS NEVER INTENDED TO MEAN GOVERNMENT STRANGULATION.

Ever since June, 1908, the necessity for an advance in railroad freight rates has been before the country. Ever since June 18, 1910, when the Congress gave the Interstate Commerce Commission power to suspend new schedules of rates, the issue raised by the 52 eastern railroads has been officially before that body. Yet this proposition, of paramount importance to the industrial and commercial life of the Nation, has remained undecided for three years and nine months.

It is only technically true that the case now pending before the commission originated last May. It began with the filing of higher tariffs by the railroads, while the amendment of the interstate commerce act was before the Congress in May and June, 1910, and it was not ended by the decision which the commission filed on February 23, 1911. That action was technically a denial of the application of the railroads, but it was in fact an adjournment or suspension of the proceedings. The decision explicitly provided for "further consideration" of the rate question "if actual results should demonstrate our forecast of the future is wrong."

This "forecast" of the commission was that increases in gross earnings would come to the railroads and that, with economy, the net earnings of the future would be found adequate.

The eastern railroads waited and economized—with the prices of supplies advancing, wages increasing, taxes growing heavier, new burdens imposed by legislation, by commission orders, and by the removal of grade crossings.

The commission's forecast was not borne out. The gross earnings of the eastern railroads in the year ended June 30, 1913, were $186,775,000 higher than in 1910, but expenses and taxes showed an increase of $203,087,000, so the companies were $16,312,000 poorer. "Actual results" worked out directly the other way.

The situation had become acute when, in April, 1913, the 52 eastern railroads renewed their application for a 5 per cent increase in freight rates.

Formally presented to the Interstate Commerce Commission on May 13, that body refused to give assurance that it would consider the case "before the summer recess."

In fact more than six months elapsed before the preliminary hearing was held on November 24, 1913.

That was nearly four months ago. The case has dragged along. The record has been piled high with evidence.

Surely, the commission ought to decide this case without further delay. Five of the eight men who considered this application in 1910 are still on the commission, and they have had 45 months in which to reach a conclusion.

Does the business of the country have to halt while these men dilly-dally over a problem that has been insistently before them during a period almost equal to the whole term of a national administration?

Does the proposed regulation and control of enterprise resolve itself into this—that business has to be hamstrung while officials ponder ponderously and go about the country making speeches or giving out interviews attacking railroad management?

In a case of life or death the jury of 12 men usually make up their minds within 24 hours.

Why, in this case, in which the business life of a nation is at stake, should 45 months of consideration be required—with a decision still two or three months off?

What sense is there in holding up the railroads, in making extensions impossible, in preventing increased efficiency, in checking betterments by keeping the freight rate issue unsettled?

Government regulation was never meant to be Government strangulation. The power to fix freight rates was never intended to be the power to delay 45 months before giving a decision.

One of the great evils of this country to-day is the killing effect of prolonged litigation in the courts. This is an abuse from which all business interests suffer. It was never designed, when the Interstate Commerce Commission was established, or when its powers were enlarged in 1910, to intensify that evil by creating another body that could hold up for an endless period questions that ought to be decided with reasonable promptness.

Forty-five months' consideration of one question is not reasonable promptness. It is simply a process of stifling railroad prosperity and preventing development and extensions.

The people are determined to have Government regulation. They are equally determined not to have Government strangulation. They want the railroads and every business enterprise to thrive and prosper. They are not in favor of having them Brandeised into profitless stagnated enterprises.

Respectfully submitted.

AN AMERICAN CITIZEN.

—

[Impossible to tell where this came from.]

Unfortunate! It is not pleasant to read that railroad shops throughout the country are running on reduced time, with a general curtailment of about 25 per cent in the East. This is the natural result of the failure of the Interstate Commerce Commission to grant the request of the railroads east of the Mississippi for permission to slightly increase freight rates. The commission has been wasting its time listening to charges from such discredited men as Lamar, the notorious "wolf of Wall Street," only to find these charges groundless. Whenever an advance in wages is demanded the question is promptly decided and an advance is granted, but when the railroads ask for action they are held up for years. The result is reflected in the startling decline in railroad earnings during the first six months of the past fiscal year of over $1,000,000 a week, while wages and the cost of material were constantly advancing. There is nothing for the railroads to do but to reduce expenses—cut off trains, working hours, and wages. Somebody must pay or bankruptcy will be invited. The plea of President Rea, of the Pennsylvania Railroad, for a regulation of wages, rates, and other matters "without working a manifest injustice to the railroads and those who have invested in their securities" is pressing. Nor should it be forgotten that President Wilson in his recent message entered his protest against postponing action. We commend his words to the consideration of the Interstate Commerce Commission. This is what the President said in his own impressive way: "The prosperity of the railroads and the prosperity of the country are inseparably connected."

"Other journals are animadvertising in the strongest terms regarding your policy. Shame! Shame!"

—

[From a New York paper evidently.]

EFFECT ABROAD OF DEPRESSION.

The Bache Review for last week has the following:

"Notwithstanding the various reasons offered for depression and dullness here, it may be, after all, that the unsettlement in foreign markets is what ultimately is at the base of our own lack of assurance. There is little doubt that if trade were actively progressing here and confidence prevailed this improvement would communicate itself to Europe. But with the plight of the railroads, artificially brought about and kept acute by delay or adverse decisions of a commission which might reasonably remedy the whole situation, business, lacking the stimulation which liberal railroad buying would bring everywhere, has become dispirited. We say artificially because, if railroads were free, as they should be, to regulate rates under the laws of trade, there would be no such railroad situation as we have, because nothing else is holding the country back, and we should be feeling the prickling current already of spring activity in business.

"We are always trying experiments in this country in deference to some political notion. If the Interstate Commerce Commission's powers had not been extended to rate making the roads would in 1910 have raised rates 10 per cent, and it may be well concluded that over three years of depressing trade conditions would have been avoided."

—

[From the Journal of Commerce and Commercial Bulletin, New York, April 2, 1914.]

WHAT FREIGHT RATE QUESTION INVOLVES—MORE THAN ORDINARY PROBLEMS FIGURE IN CASE—EFFECTS OF ACTION OF INTERSTATE COMMERCE DECISION ON INDUSTRIAL TAP LINES—INCREASED BURDENS UPON SHIPPERS BY COMPLETELY ABROGATING PRESENT ARRANGEMENTS BETWEEN RAILROADS AND INDUSTRIAL PLANTS.

The question as to whether the eastern railroads are entitled to a general increase in freight rates, which is now pending, is largely being lost sight of in the discussion of the purpose of the roads in reducing their working forces and in the speculative inquiries as to means by which the roads can be forced into so-called economies, etc. One of the propositions under discussion is to compel shippers who have built switch tracks into their plants to pay an additional sum to the roads for switching the cars into and out of the plants. This affects every owner of such a switch track throughout the eastern territory, no matter how small he is, and is not a question which is confined to the larger and more extensive industries.

In discussing the future of the situation, Attorney P. Lewis Anderson has this to say: "The action of the Interstate Commerce Commission in granting or refusing to the eastern trunk lines an increase in freight rates involves more than the ordinary questions of an increase in the tariffs, because there has been brought into the consideration of the matter the question of the practice of the roads to perform certain switching services for industries along their lines, for which services, it is now claimed, the roads should be required to make a new charge, in addition to the established rates.

"These switch tracks are commonly built by the owners of the industry in order to facilitate the receipt and delivery of freight by making such receipt and delivery at the plant instead of through the general freight yards and freight depots of the railroads and the attendant cartage to and from the plants. The practice has grown up for the carriers to place the cars on these switches at such convenient spot thereon as may be designated by the owner of the plant for his convenient loading and unloading of the cars. This service is commonly called spotting the cars and is performed generally for all plants which build the necessary switch connections, whether it be the local coal dealer or lumber yard or the large manufacturing plant with several switch tracks.

"These switch tracks are to the railroads just that much additional terminal yard, placed here and there to relieve the congestion in the general terminal yard and freight station; and the service performed is in a general way only that which the roads would otherwise perform in handling the freight through their regular channels. The custom has been practically universal; and the rates established by the

roads, under approval of the commission, have apparently been based upon the rendering of these services as a part of the transportation service for which the rates are charged.

"An investigation is now being conducted by the Interstate Commerce Commission for the purpose of ascertaining how much additional revenue might be obtained for the railroads by imposing an additional charge for these switching and spotting services, and it is probable that several million dollars may by such a course be added to the revenues of the carriers. It may be that such additional revenue would to some extent equalize the heavy expenditures which are constantly being imposed upon the carriers by legislation and commissions.

"But is that the intelligent and lawful way to meet the question as to the necessity of a general increase in freight rates in order to make them 'reasonable,' as the law requires? Such a ruling by the commission would not affect an increase in commodity rates nor an increase in class rates, but would simply be a selective increase imposed upon certain shippers.

"The proposition seems to contain a new problem in economics—that is to say, whether an increase in general rates which may be reasonable and necessary may be avoided by an increase in revenue supplied by placing an additional and unequal burden upon a certain class of shippers without regard to the recognized considerations involved in class rates and commodity rates."

—

[From the Louisville (Ky.) Post, Jan. 20, 1914.]

HELPING THE RAILROADS.

The best help for the railroads is to tell the truth about them. We have a great system, billions invested in them; but greater than the capital are the interests largely dependent upon them for necessary services.

These roads are national highways. They were chartered to occupy these highways and perform the functions that otherwise would depend upon the State.

The development of this system has been miraculous. With this rapid development came many grave abuses which the railroads confessed they were not able to rectify.

These abuses, they said, came from cut-throat competition, from undue expansion, from contests for freight, and they resulted in rates arbitrarily made regardless of service or distance; they resulted in rebates given individuals and corporations, building up large business at the expense of small business; they resulted in the abuse of the pass privilege, passes being given not for services rendered to the road, but as another form of rebate; they resulted in the railroads going into politics and staying in politics. At times such concessions seemed necessary for protection and at other times railroad politics meant aggressions against men unfavorable to their contentions.

These abuses were curtailed by the creation of the Interstate Commerce Commission. This commission, instead of impairing the value of railroads, has increased the value of this property. This increase in value is shown in the better price for stocks and bonds since the passage of this act, a greater stability of all railroad securities, less fluctuation and, therefore, less benefit to the speculators.

But all of the abuses of the railroads have not been eradicated, and the transportation lines and the shippers have not come to a proper uuderstanding. The roads are now asking the Interstate Commerce Commission for authority to increase freight rates 5 per cent. The first request comes from the eastern lines, but if it is granted there is every reason to believe that the grant will aply to the whole railroad system of the country.

Five per cent increase in the freight rates of America means an additional burden to shippers of $100,000,000. That much is to be taken from the producers or that much is to be added to the burdens of the consumers.

Mr. John Wanamaker, in a paper read before the Traffic Club, of Philadelphia, says a 5 per cent increase in railroad freight rates would add $50,000,000 to the burden of the public, this estimate being based upon the freight rates of the eastern roads.

The total revenues of the railroads from all sources is 3,000 millions of dollars. It ought to be possible, by economy, to save 3 per cent. A good part of it could be saved by securing lower prices for rails and lower prices for other products entering so largely into the consumption of the railroad companies. It could be saved by a better system of economy throughout. The greater the system the greater the waste, instead of greater the efficiency.

It is no response to this contention to say, as the New York World says, that the Government of the United States can save 300,000,000. If that be possible, it ought to be done. It is based upon the statement of Mr. Aldrich, who declared that it was perfectly feasible for the Government to save a million dolars a day without in any degree impairing the efficiency of the Government.

Now, if it is possible for the Government to save 300,000,000 on an expenditure of 1,000 millions, it ought to be possible for the railroads to save 100 millions on an income of 3,000 millions. What the World asks of the Government is an economy of 33 per cent. What is asked of the railroads is an economy of 3 per cent.

One economy would not interfere with the other. On the contrary, economy promotes economy by suggestion and by force of example.

In our judgment it is a serious matter to impose upon the industry of America a tax of $100,000,000 to meet the necessities of the railroads. If it is imperative, then it will be made, but the argument based upon statistics fails to establish the necessity. Undoubtedly it is easier to raise rates than it is to reduce expenditures, but in the long run it will prove to be more costly. It is a poor way to increase business by increasing prices.

—

[From the Boston Advertiser, Jan. 27, 1914.]

"The scheme of considering the proposed increases by separate commodities," say Louis D. Brandeis, speaking of the hearings on the request of the eastern railroads for a 5 per cent increase in freight rates, "would postpone for a time the economic question arising from the railroads' contention that, like the cost of food, there has been an advance in the cost of operating railroads."

—

[From the Springfield Republican, about Jan. 12, 1914.]

THAT U. P. "MELON"—SOME LIGHT ON THE MOST RECENT EXAMPLE OF HIGH FINANCE.

Attorney General McReynolds is said to be pleased with the plan of distribution of assets among its stockholders, announced by the Union Pacific Railroad Co. From his point of view in enforcing the anti-trust law, it is better to have the Union Pacific's holdings of Baltimore & Ohio stock scattered about among individuals than to run the risk of its sale in a block to some competitor of the Baltimore & Ohio. One can not help wondering, however, if the Interstate Commerce Commission would view the Union Pacific "melon" in the same way.

In the public statements made by the Union Pacific Co., one finds nothing to show that this extra dividend of 33 per cent to holders of the Union Pacific common stock is to be accompanied by any payment of the company's debts. How did the Union Pacific Co. happen to have in its treasury such a surplus? Surely not as the result of the earning power of the road as a common carrier. The late Mr. Harriman accumulated enormous holdings in the stocks of other railroads by purchase. And he found the money to buy with by issuing bonds—that is, by borrowing.

To acquire control of the Southern Pacific Railroad in 1901, $100,000,000 convertible bonds of the Union Pacific were marketed. The control of the Northern Pacific Railroad was then bought with the remainder of the $100,000 bond issue and the proceeds of an issue of Oregon Short Line bonds, the Oregon Short Line being a Union Pacific subsidiary. After the enforced dissolution of the Northern Securities Co. and the sale of the so-called Hill stocks held by the Union Pacific at good prices, Mr. Harriman marketed another Union Pacific bond issue of $75,000,000, and with the proceeds of the sale of the Hill stocks and the third bond issue he bought in the open market stocks costing $131,970,000.

These stocks formed the bulk of the Union Pacific profit-and-loss account, the like of which was never before known in American railroading. But the $45,000,000 Oregon Short Line bonds are still outstanding. Of the other $175,000,000 in Union Pacific bonds issued for these vast stock purchasers, all but $36,000,000 have meanwhile been exchanged for Union Pacific stock, but that stock is still outstanding and receiving the 10 per cent dividends, hereafter to be placed on an 8 per cent basis.

The recent incident of the sale of the Union Pacific's holdings of Southern Pacific stock in part, and its trade with the Pennsylvania Railroad by which Southern Pacific stock was exchanged for Baltimore & Ohio stock, in order to obey the court decree for the separation of the two Harriman lines west of the Mississippi River, requires no extended description at this time. The sale of Southern Pacific shares netted about $80,000,000 cash. On the entire transaction, sale and exchange, the Union Pacific reaped profits of some $20,000,000. Those profits, it has been urged, could be justifiably made the basis of an extra dividend. But is it the best financial policy to distribute several times these profits, or nearly $90,000,000, as the present "melon cutting" involves?

The Union Pacific Co. has had to allow for a depreciation of $50,000,000 in the market value of the bulk of its investment stocks since they were bought. It is hoped by the Union Pacific Co. that sooner or later the Central Pacific Railroad may be bought from the Southern Pacific Co.—a scheme approved already by the United States Supreme Court and the Federal Department of Justice. But the Central Pacific would cost at least $104,000,000, the price paid for it by the Southern Pacific. The money now to be given to Union Pacific shareholders would nearly buy the Central Pacific.

But is it possible to justify the distribution of nearly $90,000,000 among shareholders so long as the original loans of the Union Pacific Co., but an operation such as is announced may easily mean in a few largely uncanceled? Why should the company not retire the outstanding bonds issued for that purpose—amounting to over $80,000,000—before "cutting a 'melon'"? In some of its aspects this performance is like borrowing money to pay a stock dividend.

No one questions the sound financial condition of the Union Pacific Co., but an operation such as is announced may easily mean in a few years that shippers will be called upon to pay more in freight rates, or the shareholders will be forced to accept smaller dividends in order that the company may pay the increased interest on new security issues marketed for the purpose of making improvements or replacing equipment or possibly buying the Central Pacific. The country will soon see the Interstate Commerce Commission supervising the issuance of new railroad securities by authority of law. It is a misfortune, perhaps, that the commission is not now empowered to supervise such an important financial operation as the giving away of some $90,000,000 of a great railroad's assets—important in its bearing upon the future financing of the corporation.

—

[From the Johnstown (Pa.) Democrat, Jan. 15, 1914.]

CONCERNING FREIGHT RATES.

In view of the cry that is going up from great railroads the country over for permission to increase their freight rates, a statement of a year's operation and amazing profits realized by one of the few great systems which are not excessively overcapitalized will prove interesting. The Lackawanna Railroad, operating its main line from New York City to Buffalo, with a number of branches, with passenger and freight service unexcelled, last year earned over 41 per cent on its outstanding capital stock. With a capital of only a little over $30,000,000, it realized nearly $13,000,000 in dividends, and at the same time prosecuted gigantic cut-off construction operations which will shorten the line at several points and which will cost anywhere from ten to twelve million dollars.

The Lackawanna has paid immense dividends for many years, and consequently is one of the giltest of gilt-edge securities on the New York Stock Exchange. Little of it ever appears in open market, for there always are eager private investors to snap up any of the stock that may be offered.

But while other railroads, staggering under millions piled upon millions of overcapitalization, declare that they must be allowed to charge the American public 5 per cent more for the transportation of its freight, the Lackawana is able to pay a dividend the size of which, in proportion to its capital stock, dazes the comprehension. Here is the statement of the Lackawana's operations:

The Delaware, Lackawanna & Western Railroad Co. earned between 41 per cent and 42 per cent on its $30,144,000 outstanding stock in the calendar year 1913. This estimate is based on 11 months' income account and an allowance for some shrinkage in December earnings.

The statement furnished to the New York Stock Exchange in connection with the listing January 5 of $12,000,000 additional stock showed that Lackawanna in the 12 months ending October 31, 1913, earned a balance for dividends of $12,872,511. This was equivalent to 42.7 per cent on the outstanding stock. It compared with $11,762,768, or 39 per cent, in the year ending December 31, 1912, and with $11,832,669, or 39.2 per cent, in 1911.

In the 12 months ended October 31, 1913, Lackawanna charged income with $2,000,000 for additions and betterments, and this closely

appproximates the charge for the last calendar year. In 1912 $1,720,000 was so charged and in 1911 $2,200,000.

Surplus after dividends and additions and betterments was $4,842,274 for the year ended October 31 last, increasing final profit and loss surplus to $35,300,000. By December 31, 1913, this was increased to about $35,500,000. This yearly surplus compares with $4,013,000 in 1912 and $3,000,000 in 1911. Had the $12,000,000 new stock, which will be outstanding in 1914, been issued in 1911, 1912, and 1913, dividends of 20 per cent in addition to betterments as charged would have been earned, with a surplus annually ranging from $1,200,000 in 1911 to $2,400,000 in 1913. Thus on stock of $42,144,000 in 1914 the road can be expected to earn 20 per cent dividends, $2,000,000 additions and betterments and a handsome margin besides.

The Lackawanna is the old Sam Sloan railroad and has always been conservatively managed. When the venerable President Sloan stepped down and out about 15 years ago, and the road passed into the hands of men regarded as being of the newer school of finance, it was expected that at once there would be immense stock issues, the consequent spreading out of dividends serving to keep from the general public the fact of such tremendous earnings on approximately the actual property valuation. But President W. H. Truesdale, the new president, and his directors maintained the old policy and have sternly frowned down all attempts to water the stock of the Lackawanna; and the staggering profits have from year to year shown just what can be earned on reasonable capitalization and how little need there would be for an increase of freight rates if other great railways had not so flagrantly inflated their security issues.

—

[From Financial America, New York, Jan. 13, 1914.]

NEW HAVEN'S PROBLEM MAINLY A TERMINAL ONE—ESSENTIAL OF SITUATION AS VIEWED BY RAILROAD INTERESTS FROM OPERATING AND TRAFFIC STANDPOINT—TERMS OF AGREEMENT REGARDED FAVORABLY—LITTLE BELIEF THAT SALE OF LARGE SUBSIDIARY COMPANIES PROBABLY CAN BE AFFECTED WITHIN YEAR.

Howard Elliott arrived in New York yesterday from Washington and was engaged at his office in the Grand Central Terminal with accumulated mail and with conferences regarding the details of the agreement with the Government, which was arrived at in Washington last Saturday. There are many questions to be taken up, and it was authoritatively stated that in all probability no further announcement would be made at present. This does not mean, however, that the working out of the details will not be pushed as rapidly as possible and practical.

The general terms of the agreement, which were made public in Washington last Saturday, have been well received here and were commented upon favorably. It was pointed out that if the New Haven management had allowed the Government to bring its threatened dissolution suit, the proceedings would have lasted several years, and undoubtedly would have been much worse for the New Haven and its subsidiaries than any losses that may be incurred through carrying out the proposed disintegration plan.

It is obvious to everyone that has given any attention to the financial markets and to the position of the New Haven lines that any attempt on the part of the Government to force an actual sale of any of the New Haven subsidiaries at this time would be altogether unfair and would mean a heavy loss to the New Haven Railroad Co., particularly as it paid high prices for most of them. It is believed by those who have studied the matter that only by trusteeing the subsidiary properties can they be divorced from the New Haven Railroad Co. within the next few months.

These observers believe also that Attorney General McReynolds must have been misquoted in Washington dispatches when he was reported to have said that the time that would be allowed by the New Haven management to work out the details of the agreement would be measured by months rather than by years. No one believes that a genuine sale of any of the large subsidiary companies can be effected during the present year. It has been rumored that both the Delaware & Hudson and the Canadian Pacific were considering the purchase of the Boston & Maine. While six to eight months ago the Canadian Pacific was willing to take that property, there is excellent authority for the statement that the management does not intend to make any further acquisitions until conditions in Canada become more settled.

A prominent railroad official who has looked into the New Haven situation carefully, said yesterday:

"The New Haven Railroad proposition is essentially a big terminal proposition, from an operating and traffic point of view. If I were high in the councils of the New Haven management, I would express no regret over the demand of the Government that the trolley lines be disposed of. The New Haven can never, in my judgment, make the trolley lines in New England which it owns or controls particularly profitable. The situation is too much congested all the way from Boston to New York for the New Haven to be giving much attention to the kind of traffic that is handled by trolley lines.

"With respect to the steamship lines, I would take a very different position if I were in the New Haven management. For the very reasons that I have stated, the water lines are highly essential to the successful operation of the New Haven. As is well known, all the coal used in New England has to be hauled in from the outside. If the New Haven Railroad were to attempt to handle all this coal over its rail lines, there immediately would be a congestion over which New England shippers and patrons of the road in general would be up in arms. I believe the Interstate Commerce Commission will realize this situation and act accordingly upon the application of the New Haven, under the Panama Canal act, to retain certain of its water lines."

The opinion prevails in both railroad and banking circles that the refusal of the Supreme Court of Massachusetts to allow the New Haven to make the proposed $67,000,000 debenture bond issue will prove a blessing in disguise. A prominent international banker said yesterday that before the short term notes, which were issued by the New Haven because the debenture issue was held up, mature the money market will have improved sufficiently to enable the New Haven to get considerably better terms than it had agreed to with respect to the debentures. This, it was said, would remove much of the ground for the adverse criticism of the management in the authorization of those bonds.

Owing to dullness in business, ever since Howard Elliott took hold of the New Haven, the earnings have been disappointing and this was true for some time before he became connected with the system. Everything possible has been done to reduce expenses. It has been found, however, that the management is largely powerless in this regard, except with respect to the stopping of leaks. Any attempt to reduce allowances for maintenance would at once be opposed by the various State commissions and it is expected that reductions in passenger-train service would be opposed vigorously by the traveling public. Trainloads can not be increased until passing tracks are lengthened. Heavier power can not be used over certain bridges where it should be used because the bridges will not stand the increased weight. During recent months it has been necessary to put in ballast and lay rails that should have been attended to a year and a half before. The present management is giving the closest attention to an intensive operation of the various properties included in the system. If the trolley lines and the Boston & Main and some of the steamship lines are trusted, Mr. Elliott and Mr. Hustis will be able to give still more attention to the operation of the New Haven Railroad proper.

If the Interstate Commerce Commission grants the 5 per cent advance in freight rates that has been asked for by the eastern roads the New Haven would profit substantially. An improvement in general business in New England, particularly in the mills, would help the gross earnings materially. In recent months there has been a general falling off, which, coupled with unavoidably high operating expenses, has made the net earnings discouraging.

—

[From the Wall Street Journal (N. Y.), December 31, 1913.]

THE LATEST RAILROAD PROBE.

That the Interstate Commerce Commission appreciates the necessity of a prompt decision of the eastern advance freight rate case is indicated by the time limit set for answering its 25-page pamphlet of questions just received by the carriers party to the proceedings. It remains to be seen whether such a searching probe of railroad management as is demanded in this pamphlet and the accompanying statistical blanks can be completed by January 31, but it can not be objected that the questions are trivial or irrelevant.

Apparently the commission fully accepts the truth and accuracy of the elaborate charts offered in evidence by the carriers to show the serious impairment of their net revenues since 1903, and especially since 1910. It raises no question over the allegation that the eastern roads are paying $48,000,000 more a year for their labor than it would cost on the wage basis in effect in 1910. Summarizing the purport of the great mass of detailed information asked for, the commission raises the following issues:

1. Do the commodities which are shipped in great quantity over long distances, such as grain, coal, meat, lumber, ore, iron, steel, cement, bear their fair proportion of the cost of railroad service, and is the disparity between through and local rates only what it should be?

2. Are passenger, express and mail traffic bearing their due proportion of operating and capital expenses? To what extent has State regulations of passenger fares reduced revenues?

3. Are the carriers fully justified in making all the allowances they make shippers for lighterage, their own switching, use of "industry tracks," and in rendering all such free service as switching, loading and unloading freight, warehousing, reconsignment and milling-in-transit privileges, and special rates and train service?

4. Do the railroads purchase their supplies under competitive conditions, rigidly enforced as to quality of materials accepted, and do they employ scientific methods in testing equipment and supplies purchased?

5. To what extent are directors or officers of the carriers interested in firms or corporations selling materials or equipment to the railroads, or purchasing their securities, and what is the effect upon the railroads of such relations?

6. Should the railroads obtain more favorable terms from the Pullman Co., or could they get better financial results from operation of their own sleeping-car service?

Gathering and returning all this information will cost the railroads heavily and may prolong the investigation. But if the result should be to confirm the assertion of the companies that there is no other way out of their impossible situation than an increase in rates, it will have been well worth the time and money.

It is essential not only that the railroads increase their earnings and thereby their borrowing and serving power. It is equally essential that they quiet permanently and effectually the general suspicion, due largely to the efforts of Mr. Brandeis, that their purchasing departments are loosely governed, that they play favorites among the shippers, and that their directors have more irons in the fire than they can properly keep hot.

—

[From the Boston Post, December 28, 1913.]

STOPPING A SWINDLE.

The report that the Boston & Maine Railroad officials are to become honest in the matter of fares paid by mileage after January 1 is cheering. It shows that not only are travellers to get a square deal, but that a better idea of corporate integrity appears to have come to the management.

It has long been a scandal, which the Interstate Commerce Commission should have ended some time ago, that a passenger from Boston to Portland over the Portsmouth division has had to give up 115 mile coupons from his book when the actual distance was only 100 miles. By this operation the traveller was swindled out of six coupons, or 12 cents, whenever he took that route to Portland. To plead that the distance over the Dover route was 115 miles, and that the passenger might have gone that way at the same price, did not make the transaction any the less dishonest.

—

[From the St. Louis Globe-Democrat, December 29, 1913.]

COMING INTO COURT.

Investigation to be made by the Interstate Commerce Commission in the hearings it will have before passing upon the railroad's petition for a 5 per cent increase in freight rates will cover a wide range. Railway managers will be questioned on lines of examination calculated to bring out railway practices in the government of expenditures for operating the lines. It is expected that an increase in operating expenses will be shown, owing to large advances in wages, but the commission will endeavor to find whether this increase is not made larger than necessary through extravagance in payment of salaries, needless special services, and other items of expense charged against the operating account. It will inquire more particularly, when the fact of decreasing revenues is asserted, as to whether all of the lines are exhausting their opportunities under present rating laws. It will inquire whether the loss is not due more to the cost of special services, allowances given to shippers, discounts for mileage over privately owned tap lines (which are nothing more or less than rebates), freight handling, warehousing, payments to auxiliary corporations and unprofitable branches, the construction of overcostly terminal systems, and the maintenance of affiliated industries through interlocking directorates.

The second of these two lines of investigation we should consider the more important. We are convinced that railway managers have for some time past been retrenching in many lines of expense usually charged to cost of operation, abolishing sinecures, reducing salaries long kept at too high figures, and dispensing with the service of all but indispensable men. This has become their natural and necessary policy under the heavy advances in the wage list they have had to allow. Conceding this, there does not appear to be anything in the traffic reports showing the volume of traffic moved and moving, to explain the wide disparity between their claimed increase of 5.3 per cent in operating expenses per mile and their claimed decrease of 1.3 per cent in total operating revenues per mile. It is, of course, possible that such a disparity can be shown and clearly demonstrated to the satisfaction of the Interstate Commerce Commission. It is clear that that body is not animated by any prejudice for or against the petition for advanced freight rates. It is performing in a proper way its proper function of doing justice between the shipping and the transportation interests of the country.

Such being its function, a question arising at the very outset of such an investigation as it is about to make is whether the commission should be clothed with power needed to correct any evil conditions now existing, and to prevent their continuance or repetition. There can be no doubt that should the 5 per cent advance be granted there will be more kiting of some railway securities. This is so well understood that in view of possible developments of facts which the commission would be powerless to change as a condition precedent to allowing the higher rate, half a dozen of the leading railway managers of the country, speaking for strong, solvent, and capably managed lines, have now expressed a willingness to support congressional action clothing the commission with power to regulate railway capitalizations. They evidently see that untoward disclosures, moving a commission powerless to terminate them to an exercise of all its power to prevent their continuance, would mean a denial of the rate petition. This break in the former solidarity of the railway interests against further regulation indicates that railway men with clean hands are at last willing to come into a court of equity and leave the others outside. The fact promises much for a better understanding and better conditions.

—

[From the Louisville (Ky.) Herald, December 26, 1913.]

RAILROAD LOGIC.

The supplemental questions submitted by the Interstate Commerce Commission to railroad managers, seeking an advance in rates, go to the core of the issue of governmental regulation of railroad finances.

The questions, covering broadly all reasons for the decrease in revenues as compared with the increase in operating expenses, relate specifically to extravagances in railroad expenditures, allowances, rebates, and special privileges, and to financial relations and dealings between allied corporations and of railroad directors in corporations selling to the railroads.

It is not likely that the commission will get free confessions of illegal rebates and allowances. If it has knowledge of such transactions it should supply the Department of Justice with the facts.

The questions touching the possibility of reducing extravagant outlays and operating expenses relate to the present petition for an increase of rates. Those touching financial relations and dealings with allied corporations and railroad directors relate to the petition for rate increases, if they are to be continued.

It is conceivable that the railroads may confess to improper and costly dealings through interlocking directorates and official syndicates in the past and justly plead need for better rates now, largely on account of such looting. But the condition of the grant of increased rates should be the cessation of all improper practices by which railroad treasuries are depleted for the enrichment of favored persons inside or out of their directorates.

The inquiry leds directly to the necessity of a guaranty of the economical and efficient expenditure of railroad revenues and railroad loans for needed railroad purposes, and no other. By inference this is the commission's condition of a grant of rate increases.

The condition can be met only in one way—by rigid governmental regulation of railroad finances—the supervision of the issues of railroad securities, of the purposes for which they are issued, and of the actual expenditure of the money.

The logical conclusion of the whole matter is found in the commission's own recommendation for the regulation of railroad finances in its annual report, which has been brought to an acute issue by the Post-Dispatch's demand for prompt action in the light of the revelations of plundering practices in the New Haven and Frisco systems.

Nor need the Interstate Commerce Commission wait for further information to give weight and point to its recommendation. The history of American railroads supplies a library of information which is capped by the recent scandalous facts brought out in the Frisco and New Haven investigations.

What is needed more than anything else now is prompt congressional action in the form of an adequate amendment to the interstate commerce act giving the commission regulatory control of railroad finances. This will solve all railroad problems.

—

[From the New York Journal of Commerce, January 3, 1914.]

President Wilson had delayed his nominations to the Interstate Commerce Commission, and it is evident that he is considering the situation with great care. There has been an unusual number of unworthy or undesirable candidates, as well as a very large number of men who were incapable of doing the work well. It remains true that the necessity for early nominations, if they can be satisfactorily settled upon, is very great. Within a few days the hearings regarding the advanced rates requested by the railroads will recommence, and from that time on every day's work will be of importance toward the shaping of a final decision. In view of the fact that some time is inevitably lost in getting men to assume new duties, the urgency for the selection of the new commissioners is very materially increased. The final decision of the commission regarding the desired rates should be one that will represent the views of that body as a whole, including the men who are to be named by President Wilson.

—

[From the Newark (N. J.) Star, December 31, 1913.]

COAL COMBINE CROOKEDNESS REVEALED.

Testimony before the Interstate Commerce Commission will make a valuable appendix to the report of the Egan investigating committee to the New Jersey Legislature, showing the methods of the coal combine in this State. That rebates of 15 cents a ton have been granted for four years to two wholesale concerns in Jersey City by the Lehigh Valley Coal Co., owned entirely by the railroad of the same name, is admitted by the beneficiaries of the crooked deal. Here was 15 cents a ton virtually stolen from coal dealers not in the combination, and which had to meet the prices of their favored competitors. One of these firms demands a similar rebate, which for the four years comes to $150,000, and if the commission grants the plea it will be a very effective way of putting the coal combine out of business.

—

[From the Wall Street Journal, New York, Jan. 3, 1914.]

HELP FOR THE RAILROADS IN SIGHT.

Without putting a strained construction thereon, it may be said that the severe written examination which the Interstate Commerce Commission is putting the eastern railroads through is of good omen. If it means anything, it means that the commission is gravely impressed with the necessity of granting them relief from the strangling forces of rigid rates and uncontrollable expenses.

It does not necessarily follow that the commission will grant the general advance of 5 per cent in freight rates asked. The commission suggests, at least by implication, that the carriers may have been unduly liberal in incidental services to shippers included in the published rates; that they may have allowed certain through rates on bulk commodities to sink to an unduly low level; that they may not have enforced sufficiently competitive conditions in the purchase of equipment and supplies; that they may be obtaining too little compensation for passenger, mail, or express business; that they may have been at a disadvantage in the sale of securities through the presence on their boards of directors of interested bankers.

For the most part, the commission's inquiries touch upon handicaps from which, assuming that they exist in a substantial degree, the railroads are naturally almost powerless to relieve themselves. Incidental services to shippers, such as free switching, placing of cars on industrial tracks, and storage of freight, are part of the vigorous competition which still survives. The existing through rates on important commodities were, generally speaking, established during the era of rate competition, and perpetuated since 1910 by the law of that year, which took rates out of the control of the carriers. Passenger rates are almost wholly controlled by the States and the long-and-short-haul clause of the commerce act.

The two remaining factors—economy in the purchase of supplies, and freedom to sell securities to the highest bidder—must be admitted to lie wholly within the power of company managements. There is little doubt that most, if not all, the roads will be able to show a fairly clean record under the first head. As to the second, it should be noted that the marketing of railroad securities has all but ceased. Is it conceivable that banking houses, whether represented on railroad boards or not, would be so rapacious as to force their own best customers out of the market?

In none of the directions indicated by the commission, with the possible exception of a substantial increase in selected commodity rates, is it likely that an avenue will be found wide enough to let the eastern carriers out of their present unwholsome situation. What the railroads need is better net revenues. If these can be found in a better economy in purchasing, or a curtailment of so-called free service or of unremunerative service, made possible by the initiative and the powerful moral support of the Interstate Commerce Commission, the carriers can only welcome the alternative. In any event, the commission is in a fair way to substitute certainty for vague suspicions and irresponsible accusations.

—

[From the Tennessean, Nashville, Tenn., December 31, 1913.]

THE RECIPROCAL SWITCHING QUESTION.

The decision of the Interstate Commerce Commission in the coal-rate case for Nashville, in which was laid down the general principle relating to reciprocal privileges and rates, has obviously opened the way for proper adjustment of the whole plan and system of switching in Nashville, and the people of the community are greatly encouraged over the outlook for better conditions in the matter of switching and switching rates on all classes of freight, regardless of the conflicting interests of the various railroads that enter Nashville or have traffic arrangements with other railroads that enter this city.

The traffic bureau and the various other commercial bodies of the city have long been jointly working together to bring about an equitable arrangement in this matter, and since the decision of the Interstate Commerce Commission in the coal-rate case, which is at least favorable to a rearrangement and readjustment of the whole switching system and reciprocal or retaliatory rates, preparations are being made to take the question before the commission and ask that it be passed on and settled.

Those who have made a study of the case are confident the facts to be presented are ample to induce the commission to make a ruling that will be favorable to Nashville and our great commercial interests which have long suffered from discriminatory and extortionate charges in switching privileges. So confident are they that the prevailing inequity will be corrected that they are planning to speedily bring the case up and commence the fight at once.

After the Interstate Commerce Commission shall have passed on and settled the points in question, it will then be up to the State, through the State railroad comimsion, to meet the requirements of the situation by foreing similar concessions in rate charges and switching privileges on intrastate shipments of freight, for as it has already developed from the coal-case decision, the interstate regulation can have nothing to do with the intrastate shipments which must necessarily fall under State authority. Therefore, after the Federal authorities shall have determined what is equitable, it will then be in order for the State authorities to shape its requirements to conform with those of the Federal Government.

It seems, however, that it would be an easy matter for the State authorities to compel the desired interchange of service at reasonable rates, especially after the Interstate Commerce Commission has put into effect its orders. If the State railroad commission has not the power to accomplish what is desired, the legislature can easily clothe that body with the power, and this is what should be done. In the meantime, let nothing be left undone to meet the needs and requirements of the community in this vital matter.

—

[From the Joplin (Mo.) Globe, December 25, 1913.]

GIVE THE RAILROADS THEIR DUE.

The Interstate Commerce Commission, in its annual report submitted to Congress last week, again asks for authority to supervise and con-

trol railroad capitalization, observes the Oklahoman. It points out anew the relationship existing between the rate-making power and supervision of capitalization and calls attention to the futility of adjusting rates to an equitable basis in the absence of authority for the control of security issues.

We can conceive of no legislation more needed at the hands of Congress just now than the authority which the commission asks. The simple truth is the greater part of the railroads of the country are in a deplorably bad fix for means with which to make needed betterments and purchase needed equipment; but it is improbable that the Interstate Commerce Commission will grant authority for an increase of freight rates until it holds the power for supervising their capitalization. It is wholly justified in withholding this authority until it is empowered to supervise capitalization for the reason that it has no means of knowing, in the event that authority was granted to increase freight rates, that the additional revenue arising would not be used for exploitation purposes rather than applied to existing needs.

The railroads have sowed to the wind in the past and are now reaping the whirlwind. That is to say, they have abused the trust of both the public and security holders in order to enrich a few officers, and in consequence have reached the end of their ability to float new securities. They are also unable to earn sufficient returns upon the capital invested to meet reasonable dividends and make needed betterments or add new equipment.

But there are both efficiently and incompetently managed railroads the same as there are both good and bad men in any business calling. There are, in fact, a great many roads which have been honestly managed and efficiently conducted, and yet they are suffering from public mistrust the same as the roads which richly deserve it. They are estopped from discharging their bounden duty to the public because of their lack of funds.

It is unjust to expect the roads to spend money for improvements when they are unable to show fair earnings upon the capital already invested. It is likewise unfair upon their part to ask authority to increase freight rates when no power exists for preventing the abuses which have characterized the management of some of their number in the past.

The situation, however, demands the immediate attention of Congress. Since the power to regulate rates already rests with the Interstate Commerce Commission, no valid reason exists for withholding authority for the supervision of capitalization. In short, the assumption of authority on the one hand clearly involves the duty of accepting entire responsibility on the other.

—

[From the Philadelphia Press, December 29, 1913.]

SENTIMENT IMPROVED, BUT TRADE STILL LAGS.

There has been an improvement in sentiment during the past week. This is partly due to expressions of confidence uttered by the leading bankers of the country following the enactment of the new currency and banking law. The national banks will continue as such, which fact will minimize any bad effects that might possibly arise out of an application of the new law. The act provides that such changes as are made which will effect a shifting of funds will occur gradually. Thus one-half of subscriptions to the capital of the Federal reserve banks will be paid in installments and the balance only upon call. Shifting of reserve funds will extend over a period of three years. The extent of rediscounting of commercial paper and the issue of new circulating notes will depend largely upon business needs and the action taken by the member banks. Owing to the amendments adopted no shock to business is likely to occur in applying the new act, as existing loans need not be disturbed.

The second pacifying influence is the better understanding between the captains of industry and the Attorney General. There are possibilities for good here if the President's special message on the subject of antitrust legislation does not tend to create new apprehension among those men who are called upon to conduct the affairs of big business.

Apart from sentiment some facts are found which are favorable to progress in the business world, but unfavorable factors are still in evidence. Clearings for the week were only 1.2 per cent behind those of the corresponding week of 1912. The amount of clearings in New York City were more nearly normal because of the greater activity in the stock market last week. Gross earnings of 39 railroads reporting for the second week in December show a decrease of 8.65 per cent. The Interstate Commerce Commission has asked the railroads for additional information, which must be submitted before February. This step still further delays a decision on the question of an advance in freight rates. Idle cars continue to accumulate, the statement as of December 15 showing 101,545 idle cars, the largest in nearly two years, and an increase of 44,311 in two weeks. Commendable efforts are being made in various sections to reduce the number of unemployed men by providing employment upon public works.

Trade generally is expected to be quiet in January, when business men are taking their bearings for the new year. Improvement is noted in the security markets, due partially to the prospective disbursement of $250,000,000 to pay dividends and interest next month.

—

[From the New York Press, December 30, 1913.]

RAILROAD HONESTY, TOO.

The Interstate Commerce Commission has called upon the eastern roads for a great deal of new information, to be digested in connection with the determination of whether rates shall be advanced. It is very plain from the character of data asked this time that interests hostile to granting an increase of rates are taking an inning now and that they propose to bring out just as much as possible of evidence that some railroads have not been making the best possible use of the money now paid to them for their services.

It was, of course, inevitable that this effort would be made. The railroads are asked, for example, to tell the commission just what special interest its officials have through which they make private profits out of business with the railroads. That means, plainly enough, that some of the things that happened in the New Haven are going to be brought out into the daylight and urged as the evidence that some railroads get money enough if only they used it in the right ways.

No harm will come from an inquiry of this kind. There have been some very rank cases of private grafting off railroads. The Illinois Central presented such an exposure a few years ago. The Frisco has had another very recently. The New Haven case has given the public a severe shock. The more official publicity given to such facts the tighter will the brakes be set against the repetition of such performances. Then, there is another consideration. It is that roads honestly managed can have their day, too.

It will be well if the railroads place every possible facility at the disposal of the commission in order that the public may learn that not all railroads are conducted by grafters. There are more honest than dishonest railroad men by a long shot, and it would be a good thing, for a change, to have attention called to the honesty of the honest ones.

—

[From the New York Sun, December 28, 1913.]

MORE DATA ASKED TO AID RATE RULING—RAILROADS SEEKING TO INCREASE FREIGHT CHARGES ORDERED TO GIVE DETAILS—STRESS ON FINANCING—ECONOMY, INTERLOCKING BOARDS, AND CONTRACTS OTHER FEATURES OF INQUIRY.

WASHINGTON, *December 27.*

Railroads of the United States seeking authority to increase their freight rates on an average of 5 per cent are requested in an order issued to-day by the Interstate Commerce Commission to submit detailed information concerning their financial operations.

An inquiry into the rate case was begun several weeks ago, and the railroads told their side. The shippers who are fighting the proposed increase are yet to be heard. The commission has gone over the evidence submitted by the railroads and has asked for supplemental data.

The commission's order issued to-day does not foreshadow delay in the promulgation of a decision in the application for authority to increase railroad freight rates. It indicates that the commission does not intend to decide the case merely on the ex parte statements of railroad managers.

The new information sought by the commission covers these questions:

Revenue derived from the transportation of different commodities and the practice of the railroads in granting to shippers special service or allowance in connection with transportation service.

Economy in methods of purchasing equipment, materials, and supplies; their uses and practices in connection with various transportation operations.

Financial history and transactions of carriers.

Conflicting interests, particularly the financial interests of directors, officers, and employees in the business transactions to which the carriers are also parties.

Contracts made between the carriers and sleeping-car and parlor-car companies and the results of such contracts.

Also general information not embraced in circulars heretofore issued by the commission. The commission announced that on January 7 hearings will be begun to settle all points in controversy.

MUST ANSWER BY JANUARY 31.

Seventy-nine questions bearing on rates are submitted to the railroads. The answers must be made before January 31.

"Elaborate and helpful contributions from the carriers' accounts have been submitted by the railroads, with a view to diminishing net returns from operations and lessened net income," said the commission in an announcement explaining its inquiry. "These statements do not furnish fully the data deemed by the commission to be necessary to determine the general course to be pursued. The carriers are therefore further ordered and directed to furnish the commission, at the earliest date possible, the information called for and to verify such information under the oath of the officer under whose direction and supervision the returns are made."

The commission explains some of the various groups of questions that are asked carriers, as follows:

"Questions regarding revenues and the conservation thereof are designed to secure data concerning the possibility of increasing revenues otherwise than through a general increase of freight rates. The questions relate in part to the terminal allowances made by railroads, particularly to the larger industries, and to the free service, the legality or propriety of which has been from time to time questioned. These services and allowances include allowances to terminal railways owned by industries, free switching, lighterage, loading and unloading freight, free warehousing, reconsignment, especially favorable rates and special train service, billing in transit privileges.

"Questions relative to economy are designed to secure data concerning the possibility of increasing the net revenues through economies in operations. These include possible savings in the purchase of materials and supplies through standardization and otherwise; also possible savings in the use of materials and supplies, and particularly in the consumption of coal.

"There are also questions designed to secure further information as to the causes of increased operating costs and means of avoiding them. Certain of the questions are designed to secure data with a view of determining to what extent and under what circumstances the increase in the size and weight of equipment results in economy and greater net operating income.

QUESTIONS AS TO CAPITAL.

"The group of questions under 'Financial' is designed principally to secure data concerning the character of the capital expenditures made by railroad corporations.

"The companies are requested to show to what extent stock and bond issues have been applied to purposes other than the development of the railroad properties. In other words, it is desired to determine what part of the capitalization of the railroads represents the purchase of bonds and stocks in industrial or mining corporations or in other railroad companies, and to what extent the railroads might secure new capital for improvement and development by disposing of the bonds and stocks of other corporations so held.

"Under the group 'Conflicting interests,' it is designed to secure data to determine the extent to which the directors and officials of railroads have other financial interests in the transactions of the carriers. It is desired to determine to what extent conflicting and intertwining interests, commonly described as interlocking directorates, prevail, and what influence, if any, this practice has had in increasing railroad costs.

"It is also proposed to inquire to what extent, if any, diminishing net revenues of railroads may be attributable to inadequate passenger rates, in view of large expenditures relating specifically to passenger service."

—

[From the New York Post, December 26, 1913.]

THE INTERSTATE COMMERCE COMMISSION—WHY THIS WEEK'S APPOINTMENT WAS ANXIOUSLY AWAITED BY RAILWAY MEN.

When the freight-rate hearing began before the Interstate Commerce Commission on November 24 a feeling of uncertainty existed among railway men because three vacancies existed in the commission. John H. Marble died suddenly on November 21; Charles A. Prouty's resignation, to take charge of the work of physical valuation, had already been formally submitted; and the term of Judson C. Clements was about to expire. Besides the feeling that those vacancies might interfere with

late hearings, railroad men were afraid that three new and inexperienced members might be appointed. This week that uncertainty was dispelled somewhat by the reappointment of Clements.

The original act to regulate commerce, passed February 4, 1887, provided for a commission of five members, but the act of June 29, 1906, increased the number to seven. The term of office is seven years, the salary $10,000. Clements was first appointed in 1892. Edward E. Clark, now chairman, became a member in 1906, the same year James S. Harlan, a son of the late John M. Harlan, was appointed. B. H. Meyer and C. C. McChord took office in 1910. At least five of the seven members who will decide the freight-rate case now pending heard the testimony given by the railroads three years ago, and are therefore familiar with the subject.

Until only a few years ago the Interstate Commerce Commission was generally looked upon as a body without backbone or claims. Up to that time the powers of the commission were limited to investigations of freight rates only after complaints had been made by shippers. To-day, because of recent amendatory and supplemental enactments, the commission is recognized as a forceful organization, with broad powers.

Among the more important of these recent changes in the commerce law is the Elkins Act, passed February 19, 1903, which made rebating illegal, allowed proceedings in the courts by injunction to restrain departures from published rates, and provided that cases prosecuted under the direction of the Attorney General, in the name of the commission, be given precedence over other suits. Next came the Hepburn Act, passed February 29, 1906, giving the commission the right to investigate rates without waiting for complaint by shippers, and then the power to fix rates, which might be decided unreasonable. The Mann-Elkins law, approved June 18, 1910, gave the commission the power to suspend proposed rates pending an investigation. That law also authorized the appointment of a commission to investigate questions pertaining to the issuance of stock and bonds. The law ordering a physical valuation of the railroads, to be used on the basis of rate making, was passed March 1 last.

—

[From the Louisville (Ky.) Post, December 20, 1913.]

WHAT IS THE MATTER WITH THE RAILROADS?

In presenting their arguments to the Interstate Commerce Commission in support of the application for a subsidy of $100,000,000, great emphasis was laid on the following paragraph:

"The gross earnings of the official classification territory roads during the last fiscal year were $186,775,000 greater than in the fiscal year ending June 30, 1910; but the operating expenses and taxes during the last fiscal year were $203,087,000 greater than they were in 1910, so that the net return, after paying operating expenses and taxes, was actually $16,311,000 less in 1913 than it was in 1910."

These figures demand some explanation and deserve careful consideration. Taking the average net earnings of railroads in any large territory the cost of wages, supplies, operating expenses, and taxes is slightly less than 75 per cent. In 1910 the ratio of expenses and taxes to gross earnings was 70 per cent. Had that ratio prevailed in 1913, the profit on $186,775,000 would have been $56,000,000. In 1911 the ratio of expenses and taxes to gross earnings was 72.54 per cent. In 1912 it was 73.54 per cent.

Let us make the liberal concession that in 1913 the ratio of expenses and taxes to gross earnings was 75 per cent. That would have been most extraordinary. There would be nothing in the wages given to account for it, for they do not increase in leaps and bounds. The ratio of compensation for labor to gross earnings in 1911 was officially 43.32 per cent, while the total expenses were 72.54 per cent. The labor proportion was estimated in 1912 as 44.20 per cent, with a ratio of total expenses to gross earnings of 73.54 per cent. Let us assume that the net profits were but 25 per cent of the total receipts. Then the additional profit from this additional business would have been $47,000,000.

What became of the $47,000,000?

II. The total revenues of 224,354 miles of road in July, August, and September, 1913, were $811,000,000 in round numbers, against $781,000,000 for the corresponding quarter of 1912; $715,000,000 for the corresponding quarter of 1911; $716,000,000 for the corresponding quarter of 1910.

The total operating expenses for this quarter in 1913 were $555,000,000, against $509,000,000 in 1912 for the same quarter; $469,000,000 in 1911, and $469,000,000 in 1910.

The "maintenance of way and structures" shows for this quarter in 1913, $116,000,000 against $105,000,000 last year, $97,000,000 in 1911, and $101,000,000 in 1910.

This is a flexible item. It was $93,000,000 in 1907, $77,000,000 in 1908, $92,000,000 in 1909.

The "maintenance of equipment" cost $134,000,000 in this third quarter of 1913, against $120,000,000 in 1912; $107,000,000 in 1911; $103,000,000 in 1910.

The traffic expenses were $16,000,000, against $15,000,000 the year before; $14,000,000 in 1911; and $15,000,000 in 1910.

Transportation expenses were $270,000,000 in 1913, $251,000,000 in 1912, $232,000,000 in 1911, $233,000,000 in 1910.

General expenses were $18,000,000 in 1913, $17,000,000 in 1912, $16,000,000 in 1911, $16,000,000 in 1910.

The total operating expenses for this quarter were $555,000,000, against $509,000,000 a year ago; $469,000,000 in 1911; and $489,000,000 in 1910.

This leaves for net operating expenses in this one quarter of 1913, $255,000,000, against $272,000,000 in 1912; $246,000,000 in 1911; and $246,000,000 in 1910.

III. These are strange figures. They would indicate that at the time when the railroads were crying out concerning traffic and bad business conditions they entered upon a period of expansion. They spent for maintenance of equipment in one quarter $14,000,000 in excess of the expenditures of the same quarter the year before, and $27,000,000 compared with 1911, and $31,000,000 as compared with 1910.

If we note this same quarter for 1910 and 1911, we see that the revenue of 1910 was $716,405,000; in 1911, $715,967,000, or half a million less; whereas the operating expenses were almost identical, $469,107,000, against $496,864,000 in 1910.

Here in one quarter of the year is a net profit after paying taxes of $223,000,000, a little short of $900,000,000 for the whole year. This is $20,000,000 less than the year before, but it is $3,000,000 more than the revenues of 1911, and $2,000,000 more than the revenue of 1910.

According to the figures furnished by the Interstate Commerce Commission in its last report, the net operating income for this third quarter of 1910 was $221,000,000; in 1911 it was $220,000,000; in 1912 it was $243,000,000; and in 1913 it was $223,000,000.

But we are to note that for the maintenance of way and the maintenance of equipment, the expenditures in 1910 were but $204,000,000, they were $204,000,000 in 1911; they were $225,000,000 in 1912; they were $250,000,000 in 1913, an increase of expenditures for the "maintenance of way and structures" and "the maintenance of equipment" of $45,000,060.

It must be manifest, therefore, that if the railroads would do as other people do—spend liberally when their revenues are large and economize when their revenues fall off—there would be less necessity for increasing freight rates. Surely if these expenditures in the maintenance of way, structures, and equipment were justified, they must make the conduct of the business less expensive.

IV. These figures show that the total revenues of the railroads exceed $3,000,000,000. They show a net operating income, after providing for the expenses and taxes, of $900,000,000. In other words, taking this quarter of $223,000,000 profits on an $811,000,000 business, the surplus is not 25 per cent, but 27 per cent. That the railroads want the money, and that in a certain sense they need it, can be accepted as true; but the producers need it, the consumers need it, the farmers, the merchants, the householders need it. It is a question of doubt whether the arbitrary advance in rates would not cause a decline in traffic. Certainly if the railroads succeed in so alarming the public as to check business generally, there will be a falling off in the business that will more than offset the increase in rates.

It might be well for the railroads to consider the figures of the third quarter of 1907, when their earnings were $674,000,000. In 1908 they were only $593,000,000, and in 1909 they were $673,000,000.

The expenses of 1907 were $445,000,000. They were only $418,000,000 in 1909. In 1907 the net revenue, after paying expenses and taxes, was $212,000,000 for this third quarter, and on this same business exactly two years later it was $232,000,000. Somehow they had saved $20,000,000, or for the year $80,000,000. That is a better way of getting $100,000,000 than by increasing freight rates.

—

[From the Washington Times, December 28, 1913.]

ASKING ALL THE FACTS.

The Interstate Commerce Commission has called on the eastern roads for a great deal of new information, to be digested in connection with determination whether rates shall be advanced.

It is very plain from the character of data asked this time that interests hostile to granting an increase of rates are taking an inning now, and that they propose to bring out just as much as possible of evidence that the railroads are not making the best possible use of the money now paid to them for their services.

It was, of course, inevitable that this effort would be made. The railroads are asked, for example, to tell the commission just what interests its officials have through which they make private profits out of business with the railroads. That means plainly enough that some of the things that happened in the New Haven are going to be brought out into the daylight and urged as the evidence that the railroads get money enough, if only they used it in the right way.

No harm will come from an inquiry of this kind. There have been some very rank cases of private grafting off railroads. The Illinois Central presented such an exposure a few years ago. The Frisco has had another very recently. The New Haven case has given the public a severe shock. It will be well if the railroads place every possible facility at the disposal of the commission, in order that the public may learn that not all railroads are conducted by grafters. There are more honest than dishonest railroad men, and it would be a good thing to have attention called to the honesty of the honest ones for a change.

[From the Baltimore Evening News, December 29, 1913.]

ASKING ALL THE FACTS.

The Interstate Commerce Commission has called on the eastern roads for a great deal of new information, to be digested in connection with determination whether rates shall be advanced.

It is very plain from the character of data asked this time that interests hostile to granting an increase of rates are taking an inning now, and that they propose to bring out just as much as possible of evidence that the railroads are not making the best possible use of the money now paid to them for their services.

It was, of course, inevitable that this effort would be made. The railroads are asked, for example, to tell the commission just what interests its officials have through which they make private profits out of business with the railroads. That means plainly enough that some of the things that happened in the New Haven are going to be brought out into the daylight and urged as the evidence that the railroads get money enough, if only they used it in the right way.

No harm will come from an inquiry of this kind. There have been some very rank cases of private grafting off railroads. The Illinois Central presented such an exposure a few years ago. The Frisco has had another very recently. The New Haven case has given the public a severe shock. It will be well if the railroads place every possible facility at the disposal of the commission, in order that the public may learn that not all railroads are conducted by grafters. There are more honest than dishonest railroad men, and it would be a good thing to have attention called to the honesty of the honest ones for a change.

—

[From the Detroit News Tribune, January 1, 1914.]

Something not clearly understood has halted the decision of the Interstate Commerce Commission in the matter of the 5 per cent advance in freight rates asked for by the railroads in the territory east of the Mississippi. It is announced that the inquiry is to be reopened. From the how! that has gone up in some quarters it might be suspected that there was knowledge that the commission means to begin fishing in the stock and bond puddle; and if it should, there is no telling what nauseous matter it might find.

—

[From the Columbus (Ohio) Journal, January 11, 1914.]

ADVANCE TO AFFECT COMMODITIES SLIGHTLY.

Food and coal prices to the ultimate consumer may be advanced so slightly by the proposed increase in freight rates as to be hardly noticeable, according to Columbus traffic men. If the Interstate Commerce Commission grants the 5 per cent advance asked for there may be a corresponding advance of 5 cents a ton on coal, it is said. In the case of foodstuffs, however, it is said that the prices may be infinitesimally advanced, so far as the ultimate consumer is concerned.

[From the Indianapolis Star, January 16, 1914.]

Shippers will have opportunity to present to the Interstate Commerce Commission their objections to specific instances in the 5 per cent increase of freight rates proposed by the 52 eastern railroads. They will not be obliged to present objections to the increase as a whole, but may develop testimony on the cost of moving certain classes of traffic. This was decided by the commission yesterday with an announcement that the shippers would first be heard in regard to petroleum at a near date, soon to be announced. Hearings on other commodities, coal, cement, brick, plaster, flour, packing-house products, iron, steel, and lumber, will be granted as rapidly as possible. It was announced that "the commission now decides that the protestants are legally entitled to be heard before a final decision is rendered on the pending application of the railroads for permission to make a general increase in freight rates.

A. L. Trowbridge, commercial freight agent in Indianapolis for the Missouri Pacific-Iron Mountain system, has received official notice from C. A. Torrence, foreign freight agent of the road in Chicago, that a new steamship service has been arranged. The service will be from the ports of New Orleans, Galveston, Port Tampa, and Savannah, direct to the ports of call in China, Japan, the Philippines, and the Straits Settlements. The line will be known as the Atlantic-Gulf-Far East line and will be operated by way of the Suez Canal until the opening of the Panama Canal.

[From the Washington Post, March 4, 1914.]

"ROADS SHOULD HAVE INCREASE"—PRESIDENT OF B. & O. DEFENDS CARRIERS AT FORMER SENATOR DAVIS'S DINNER—PROSPERITY IS KEYNOTE—REPRESENTATIVE UNDERWOOD SAYS THE TARIFF LAW IS "GOOD AS FAR AS IT HAS GONE."

American railroads are entitled to the 5 per cent increase in freight rates, even if their gross revenues are greater than ever, and are entitled to it pending the inquiry, was the position taken last night by President Daniel Willard, of the Baltimore & Ohio Railroad, at a dinner given in his honor by former Senator Henry Gassaway Davis, of West Virginia, at the residence of Mrs. Stephen B. Elkins, at 1626 K Street NW.

Senator Owen, of Oklahoma, also spoke, confining his remarks to the new currency law and speaking optimistically of business prospects.

Present also were Senators and Representatives and many notable railroad men. Among them were Mr. Willard, Samuel Rea, president, Pennsylvania Railroad; J. M. Schoonmaker, president, Pittsburgh & Lake Erie Railroad; F. D. Underwood, president, Erie Railroad; George W. Stevens, president, Chesapeake & Ohio Railway; L. E. Johnson, president, Norfolk & Western Railway; W. H. White, president, Washington-Southern Railway; M. C. Kennedy, president, Cumberland Valley Railroad; W. W. Atterbury, vice president, Pennsylvania Railroad; A. W. Thompson, vice president, Baltimore & Ohio Railroad; Arthur Lee, vice president, Coal & Coke Railway; George F. Randolph, vice president, Baltimore & Ohio Railroad; James A. O'Gorman, United States Senator from New York; Robert L. Owen, United States Senator from Oklahoma; Oscar W. Underwood, Representative from Alabama; John W. Davis, Solicitor General; Alton B. Parker, formerly chief justice New York court of appeals; R. C. Kerens, formerly ambassador to Austria; C. C. Clover, president Riggs National Bank; C. J. Bell, president American Security & Trust Co.; W. D. Hoover, president National Savings & Trust Co.; Charles H. Grasty, proprietor, Baltimore Sun.

SHOULD GRANT INCREASE.

Mr. Willard declared the railroads of the country welcome any investigation the Interstate Commerce Commission may desire to make. He insisted that the commission should grant the rate increase pending its inquiry, because, he said, transportation lines are sorely in need of additional revenue for improvements and betterments demanded by the public.

Mr. Willard declared he felt satisfied that the commission would grant the increase after all the needs of carriers are considered. The real conditions of transportation lines, together with the demand for improvements, he said, are strong enough to justify the increase.

Mr. Willard said it is true that the gross earnings of the railroads are greater to-day than ever before, but that additional funds are needed for betterments, which will keep transportation lines busy for the next five years. Mr. Willard also referred to the opinion of the Interstate Commerce Commission, in which it was held that industrial lines were often used as an indirect means to give rebates to big shippers. He declared that the commission had known for years of the "industrial line" conditions.

UNDERWOOD DEFENDS TARIFF.

Representative Underwood argued in favor of the tariff. When the measure was first contemplated, he said, advocates of the bill had as a foundation upon which to work, merely a theory. This theory which they had in mind, if successful, would be of unestimable benefit to the country.

"Unquestionably," said Mr. Underwood, "this theory has proved a success as far as it has gone."

Col. John C. Schoonmaker, of the Pittsburgh & Lake Erie, a union veteran, told of his experiences in West Virginia during the war. He said he was familiar with the country where Senator Davis spent most of his life.

Introducing the next speaker, Senator Davis said:

"During the campaign of 1894 voters of the country said 'Senator Davis is too old, but we are going to vote for him because he is a running mate of that distinguished statesman, Judge Parker,' whom I now introduce to you."

SENATOR DAVIS PRAISED.

Judge Parker devoted his remarks to the 5 per cent increase now being sought by the railroads. He lauded Senator Davis and called attention to the fact that he was a member of the first committee, known as the select committee for seaboard transportation, in December, 1872, and that among his associates on that committee were Senators Windom, Conkling, and Sherman. He said Senator Davis was born almost before railroads were thought of, and that surely he was in active life before the first railroad was built in the United States.

Judge Parker declared that the sentiment of the press and the people was changing in favor of the railroads. There was a time when both the press and the people looked on the railroads with suspicion. This he said was due in a large degree to agitation stirred up by men unfamiliar with railroad conditions. To-day he said that 98 per cent of the press was with the railroads in their fight for the rate increase, whereas not long ago a poll of the papers in the country showed that only 44 per cent were favorable.

He predicted that a new era was dawning in which the people were demanding that the railroads should receive justice at the hands of Federal and State Governments.

President Rea closed the banquet with a eulogy of Senator Davis. He told of his earlier life and paid a high tribute to his services in the United States Senate.

—

[Mailed to I. C. C. Paper from which taken unknown.]

TRADE SLUMP SHOWN BY STEEL—MONTHLY STATEMENT WORSE THAN EXPECTED—LOWER WAGES PROBABLE—CORPORATION MAY BE FORCED TO CLOSE MANY MILLS.

The extent to which the depression in all lines of industrial activity has affected the steel trade is reflected in the monthly tonnage statement of the United States Steel Corporation, issued this afternoon, showing a decrease of 372,615 tons in the unfilled orders on the books of the company in March. Unfilled orders on hand March 31 were 4,653,825 tons, compared with 5,026,440 tons on February 28. A year ago the unfilled orders aggregated 7,468,956 tons.

Wall Street expected a heavy slump in the total of unfilled orders as a result of the reaction in the steel industry which began in the middle of February, but the statement showed a condition far worse than had been anticipated by the most pessimistic. Estimates placed the decrease for March at from 200,000 to 350,000 tons.

The statement means that the demand for manufactured steel goods fell off to a marked degree in March, with the natural result that the orders on the books of the billion-dollar corporation were heavily cut into. It is estimated that the company's mills are operating at the moment at 65 to 70 per cent of capacity.

The first of the current year brought a revival in the steel industry that promised well for the 12 months. Incoming orders in January picked up and averaged 50,000 tons a day. This state of affairs continued well into February, when there was a slackening of the demand. Since the middle of February the demand has continued to fall away, and it is estimated now that incoming orders are at the rate of 25,000 tons a day, less than half what they were in January. At this rate it is likely that the Steel Corporation will be compelled to shut down many of its mills and lay off more men.

In the past fortnight heads of the leading steel manufacturing corporations have shaken their heads and spoken most unfavorably of the outlook. They have reiterated that the future depended largely on the outcome of the freight rate matter. An increase in freight rates at this time, they said, would mean increased railway equipment purchases which would in turn mean an increased demand for steel products. President Schwab of the Bethlehem corporation said in the course of the week that March was the "pilot" month in the trade and what was done in that month forecasted the business for the season. If this statement is to be taken literally it means a poor year for the steel industry.

There is talk of a reduction in wages for the employees of the steel manufacturing concerns if the present conditions of prices and demand continue for long. The probability of early action on all wage schedules is indicated by a conference on the subject at Pittsburgh early this week which was attended by the presidents of the five independent companies.

—

STEEL MILL WAGES TO BE CUT, IS REPORT.

A movement by independent steel manufacturers to reduce wages is reported to be under way.

The meeting in Pittsburgh last week of the heads of five independent steel companies lends color to the report.

Views are expressed that this movement can only be stopped by early and definitely large betterment in business, such as is to be expected with a granting of the higher railroad freight rates, for a liquidation of wages is regarded as ultimately necessary under the present tariff.

Higher prices for steel are not looked for, owing to the possibilities of heavy importation of foreign steel.

Features of the iron and steel trades last week were the large increases in pig iron production in March, announced by the Iron Age.

—

[From the Baltimore Sun, March 11, 1914.]

HOW MONEY MAKES MONEY.

(By Channing Rudd.)

Evidence continues to accumulate showing that the railroads urgently need an increase in freight rates. Detailed figures are now available showing both gross and net earnings of the railroads for the full calendar year 1913.

The magnitude of the railroad business, and its importance to the country, can be seen from the fact that railroads operating 241,931 miles of road produced gross earnings for 1913 of $3,162,451,434. This large total is an increase of more than $142,000,000 over the preceding year.

Notwithstanding the decrease in gross earnings during the latter part of 1913, the total gross earnings for the year would be satisfactory were it not for the enormous increases in expenses and the consequent decrease in net earnings.

The increase of over $142,000,000 in gross earnings was offset by an augmentation in expenses of about $176,000,000, producing a decrease in net earnings of more than $33,000,000.

The above figures may be considered not only discouraging but alarming.

—

[From the New York Tribune, March 16, 1914.]

REVIEW OF THE WEEK IN FINANCE—DULL PROFESSIONAL MARKET FOR SECURITIES—TRADE, TOO, SLACKENING—RAILROAD MANAGERS ON THE DEFENSIVE—CHARGES OF IRREGULAR ACCOUNTING TO GET HIGHER RATES DENIED—BANKS LOSE CASH.

The stock market last week lapsed almost to the dull condition of last November, with trading for the most part professional and little outside buying. The bond market, too, was quieter, with a large proportion of business in the more speculative issues. The general slackening of trade has reflected itself in the absence of the public from the securities market. Similar conditions exist abroad through reasons largely political. Here the particular depressing influences continue—the menace of a Mexican crisis and uncertainty as to how the Government is to treat the corporations, especially the railroads.

Antitrust legislation at Washington has advanced little beyond reports that the prohibition of interlocking directorates will be made much less rigorous and that definition of acts prohibited by the Sherman law may possibly be abandoned. The plight of the railroads,

owing to continued discussion and repeated poor reports of current earnings, has been much in evidence, causing pressure on transportation securities on the exchange, with some pronounced declines in issues of those companies whose position is least favorable. Figures compiled from the returns to the Interstate Commerce Commission show that for 179 roads net operating revenue decreased almost $12,000,000 in January of this year.

RAILROAD NEEDS BETTER APPRECIATED.

The railroad industry of the country has been the growth of years. The great wealth it has brought to a few is insignificant compared with the part it has played in developing the whole country. The welfare of this great industry means too much to the well-being of the business life of the nation for it to be long disregarded. That there must be allowed a fair return for service rendered is apparently being more widely appreciated. President Willard of the Baltimore & Ohio has said that the public seems more willing for the roads to have relief through a small advance in rates than through depending on pay for service now given free.

The railroad managers are showing more disposition to demand fair consideration. Even the badgered New Haven has made public a statement from its bankers, J. P. Morgan & Co., showing that they had disposed of its securities for small returns instead of large, and denying the charge that they had profited in the sales of properties to the road.

Following the appeal to New Jersey that the full-crew law be rescinded, a similar petition has been made to this State. In it the railroad heads point out that they are facing the greatest financial problem in the history of the railroads. President Rea, of the Pennsylvania, told his stockholders that the railroads as a whole were operating economically and not spending enough for maintenance. Not being able to make a reasonable charge for transportation, he continued, they were forced to make unusual economies, throw men out of work and create general depression and lack of confidence. But for all this railroad management would refuse to take responsibility.

The attempt to show that bookkeeping irregularities, such as have been charged against the St. Paul, were being generally used to produce argument for higher rates through fictitious accounting met vigorous and prompt denial. President Rea, for instance, announced that hereafter no statement reflecting on the management or the integrity of the officers of the Pennsylvania would be allowed to go unchallenged.

INDUSTRIALS COMPETE FOR FUNDS.

In addition to present difficulties, it is being realized that, particularly for the last 12 years, the railroads have been subjected in their constant necessity for new capital to great competition from the industrial corporations. Investment in securities has ceased to be synonymous with railroad stocks and bonds. The industrials, when cost of materials and higher wages threaten to reduce profits, have no State or national regulating commission to prevent them from raising the price of their products, and are able to offer more attractive yield to investors. Even under favorable conditions the railroads are unable to borrow at the low rates formerly prevalent, and with such meager net earnings as are now being returned from present transportation rates it is increasingly difficult to obtain money needed even to refund old obligations.

Conditions of general business have not improved during the week. The steel industry continues to present the most favorable condition. Unfilled tonnage of the United States Steel Corporation at the end of last month had increased over 400,000 tons to 5,026,440, but the independent companies, it is reported, did not make proportional gain in unfilled orders, and buying this month has been gradually reduced. Prices for finished product, too, have not been held firm. The Steel Corporation last week was operating its steel mills at 80 per cent of capacity, with furnaces at 75 per cent.

—

EFFECT ABROAD OF DEPRESSION.

The Bache Review for last week has the following:

"Notwithstanding the various reasons offered for depression and dullness here, it may be, after all, that the unsettlement in foreign markets is what ultimately is at the base of our own lack of assurance. There is little doubt that if trade were actively progressing here and confidence prevailed, this improvement would communicate itself to Europe. But with the plight of the railroads, artificially brought about and kept acute by delay or adverse decisions of a commission which might reasonably remedy the whole situation, business, lacking the stimulation which liberal railroad buying would bring everywhere, has become dispirited. We say artificially, because if railroads were free, as they should be, to regulate rates under the laws of trade, there would be no such railroad situation as we have, because nothing else is holding the country back, and we should be feeling the prickling current already of spring activity in business.

"We are always trying experiments in this country in deference to some political notion. If the Interstate Commerce Commission's powers had not been extended to rate making, the roads would in 1910 have raised rates 10 per cent, and it may be well concluded that over three years of depressing trade conditions would have been avoided."

—

[Mailed to Interstate Commerce Commission; paper from which taken unknown.]

PHILADELPHIA MARKET.

Except for a certain amount of activity in United States Steel, much of which was due to short covering during the first hour, the Philadelphia market remained in a stagnant condition throughout most of the day. Westmoreland Coal lost the 2 points gain established yesterday on a few odd-lot transactions. Otherwise, price fluctuations were confined to minor fractions. Except for the somewhat unusual speech by President Rea regarding the railroad's situation with respect to the Government, especially as to juggling of accounts, nothing new developed at the annual meeting of the Pennsylvania Railroad Co. The stockholders approved the proposed blanket mortgage, and other suggestions of the board already discussed in these columns, and the stock itself remained quiescent. Philadelphia Electric shares hardened to 27 in the afternoon, whereas Philadelphia Company advanced a substantial fraction.

Inquiry around the brokers' offices to-day elicited the information that investment demand, so noticeable during January and the first half of February, had been pretty thoroughly satisfied. The numerous new bond issues brought out since the first of the year have about saturated the market for high-grade securities for the time being, and bond dealers are inclined to look for a period of quietude while these new securities are being assimilated. Prices, however, are well sustained, due primarily to the low existing rates for money. What demand there is for bonds appears to have drifted in the direction of public-utility issues yielding a fairly high return on the investment.

Pennsylvania Steel shares remained dormant to-day, despite the announcement that the company has just chartered a new subsidiary, under the name of the Pennsylvania Steel Co. of Delaware. The charter authorizes it to manufacture iron, steel, and other products and to engage in general construction work. Incidentally, it was stated to-day that the Reading and Pennsylvania railroads, which are the principal owners of the steel company, had advanced about $3,000,000 out of a proposed $10,000,000 for modernizing the company's plants.

Keystone Telephone shares were stagnant, although the February report of earnings was distinctly good, showing a gross increase of $4,894 and a net gain of $3,427. The surplus was $29,451, an increase of $2,142. Since January 1 the surplus was $55,918, a gain of $4,570.

SHOW BIG RAILROAD FAVORS TO SUGAR TRUST AT CHICAGO—ADMITTED TO COMMISSION THAT UNLIMITED FREE STORAGE IS GIVEN, EVEN WHEN TRANSPORTATION COMPANY MUST HIRE SPACE.

WASHINGTON, *April 4.*

Tremendous discrimination by railroads in favor of the Sugar Trust at Chicago was revealed to-day in testimony before the Interstate Commerce Commission in the hearing on lake and rail rates.

It was known that the railroads granted tremendous special privileges to the Sugar Trust in New York, privileges which reduce the earnings of the railroads, but it was not known that this favorable discrimination extended further.

Admission that the American Sugar Refining Co. is granted unlimited free storage privileges on the docks of the Erie & Western Transportation Co. at Chicago was forced from W. H. Johnson, general western agent of the company.

Competing sugar companies are unable to avail themselves of this privilege because of their inability to use the lake and rail routes to advantage.

The further admission that, if the transportation company's docks are full, it rents storage room for one month to give it free of cost to the Sugar Trust was wrung from Mr. Johnson by Rush Butler, attorney for the Chicago Association of Commerce, and Louis D. Brandeis, special attorney for the Interstate Commerce Commission.

The privileges are covered in a joker section of sugar-rate tariffs now in effect between Chicago, Philadelphia, New York, and Boston on the lake and rail routes.

These admissions were the most startling events of the day in the rate hearings before the Interstate Commerce Commission.

CARRY GOODS VIRTUALLY FREE.

Admissions by the railroad representatives to-day are thought to have made impossible any increase in the lake and rail rates, even though the commission decides that on some schedules the railroads are losing money and that these schedules should be revised.

C. C. McCain, chairman of the Trunk Line Association, testified particularly as to the practices on the "ocean and rail" and "lake and rail" hauls from New York to Chicago. The rates are virtually the same—62 cents per hundred pounds for carload lots when the lake-navigation season is on and 65 cents when only the "ocean and rail" route can be used.

Mr. Brandeis obtained from Mr. McCain the admission that on a great part of ocean and rail business from New York the Baltimore & Ohio and Norfolk & Western (a part of the Pennsylvania system) carry the goods virtually free of charge.

This is due to the fact that certain cities in the interior of New York are granted "absorption rates" and "ocean and rail" shipping privileges to Chicago.

Watertown was taken as a sample of one of these cities. The rate from Watertown to New York on first-class carload shipments is 18 cents per hundred pounds, and on less than carload shipments 42 cents per hundred pounds.

The rate from New York to Chicago on carload lots is 26 cents per hundred pounds, and on less than carload lots 65 cents in winter and 62 cents in summer.

On shipments from Watertown to Chicago by the ocean and rail route the railroads absorb the 18 cents a hundred rate from Watertown to New York on carload lots, leaving them 8 cents a hundred for hauling the freight to Chicago from New York via steamer to Baltimore, Newport News, or Norfolk, and then from one of those points to Chicago by rail. On less than carload lots the absorption is 42 cents out of a 65-cent rate in winter and a 62-cent rate in summer.

CREATES UNFAIR DISCRIMINATION.

This service not only causes a tremendous loss to the carriers in revenue, but it creates a most unfair discrimination as between shippers who have the advantage of the ocean and rail routes and those who have not, according to Mr. Brandeis.

Mr. Johnson testified that under the sugar schedules of the Erie & Western Transportation Co. 17,000 barrels of sugar can be stored for an unlimited time on the docks of this company in Chicago. If the docks are crowded, the company will hire private storage for a month in order to handle the sugar business free of cost to the shipper, the American Sugar Refining Co.

The extent of this service is as unlimited as the time allowed, however, for the company will order the sugar out, free of cost to the Sugar Trust, redistribute it for its various destination points, free of charge, and will reconsign it to new destination points if only stored on the docks waiting sale.

Not only this, but the trust is given the privilege of substitution, which means that it can place sugar, brought by rail to Chicago, on the docks of the company and then have it handled free of charge, just as though it were brought by water.

When Messrs. Brandeis and Butler attempted to get some estimate as to the value of this service, Mr. Johnson was unable to give it. In the opinion of the attorneys, it is worth many thousands of dollars annually to the Sugar Trust, and it has the effect of virtually eliminating competition.

—

SUGAR SHIPPING FAVOR IS CUT OFF BY PENNSY—ADDS NEARLY 50 PER CENT TO FREIGHT REVENUE FROM THAT TRAFFIC—GAVE BACK $18.04 ON A CAR.

While arguing for a general 5 per cent advance in freight rates, the Pennsylvania Railroad, through the simple process of cutting off one terminal allowance, has added nearly one-half to its retained revenue from a big sugar traffic out of New York. This follows the clearly expressed view of the Interstate Commerce Commission that allowances

out of freight rates to shippers for various services performed by them constitute rebates in covert form, and, hence, should be abolished.

For floating empty cars from its Jersey City terminal to the Brooklyn Eastern District Terminal the Pennsylvania Railroad Co. made an allowance equal to 1⅛ cents per hundred pounds on the sugar which such cars would bring away. Counting 100 barrels of sugar to a car, such an allowance amounted to $6.76 per car. The terminal district in effect covered American Sugar Refining Co. shipments from Brooklyn.

GAVE BACK $18.04 ON EACH SUGAR CAR.

The published freight rate on sugar from New York to Philadelphia, Baltimore, Washington, and Alexandria, Va., for illustration, is 8½ cents per hundred pounds to each place, entirely regardless of the great difference in the haul, ranging from 90 miles to 230 miles. Besides the above allowance, which has been cut off, the Pennsylvania Railroad made, and still makes, another of 3 cents per hundred pounds.

This is for floating cars loaded from Brooklyn to Jersey City. On the same load basis it amounts to $11.28 per car. Thus there were allowances of 4½ cents per 100 pounds on account of services which it is closely estimated were performed by the Sugar Trust at a maximum cost of about half that much. It left the railroad a free revenue of only 3⅞ cents out of the rate of 8½ cents.

Under that arrangement the Pennsylvania Railroad gave up to the shipper of sugar from Brooklyn to all points reached by the 8½ cents rate from New York, 56 per cent of the collected revenue from the traffic. For each carload of sugar it collected $31.95. Out of this it gave back in service allowances $18.04, and so had left only $13.91 for itself.

ADD 48 PER CENT TO REVENUE.

With one allowance cut off, the Pennsylvania Railroad, charging just the same rate on this sugar business out of New York, actually gets 1½ cents per 100 pounds more for itself. The charge for a carload of sugar is unchanged at $31.95, but instead of giving up, in allowances, $18.04, the company now hands over only $11.28. The result is a free revenue of $20.67, or 64 per cent of the tariff revenue, against 44 per cent of it previously retained.

Thus the railroad, through an act in its own power, increased its clear revenue on Brooklyn refined sugar carried to points in the 8½-cent rate territory from $13.91 to $20.67 per carload. In this way it has added 48 per cent to the revenue from an important traffic. It is in ways such as this, which only square with honest practice, that the Interstate Commerce Commission and Louis D. Brandeis point the railroads to conserve their revenues.

[From the Chicago Examiner, July 24, 1913.]

RAIL HEADS HERE EAGER TO STOP TAP-LINE REBATE—PRESIDENT H. U. MUDGE, OF THE ROCK ISLAND, SAYS RAILROADS WILLINGLY WILL OBEY ORDER OF INTERSTATE COMMERCE COMMISSION—CHICAGO OFFICIALS TELL OF EXACTIONS BY TRUSTS, MULCTING THE LINES OF $50,000,000 A YEAR; BRINGS RELIEF TO COMPANIES.

Heads of railroads having headquarters in Chicago, while surprised yesterday at the exclusive disclosure made in the Examiner as to the plan of the Interstate Commerce Commission to abolish rebates in the shape of allowances to industrial corporations on tap-line roads, said that the railroads would have no hesitation in obeying such order.

"Every railroad has had to make these allowances," said President Henry U. Mudge, of the Rock Island, "but it will be a relief for the companies to be forbidden to make them. The railroads will regard the commission's order much as they did the antipass law.

"When the railroads were allowed to give passes they could not refuse to hand them out. When the law forbade the giving of passes the railroads could refuse to issue them, and former 'deadheads' had to pay money for fares. The same will be true of these 'tap-line' allowances.

WILLING TO STOP PRACTICE.

"Hitherto the railroads have been obliged to make these allowances because the industrial corporations were able to exact them. Now that the railroads are to be ordered to cease making such allowances on freight carried over the tap-line roads, we will stop the practice and will be the gainer.

"It is unfortunate that the custom should have grown up of making these allowances. They were, in my opinion, unjustifiable, although there are exceptions. The International Harvester Co. has two of these industrial railroads connecting its plants with trunk lines, and these little railroads do a bona fide business. The Interstate Commerce Commission has decided that the Harvester Co. is entitled to an allowance of $3 a car for the switching work done by these tap-line railroads.

MADE BAD CONDITIONS.

"In spite of such exceptions the general fact stands out that the allowance of any sum to an industrial corporation having the effect of a rebate on freight rates to a certain extent gives the industrial corporation a club over the railroads. For that reason the railroads will be glad to see the custom abolished.

"Of course, I am not authorized to speak for the railroads, but I can not see why they should object to having the tap-line allowances abolished. These allowances have been conducive to a bad condition, and I believe their abolition will have a good effect."

"There has been nothing underhand about these tap-line allowances to industrial corporations," said President Darius Miller, of the Burlington Road. "Any division of freight rates between the trunk lines and industrial railroads has been a matter of record. Railroads have often been compelled to make such allowances, but the order of the Interstate Commerce Commission abolishing them will cause no sorrow to us. Any order made by the commission will be cheerfully obeyed."

SAYS THEY STOPPED IT.

"The order prohibiting division of freight allowances with tap-line roads owned by industrial corporations will be a good thing for the railroads," said President William A. Gardner, of the Chicago & North Western. "The North Western long ago stopped the practice of making such allowances, and I should think other railroads would be glad to be ordered to abolish it."

When asked yesterday whether, in his opinion, the estimate of $50,000,000 a year as the sum total of rebate allowances by railroads on tap-line roads was too high, Charles R. Hillyer, former counsel of the Interstate Commerce Commission, said last night:

"You would not have thought so if you had seen how bitterly the Steel Trust fought before the Interstate Commerce Committee during the hearings before Commissioner Harlan.

"Kellogg, Severance, and the whole battery of highly paid Steel Trust lawyers were on hand to defend the allowances made to the trusts on the tap lines, and it was evident from the terrific fight made by the trust that enormous sums of money were involved—enough to pay dividends on half a billion of stock.

MILLIONS IN ALLOWANCES.

"In the course of the investigation made by Commissioner Harlan it was made evident that the Harvester Trust, the Steel Trust, and the Lumber Trust were taking scores of millions of dollars from the railroads in rebates in the shape of allowances on tap-line railroads connecting their plants with trunk lines.

"It was shown that the Lumber Trust would build two tap-line roads a few hundred feet long connecting one of its plants with a trunk-line railroad and would then go to one railroad and say, 'Give us an allowance of $5 a carload and you can have our business.'

"The trust might go from one road to the other, and finally give its business to the road offering the biggest allowance on the freight.

"The testimony showed that the Steel Trust got more of a rake-off than any other industrial corporation. It offered to turn its business over to any railroad that would give it the biggest rebate in the shape of a division of the freight charges in favor of its tap lines.

NOT LEGITIMATE LINES.

"It was shown that certain lumber and brewery corporations got millions of dollars from the railroads in the shape of allowances for freight carried over tap lines. These tap lines, or industrial railroads, as they are called, are often only a few hundred feet or yards long. They are not bona fide railroads at all, but are operated solely for the purpose of bolstering up a claim upon the railroads for a division of the freight rate.

"As a result of the order of the Interstate Commerce Commission that the railroads shall discontinue making these tap-line allowances to big industrial corporations, I am convinced that something near $50,000,000 a year will be saved to the railroads; they have been paying out that much in these disguised rebates. This $50,000,000 a year will remain in the coffers of the railroads, and it will not be necessary for the railroads to make the advance in freight rates for which they have been clamoring.

"When I was engaged as counsel in the advance-rate case in 1910, and it was argued by the railroads that they must be allowed to increase their freight rates, the question was asked, 'Why do you not cease making these allowances to the trusts on their tap-line railroads?' But the railroads made no answer to this question.

NO REASON FOR INCREASE.

"There is no reason why the railroads should ask for increased freight rates while they are paying out scores of millions of dollars a year in unnecessary allowances to the trusts on tap-line roads which are merely subterfuges to obtain rebates.

"These tap lines built by the big industrial corporations are not bona fide railroads. They are used to coerce the railroads into committing a violation of the interstate commerce law. The commission found at the recent hearing that the Lumber Trust had incorporated many of these little railroads for the express purpose of getting a division of the freight allowances with the railroads."

—

[From the Chicago Examiner, Thursday, July 24, 1913.]

A SQUARE DEAL FOR RAILROADS AND PUBLIC.

Readers of the Examiner were given yesterday morning an authoritative forecast of a forthcoming decision of the Interstate Commerce Commission.

A very considerable portion of the population of the country has a direct financial interest in that decision. Millions upon millions of dollars are involved in it. Also it is a decision that will have much to do with the solution of the trust issue.

For these reasons it is one of the most important pieces of news that have been given the public in months. Therefore the Examiner takes some pride in the fact that it was given exclusively to the readers of this paper. There is a satisfaction in giving good news—and giving it first.

First, the decision denies the railroads of the country permission to increase freight rates.

Freight rates are a fixed charge upon every individual of the Nation. They are a concealed charge, to be sure. They are as insidious as the tariff, but they are also as certain a tax as the tariff is.

But that is not the most important part of the conclusion reached by the commission. That body has also determined that so-called "allowances" to concerns operating stub railroads shall hereafter be prohibited.

"Allowances," in the sense the word is used in railroad terminology, is but an euphemistic synonym for the "rebates" of other days.

An "allowance" is a division of the freight charge upon any commodity given the manufacturer if he has a stub railroad connecting his plant with a railroad. The trust has been getting its "allowances" on both material shipped in and its products shipped out under the theory that the stub railroad is a transportation company. And the "allowance" demanded by the stub line has often, in the cases where railroad competition permitted it, been half the total charge, although the stub hauled the freight but a mile or so, while the railroad hauled it hundreds of miles.

As a matter of fact, a stub line is not a railroad in any sense. It is simply a delivery system. It is to the trust just what the Missouri mule or the auto truck is to the smaller manufacturer. And the commission has come very wisely to take that view of it.

The big corporations are pretty apt to howl over the decision. It will cost them, according to the estimates of the commission, between $50,000,000 and $100,000,000 a year.

But the railroads should be pleased. It will permit them to give the increased wages their men demand and leave them several millions balance without increasing rates. And the small manufacturer and the consumer will profit, because one of the unfair advantages of the trust has been broken down.

—

RAIL HEADS HERE EAGER TO STOP TAP-LINE REBATE—PRESIDENT H. U. MUDGE OF THE ROCK ISLAND, SAYS RAILROADS WILLINGLY WILL OBEY ORDER OF INTERSTATE COMMERCE BOARD—CHICAGO OFFICIALS TELL OF EXACTIONS BY TRUSTS, MULCTING THE LINES OF $50,000,000 A YEAR; BRINGS RELIEF TO COMPANIES.

Heads of railroads having headquarters in Chicago, while surprised yesterday at the exclusive disclosure made in the Examiner as to the plan of the Interstate Commerce Commission to abolish rebates in the shape of allowances to industrial corporations on tap-line roads, said that the railroads would have no hesitation in obeying such order.

"Every railroad has had to make these allowances," said President Henry U. Mudge, of the Rock Island, "but it will be a relief for the companies to be forbidden to make them. The railroads will regard the commission's order much as they did the antipass law.

"When the railroads were allowed to give passes they could not refuse to hand them out. When the law forbade the giving of passes the railroads could refuse to issue them, and former 'deadheads' had to pay money for fares. The same will be true of these 'tap-line' allowances.

WILLING TO STOP PRACTICE.

"Hitherto the railroads have been obliged to make these allowances because the industrial corporations were able to exact them. Now that the railroads are to be ordered to cease making such allowances on freight carried over the tap-line roads, we will stop the practice and will be the gainer.

"It is unfortunate that the custom should have grown up of making these allowances. They were, in my opinion, unjustifiable, although there are exceptions. The International Harvester Co. has two of these industrial railroads connecting its plants with trunk lines, and these little railroads do a bona fide business. The Interstate Commerce Commission has decided that the Harvester Co. is entitled to an allowance of $3 a car for the switching work done by these tap-line railroads.

MADE BAD CONDITIONS.

"In spite of such exceptions the general fact stands out that the allowance of any sum to an industrial corporation having the effect of a rebate on freight rates to a certain extent gives the industrial corporation a club over the railroads. For that reason the railroads will be glad to see the custom abolished.

"Of course I am not authorized to speak for the railroads, but I can not see why they should object to having the tap-line allowances abolished. These allowances have been conducive to a bad condition, and I believe their abolition will have a good effect."

"There has been nothing underhand about these tap-line allowances to industrial corporations," said President Darius Miller of the Burlington road. "Any division of freight rates between the trunk lines and industrial railroads has been a matter of record. Railroads have often been compelled to make such allowances, but the order of the Interstate Commerce Commission abolishing them will cause no sorrow to us. Any order made by the commission will be cheerfully obeyed."

SAYS THEY STOPPED IT.

"The order prohibiting division of freight allowances with tap-line roads owned by industrial corporations will be a good thing for the railroads," said President William A. Gardner, of the Chicago & North Western. "The North Western long ago stopped the practice of making such allowances, and I should think other railroads would be glad to be ordered to abolish it."

When asked yesterday whether, in his opinion, the estimate of $50,000,000 a year as the sum total of rebate allowances by railroads on tap-line roads was too high, Charles R. Hillyer, former counsel of the Interstate Commerce Commission, said last night:

"You would not have thought so if you had seen how bitterly the Steel Trust fought before the Interstate Commerce Committee during the hearings before Commissioner Harlan.

"Kellogg, Severance, and the whole battery of highly paid Steel Trust lawyers were on hand to defend the allowances made to the trusts on the tap lines, and it was evident from the terrific fight made by the trust that enormous sums of money were involved—enough to pay dividends on half a billion of stock.

MILLIONS IN ALLOWANCES.

"In the course of the investigation made by Commissioner Harlan, it was made evident that the Harvester Trust, the Steel Trust, and the Lumber Trust were taking scores of millions of dollars from the railroads in rebates in the shape of allowances on tap-line railroads connecting their plants with trunk lines.

"It was shown that the Lumber Trust would build two tap-line roads a few hundred feet long connecting one of its plants with a trunk-line railroad and would then go to one railroad and say, 'Give us an allowance of $5 a carload and you can have our business.'

"The trust might go from one road to the other, and finally give its business to the road offering the biggest allowance on the freight.

"The testimony showed that the Steel Trust got more of a rake-off than any other industrial corporation. If offered to turn its business over to any railroad that would give it the biggest rebates in the shape of a division of the freight charges in favor of its tap lines.

NOT LEGITIMATE LINES.

"It was shown that certain lumber and brewery corporations got millions of dollars from the railroads in the shape of allowances for freight carried over tap lines. These tap lines, or industrial railroads, as they are called, are often only a few hundred feet or yards long. They are not bona fide railroads at all, but are operated solely for the purpose of bolstering up a claim upon the railroads for a division of the freight rate.

"As a result of the order of the Interstate Commerce Commission that the railroads shall discontinue making these tap-line allowances to big industrial corporations, I am convinced that something near $50,000,000 a year will be saved to the railroads; they have been paying out that much in these disguised rebates. This $50,000,000 a year will remain in the coffers of the railroads, and it will be necessary for the railroads to make the advance in freight rates for which they have been clamoring.

"When I was engaged as counsel in the advance-rate case in 1910, and it was argued by the railroads that they must be allowed to increase their freight rates, the question was asked, 'Why do you not cease making these allowances to the trusts on their tap-line railroads?' But the railroads made no answer to this question.

NO REASON FOR INCREASE.

"There is no reason why the railroads should ask for increased freight rates while they are paying out scores of millions of dollars a year in unnecessary allowances to the trusts on tap-line roads which are merely subterfuges to obtain rebates.

"These tap lines built by the big industrial corporations are not bona fide railroads. They are used to coerce the railroads into committing a violation of the interstate commerce law. The commission found at the recent hearing that the lumber trust had incorporated many of these little railroads for the express purpose of getting a division of the freight allowances with the railroads."

REBATE GIVES TRUSTS CLUB OVER RAILWAYS, DECLARES H. U. MUDGE.

Every railroad has had to make allowances for tap lines, but it will be a relief for companies to be forbidden to make them. The railroads will regard the commission's orders much as they did the antipass law. The allowance of any sum to an industrial corporation, having the effect of a rebate on freight rates, to a certain extent gives the industrial corporation a club over the railroads. For that reason the railroads will be glad to see the custom abolished.

HENRY U. MUDGE.

—

[From Chicago Examiner, July 23, 1913.]

REBATES BY ALLOWANCES ON TAP-LINE ROADS TO BE ABOLISHED—FIFTY TO ONE HUNDRED MILLION DOLLARS WILL BE ADDED TO REVENUES OF RAILROADS BY DECISION; WILL OBVIATE RATE INCREASE NECESSITY—INTERSTATE COMMERCE COMMISSION WILL REFUSE TO GRANT RAISE IN RATES; TO ISSUE ORDER THAT WILL STRIP TRUSTS OF SPECIAL FAVORS.

WASHINGTON, *July* 22.

The answer of the Interstate Commerce Commission to the application of the railroads east of the Mississippi and north of the Ohio and Potomac Rivers for permission to make a general increase of 5 per cent in freight rates will be as follows:

1. The application will be denied.
2. All railroads will be ordered to discontinue making "allowances" to certain favored big industrial combinations.

The effect of this will be to relieve the general public of the necessity of paying the additional $42,000,000 a year which the railroads in official classification territory are asking for, and to strip certain big corporations of a sum ranging between $50,000,000 and $100,000,000 annually.

MAY NOT PROSECUTE.

The necessity of such an order has been under consideration by the commission for some time. During the past few months it has secretly made an investigation to determine just the extent to which the practice of making "allowances" to industrial short-line railroads owned by manufacturing concerns is prevalent.

It is now in possession of the names of the firms that receive these allowances, or rebates, or discriminatory rates, and in addition it has the names of the railroads that pay them the amounts received by the favored industrial corporations and something of the extent to which the practice injures the competing manufacturers who are not in a position to enter into such arrangements.

In a large number of instances, it is claimed, the practice amounts to extortion. The railroads are compelled by the demands of competition to make allowances to the manufacturer for his part in transferring his product over his own insignificant trackage to the junction where the regular railroad takes up his cars.

$17,000,000 FOR INCREASE.

Where several railroads are bidding for such a manufacturer's business, the one which makes the most liberal allowance usually gets the freight.

In view mainly of this fact, it is expected that the answer which the commission will give the railroads' application will meet with their approval and cooperation and will do away with the most important of existing improper practices in the railroad business without the necessity of prosecution.

The railroads are asking for the 5 per cent increase on the ground that they must have increased revenue to pay their large operating expenses, and particularly to pay the higher wages demanded by their employees—a demand which almost precipitated a paralyzing strike a few days ago and which is now being arbitrated under a special act of Congress. In rough figures, the 5 per cent increase asked by the railroads in the territory east of Chicago would add $42,000,000 to their revenue.

The recent demands of their employees for wages equal to those paid railroad workmen in the western and southern territory would take $17,000,000 of that amount.

Under the order which the Interstate Commerce Commission will issue they will get more than $42,000,000 by simply cutting off an improper expense, and, correspondingly, the favored trusts and combinations which have been mulcting them of the amount will be deprived of it.

The railroads will be placed in a position to pay their employees the living wage they demand, the danger of a tremendous strike will be avoided, and the whole thing will be accomplished without the shippers—and through them the general public—being required to pay more for the transportation of the necessities of life.

And this means that another boost in the cost of living, which would mean hardship to millions of families, will be prevented.

A year ago Commissioner Harlan discussed the subject generally to some extent on the opinion on the tap line, which has to do specifically, however, with the lumber railroads. Incidentally Commissioner Harlan was in charge of the investigation just made into the conditions in the official classification territory.

DEFINES INDUSTRIAL LINE.

He said:

"An industrial railroad, as that phrase is now commonly used, is a short line constructed primarily to serve the particular plant or industry in the general interest of which it is owned and operated. It consists of the tracks connecting the various factories, warehouses, and other buildings of the industry with one another, and ordinarily has a connection with one or more adjacent trunk lines, by means of a track leading from the plant to the rights of way.

"It serves the industry by receiving its inbound shipments of raw materials from the trunk lines at agreed interchange points, distributing them among the various buildings according to the requirements of the manufacturing operations, and by taking its finished products from the plant of the trunk lines; it is also often in a position to effect all the necessary movements of materials and partially finished products from building to building within the plant.

OPERATED BY INDUSTRY.

"The rails, tracks, and locomotives are more frequently operated as a bureau of the industry and no pretense is made of serving outside interests. In recent years, however, a practice has grown up under which the rails, tracks, and locomotives operated and used in and around an industrial plant, when set over to a small incorporated railroad company, organized for the purpose and owned by the industry or in its interests, are thereafterwards dealt with by the regular lines as something wholly apart from the industry and as if they constituted a

common carrier, in the service of the general public, participating on an equal basis with other carriers in the transportation of the traffic of the country.

"On this theory of their status many industrial lines receive allowances out of the rates, both on the traffic of the controlling industry and upon such traffic of outside interests as they may handle.

COSTS MILLION A YEAR.

"The aggregate amount so paid by the regular lines to industrial lines throughout the country is not known. It has been estimated at not less than $100,000,000 a year. On the basis of such investigations as we have been able to make, it seems entirely conservative to say that the amount for the whole country is not less than $50,000,000 or $60,000,000 a year.

"In no small number of cases the allowances are sufficient to meet all these costs and to return handsome dividends on the entire investment of the industry in its tracks and equipment. In some cases the amount thus received by a particular industry is so large as to contribute materially to its prosperity as compared with the prosperity of a competitor in the same line of business receiving no such aid."

Commissioner Harlan also significantly intimated something of what is to happen by saying at another point in the opinion:

"In a formal investigation we are now looking into the relations between the public carriers and the industrial lines affiliated with iron and steel industries and with other manufacturing concerns located in the territory east of Chicago. A number of particular instances are also before us upon formal complaint. All these cases will be considered in due time."

SIMILAR TO LUMBER CASES.

The insidious nature of the rebating is indicated in his comment on conditions in the lumber industry, which is perfectly illustrative of conditions among other industries in the eastern territory.

"The allowances paid range from a minimum of three-quarters of a cent to 6 cents per 100 pounds," he wrote. "In the competition of carriers for the traffic allowances as high as 7 cents per 100 pounds have been paid out of a 14-cent rate, where the haul of the tap line was a matter of feet and yards, while the haul of the carrier itself approximated 400 miles."

Franklin K. Lane, now Secretary of the Interior, forecasting sweeping reforms in this direction when he wrote his opinion in the Manufacturers' Railway Co. case, said:

"I can not but believe that the solution of this question of terminal allowances for industrial delivery can only come when we have separated the line charge from the terminal charge. If the industry was sufficiently powerful in that it had a great volume of traffic it generally secured the allowances, and especially if it was in competitive territory.

"We are now coming under a system of regulation in which one universal rule must be applied to all industrial railroads which are in part plant facilities and carriers' facilities—plant facilities in that they are a substitute for horses and wagons in the carriage of goods from one part of a plant to another and in the delivery of the plant's traffic to a trunk line; carrier facilities in that they are an extension of the terminal of the trunk line to the industry.

SITUATION COMPLICATED.

"This situation is so complicated that, in my judgment, it never can be settled so as to avoid giving a rebate to the industry or discriminating against the industry until the trunk lines state in their tariffs separately and distinctly what portion of their rate is allowed for terminal service."

This case was decided before the tap-line case referred to. Nevertheless, Commissioner Harlan then was giving a good deal of thought to the subject, as is indicated in his dissenting opinion:

"The contributions thus made by carriers to various industries must, in the aggregate, amount to a very large sum annually, and the burden is laid upon the general rates, which they exact from the public at large. In some cases, I can not doubt, the financial aid thus received is sufficient to determine the prosperity of the particular industry, as compared with similar and possibly competing industries that have to get along without an allowance or have not installed plant tracks and thus have no ground upon which to base a demand for similar contributions from the carriers."

HOPKINS TELLS OF INDEPENDENTS' LONG FIGHT ON TAP LINES.

Secret favors granted by railroads to big industrial corporations in the division of freight income with "tap lines," as short railroads built by manufacturing plants are called, have long been denounced by independent shippers.

"These tap lines," said W. M. Hopkins, head of the transportation department of the Chicago Board of Trade last night, "are not real railroads at all, but are short roads built by industrial corporations to connect their plants with trunk lines. They may be anywhere from a quarter of a mile to 10 miles or 20 miles in length, but they should not be classed as railroads but as parts of the manufacturing plants which they serve.

"Yet the railroad companies, eager to grant illegal favors to big industrial corporations, have acknowledged these 'tap lines' as railroads, and have split the freight rates with them.

"They would allow the little 'tap-line' railroad $5, $10, or even $15 a ton as its share of the freight charges on immense consignments of oil, steel, tin plate, agricultural implements, or other products of the industrial corporation owning the 'tap line,' and this would be equivalent to a freight rebate granted by the big railroad company to the trust, which owns the tap line and ships the freight.

"Of course, such allowances are grossly unfair, besides being a dishonest evasion of the law against rebating, and all good citizens should rejoice that the Interstate Commerce Commission will order the practice stopped. It will be a good thing for the railroads which have been granting these unfair allowances to be compelled to cease making them, as it will put vastly increased sums into their treasuries. It also will be a good thing for the independent shipper, who has been placed at a disadvantage, owing to favors granted by the railroads to the big industrial corporations."

W. M. Hopkins is the transportation manager of the Chicago Board of Trade, a position he has occupied since 1908. Though called upon to handle many cases involving opposing elements, Mr. Hopkins by his tact and sterling honesty always has earned the respect of both the shippers and the carriers. One of his strong characteristics is his unvarying effort to equalize conditions as between competing markets.

Mr. Hopkins was born in Michigan in 1858 and entered the railway service in 1879 as freight solicitor of the Erie & North Shore Dispatch Fast Line. He occupied successively many other railway positions. Only recently he was elected president of the Traffic Club of Chicago.

COMMISSIONER HARLAN'S "TAP LINE" DECISION RELATIVE TO RAIL REBATING.

Commissioner Harlan, in charge of the rail investigation just made, some time ago discussed the subject generally in an opinion on the tap line. A part of the decision relative to the present case reads:

The allowances paid range from a minimum of three-quarters of a cent to 6 cents per 100 pounds. In the competition of carriers for the traffic allowances as high as 7 cents per 100 pounds has been paid out of a 14-cent rate, where the haul of the tap line was a matter of feet and yards, while the haul of the carrier itself approximated 400 miles.

The amount of the allowance seems not to be governed definitely by the extent or character of the service said to be performed by the tap line, but to result to some extent from the bargain made between the carrier and the lumber company. In one case a tap line operating 6 miles of main line, received allowance of 3 and 4 cents per 100 pounds, while a few miles away another tap line, operating 12 miles, received but from 1 to 2½ cents per 100 pounds, depending upon destination; in each case the public carrier performs all the service between the mill and its own tracks.

It did not appear that the controlling lumber companies, the real beneficiaries of the allowance, knew of the discriminations between them until the facts were developed in the hearing. Other instances appear on record, where incorporated tap lines are receiving allowances that are less or greater than the allowances paid to other incorporated tap lines performing a service that is substantially similar in extent and character and under like conditions.

—

[Mailed to Interstate Commerce Commission. Paper from which taken unknown. April 2, 1914.]

WILL REGULATION BE JUSTIFIED?

Pretty much everybody is agreed that the coming decision of the Interstate Commerce Commission in the application of central and eastern railroads for a freight-rate increase will show finally whether Government regulation is a measurable success or a complete failure.

This will not involve a simple finding of fact whether present conditions for the railroads are less or more endurable than was the case when a former ruling of the commission prohibited rate increases. There must be an entire change in the viewpoint of the commissioners if their decision is to benefit the country. Heretofore they have shown the disposition which has been common in the whole Government attack against railroads. They have magnified the quasi-public character of the transportation business as contrasted with its private character to such an extent as to forget that private ownership of railroads exists primarily for the purpose of making money for the capital invested in them and except as it is successful in that undertaking it can not supply the capital needed to maintain its business or do that business in a way to insure good public service. They have failed to realize, too, how completely dependent the whole industry of the country is upon the prosperity of its railroads, and how impossible it is to check railroad prosperity and discourage railroad enterprise without paralyzing to very grave degree all industrial enterprise. Starve the railroads and you pinch everybody.

If you compare the purchasing value of a dollar to-day with its purchasing value of 10 years ago, and then contrast railroad rates of to-day with those which obtained 10 years ago, you will find that existing rates are really infinitely lower than they used to be, and railroad profits discouragingly less. Wages and costs of material have increased; the difficulty of raising money has increased; every railroad undertaking is harder to carry out than it used to be—but the chance of profit from the railroad business has steadily decreased. There is no longer any broad strength or spirit to railroad development. And because this is so there is no broad strength and spirit to business development of any kind such as the country knew and enjoyed before Government saw fit to make war upon railroad profits. The circumstances of the time show plainly enough that most of our Government regulation thus far has been destructive and obstructive rather than constructive of successful railroad operation in the United States.

There is no necessary reason why this should be so. Government commissions need only to see things in their true light and relations to have a sounder basis for their orders. If their idea will be to make railroads richer instead of poorer they will begin to justify the policy which brought commissions into existence. That was not to impoverish the public but to make the public better off. And commissions can not impoverish railroads without impoverishing the public. Who owns the railroads? Thousands upon thousands of stockholders. Railroad prosperity feeds millions.

Rate increases were opposed by public opinion a few years ago. But now that public opinion favors rate increases, and favors them because convinced of their justice and expediency, if the Interstate Commerce Commission shuts its eyes to the common sense of the Nation and falls a prey to the statistical mummery of a Thorne or a Brandeis—refuses to give railroading a chance to prosper richly—railroad regulation by commission will be a failure. People will vote it such when they get the opportunity.

—

[From Philadelphia North American, March 5, 1914.]

BIG SHIPPER IS FOR FREIGHT RAISE, AT BUYER'S EXPENSE—WOULD ADD 7 CENTS TO COST OF EACH PACKAGE, MAIL ORDER HOUSE ADVOCATE OF HIGHER RATES ADMITS.

WASHINGTON, *March 4.*

Increases in freight rates increase the burdens upon the consumers far more than upon the big shippers of freight, and the latter in advocating general advances in rates as preferable to the abolition of free terminal services and special privileges to themselves demonstrate absolute indifference to the welfare of their customers.

This short sighted policy upon the part of great mercantile houses and producers was forcefully illustrated in the hearings before the Interstate Commerce Commission to-day upon free services performed by railroads for favored shippers.

J. C. Maddison, traffic manager for the great mail-order house of Montgomery & Ward, Chicago, declared that the advance in rates proposed by the railroads would add an average cost of 7 cents to every package sent out by his firm. This cost would be borne entirely by the purchaser.

He favored the advance in rates, rather than have the railroads impose a charge for services which are now performed free for his firm.

In striking contrast to this testimony was that of R. H. Forbes, traffic manager for Butler Bros., wholesale mail-order merchants of Jersey City. Mr. Butler testified as one familiar with traffic condi-

tions, and not as the representative of a particular concern. He was emphatic in declaring against the advance in rates and in favor of the abolition of all free services and special privileges.

LIGHTERAGE PROBE COMING.

He told of the lighterage service performed by railroads for New York, and suggested it was a subject that might well be investigated.

"You need not be surprised," interposed Commissioner Harlan, "if you hear an announcement of our intention to investigate that very subject."

Mr. Forbes said: "New York and Jersey City pay the same rates to Chicago, yet it costs the railroads vastly more to handle New York freight than Jersey City freight. They furnish free lighterage from Jersey City to New York, and that is the most expensive service possible. Also, it is a distinct service.

"In talking about the 5 per cent increase, I have heard much about the burden to the shipper, but in truth that burden will be passed on to the consumer. The 5 per cent raise will amount to more than 20 per cent before it reaches the consumer, in my estimation. This can be seen when you figure it will apply on raw material as well as on finished products, and on each individual distributer. Also, many local tariffs will be far in excess of 5 per cent higher under the flat-rate scheme.

"The sentiment in New York, I hear, is all in favor of the increased rate. That sentiment does not extend to Jersey City, however, and if New York shippers want to pay the railroads more, I think they should pay for the distinct and expensive services, such as lighterage, which they now receive free."

Mr. Forbes went on to show that passing the burden on to the consumers restricts business both for the merchants and for the railroads. It would be better for both, he believed, to abolish all free service. The increase in railroad revenues which would thus be contained would be far less expensive to the country than a general increase in rates.

In Mr. Maddison's testimony, the plea was made that the shippers who enjoy special privileges relieve the railroads of a great deal of work, but when questioned by Mr. Brandeis he admitted that they are themselves the chief beneficiaries, since they are relieved of all hauling and are enabled to ship at lower cost than less fortunate shippers, thereby obtaining the advantage of special privilege over competitors.

When Mr. Brandeis asked him if he had studied the proposed 5 per cent increase, he said:

"I haven't figured it out closely. It wouldn't cost us a nickel, though, for it finally would go into the cost of goods, and I am told the average shipment would cost the consumer 7 cents per purchase more than now."

Mr. Maddison said his firm handled upward of 23,000 cars annually, the cost of the freight on each being above $100. On the basis of a straight 5 per cent raise, this would be more than $100,000 additional freight charges.

As against this, Mr. Brandeis pointed out that if a spotting charge of $1 a car is levied, it would amount to only about one-fifth the increased rate cost.

WILLING TO LET CONSUMER PAY.

Here Clifford Thorne, State railroad commissioner of Iowa, asked: "You'd rather have the other fellow pay the $100,000 than to pay the $23,000 or so yourself, wouldn't you?"

"I'll have to answer that later," said Mr. Maddison.

Mr. Thorne remarked that when they felt the burden would rest on the consumer the big shippers were willing to see the railroads get the increase in rates, but now that they see a possibility of having to pay for special services performed for them, they are not only willing, but anxious, to see the line haul cover the whole thing.

Mr. Maddison said it didn't make any difference to his firm what the rates are, as the consumer ultimately would pay it all anyway, and the business would go on just as before.

Another witness who took an advanced view of the situation to-day is A. J. Earle, of the Kelly Island Lime & Transportation Co. He said the margin of profit upon lime is very small. The Kelly Island company ships 65,000 carloads per year. If a general advance in the rates on lime is made, it will decrease railroad revenues, for it would contract both the freight and the traffic, because the freight would not move.

Hearings on free terminal services in large cities were concluded for the present and the cost of free services in the coal regions was taken up.

It was shown by General Freight Traffic Manager Schriver, of the Baltimore & Ohio, that his railroad performs services free for every mining company upon its lines.

The average cost of spotting cars for the different mines, for which the railroads receive no compensation, is $1.49 per car.

[From the Joplin (Mo.) Daily Globe, February 27, 1914.]

FRISCO OFFICIALS GUESTS AT BANQUET BY BUSINESS MEN—ALL DEPARTMENTS OF ROAD REPRESENTED AT DINNER TO SHOW APPRECIATION OF INVESTMENT—FAVOR FREIGHT-RATE RAISE—RESOLUTION APPEALING TO INTERSTATE COMMERCE COMMISSION IN EASTERN SYSTEMS' BEHALF ADOPTED.

The value of friendliness and understanding between the public and the railroads, coupled with cooperation, was the keynote of every speaker, both of business men and of the railroads, in a complimentary banquet tendered by the commercial organizations of Joplin to the Frisco in the Connor Hotel last night. It was in token of appreciation and celebration of the numerous improvements made here within the last 15 months by the Frisco railroad.

Every department of the railroad system and virtually every line of industry in Joplin was represented. Homage to the railroad was paid by 175 business men and was acknowledged by 18 Frisco officials Not another person could have been accommodated in the dining room of the hostelry where the banquet was held.

FAVOR INCREASED FREIGHT RATES.

The jubilation began with a seven-course dinner, interspersed with instrumental music by Miss Alma Pitman and Miss Rhetta Hesselberg, and the song "America" in chorus. Judge David D. Hoag was toastmaster.

Following the banquet a resolution indorsing a proposed 5 per cent increase in railroad freight rates east of the Mississippi River was adopted unanimously by the 175 business men of Joplin. It recently was indorsed by the Noonday Luncheon Club. In the action last night it received the recommendation of every commercial body in the city. The resolution was read by John M. Malang. It follows:

"Whereas most of the commercial bodies and boards of trade east of the Mississippi River have, by resolution and petition, requested the Interstate Commerce Commission to grant the railroads east of the Mississippi River a 5 per cent advance in freight rates; and

"Whereas the cities of St. Louis and Kansas City of our own State and the business men of the city of Joplin attending the Noonday Luncheon Club of this city have made a similar request: Now therefore be it

"*Resolved*, That it is the sense of this meeting that the several commercial bodies here assembled indorse the action of the various commercial bodies before mentioned and the action taken at our Noonday Luncheon Club by our own citizens and business men."

TOAST TO PRESIDENT.

Those who spoke in behalf of the railroads last night were: A. Hilton, J. E. Hutchison, E. D. Levy, and C. W. Nunn. The following Joplin business men spoke: Judge David D. Hoag, T. J. Frank, O. D. Royse, and John M. Malang.

Judge Hoag began the speaking with toasts to President Wilson and to the Frisco Railroad. A. Hilton, of St. Louis, passenger traffic manager, responded in behalf of the railroad and particularly for W. B. Biddle, receiver, who could not be present.

"On January 20, last," said Judge Hoag, "the Chief Executive of this Nation sent a message to the business men of this country. It was a direct communication to every business man in Joplin, as well as to all of the business men of the Nation.

"'Peace, freedom, and prosperity in commerce and industry' were the keynotes of that message. He said: 'The antagonism between business men and the Government now is over. The prosperity of the railroads and the prosperity of the country are inseparably connected.'

"It is refreshing to read this clear-cut, straightforward message, going direct to the point. It is in marked contrast to the heavy state papers that heretofore have been delivered to statesmen and politicians, filling columns of newspapers that the average business man never reads. Therefore, at the very outset of these proceedings, I propose a toast to Woodrow Wilson, the President of the United States: 'May he succeed in his endeavors to bring about a condition where there shall be a common effort to square business methods with both public opinion and law.'

"We are gathered here to-night to celebrate the formal opening of the new Frisco Railway station. It is right and fitting that we honor the occasion.

"Our new railway station will compare favorably with any other in the United States. Some of the large cities have larger buildings, but none surpass the accommodations of our Frisco station. It is superior to, has more conveniences, is better lighted, and is much handsomer than is the Pennsylvania Railway station of Pittsburgh.

"The management of the Frisco corporation planned wisely and well when they decided to place in Joplin the finest station on the system.

"Our citizens were wise when they forgot their grievances as to freight discriminations and gave their time, their money, and their efforts to clear the ground on which this splendid building would be placed.

"Here is a splendid example of cooperation—'Cooperation,' the slogan of the Business Men's Noonday Club.

"We congratulate the railway officials who are with us to-night. We appreciate the liberality of the appropriation. We are glad to know that you recognize the importance of our city. We believe that the receipts from this passenger station will justify the expenditure. This certainly is one case where the people are with you.

"I now propose a toast:

"'To the officials of the Frisco Railway Co.—may they enjoy the good will of the people whom they serve.'

"To our own committeemen—may they continue their work for a greater Joplin.'

"America has grown by leaps and bounds along the new roads of history with a rapidity and an energy for which there is no precedent; 10, 15, 30 times in a single century has she multiplied her population, her cities, and all the wealth controlled by man.

"All this increased wealth and population has brought with it new problems—the fathers in the past wrought well, but there never was a time in the history of this country when the solution of great problems devolved upon business men—a class of men as high minded and as patriotic as any other class of men—to such a large extent as now devolves upon our own business men.

"The increasing Government supervision of business emphasizes the importance of an intelligent consideration of these problems.

"I am not a prophet, nor the son of a prophet, but if I read the signs of the times aright, the corporations of a quasi-public nature are beginning to accept the doctrine of governmental or State control and are shaping their affairs accordingly. There are indications that the Interstate Commerce Commission and the State commissions are getting away from popular clamor and are disposed to treat the subject in a fair and judicial manner.

"These tribunals should become as high and as sacred in the minds of the people as are our highest courts. Only men of known integrity, of great ability and high character will be selected for these positions.

WILL COOPERATE.

"They should be as fully equipped with competent engineers, accountants, and auditors as are the corporations whose business they shall examine and supervise. They will have the corporations respect them, treat with them, and cooperate with them, both working together for the common good of the public and the stockholder.

"Under such conditions the corporations will, I believe, meet the commissions in the spirit of fairness.

"There is a disposition to get together on both sides along lines that will be fair to the people and fair to the corporations.

"There is a community of interest between business men and the great corporations. The proper moral standard must be set and maintained, both in behalf of the corporation and its patrons. No man can justify the unconscionable methods used by upscrupulous managers for their own private gain. The time, too, has come when preferential rates and rebates will no longer be extended to favored shippers. It should be our duty, as members of our respective commercial clubs, to see that these subjects are brought before the bar of public opinion.

"Let the white light of publicity be turned on; let us give some part of ourselves and some part of our time to the solution of these problems. Then we will have done our duty, and we may rest assured that these questions will be settled and settled rightly."

In the closing address at the banquet, E. D. Levy, of Springfield, who, on March 1 becomes general manager of the system, said in part:

"The railroads and every other line of business are entering upon a new era—a clear business era. The general public and the railroads

are beginning more than ever before to understand each other and the needs of each. A friendly spirit of cooperation has sprung from what used to be that of rebellion and strife.

JOPLIN WORK MARKS ERA.

"The railroad official of to-day is a workingman. He realizes the value of getting next to the public and to serve it in the best possible way. Likewise, the construction of the new passenger station and freight depot in Joplin marks a new era in station building in this country. The day is passing when ornamentation only shall be the object in such improvement. In its place shall come that paramount object to-day in every line of business and industry—service.

"I assure Joplin of the hearty support of the Frisco railroad in every way in the future."

A tribute to the Missouri Public Service Commission was paid by Mr. Hilton for its fair treatment, both to the railroad and the public relative to railroad rates and management.

"Missouri is indeed fortunate in having a body of commissioners composed entirely of fair and reliable men," said Mr. Hilton. "I have absolute confidence that in time every difficulty will be settled pacifically and to the best interests of the public and the carriers.

"I do not believe it is a time for faultfinding or criticism by either the public or the railroads for the conditions existing to-day. It is a time for all to settle down quietly and take what comes. Nothing but good can be the result, I am confident."

Mr. Hilton also spoke of the loss sustained by the railroads for the low rates paid by the Government for hauling mail, and especially since the parcel-post law became effective. A brief review of the improvements made here also was made. He accredited T. J. Franks with the instrumentality of Joplin acquiring the new passenger station.

"The Frisco Railroad," a song, the words of which were composed by D. K. Wenrich, then was sung by the business men.

In an address, rich to overflowing with statistics relative to the railroad construction in Jasper County, Mr. Franks next spoke to the banqueters. He spent many years in the service of the railroads before coming to Joplin. His address, in part, follows:

"The Noonday Club of this city, composed of 70 of our business men, was formed for the purpose of cooperation, and has adopted and is pursuing the 'get-together' spirit for the current year. With this object in view, the chairman, as well as the members, have invited a free and full discussion of all issues—city, State, and national.

"Following this example, I will offer no apology for addressing you upon what I believe to be the paramount commercial issue of the day, or, in other words, the railroad situation in the United States. I have devoted the best part of my life to the railroad service and feel able, therefore, to approach the subject with at least some degree of familiarity.

MUCH UNJUST LEGISLATION.

"The tendency of railroad rates has been downward for the last 20 years, due, in the first place, to aggressive competition and the inevitable rate wars which followed prior to the passage of the Elkins and Hepburn Acts, constituting the present interstate commerce law. The general wave of resentment against the railroads, caused by the discussion in Congress preceding enactment of the Elkins and Hepburn Acts, has continued unabated for eight long, weary years. The national law has been supplemented by the creation of State railroad commissions in nearly every State in the Union, and the passage of innumerable State laws not only affected the rates and revenues of the railroads, but their methods of operation. Many of these laws have been severe and unjust, and many times they have been in the nature of individual laws reflecting the views of some legislator or the prejudice or supposed needs of some particular community.

"The men elected or appointed to these State commissions usually have been the valiant strikers of one political party or the other. I have in mind the personnel of a certain State commission, composed of three members, one of whom was a former cowboy, the second a potato grower, and the third a livery-stable man, who, under the laws of their State, were granted decisive powers in the regulation of the revenues and the supervision of the railroads of the State involving an investment of at least one-half billion dollars.

"It is only fair to admit that the railroads brought upon themselves much of the public condemnation to which they have been subjected, but there always is two sides to every question. No legislator was ever controlled who did not want to be controlled; no rebate was ever given which was not received, and, so far as I know, and I have had considerable experience, no pass was ever tendered which was not accepted and used. Looking over this audience I see a number of my old friends I used to call upon in my railroad days, who, if disposed, could verify this statement. I do not want any of them to become alarmed, because it is not my purpose to mention any names and, in any event, their respectability is made secure by a beneficent statute of limitations; and besides, the prosecution of any individual shipper would add nothing to the political prestige of any party.

"The fact remains, however, that the railroads have been persecuted and prosecuted for violations of the law which in days gone by were regarded by them and the beneficiaries as nothing more than conventional and usual in the prevailing moral standards of that time.

TIDE HAS TURNED.

"But these are past events. The pendulum is swinging backward. Our toastmaster already has commented upon the turn of the tide. Heretofore every national problem, commercial or otherwise, has had to pass in political review before one party or the other. We are now assured of a cessation of hostile legislation toward business and the railroads. And the railways are sadly in need of assistance.

"The revenues of the railroads of the United States for the year 1913 show an increase in gross earnings of about $14,000,000, but a decrease in net earnings of $34,000,000. The showing in the first half of the year 1913 was fairly good, but for the last six months, ending December 31, 1913, compared with the corresponding six months of 1912, the railroads actually show a decrease in net earnings of $59,508,000. It is a strange coincidence that the tremendous net decrease for the last six months of 1913 is almost identical to the total increase in wages granted by the eastern railroads to their employees since 1910.

"In this connection, I want to read to you a letter from Daniel Willard, president of the Baltimore & Ohio Railroad Co., concerning the matter of increases and pay to employees of the eastern roads:

"'Mr. T. J. FRANKS,
"'*St. Louis-Joplin Lead & Zinc Co.,*
"'*Cunningham Building, Joplin, Mo.*

"'DEAR SIR: Your letter of the 22d was received, and reply thereto was delayed until I could secure information necessary to answer your question in the matter of increases in pay of employees of the eastern railroads.

"'There are 38 railroads interested in the application for increased freight rates now pending before the Interstate Commerce Commission. Thirty of these roads have reported increases in wages for use in that case for fiscal year 1913, compared with 1910, to be $50,964,886, affecting 688,432 employees.

"'This amount does not include the increase allowed the firemen, which went into effect May 3, 1913, which is estimated for one year to be $2,757,000, only one month of which appears in the $50,964,886 mentioned above; second, increase allowed conductors and trainmen, effective October 1, 1913, estimated to be $6,000,000 annually. So that there will be a total estimated increase of $59,721,886 on a yearly basis.

"'I note particularly that the Frisco road has accorded Joplin a handsome new passenger terminal, and that the citizens, to show their appreciation, propose to tender the officers of that line a banquet some time in the near future, which I think is a very appropriate action on their part to take in that connection.

"'Yours, very truly,

"'DANIEL WILLARD.'

INCREASED EXPENSES.

"In all wage disputes between the eastern roads and their employees United States labor commissioners created under the Erdman Act have acted as mediators and arbitrators in the final settlement between the labor organizations and the railroads, and in each instance the railroad employees have been given increases corresponding to the increased cost of living; there is, therefore, one class or element in the country to whom the increased cost of living is no burden.

"I now want to call your attention to the local situation and to here make reference to the belief that seems to prevail generally that our railroads are undertaking to pay dividends upon fictitious values; in other words, that the American roads are overcapitalized. I have made up some figures with respect to the investment of the railroads in Jasper County which, I hope, will dissipate any erroneous impressions which may prevail as regards the capitalization of the Jasper County lines in comparison with the average capitalization per mile of the railroads in the United States. The following is a statement of the mileage of the different lines within the borders of Jasper County:

	Main line.	Side tracks and spurs.	Electric line mileage.
Mo. Pacific	77.49	72.65	.....
K. C. Southern	19.41	12.08	.....
Frisco	83.50	58.47	.....
M. K. & T	8.78	3.18	.....
S. W. Mo. Elec	.....	.....	73½
Pittsburg-Joplin	.....	.....	24
Total	189.18	146.38	97½

COUNTY HAS 433 MILES.

"The grand total mileage of our county, including the main lines, side tracks, and loading spurs, is 335.56 miles, or equivalent to the distance from here to St. Louis. Add to this the mileage of the electric lines in Jasper County and she has within her borders a total mileage of 433 miles. But this is not all. I am anxious to get before you some figures with respect to the investments which have been made for improvements completed in our county during the past three years:

"The Missouri Pacific has expended in ballast and in re-laying its main lines in Jasper County in the last three years $134,100. In addition to these improvements, they have made a further outlay in new tracks, yard facilities throughout the county, and a new passenger station at Carthage, making up a total of $68,400, or a total investment for that line in the last three years in this county of $202,500.

"It cost the Missouri, Kansas & Texas $148,661.67 to build from Chitwood to a connection with the tracks at the new union station, and in addition to this the road has spent an additional $1,000 for building tracks for chat loading, making a total investment for that line of $158,664.67.

"The outlay of the four lines entering the union station in real estate, depot building, platforms, roundhouse, etc., was $509,455.66. The Kansas City Southern spent in the revision of its line, grade and curve reductions in this county within the last two years, including Webb City ballast tracks and other improvements connected therewith, a total of $406,667. The proportion of the Broadway viaduct now under contract will add another expenditure to be borne by the union station lines of $36,666, and, last, but not least, is the guaranty on the investment made by the Frisco on its new passenger terminal and building and investment in freight facilities at Tenth Street, including the Ruth yards, an outlay comprehending an investment of $620,000.

"The figures above quoted were furnished me by the officers of the different lines and are absolutely correct. A grand total of these investments or expenditures made by the railroads in Jasper County during the last three years amounts to the tidy sum of $1,933,949.

"Now, just one word here about the capitalization of the railroads. The average capitalization of the railroads in the United States is $60,300 per mile of main-line track. If you will divide the amount invested by the railroads in this county in the last three years, viz: $1,933,949, by 189—the number of miles of main-line track in the county—you will find that the railroads have added $10,232 per mile of road—an actual investment.

HEAVY INVESTMENTS HERE.

"According to the last annual report to the Interstate Commerce Commission, the Frisco Railroad owns 6½ box cars to the mile; one-eighth of a passenger car per mile of road and in engines per mile of road about one-fifth; in other words, the Frisco has little more than 1 passenger coach for every 8 miles of road and 1 engine for every 5 miles of road and 6½ box cars for every mile of road. An engine is worth about $15,000. The average cost of a passenger coach will exceed $8,000, and a freight car $1,000; so if you will tabulate these figures you will find that the Frisco's investment in equipment alone is $10,324 per mile of road. Do not lose sight of the capitalization per mile, but in this connection I want to call attention to the fact that the other railroads of Jasper County own about the same number of cars, coaches, and engines per mile as the Frisco, and that if we are allotted in this county in proportion to our mileage an equal number

of cars, coaches, and engines as that required for the operation of the entire mileage of the roads, the total value of equipment required daily for the needs of this county amounts to $2,040,236.

"These improvements, excepting the grade and curve reductions of the Kansas City Southern, will bring no tangible net return to the railroads, although they have been made in the face of constantly decreasing net revenues. The facilities will in no way increase the traffic of the railroads in this county, excepting in proportion to the amount of new business which the improvements will attract, and the community will share in this increase without having invested a dollar.

"The new Union Station and terminal at Kansas City, which is nearing completion, represents an investment on the part of Kansas City railroads of $45,000,000, and I have heard upon high authority that it will cost $48,000,000 before it is completed. Now, this terminal is a Missouri institution; the outlay for operating expenses and the taxes upon it will be paid in Missouri, and it is therefore only fair to charge the additional capitalization made necessary by this investment to the railroads of Missouri. We have in Missouri 8,230 miles of railroad. The cost of this Union Station in proportion to this mileage will add to the actual investment of the roads of the State an additional $5,400 per mile.

EXCEEDS OTHERS.

"Now please fix in your minds that the investments in Jasper County in the last three years make a total per mile of road of $10,232; that the actual amount of equipment owned by our local roads is $10,324 per mile; add to this capitalization the $5,400 and you have a total per mile of main-line road of $25,956, or we will call it $26,000 for convenience in computation.

"I am anxious to get before you to-night the fact that the railroads of Jasper County represent an actual investment equal to or greater than the average capitalization per mile of roads in the United States. If, therefore, you will deduct from $60,300 the $26,000 made up of the three items I have mentioned, you will find, taking into consideration the average capitalization per mile of the roads in the country, that you have a balance of $34,300 to be applied as the remaining actual value per main-line mile of the Jasper County roads, or a total for 189 miles of $6,472,700, but if you divide this amount by 335 miles—the total mileage of our county, including main lines, side and spur tracks—you will find the result to be $19,320 per mile of road, and these figures, outside of the improvements mentioned, do not include station buildings, both freight and passenger, stockyards, coal chutes, water tanks, roundhouses, bridges, interlocking plants, and water facilities. I have no way of giving you the exact cost of the 335 miles of track above mentioned, but I do not believe that anyone would for one minute assume to argue that the 335 miles of railroad within the limits of our county could be reproduced at anything like $19,320 per mile of road.

"The railroads of Jasper County are, of course, the heaviest taxpayers. H. R. Wheeler, superintendent of the waterworks company, tells me they are the largest consumers of water. The wages paid out by the steam roads of Jasper County amounts to $530,000 per annum, and they purchase annually in this district between $60,000 and $70,000 worth of mining chats for ballast purposes.

"The commercial rating or greatness of any community is largely dependent upon its facilities for the conduct of its commerce, and by this token the future commercial greatness of Jasper County is assured.

"I want to inject here a brief history of the building of the Frisco Railroad in Missouri. The southwest branch of the Pacific Railroad Co., which had been completed to Rolla before the Civil War, was the nucleus of the great Frisco System of to-day. Between 1860 and 1870 the line was completed to Springfield by the South Pacific Railroad Co. The line west from Springfield to Peirce City was constructed and completed in the latter part of 1871 or the early part of 1872, and the line from Peirce City to Columbus, via Carthage, known as the Carthage & Northwestern, was completed in 1874. The first railroad to enter Joplin was the Joplin Railway Co., which was completed between Joplin and Girard, and the last spike was driven at Smelter Hill on August 26, 1877. The Missouri & Northwestern Railroad from Oronogo to Joplin was completed in 1879.

"It would hardly be interesting to follow up subsequent additions in railway mileage, but following the close of the Civil War railroad construction progressed at a rapid pace, until to-day we have in the United States 236,444 miles, employing 1,728,603 men, who received in wages in the year 1912, $1,268,977,272. Every twelfth male adult in the United States is actually in the railroad service. This statement may sound remarkable, but it can easily be verified from the reports of the Census Bureau and the Interstate Commerce Commission. If the men employed directly in producing coal, lumber, ties, cars, locomotives, and supplies of all kinds for the railroads were included, the number would be greatly increased.

RAILROADS SUPPORT 15,000,000.

"President J. H. Farrell, of the United States Steel Corporation, is authority for the statement that under normal conditions the railroad companies of this country take directly and indirectly 40 per cent of the total production of iron and steel products in the United States. It is easy to conceive, therefore, that the wages of between 2,500,000 and 3,000,000 men and of at least 15,000,000 of our people are dependent upon the transportation industry and its allied interests for a livelihood.

"James J. Hill, probably the greatest constructive railroad genius of his time, said in his valedictory address to the stockholders of the Great Northern Railway on his retirement from the chairmanship of the board of directors, that the security of the investments of his stockholders has been a first consideration, and that every dollar ever committed by a man or woman to that company in trust has been returned in cash or is being returned in dividends. He said further, that the future financial necessities of the property have been provided for beyond the time of any man now living.

"This indorsement should be enough to establish the belief in the minds of the most skeptical that Mr. Hill would have little or no incentive in presenting to the American people the claim that there should be expended upon the transportation facilities of this country $1,100,000,000 every year for the next five years. He has characterized the railroad terminals as the inland harbors of the country, and his greatest concern in his old age seems to be that the people of the country are not looking into the future. According to his estimate, and his insight into the future is nothing short of marvelous, the population of this country in 1950 will have reached a total of 200,000,000 people.

"Nothing, according to Mr. Hill, should be allowed to stand in the way of carrying forward the effectiveness or efficiency of the facilities upon which the country is dependent for the movement of its commerce, and his opinion in this particular respect has been voiced by many other able men.

"Judge Prouty, of the Interstate Commerce Commission, addressing the National Hay Association in Kansas City some two years ago, said, in reference to the railroad situation, that 25 years ago the danger point was, first, discrimination, and, second, unreasonable rates, but that to-day, in his opinion, neither of those reasons is to be considered, and he concluded: 'The danger point to-day, I think, is the inadequate service and inadequate facilities.' In that same address, referring to the situation in 1907 in which the railroads found themselves, he said: 'Five years ago I came to Kansas City. I came here for the purpose of investigating what was then termed the car shortage. Crops were rotting upon the ground because they could not be taken to market. A little later in the season men and women up in the Northwest were hungry and cold because the railroads of that section could not transport coal with which to cook their food and warm their houses. The panic, which stopped everything, relieved that situation, but the situation was a serious one. Now it is the apprehension and the possibility that that situation may return, which I look upon with the gravest doubt.'

"CUP OF JOY RUNNETH OVER."

"I know no community where the people are as prone to the good things of life as the citizens of Joplin. Our local pride in the Connor Hotel is excusable. The completion of the Union Station was the occasion for a public demonstration. The success which has attended the courage and enterprise of the Newmans in their undertaking is a matter of satisfaction to all of us, and with the completion of the Frisco terminals our cup 'runneth over.'

"While we probably are the best, we are not the only city on the map. The railroad files in the general offices of the Frisco in Springfield and St. Louis contain many applications and petitions for new stations and facilities at other points. This is not only true of the Frisco, but of every railroad in the United States. There is nothing that the public does not demand from the railroads in the way of standard service and conveniences. The needs of the railroads are, therefore, the needs of the people.

"The 5 per cent advance in freight rates, which the railways east of the Mississippi River have asked at the hands of the Interstate Commerce Commission, would be a smaller concession than most people imagine. This increase, which in itself is infinitesimal, is a necessity to the eastern railroads if they are to be depended upon to furnish the service which the public demands. The average freight rate per mile in this country is less than three-quarters of a cent. The Pennsylvania Railroad's rate in 1912 was 5.83 mills per ton per mile. Under a 5 per cent increase they would have earned 6.12 mills per ton per mile, or a natural increase of 0.29 mill; in other words, the actual increase which the Pennsylvania Railroad will receive, if the Interstate Commerce Commission finally concludes to grant the 5 per cent increase to the eastern railroads, will be less than one-third of a mill per ton per mile.

"Nothing would give a greater impetus to the prosperity of this country than an increase in freight rates to the railroads. The effect would be immediately felt in the iron and steel trade—the barometer by which the Joplin district is gauged. Anything in the way of prosperity in the steel and iron industry will immediately be reflected in the zinc industry.

"In conclusion, I want to make a special plea to our business men to consider this great question from a patriotic attitude. Our local situation, so far as railroad facilities are concerned, is on the whole very good, but the railroads need more cars, more engines, double tracks, block signals for the protection of life and limb, new depot and passenger facilities for thousands of towns less fortunate than ours, steel passenger equipment—and these can only follow by permitting the railroads to earn sufficient revenue to provide them.

FACILITIES UNSURPASSED.

"Joplin is a much-favored community. Our freight service is excellent; our passenger service combines all of the comforts and conveniences at the minimum of cost as compared with any other service in the world, and every citizen who arrives in Joplin over the Frisco and enters the new passenger terminal may well congratulate himself with pride and satisfaction upon the fact that he is a resident of a city and county whose transportation facilities, both freight and passenger, steam and electric, are unsurpassed by any other county in the United States."

Mr. Franks was followed by J. E. Hutchison of Springfield, general superintendent of the Frisco. He confined himself principally to comparative statistics relative to railroads in this country and in England, and of the inefficiency of the average public-service commissioners.

"The men who compose the State public-service commissions," said Mr. Hutchison, "are not unfair. But they are not schooled nor posted sufficiently to pass upon the controversies to which they are chosen to decide. They have been placed on the commissions principally for political reasons and not for their ability.

"The commissions may be valuable and a necessity in cases, but they are a tax upon the State and cause the loss of much valuable time and energy upon the part of railroad officials. The money and time that is spent by the railroad executives in testifying or appearing before the commissioners, could much more profitably be spent in other ways."

Mr. Hutchison also referred reminiscently to the defeat of the Frisco Railroad in establishing the Joplin freight yards at Tenth Street and Maiden Lane. Following the unsuccessful attempt the Frisco built the Ruth yards.

"There is nothing but friendliness now, I trust, between the railroad and the public of Joplin," said Mr. Hutchison. "The Frisco shall try to serve you in the best manner possible. It has nothing but friendship for the people of Joplin. It wants your patronage, for it needs the money."

The railroads are largely responsible for the agitation that has been waged by the public against the carriers, in the opinion of Mr. Hutchison.

The Frisco officials were welcomed in behalf of the other six steam railroads entering Joplin by C. W. Nunn, general agent of the Kansas City Southern.

A booster address for Joplin and the district was delivered by O. D. Royse. He went even further than the district in his praise, dwelling briefly upon the fertility and climate of the Ozarks. "The reason the Ozarks to-day are not the garden spot of this country is because the country has been left entirely to the 'hill Billies,'" said Mr. Royse.

An outline of the mineral wealth in the district, the early history of Joplin, its leading factories and industries and of the retail and wholesale traffic was given. "Sixty-five per cent of the goods sold over the counters of Joplin stores to-day are purchased by persons living out of Joplin," he said.

"If the past and the present are prophetic of the future, then the people of Joplin have much to look forward to," declared Mr. Royse.

"Joplin is a city of 40,000 people, the center of a rich and populous territory, ramified in every direction by steam and electric railways, interlaced with a magnificent system of macadam roadways and containing within a radius of 25 miles more than 250,000 persons.

"When Joplin was established a little more than 40 years ago it was singularly isolated from the great arteries of travel. The first railroads were built to the north and south and to the west of the Joplin district, and were induced to build into Joplin only by reason of the enormous natural tonnage which was created by her principal industry, the mining of lead and zinc, which industry, together with the other great natural wealth and advantages of the district, has caused Joplin to be made one of the greatest of the secondary railroad centers of the country.

PENETRATE RICH FIELDS.

"There now are seven railroad systems entering Joplin; terminals are ramifying in every direction into a territory rich with all the products of the earth necessary to supply the wants of mankind, except perhaps a few of the metals. Within a radius of 100 miles about Joplin are great forests of hard wood; untold wealth in coal, oil, gas, and stone, and in her fields the cotton of the south and the wheat of the north are neighbors, while the surrounding hills are famous for their small fruits and are known as the home of the big red apple.

"For many years the great lead and zinc industry predominated all of the activities of the Joplin district. It has grown by leaps and bounds to meet increasing demand, until the district's annual output of minerals now reaches between $15,000,000 and $20,000,000 and that the promise of the future is indeed bright is evidenced by the fact that the production of the zinc smelter is normally taxed to the utmost to supply the natural demand of the increasing population of the country. From 1884 to 1890 the production of zinc smelters increased more than 300 per cent; from 1890 to 1900 it increased another 100 per cent, and during each of the succeeding years the increase has been more than proportionately large, which fact proves at a glance that the zinc industry is one of the most stable of all of the country's assets and that its future prosperity is assured.

"Until a few years ago Joplin was a town of mines; then it began to take on the resemblance of a commercial community, and to-day its retail establishments would do justice to a town of twice its immediate population, and its wholesale merchants supply a very considerable proportion of the demands of a large territory, penetrated not only by its seven great steam railroads but by its interurban electric lines and a magnificent macadam roadway system which penetrates all portions of the surrounding territory.

"Joplin is fast assuming a remarkable position as a manufacturing center. It is to-day the largest manufacturer of cigars in Missouri. The great Picher Lead Works is one of the country's large institutions. A list of the manufactories already established and prospering in Joplin points to a great future, for, in addition to its wonderful transportation facilities, Joplin is the fortunate possessor of a plentiful supply of cheap power. Two great power companies, operating steam and water power generating plants, envelope the entire district with their distributing systems and are equipped to furnish enough cheap electric current to supply any demand likely to be made for many years to come.

BELIEVE IN JOPLIN.

"Aside from her natural and other physical advantages, Joplin is fortunate in the fact that her laborers are well paid and satisfied. Labor troubles are virtually unknown in the Joplin district. No city of its size in the country can boast of a larger percentage of university men in its population, and the average of intelligence among its citizens is high. The mining town of yesterday not only has been transformed into a great commercial and industrial center but at the same time it has become a city of homes and schools and churches.

"The great railway terminals recently established in the city are the tangible evidence of the fact that the men who control the seven railroads which enter her gates believe Joplin is destined to be a much greater city; that they have faith in her future; that she possesses all of the prerequisites to a material and healthful growth.

"Yesterday Joplin was a town of miners; to-day it is a town of miners and merchants; and to-morrow it will be a town of miners, merchants, and manufacturers."

John Malang, introducer of the freight-rate solution, prefaced the action by a short eulogy of the railroads in general. "The prosperity of the public is inseparable from the prosperity of the railroads," said Mr. Malang. "The cause of the apparent unfriendliness in the past between the railroads and public has been misunderstanding. With this eliminated, a better spirit of loyalty and cooperation will prevail."

THE GUEST LIST.

Frisco officials who attended the banquet are: E. D. Levy, of Springfield, who March 1 becomes general manager; A. Hilton, of St. Louis, passenger traffic manager; J. A. Middleton, of St. Louis, freight traffic manager; J. E. Hutchison, of Springfield, general superintendent; J. H. Doggerell, of Springfield, in charge of freight loss and damage claims; H. C. Conley, of Oklahoma City, assistant general freight agent; L. W. Price, general baggage agent; George F. MacGregor, of Memphis, assistant general freight agent; T. B. Coppage, of Fort Scott, Kans., who March 1 becomes superintendent of transportation, with offices in Springfield; E. C. Hoag, superintendent of farm markets, formerly division freight agent here; H. H. Brown, of Neodesha, Kans., superintendent of this division; J. C. Lovrien, of Kansas City, division passenger agent, formerly division passenger agent here; C. O. Jackson, of Oklahoma City, division passenger agent; E. E. Carter, of Wichita, assistant superintendent of this division; F. E. Clark, of Wichita, Kans., division passenger agent; D. L. Ewing, of Kansas City, assistant general freight agent; M. J. Conley, of Joplin, general agent; and Frank R. Newman, of Joplin, division passenger agent.

Local officials of the Missouri, Oklahoma & Gulf, Missouri Pacific, and the Kansas City Southern also were represented by Tracy Munson, general agent of the Missouri, Oklahoma & Gulf; B. E. Sells, commercial freight agent of the Missouri Pacific; C. W. Nunn, general agent, and L. O. Scoville, traveling freight agent of the Kansas City Southern.

Telegrams and letters of regret were read from: Carl Gray, president Great Northern Railroad; J. W. Lusk, receiver; J. W. Evans, general passenger agent; Frank Anderson, director of development; L. M. Harris, press bureau; Isaac Cook, architect and builder of the new passenger station; and F. C. Riley, of St. Louis, assistant freight traffic manager.

Others expected, but who could not attend, were: W. B. Biddle, of St. Louis, receiver; D. L. Ewing, of Kansas City, assistant general freight agent; E. T. Miller, of St. Louis, general attorney; and W. C. Nixon, of St. Louis, receiver and chief operating officer.

The visiting Frisco officials spent yesterday in viewing the several improvements that have been made recently in Joplin by the railroad. The inspection trip included a visit through the passenger station, freight depot, and the terminals. Part of the city also was visited by those officials who arrived early in the day. A majority of the officials left last night.

—

[From Minneapolis Journal, April 2, 1914.]

RAILROAD INCOME AND OUTGO.

The railroads of the country, prudently managed for the most part in the best interest of the larger public that embraces consumers of traffic and travel, security holders, with employees, have been driven at last to sacrifice the last interest to the first two.

Constrained by economic conditions to heavy increase of wage and material expense, unjustly forced in some States by political legislation to pay and carry useless trainmen, and transport commuting classes for less than cost, while denied compensating increase in charges, they are turning to a policy of drastic retrenchment that stops a hundred trains and dismisses a hundred thousand useful employees.

This is hard on workmen, but it is less harmful in the end than the policy of keeping the peace with employees while letting discipline and operation, repairs and maintenance run down, and making ends meet with reckless borrowing till the whole ends in mortal accidents and stock-market collapse.

Something must be done when a Government eggs on increased wages and cost of material and holds down compensating increase of charges for 10 years. The Interstate Commerce Commission began with the excuse that some roads were extravagantly financed and managed, and that others concealed huge earnings with false accounting. Congress could have amended this long ago.

In the meantime, income less than outgo must be paid by some one—employees or stockholders, and the public that must use demoralized roads.

Has the country one isolated industry that can do business as well and earn all that is due to it, on the wages and expenses of to-day and the charges for service of 10 years ago?

—

[From the Washington Herald, Friday, March 6, 1914.]

THE POOR RAILROADS AGAIN.

We have hitherto commented upon the vital interest which the country has, at large, in a prompt and favorable decision by the Interstate Commerce Commission of the railway freight rate question, which has now, for months past, been pending before it. Herewith we present another phase bearing upon the same general subject, namely, are our railroads to be allowed to prosper?

We hold it to be a truth that it is almost as necessary in a well-ordered state of society, erected upon permanent foundations, for means to be provided for the proper investment of money as for pure air or pure water or a sufficient supply of food.

A man or nation that is to live comfortably must save money; and if money is saved there must be a place to put the savings. The savings must be so placed that they will earn additional money, and this in turn implies that the earning power of the industry shall be reasonably constant and secure.

All of this was taught by the Saviour of mankind in the parable of the talents 1,900 years ago. It is an elementary principle of the social structure, and everybody so admits it as a matter of theory. But everybody does not so admit it as a matter of fact. In our own country it seems almost to have come to this at the present time; that no sooner does a business or industry develop sustained and reasonably permanent earning power than the people become ignorantly jealous of it and seek to destroy its earning power or at any rate greatly to reduce the rate of earnings. One of the reasons by which the existence of a national debt in a country was formerly justified was that the debt would provide an outlet for the savings investments of the people. This reasoning is no longer thought to be conclusive, because of the tendency everywhere for national debts to rise disproportionately with the increase in the wealth and population of the country, and because the rate of interest borne by this national stock is so low as to only be attractive to people who have very large sums to invest. The great mass of people who invest money want to receive more than the 2 or 3 per cent interest return given, for instance, upon United States Government bonds.

Up to a few years ago, in the history of our own country, railroad stocks and bonds were regarded as one of the choicest, if not the choicest, practical field for investment. The supply of ore in a mine could run out and almost any manufacturing or commercial industry could be so affected by changing circumstances as vastly to decline in prosperity. But a great railway, running through a prosperous country, had a solid basis in the current business of the community. The chances were overwhelming that its business would increase steadily from year to year. Its securities were easily marketable, and their general value was usually a matter of common knowledge.

But the public or political hostility to railroads has run to such a length with us, and the railway companies have been subjected to such an impairment of their earning power by continuous State and national legislation, that the people will no longer buy railway stocks for investment. There is a fear so widespread that it would be foolish to ignore it, that the railroad business will soon become so unremunerative as to be relinquished by those who now conduct it. This will force the business into the hands of the Government, and it will then have to be conducted at a national loss.

We do not desire at this time to go into a consideration of the subject in detail, but we only ask our Members of Congress and our thinking people to consider just what will be the state of affairs with us if saving and investing people as a whole get it into their heads that there is no industry in the country whose position is safe, that the country no longer affords secure fields for savings, and that our State and national legislators, having eaten of the root of some madness, are bound to reduce the earning power of every industry to a merely nominal basis, with a state of socialism as the end of it all.

In order to frame a proper answer to this question, it is only necessary, perhaps, to ask what has been the financial and economic history of every land where a fear of this kind once became paramount in the national life.

—

INCREASED RATES ARE URGENT, RAILWAY MEN TELL THE HERALD.

The Washington Herald has received from presidents and other officials of railroad companies in different parts of the country letters commending its editorial policy in pointing out the vital necessity of granting to the roads the increase in freight rates for which they are contending, and which is now under consideration by the Interstate

Commerce Commission. The letters, which follow, throw an interesting light on the situation:

Ben B. Cain, vice president and general manager Gulf, Texas & Western Railway Company:

"You correctly say there is no question confronting this country which is quite so vital as granting to the railroads an increase in freight rates. This applies not only to the eastern lines, but is more essential to the prosperity of those lines struggling for existence in the more sparsely settled sections of the country. Data compiled by the American Railway Association, which I have reason to believe is reliable, shows that 91¼ cents of every dollar earned by the steam roads of the United States has to be expended in keeping the roads going, there being only 8¾ cents with which to pay dividends and make improvements. The distribution of a dollar earned by the common carriers is as follows:

WHERE THE EARNINGS GO.

"Labor, 44.7 cents; fuel and oil, 8.93; material, supplies, and miscellaneous expense, 14.06; loss and damage, 2.20; taxes, 4.21; rents and leases, 4.41; interest on debt, 13.43; and dividends and improvements, 8.59.

"Within the past month railroads of Texas made application to the railroad commission for an increase of 15 per cent in the freight rates, but our commission refuses to even consider the application, notwithstanding it was based upon facts which, if true, undoubtedly warranted an increase.

"I quote from an appeal addressed to the people of Texas by the general managers, as follows:

APPEAL TO TEXANS.

"'Your tax commission, created by you and acting under their oaths of office, has found that the true value of the railroads of Texas is $30,000 per mile. We believe they are of greater value. According to table No. 10, page 400, of the Twenty-first Annual Report of the Railroad Commission for the year 1912, the total cost of the construction and equipment of the Texas railroads up to June 30, 1912, was $582,388,949, which shows that the roads have cost their owners a little over $38,000 per mile. But, taking $30,000 per mile, which the tax board says is the true value of the roads, as a basis, the railroads of this State for the year ended June 30, 1910, earned 4.30 per cent on that value. For the year ended June 30, 1911, they earned 4.16 per cent; for the year ended June 30, 1912, they earned 3.47 per cent; and for the year ended June 30, 1913, they earned 3.97 per cent. Out of these earnings the companies must pay the interest on their bonds and other indebtedness, and if it is not sufficient they are forced to borrow the money or default in interest payments. For the year ended June 30, 1912, the shortage amounted to a little over $3,250,000; for the year ended June 13, 1913, the shortage amounted to something over $1,600,000; and for the first five months of the year beginning July 1, 1913, the railroads are over $4,000,000 behind what they were at the end of the corresponding five months of the year beginning July 1, 1912, so that if they break even for the balance of the year their deficit for the year ended June 30, 1914, will be nearly $6,000,000. However, they can not hope to break even, because the month of December, with its disastrous floods and loss of business, has not yet been taken into account.

REDUCED TO THE LIMIT.

"'We are anxious to continue to give the people at least as good service as heretofore. In fact, we want to improve that service, but it is apparent that we can not do so unless we can obtain more money from the operation of the roads. We have reduced operating expenses all we can. Further reductions of expenses must come, if at all, by the help of the people, the legislature, the courts, and the juries.

"'The crisis has been reached where we must have more money or else be unable to give the people adequate, safe, and reasonable service. Poor service naturally gives rise to bitter complaints, and as your servants we believe you are entitled to know the true facts and the situation with which we are confronted.'

UNABLE TO HANDLE CROP.

"In the year 1912 the State of Texas made what might be called a fairly good cotton crop. The railroads found it impossible to handle the crop without delay, because of inadequate equipment and track and terminal facilities. The cotton-carrying roads of this State are now being sued for hundreds of thousands of dollars for delay in transportation of cotton crops, and this will be repeated whenever a normal crop is made, because it is impossible to give the required service under existing conditions. Improvements can not be made without credit, and credit can not be had without a better showing as to earnings. So far as I know the railroad business is the only business in the world in which its owners have practically no right which goes to the foundation of its financial status, except the one providing the funds necessary to meet its obligations. State and national commissions, together with labor organizations, completely control the policies and details of management, and it would seem that with regulation so complete there should also go the responsibility of financing the properties. The commissions seem lacking in the necessary comprehension or courage. The last hope for railroads is in the creation of an enlightened public opinion. The responsibility of such public opinion rests largely, if not entirely, on the newspapers of the country. The fact that such influential journals as your own are making a study of the question and are courageous enough to cry out against the wrong and plead for the right is the most hopeful sign of the times to the man who is struggling closest to the railroad question."

FEAR OF POLITICAL CONTROL.

J. W. Oglesby, president the Short Line Railroad Association:

"The policy of governmental control, which can only result in Government ownership, seems to be a fixture. The people who think are beginning to suspicion that political control of the railroads will perhaps result in about as much success as the southern negro who taught his horse to eat sawdust instead of corn. About the time he learned to eat it good he died. So it is with the railroad interests of this country. They are beginning to accept the broken doses of political control, but they can't see the end. However, political demagogues, back up by the ignorant masses, will push forward to Government ownership as a remedy. The end of this we know not, but likely the destruction of the Republic. I must admit these sentiments are rather pessimistic, but we know the railroad situation and the labor situation, and the fact that the Government is behind both and is the worst enemy of the railroads and of large business justifies pessimistic feelings on the part of business men."

NO GRAVER QUESTION.

C. E. Schaff, president Missouri, Kansas & Texas lines:

"I desire to tender grateful thanks for the favorable attitude which you have assumed toward railway interests and expressed with such forceful logic in your illuminating editorials. They can not fail to do good. There is no graver public question at the moment than a determination of the policy which shall be adopted with respect to railroads, and it is pure patriotism to endeavor to secure the adoption of the wise policy as you are doing."

COMMISSION OVERWORKED.

Calvert Townley, president Lackawanna & Wyoming Valley Railroad Co.:

"In general, we feel that Congress may have imposed manifold duties on the Interstate Commerce Commission without perhaps a full appreciation of the magnitude of the work thereby required, the inevitable result being an overworked commission with consequent delays in issuing rulings on matters which ought to have prompt attention."

—

THE CHRISTIAN SCIENCE MONITOR,
Boston, Mass., April 6, 1914.

Hon. EDGAR E. CLARK,
Chairman, Interstate Commerce Commission,
Washington, D. C.

MY DEAR SIR: We have been observing with much interest the large mass of news and editorial matter that has been running in the newspapers recently, dealing with the decision that is now pending in your board, and to-day have made comment on this situation in an editorial. I am taking the liberty of mailing you a copy under another cover. With best wishes, I am,

Very truly, yours,

OSCAR L. STEVENS,
Assistant Managing Editor.

—

NEW YORK, *April 8, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

MY DEAR SIR: The inclosed editorial, which appeared in a recent issue of the Christian Science Monitor, deserves your careful scrutiny. I believe it reflects the opinion of all unprejudiced citizens and is sent you merely as my testimonial of the confidence we have in your committee.

Very respectfully,

M. C. WATSON.

—

[From Christian Science Monitor, April 6, 1914.]

FAIR PLAY AND THE RATE QUESTION.

Developments of the last few days in connection with the railroad hearing before the Interstate Commerce Commission make it clear that there are great classes of people in the United States who believe not only that freight rates should be increased, but that the commission should go out of its way to put the increase through with speed. Great men of the railroad world have told the commission, in effect, that rates would have to be raised quickly or they would not be responsible for what might happen to the general business of the country. Shippers have come into the newspapers with resolutions or interviews regretting that the commission has not been able to decide this important question without so much hesitation. At the same time some of the greatest railroad systems, with apparent summariness, have dropped out of their employ a number of thousands of employees. Also in notice are significant cartoons, one of which pictures the Interstate Commerce Commission as a gigantic snail blocking the path of a fast railroad train labeled "Business progress."

We do not know any reason why all these things may not have come out at this time naturally. Yet there is about their precipitation into public consciousness something cumulative, a certain timeliness, such as in other instances has been evident where artifice has been employed to produce a carefully planned effect. They certainly tend to create a public sentiment in favor of raising railroad rates, just as they tend to push the commission toward that kind of a decision. For this reason it becomes highly important, we think, that all who read this class of news at this time should weigh each item with care, and with a view to determine whether its origin is in natural conditions or in some effort that involves calculation and artifice.

In connection with this sudden dropping of thousands of railroad employees, we can not help wondering what is the nature of an organization that can get rid of so many hands in the fashion indicated by the newspaper accounts and still continue as a going business. And our wonderment is increased when we recall that for many months the great railroads have allowed themselves to be reported as using every means in their power to economize on operating expenses, since it is not so much gross earnings as net that have undergone diminution. If we are to believe that they economized as much as they could in those earlier months, it is difficult to understand the sudden opportunity for such retrenchment just now while the rate question is up. We can find no figures showing any corresponding slump in general business preceding this recent curtailment, whatever figures may be available now that the curtailment has taken place. Neither can we find any reasonable explanation in general business for the flood of elaborated news of operative reductions and related information that is rolling up against the desks of those newspaper editors who handle financial and business matters.

If those newspapers that are virtually controlled by organized business are being systematically used to develop a sense of pressure in this rate situation that would not otherwise be acute, then the same care is necessary at this time that would be taken anywhere and at any time to guard against what is known as a "stampede." It is not always easy for ordinary newspaper readers to discover when an item of print has something behind it other than the desire to convey information; and when many great newspapers of the country are suddenly found to be printing items that are essentially prejudicial to an issue that is nominally open there is need for special care if a reader is not to allow himself to be swept on to a wrong conclusion. Many well-informed newspaper readers, it may be remembered, agreed that the Spanish-American War could have been avoided if the newspapers had refrained from jingoism.

So if there is now on foot any attempt to sway public sentiment unduly or by artifice on the rate question, this is the time of times when the Interstate Commerce Commission deserves popular support. In the gradual advance toward effective public supervision of the great railroad systems in the United States, the time has come when that little

group of public servants at Washington is required to withstand great pressure in the effort to exercise fairly the wide powers with which the public has intrusted them. The railroads have an opportunity to bring great influences to bear on the situation through their highly organized control of industry. Whether or not they are taking advantage of this opportunity there is, we believe, all the more reason why public sentiment should stand unwaveringly behind the commissioners, who are at this moment the Nation's reliance, to see that no undue influences shall prevail and that the far-reaching decision as to railroad rates shall be neither stampeded nor deliberated unfairly, but adjudicated with due regard for the truth and the rights of all.

EXHIBIT B7.

THE INTENSIVE NATURE OF THE NEWSPAPER CAMPAIGN.

The above newspaper articles go to show how general and comprehensive was this campaign of the railroads, but it does not begin to show the mass of material which often issued from a single paper during the year, and more of this sort of agitation. Below is given a list of articles which appeared in the Washington Herald, Washington Evening Star, Washington Post, Washington Times, and Chicago Inter Ocean from January 1, 1914, to about April 5, 1914.

[Washington Herald, 1914.]

January 27.—2 : 3. Shippers are opposed to increased rates.
January 28.—6 : 4. Allowances to iron and steel concerns must cease.
February 9.—4 : 2. Editorial. The chastened railroads. President Harrison of the Southern, says railroads are now in difficulty due to regulation and past history.
March 4.—1 : 6. Roads should have increase. President Willard of B. & O., said, at dinner given in his honor by former Senator Henry Gassaway Davis, of West Virginia, in Washington, that railroads should have 5 per cent increase at once pending the inquiry. Many railroad presidents present; also several Members of Congress; John W. Davis, Solicitor General; Judge Alton B. Parker; and others. President Willard was sure of increase, and said that increases should be given at once. Judge Alton B. Parker said increase should be granted. He said that now 98 per cent of the papers were favorable to the railroads, while formerly only 44 per cent were favorable. Said new era had dawned in which railroads were to receive justice at hand of State and Federal Governments.
March 5.—4 : 2. Editorial. Don't delay the rescue. It would have been improper for the I. C. C. to have been present at Mr. Davis's dinner, but that if they had been there to listen to Mr. UNDERWOOD'S enthusing talk on the tariff, and then hear Mr. Willard's sad tale, "they might have been impressed with the necessity for prompt action on the question of increased rates." Increase should be granted pending investigation, and early decision should be reached. Alton B. Parker shows how the public are becoming more reasonable. Ninety-eight per cent of the papers favorable to railroads.
March 6.—4 : 2. Editorial. The poor railroads again. Though we have heretofore commented upon need of prompt and favorable decision by I. C. C., we make the same point again. The Savior 1,900 years ago taught that money ought to be invested. Regulation has knocked the bottom out of the railroad's securities business. We are drifting to Socialism. Earnings are falling off. "The end is inevitable. Unless the I. C. C. doctors give the patient some nourishment he will die."
March 6.—4 : 4. Railroads should be heard. Reprint from Houston (Tex.) Post, being a semi-tirade on valuation for rate and tax purposes. Railroads are pouring out their griefs.
March 6.—4 : 5. Increased rates are urgent railway men tell the Herald. Editorial says he has many letters commending him on his editorial policy of "pointing out the vital necessity of granting to the roads the increase in freight rates for which they are contending." Letters printed. C. E. Schaff, president Missouri, Kansas & Texas Railway, praises the editor's logic, and says "it is pure patriotism to endeavor to secure the adoption of the wise policy as you are doing." J. W. Oglesby, president of the Short Line Railroad Association, sees Socialism ahead, and says that the Government is the worst enemy of big business.
March 7.—4 : 4. Theo. N. Vail of American Telegraph & Telephone Co., commends the edtior of the Herald on his views.
March 7.—7 : 7. Interstate Commerce Commission scores Chicago, Milwaukee & St. Paul and Chicago, Milwaukee & Puget Sound Railways for juggling accounts. Overstated income.
March 11.—6 : 2. Bookkeeping blamed by Thorne for road's losses. Thorne claims all railroads asking for increase changed bookkeeping system in 1912 to show increase in maintenance. All but two roads did this, i. e., Bangor & Aroostook and Western Maryland Railroad. Present lack of prosperity is largely a matter of bookkeeping.
March 11.—14 : 4 "Roads should demand rights," says President Rea at meeting of Pennsylvania Railroad stockholders. Investors urged to insist on their rights. Country can not prosper unless railroads prosper.
March 12.—4 : 2. Editorial. President Rea's warning. Summarized Mr. Rea's speech to stockholders of Pennsylvania. Stockholders to use their influence in legitimate ways.
March 13.—Cartoon front page. "After the railroads are reduced to junk, then what?"
March 13.—4 : 3. Editorial. A nonpolitical commission. Wishes commission could be taken out of realm of politics. Commissioners should be appointed for life.
March 14.—2 : 3. Editorial. Harlan's epistle to St. Paul. Commissioner Harlan has just rendered a distinct disservice to the community by promulgating his report on the false accounting of the St. Paul and Puget Railways. His decision a blow to business confidence. The commission lacks sense of proportion or knowledge of fitness of things.
March 18.—4 : 3. Railroads on the defensive. Hard-coal lines giving testimony.
March 24.—4 : 4. An open letter to the I. C. C. by Mr. Forbes. This letter is the climax.
March 24.—4 : 3. Editorial. Speak for yourself, John. Substance is that abused railroads have never told their story to the people.
March 29.—2 : 4. Free service by roads is scored. Brandeis makes charges against Pennsylvania.
March 29.—4 : 5, 6. President Willard tells of railroads' necessities. Part of his speech to Traffic Club, of Pittsburgh, on March 27. Heavy loss net earnings. Press favorable. County grows with the railroads, etc.
March 31.—2 : 1. Carriers would hasten inquiry.
March 31.—2 : 2. Hardin, vice president New York Central, denies that dismissed men to affect rate case.
March 31.—4 : 5. Editorial. Railway persecution. Editor says throughout country papers are reflecting the changed public sentiment regarding railroads. Then reprints *long editorial* which appeared in New York Post, March 25, entitled "Harrying the railroads." Substance of editorial is that regulation is pestering the life out of the railroads. Quotes favorably from Mr. Howard Elliott's "The truth about the railroads."
March 31.—4 : 2. A badly overworked commission. Editorial. Prompt decision urged. Congress to blame for loading up commission with extra work.
April 1.—3 : 3. Crisis at hand for railroads. President Willard of Baltimore & Ohio at I. C. C. session predicts crash.
April 1.—4 : 3. An argument in figures. Editorial. Favorable comment on Mr. Willard's testimony, including that part which threatened discharge of men by railroad.
April 2.—1 : 5. New York Central in critical state. President Smith, of New York Central, shows decrease in income.
April 2.—4 : 2. A bill to protect the I. C. C. Editorial. La Follette bill discussed. Indicates lack of confidence in commissioners or is aimed to save work of opening mails for secretaries.
April 3.—3 : 1. Ruling by May 1, in freight case. Rea makes strong appeal. Improvements must be curtailed.
April 3.—4 : 3. La Follette's latest. Reprint from editorial in New York World. Sarcastic criticism of I. C. C. bill. "La Follette is supposed to have been put to sleep two years ago."
April 3.—4 : 3. The railway crisis. Reprint from editorial in New York Times. Essence is that rate case is crisis for wage earners. No raise, no jobs.
April 3.—4 : 7. Earnings decrease. February returns of railroads discouraging.
April 4.—4 : 3. Editorial. Senate wisdom prevails. Senate proved itself immune to stampede in Daniels appointment. A good job well done.
April 4.—7 : 1. I. C. C. allows carriers' plea. Side issues postponed. Commission will expedite matters.
April 5.—4 : 3. Business conditions and politics. Editorial. Editor calls attention to fact that several things are on the big toboggan. Treasury faces deficit and railroads are suffering greatly.
April 6.—4 : 2. No need to delay rate decision. Editorial. Decision will not be handed down for month, but might as well be handed down to-day, as facts must be convincing to commission. Recites fact that 100,000 men discharged, earnings fallen off, trains discontinued, etc. Blue picture.
April 6.—Cartoon. Page 1. "Starve the cow and there's no milk for the calf." Cow is railroad; calf is business.
April 7.—4 : 1. Slam at railroad valuation. Will cost $12,000,000 to $15,000,000, and will take five years to complete.
April 14.—3 : 1. Carriers denied early decision. Collateral questions instituted by commission, rebates.
April 14.—4 : 2. Editorial. Surprise from Senator Cummins. Editor much surprised that Cummins should suggest that newspapers are doing anything more than reflect public opinion. Still more surprised to see that the Senator is not converted by statements of railroad presidents.
April 14.—4 : 4. High cost of railroading. Recent figures from Lehigh Road show costs have increased in labor, cars, locomotives, and materials. Five per cent increase needed.

[Evening Star, 1914.]

January 7.—7 : 7. Plea of shippers to be heard.
January 15.—11 : 1. Will hear shippers on a freight rate raise.
January 18.—5 : 1. I. C. C. closes case in hard-coal rates. Allowances between parent and subsidiary and friendly companies brought out in evidence.
January 21.—8 : 3. Freight rate hearings to begin here Monday. Shippers to be heard.
January 19.—2 : 7. President thought to favor increase.
January 26.—1 : 3. Protest against increase in rates by independent oil producers. Charge discrimination favor of Standard Oil Co.
February 3.—1 : 2. New issue enters railway rate inquiries. $15,000,000 free service given.
February 13.—2 : 6. Cartage favors to big shippers.
February 18.—1 : 3. President confers with Chairman Clark on rate increase. Believed that President has been informed by friends of nervous condition of money market.
March 5.—2 : 6. Advance in rates opposed at hearings.
March 14.—2 : 7. All merchants asked to aid in rate fight. Cooperation desired to fight railroads.
March 24.—3 : 4. Rate advance case postponed by I. C. C.
March 24.—10 : 5. Freight rate fight to open to-morrow on behalf of Washington shippers.
March 26.—2 : 2. Rate case rested by complainants (Washington parties).
March 27.—11 : 1. Southern road announces reduced rates from Washington south.
March 31.—5 : 3. Protests against rate increase for railroads. District Consumers' League.
April 1.—2 : 6. Decision on rates expected soon. Roads are in a plight.
April 2.—2 : 4. Rea recites need of increase in rates.

[Washington Post, 1914.]

January 15.—6 : 2. The I. C. C.'s opportunity. Editorial. Orders for steel dependent on allowance of increase. Security markets also affected. Quick decision needed. It will take a year to answer questions put by I. C. C. and five years to sift out.
January 21.—6 : 1. Editorial. Speeding up justice. Wilson's conference with I. C. C. proper even though he may have intimated rates should at once be increased.
January 28.—1 : 3. Rebates a "Crime." Millions paid to big trusts illegally, says I. C. C.
February 8.—1 : 4. New railroad era. Times here for better service, said Southern's head. Working on efficiency.
February 13.—6 : 1. Physical valuation. Editorial. Chief benefit of valuation is political. Inform people, but of less value to commission.
February 16.—6 : 1. Is it worth it? Editorial. Physical valuation largely a fad and not worth the price. "Mass of statistics of doubtful value."
February 19.—1 : 4. Called in by Wilson. Chairman Clark asked for information. Did not talk rates. President said to favor rate increase.

February 22.—4:2. Editorial. Railroads and business. Slowness of decision retards coal, steel, and securities business. If increase granted by March 1, there will be no idle men in the country.
March 4.—1:3. Roads to win rate. Willard of Baltimore & Ohio sure of 5 per cent advance. Evidence before commission requires such decision.
March 4.—6:1. Editorial. Managing the railroads. Seems probable that rebates will be ordered stopped. Government should not manage roads but fix rates only. Roads need encouragement now.
March 8.—7:2. I. C. C. seek rate case light. Railroads must answer whether they give free services which amount to a rebate.
March 20.—1:7. Rail data to Wilson. Keeps in close touch with I. C. C. Rate increase is "the big thing." Letters to him regarding rate increase referred to I. C. C. for the information they contain.
March 20.—6:3. Editorial. The rate cases. I. C. C. not a court and President should be free to consult with them often as to effect of rate decision on the country.
March 31.—5:1. Roads plead haste. Brownell of the Erie testifies that roads need increase at once.
March 31.—5:2. Roads forced to cut. Rea says Pennsylvania will have to stop 62 trains and discharge 25,000 men. Legislation and wages is the trouble.
April 1.—13:1. Lines face a crisis. Willard of Baltimore & Ohio warns I. C. C. at hearing. Delano of Wabash shows vast losses.
April 2.—5:1. Rate decision haste. Crushing needs of railroads cause I. C. C. to hurry. Delano of Wabash shows big losses due to legislation and wages.
April 6.—6:2. Conditions not theories. Thorne and Brandeis theorists who never worked on a railroad. Like fortune tellers who will tell how to make a fortune on Wall Street, but have to charge a dollar to make a living themselves.

[Washington Times, 1914.]

January 27.—1:8. I. C. C. to give advice but no rate advance to big railroad lines. Point out how earnings can be increased by discontinuing rebates.
February 2.—10:8. Coal dealers fight freight rate advance.
February 3.—10:2. I. C. C. frowns on free deliveries.
February 9.—4:1. Editorial. Increase of railway rates. Brandeis to show how railroad losses can be stopped. Rebates.
February 18.—7:5. Wilson talks with I. C. C. head on rates.
February 28.—2:3. Oppose testimony of I. C. C. examiners. Attorneys for railroad want to cross-question men who fight rate increase. Want to throw out testimony of examiners.
February 28.—2:6. I. C. C. ready for delivery hearing.
March 7.—2:5. Railroads accused of padding books $5,000,000 and then asking for rate increase on those figures.
March 10.—11:1. Bad faith is charged to B. & O. expert. Thorne says operating expenses $4,000,000 in excess of year previous.
March 25.—1:3. Cheaper rates are demanded by tradesman to compensate for increased drayage cost since discontinuance of free deliveries by railroads.
March 27.—4:3. Pennsylvania road to cut off trains—retrenchment.
March 28.—2:4. Brandeis says discrimination is behind rate plea. Free service eats up profits.
April 2.—1:7. Going to the devil fast, New York Central's head informs I. C. C. Absolute necessity for raise shown. Mismanagement no longer can be urged as reason for smaller earnings.
April 2.—1:8. Big heading "Starve the railroads and we starve ourselves." Reprint from April number of Munsey's.

[Inter Ocean, 1914.]

January 1.—11, 8:1. Railroads suffer financial stress.
January 3.—7:6. Manufacturers' Association favors 5 per cent increase. Resolutions to be sent to I. C. C. Opposed increase in 1908 and 1910.
January 4.—11, 2:4. Morgan Co. withdraw directorates in hope that it will induce I. C. C. to allow 5 per cent advance.
January 4.—11, 8:2. Editorial. Favorable comment on resolutions of Illinois Manufacturers' Association. Shippers can better afford to pay 5 per cent than suffer any impairment of railroad services.
January 6.—6:2. Editorial. John V. Farwell urges rate advance. Refusal of advance raises rate on short-time loans, so people pay in the end.
January 7.—7:6. Railroads to answer list of questions for I. C. C. Complain questions involve too much detail. Brandeis permits several modifications.
January 16.—1:1. National Business League of America indorses railroad rate increase. Resolution sent to I. C. C. Thirty States represented.
January 17.—6:1. Editorial. Shippers ask higher railroad rates. Criticism of Brandeis and Wanamaker for efficiency claims. Suggests that President and I. C. C. ought to take the hint.
January 18.—9:3. Railroad net gains less.
January 20.—1:1. President favorable to rate advance in return for which railroads agree to allow I. C. C. to supervise future security issues.
January 21.—6:1. Editorial. Prosperity of railroads and prosperity of country are inseparable. Quote from Wilson's message.
January 24.—6:3. Editorial. Will Federal support of securities of railroads be relief? Conflict between United States and States.
January 25.—1:3. French roads lose $16,000,000 in 1913. Would Clifford Thone apply this system to United States railroads? Argument versus Government ownership.
January 26.—1:1. High rate fight up to-day before United States commission. Good chance.
January 26.—6:3. What Government ownership of railroads would mean. Review of B. A. Worthington's (president Chicago & Alton) article in Manufacturers' News—Government ownership bad; would lessen taxes; do away with competition. Warning railroads must have protection or Government ownership.
January 27.—6:3. "Why Prosperity Halts." Criticizes Brandeis. He is an "amateur economist": his questions to railroads will take so long to analyze that "there will be many a fireless grate and supperless table where plenty waits on adequate and profitable transportation revenues and facilities." Even quotes poetry in reflecting on great boom that would accompany the rate advance.
January 28.—1:1. Commerce body favors increase in freight rates.
January 28.—6:2. Paying for a Government ownership whistle. Jumps on Clifford Thorne's statement that Government ownership would save $400,000,000 yearly. Cites France's loss of $16,000,000 in 1913.
January 29.—6:2. Good prospects for freight advance. Says Harlan in decision on spur and trap service intimates advance is to be allowed.
January 29.—7:1. Shippers present evidence against advance.
February 3.—7:3. Coal shippers fight freight raise. Frank Lyon representing Pittsburgh Coal Co.
February 4.—6:2. Railroads favor Federal supervision tending to exclude State regulation.
February 12.—6:2. Editorial. La Follette and the Railroads. Criticism of editorial in La Follette's Weekly.
February 17.—9:6. Railroad stocks suffer on rate-case delay. Probability that railroad will lose advance. Had set hearts upon it.
February 19.—9:6. Wilson confers with Clark of I. C. C., suggesting early decision. President hopes increase will be allowed.
February 20.—9:6. Stock list wavers on rail-rate news that decision is postponed.
February 23.—7:1. Delay in freight-rate hearings may deprive railroads of excellent monetary conditions at present time.
March 1.—18:5. Editorial from Philadelphia Record. Reprint.
March 8.—16:2. Criticizes Commissioner Harlan for calling Chicago, Milwaukee & St. Paul to account for their erroneous book entries.
March 23.—7:1. Sentiment in administrative circles more favorable toward railroads than in recent years.
March 28.—6:2. I. C. C. refuses to look facts in the face and act as their logic demands, i. e., grant the increase.
March 28.—12:1. Retrenchments by railroads due to adverse legislation. Increase in wages and dull business.
March 29.—12:6. Real income loss is $80,000,000 in 7 months.
March 29.—18:1. Daniel Willard explains why railroads need the increase.
March 31.—6:2. "Should the Railroads be Bled to death?"
April 1.—12:1. Early rate ruling by I. C. C. body. Willard of B. & O. and Delano of the Wabash testified that roads face crisis.
April 2.—7:1. Railroad rate decision expected within a month. La Follette offers bill to prevent influencing proceedings, I. C. C.
April 3.—5:5. Rate raise is roads' only hope. President Rea of the Pennsylvania says refusal of 5 per cent will mean serious retrenchments.
April 4.—7:3. Railroad argument will begin April 27.

THE NEWSPAPER CAMPAIGN EXTENDED OVER A PERIOD OF MORE THAN ONE YEAR.

The following list of items from the New York Times for the period beginning January 1, 1913, and ending December 31, 1913, shows the age of the campaign and how it gathered and spread out with increased vigor following the meeting of the railroad presidents, April 30, 1913:

NEWS ITEMS AND EDITORIALS IN THE NEW YORK TIMES.

January 1, 1913.—General statements and tables of earnings.
January 3, 1913.—Part VIII, V:6. "Railroads Still Gaining." Latest returns show big leap over 1912. Ninety per cent of railroads show big improvement. A freight revenue per mile for November, 1912, 12.8 per cent over November, 1911, and passenger revenues increase 6.2 per cent per mile for same period. Net operating revenues increased from $360 to $480 for the same period. Western roads made greatest gains. Southern roads held their own.
February 2, 1913.—VIII, 5:4. "Roads Had Big Half Year." First six months of current fiscal year "well ahead" of same period 1911 and 1912. Lines together did $60,000,000 more business than in the same period of this last year. Only 3 out of 20 large roads listed did not show gains.
February 5, 1913.—12:3. "Earnings Hold Out." Late reports for December show earnings hold up. Many gains. January returns show likewise.
March 2, 1913.—VIII, 8:2. "Railroads are prospering."
Six per cent per mile increase over December of 1911.
Net per mile increase $24 over that of December, 1911.
"Northwest roads faring much better this winter than in 1912."
April 29, 1913.—12:3. Ninety per cent of railroads of the United States receive earnings considerably increased over those of February, 1912, even though one day less in February of this year.
April 30, 1913.—2:7. "Railroads to ask for better rates," i. e., roads east of Chicago.
"The presidents have been meeting to discuss other matters, and have not organized yet for the specific purpose of getting a rate increase, but the leaders are in substantial accord."
Probable that will ask 5 per cent increase.
President Willard, of the B. & O., says there is no agreement of the companies to act in concert. It was learned, however, that the situation has been canvassed and would be easy to perfect organization.
May 1, 1913.—10:1. Editorial. "The railway rate movement."
"Railroads are about to make another combined attempt to advance their rates."
Explains that labor costs, taxes, new legislation make higher rates imperative.
Says this good chance for Interstate Commerce Commission to show "that it is truly a judicious, judicial, and benevolent body."
May 4, 1913.—VIII, 14:3. B. F. Bush urges need of inquiry.
May 6, 1913.—12:7. Samuel Rea predicts an increase.
May 8, 1913.—12:5. President Willard will ask reopening of cases before Interstate Commerce Commission.
May 11, 1913.—11:3:6. President Rea gives reasons why an increase should be granted, i. e., recent legislation.
Unwilling to wait for valuation of Interstate Commerce Commission.
May 16, 1913.—10:2. Editorial. Sympathetic with railroad demands.
May 14, 1913.—2:5. Briefs filed and application for reopening cases made by eastern roads.
June 1, 1913.—VIII, 6:5. Raise favored by a business organization and students of the question.
June 15, 1913.—VIII, 6:1. President Willard, of B. & O., who heads committee of railway presidents, says that gross earnings for year ending June 30, 1913, will probably be largest in their history, but that surplusses in excess of interest and dividends are not sufficient for further capitalized expenditure.
July 6, 1913.—II, 3:4. Representative JEFFERSON M. LEVY, of New York, introduced a resolution in the House asking 2½ per cent freight increase at once, and 2½ additional if investigation shows that to be necessary.
July 20, 1913.—II, 3:6. Freight rates from the East reduced on shipments to Duluth by Interstate Commerce Commission.
July 22, 1913.—11:6. Wheat rates from New York to Minneapolis changed by Interstate Commerce Commission.
August 1, 1913.—9:8. Freight rates reduced by Interstate Commerce Commission.
August 6, 1913.—6:2. Editorial. "Scientific rate making."

Says compliance with commissioner's requirement as to publication of schedules will be ruinous to roads.
Says schedules are foolish, and the work of men with no business responsibility.
August 16, 1913.—12:4. Increase of cantaloupes suspended by Interstate Commerce Commission.
September 23, 1913.—8:3. Eastern railroads apply to Interstate Commerce Commission for 5 per cent increase.
President Willard said "he had every confidence in the outcome of the matter."
September 24, 1913.—10:1. "Railroad's great gain." Increase in revenues far ahead of increase in expenditures. For January 1–June 30, 1913, gain of $288,000,000 in operating revenues, while operating expenses increased $205,000,000. Gain of $85,000,000.
Eastern roads gained in net revenue $24,000,000.
Western roads gained in net revenue $55,000,000.
October 4, 1913.—16:2.3. Decrease in earnings.
October 7, 1913.—12:2. Editorial. "Railroad outlook."
October 8, 1913.—13:4. Statement of President Hannaford and Chairman Clough of the Northern Pacific.
October 11, 1913.—14:6. D. Willard praises the above editorial.
October 21, 1913.—12:3. European railroads allowed to increase rates.
October 23, 1913.—10:2. Editorial. "Concessions to the railroads."
October 27, 1913.—12:2. Stock market will be aided by concession of Interstate Commerce Commission.
October 30, 1913.—13:4. D. Willard says rates should be increased.
November 6, 1913.—10:8. Net loss of revenue July to September.
November 9, 1913.—VIII, 7:7. Increase necessary because of advance in operating cost.
November 10, 1913.—8:3. Advance favored by people, opposed by officials.
November 15, 1913.—14:13. Reports show stagnation of business through low rates
November 15, 1913.—10:1. Editorial. "The railroads and the commission."

EXHIBIT BS.

WEEKLY PRESS HAVE INNOCENTLY REPRINTED RAILROAD ARGUMENTS FOR THE INCREASE.

Below appears a typical article from one of the weekly newspapers. The editorial from the Troy (N. Y.) Standard comments on this practice:

[From the Madison Republic and Tribune.]

FREIGHT RATES SHOULD BE SLIGHTLY INCREASED.

The Interstate Commerce Commission, at Washington, will soon be called upon to decide whether or not the 5 per cent freight-rate increase will be granted. Many prominent public officials throughout the country have taken a most determined stand on this matter and have petitioned the Interstate Commerce Commission to grant this increase. During the past years, while the Republican Party had control of the machinery of our Federal Government, very little, if any, efforts were made to place any restraint upon the railroads in regard to their stock manipulation and their financial dealings with Wall Street. It may be that some of the railroads of this country are overcapitalized, but, be that as it may, we know that some of the business interests, and especially the interests of our home city, is suffering in consequence of the inability of the railroads to buy equipment. We believe that the nominal 5 per cent increase in the freight rates, as asked for by the railroads, will do practically no harm to any of the shippers of this country, but we do know and believe that if this increase should be granted that the railroads would then be in a position to dispose of their securities, and consequently would be able to immediately place orders for new equipment. This would mean a revival of business in Madison and the Tri-Cities. It would mean prosperity for our merchants and employment for our citizens.

We hope that any and all public officials who read this article will use all honorable means within their power to try to influence the Interstate Commerce Commission to grant this increase. We believe that the commission now has abundant evidence which would warrant them in granting the request of the railroads.

In the past 15 years the freight rates have been decreased, while the operating expenses and the cost of the equipment, due to the raising of the prices of materials and the increase of wages paid to railroad employees. It would seem from these facts that the rates should and ought to be increased.

—

[From the Troy (N. Y.) Standard, January 24, 1914.]

PRESIDENT NOT PLAYING POLITICS.

There is an amount of loose talk going the rounds of some newspapers to the effect that the President has "let up on special privilege," and that the administration, having put through the chief measures to which it was pledged, is now prepared to forgive and forget past offenses by the rich malefactors and is intending to let things drift along much as they have been permitted to do in the past.

Some of this gossip is being spread by well-intentioned persons who are letting their wishes father their thoughts. They see that the tariff and currency laws have not paralyzed the Nation, and now they are trying to whoop up the stock market and inaugurate a business boom. If this gossip were confined to newspapers who peddle and their patrons who seem to like that sort of misinformation it would do no particular harm. But unfortunately it is picked up by other well intending but poorly advised vehicles of information, notably members of the weekly press, and scattered through the country. The result is that, until they learn better, some people who elected President Wilson to end the economic injustices which they have suffered and are suffering, are likely to have the feeling that they have been deserted.

In line with this most vicious invention there is another rumor going the same rounds. It is that the President will use his influence with the Interstate Commerce Commission to have the 5 per cent increase in railroad freight rates granted. Some of the wiseacres studying the President's trust message read his comment on the intimate connection between railroad and general prosperity, and knowing that there has been a considerable influence brought to bear on Mr. Wilson to have him sanction the rate increase, made the deduction that he has yielded.

The fact is that, based on the best available authority in Washington, this rumor, like its predecessor, is absolutely false. That the President has been importuned to recede from his high position and play politics is well known. A number of Democrats, and influential Democrats, we regret to say, have urged him to take a stand in favor of the increased rates. But these men put political expediency before patriotic statesmanship. Their argument is that, whether increased rates are justified or not, to grant them will be to bring about a business boom which the Democratic Party in the campaign next fall could attribute to the tariff and currency.

But Woodrow Wilson is not that kind of a statesman. He has told his callers plainly that his legislation must stand on its own merits. As for the railroads, they must justify their request for increased rates before the commission, if they are to have their request granted. There will be no executive interference.

The President's position is simply this: If the facts are as the railroads claim, then the increased rates should be granted; but if the investigation shows that increased rates are necessary simply to pay dividends on watered stock, there is no justification for the increases. It is a question of fact for the commission.

EXHIBIT B9.

ST. LOUIS, MO., *April 30, 1914.*

Hon. ROBT. M. LA FOLLETTE,
United States Senate, Washington, D. C.:

Leslie's April 30 editorial says: "From dependable sources we learn that the Interstate Commerce Commission, which has seemingly dallied with the request of the eastern railroads for a 5 per cent increase in freight rates, has at last awakened, and that a decision favorable to the railroads may be looked for at a very early date." Should advance information be given out to a special coterie?

B. A. BECKER.

[Editorial from Leslie's Illustrated Weekly Newspaper, Mar. 5, 1914.]

LET THE THINKING PEOPLE RULE!—FAIR PLAY FOR THE RAILROADS.

Every proposed freight increase by the railroads has been uniformly and promptly suspended by the Interstate Commerce Commission without regard to its merits. Meanwhile every demand for an increase in wages has had to be satisfied. How long can this condition last? Does it mean anything that the railroad equipment manufacturing concerns, the steel-rail mills, and the other factories depending largely on the railroads for their orders are running on part time and discharging workmen? Let workmen think of this and let demagogues at Washington ponder over it. There will be another election for Congressmen next fall.

It is amazing how the public misconceives the railroad situation. The New York Herald, always alert to the public welfare, justly characterizes it as "momentous." The railroads are not owned by a few men of wealth. Their prosperity doesn't concern a hundred or a few hundred individuals. They are owned by hundreds of thousands of shareholders and bondholders. Every depositor in a savings bank and every holder of a life or fire insurance policy is interested in the prosperity of our railways. In six of our States the savings banks have over 5,000,000 depositors, and their savings are largely invested in railroad bonds. If the railroads are bankrupted, what will happen to the savings bank depositor? Already the loss to the savings banks of New York State alone, with 3,000,000 depositors, because of the decline in the market value of securities, has reached over $70,000,000.

The insurance companies invest their funds largely in railway securities, and heretofore these investments have been regarded as the safest. What will happen if the pressure upon the railroads for increased wages, increased cost of material, and heavier taxes continues and if they are not permitted to slightly increase their rates? It is said that some merchants oppose the increase, but leading commercial bodies are heartily in favor of the advance. What will the merchants do in the face of receding prosperity?

Extravagant statements are made in regard to the amount of the increase the railroads would have if the application of the eastern roads for an advance of 5 per cent in their freight schedules were granted by the Interstate Commerce Commission, but the testimony shows that this would amount to about $40,000,000. Large as this appears, it would be offset by recent increases in wages and the rise in the cost of material.

Every observant citizen fears that the country is drifting away from prosperity. This retrograde movement would be checked at once if the railroads, which constitute the second great factor in our industrial progress, were permitted to advance their rates. A good Democrat, Congressman Levy, has introduced a bill to expedite the decisions of the Interstate Commerce Commission. We hope the measure will pass. But it should be unnecessary. The exigency itself should compel immediate and favorable action.

President Wilson, in his recent message to Congress, speaking of the needs of the railroads, said: "We can not postpone action in this matter without leaving the railroads exposed to many serious handicaps and hazards." This should be a warning to the members of the Interstate Commerce Commission. If they do not act promptly, they should retire and be replaced by those who realize the need of the hour and who have the ability and the disposition to meet it.

[From Collier's Weekly, New York, January 24, 1914.]

THE BASIC SERVICE OF RAILROADING.

One of the most impressive sights of our time is that from a wagon bridge over a four-track railroad. You may be a day's walk from the nearest city, but the fact of the city's existence is plain in the endless movement of goods and people. It is plain also that the railroad is not so much a business as a gigantic underlying service. This service moves human beings and things from place to place. We get used to it, depend on it, and in time come to shape our actions very largely by what the service makes possible. It follows that the cost of this transportation becomes embedded in thousands and thousands of prices. It is desirable therefore that its cost to others be stable, so that passengers and shippers can be sure of their plans. Furthermore, the railroad must be made to feel that success depends on doing a good job rather than on taking advantage of the public's necessities. Mr. Brandeis has given this point the clearest and most dramatic of statements in his famous aphorism about the "million dollars a day" which efficiency ought to save for the railroads. Our whole accepted policy of regulation and public control hangs upon these facts. The public must have real power over rates and capitalization, over dividends, and over purchases of other lines and utilities, or else the monopoly power of the railroad will be used in many cases for private gain and to the disadvantage of the community. There have been too many instances of this.

WHAT DO WE WANT?

It is not a matter of bargaining with an independent power. It is a matter of deciding what we want to get out of a certain service. These railroad corporations are creatures of the State, and most of them realize it very clearly nowadays. It is the economic facts that are obdurate, and it is our own social purpose that is vague. Do we want to use the railroads so as to accentuate and emphasize the present dominance of the Atlantic seaboard in the business life of this country, or do we want to use the railroads so as to get a spreading of population and industry over our entire area? What towns and regions should be given a comparative advantage when rates are readjusted? There is no benefit to be had from merely throwing a bone in the shape of higher rates to those who own the railroads as property. What we must do is to strengthen and extend the railroads as a gigantic fundamental service, no matter how owned. This is the only control worth while, and to accomplish it will require the handling of the problem from the broadest standpoint of constructive industrial statesmanship. It will not be done by figuring dividends and costs. We must have a national plan. What, in the long run, do the American people want from their railroads?

[From Colliers Weekly, New York, January 24, 1914.]

THE RATE INCREASE—A MIDDLE WAY.

The railways ask permission to increase their freight rates by 5 per cent. That would add $100,000,000 to the country's freight bill, and this bill already exceeds $2,000,000,000. The increase is defended on the ground that while the general level of prices has risen 30 to 50 per cent and wages some 20 or 30 per cent, railway rates have stood still. Of course, the latter is not wholly true. In a great many ways railway rates have been considerably raised within the last 10 years. The fact that the average rate per ton-mile has stood still is due to other causes. One kind of transportation has in the United States been developed to a very high degree of efficiency. That is the transportation of commodities like coal, grain, iron ore, and so on, over long distances. These commodities are carried cheaply, because if they were not carried cheaply they could not be drawn these long distances; but because they are drawn a long way the profit is large. Rates for the short haul in this country are not low, compared with Europe. In many instances as much is charged for a short haul as for a much longer haul. The effect of this scheme of cheap long haul and dear short haul has been to build up the big cities at the expense of the country. It has produced enormous congestion of population in the great centers and sent land values in these centers to fantastic heights. It is a striking fact that the congestion of municipal centers in the United States now exceeds that in many parts of Europe. This same vicious scheme has ruined industry in many portions of the country. It has nearly ruined farming in New England and the Atlantic States. It has ruined the woolen factories in the West and often suppressed coal and iron mining where it would otherwise still yield profits.

THE RAILWAYS GET THE RECOIL.

Now this evil scheme is beginning to recoil on the railways themselves. To increase their business they must have larger and larger terminals. These terminals cost huge sums for the land alone. To pay interest and dividends on the money for the land purchased at these fantastic values the railways now ask permission to raise their rates. Where is it going to end? The greater the congestion of population they produce, the higher the land values, the greater the cost of more terminals. Land on Manhattan Island or at the mouth of the Chicago River is worth millions per acre; land on Staten Island or in New Jersey, 10 miles away, is worth hundreds of dollars per acre. At Fall River they are building bigger cotton mills, at Brockton bigger shoe factories, at Lowell bigger cotton mills; but the shoe factories in Texas, the cotton mills in Mississippi, the woolen mills in Ohio or Colorado do not flourish. And why? Because the power to fix railway rates represents the greatest power of taxation in this country, and the whole scheme of railway rates in the United States has been to enable industries which are established where they do not belong to compete with and suppress industries at the natural bases of supplies and power. And this is one big reason why food and living in America is one-third dearer than in England and one-half dearer than on the Continent of Europe generally. It ought not to be cheaper to ship hides from Texas and have them made up in Massachusetts and shipped back and sold in Texas more cheaply than they could have been manufactured there. Texas has the raw materials and the fuel close by. New England has neither. Millions of cheap horsepower is going to waste in the Far West; but industries will not move there in considerable part because railway tariffs are adverse to such a development. We believe that the time has come at last to make a beginning of the end of this purblind policy.

THE WAY TO A BEGINNING.

The railways ask for a nearly horizontal increase in all existing tariffs. They do not propose to disturb the advantage of New England or of Pittsburgh or Chicago over the rest of the country. They do not propose to touch the rates which have created the fortunes of many of their directors and which have often been dictated by the directors themselves. They purpose to keep on running the railways in the interest of the very few and the interest of a small part of the country against the interests of the many and the interests of the whole country. This is unreasonable. If it is to the interest of the whole country that railway revenues should be increased, it is not to the public interest that this increase should come from rates which build up the cities against the country. If rates must be increased, it should be the long-haul rates, and especially those between the great centers. These are the rates which, from a social and economic point of view, are too low. In general, the longer haul is with commodity freight and the shorter haul with classified freight. We believe classified rates are to be raised much more than commodity rates. This may be good railway policy from the point of view of quick dividends—it is not good public policy. With the suppression of the railways' suppression of water competition, we believe it would be entirely safe to permit the railways to raise their long-haul rates as much as they liked. They could not raise them much because such a raise would promptly check the volume of business. We believe there is here a work for the Interstate Commerce Commission of the highest economic importance. It transcends in importance the work of the new banking system because it reaches far more deeply into the social and industrial life of the Nation.

EXHIBIT B10.

TRADE JOURNALS HAVE BEEN FILLED WITH EDITORIALS AND ARTICLES IN THE INTEREST OF THE RATE ADVANCE.

[From the Manufacturers' News, January 1, 1914.]

TAKE A BOLD STAND.

Washington dispatches state that a series of interrogations has been drafted by the Interstate Commerce Commission to the railroads of official classification territory in relation to the petition for an advance of 5 per cent in freight rates. Among the questions raised are the following:

"Do the present rates of transportation yield enough revenue to common carriers by railroads operating in official classification territory?

"If not, what general course may carriers pursue to meet the situation?"

We are greatly surprised as to the Interstate Commerce Commission in sending out such a circular. We have great faith in the commission, especially in Commissioner Prouty, whom we regard as one of the most able men in this country. He would make a good man for President of the United States, because he knows a lot more about running a government than he does about running anything else. The tendency seems to be to pick out men for Government work, especially Presidents, who know nothing about the job. Commissioner Prouty is a fair man, and the decisions of the Interstate Commerce Commission show the

influence of his fair mind, but how did the commission happen to send out the circular? Has not the commission been keeping the books of the railroads for years? Has it not had an army of men running over the country checking up every item? Would the railroads with the present pressure on them be likely to ask for an increase in freight rates unless it were a ground-hog case? Everyone knows the situation as to the carriers at present. They hardly have courage left to go out of doors, let alone go through the front gate to the street. They received a rather severe whipping not long ago because they asked for an advance of practically 20 per cent in rates. Now, there is a great difference between an advance of 20 per cent and a horizontal advance of 5 per cent, and the conditions are as different from those which existed two years ago as is the difference in conditions between Labrador and Martinique. The railroad brotherhoods, through their political power, have jimmied from the carriers large sums of money. Some railroad help is overpaid and some railroad help is underpaid.

Manufacturers' News is in favor of the 5 per cent increase, but if the railroad unions start to take the money away from the carriers after the advance has been granted there is likely to be a civil war in this country. The conduct of the unions and the way they have been able to twist the railroads is absolutely ridiculous, and we believe that a continuation of the strong-arm work that has been going on will result in a general upheaval.

Everyone knows the railroads are not owned by those who operate them or by those in whose control they now rest. Most of the stock of the different railroad corporations is in the hands of manufacturers, merchants, and the business men throughout the country. Many of the bonds are held by banks, and if it were not for the system of giving proxies that has grown up in this country, for which no one seems to be responsible except the stockholders themselves and those who want the proxies, the railroads would be in the hands of other people. We do not mean by this that they would be conducted any differently from the way they are conducted now—maybe not as well—but we do know they would be conducted much better if there was not so much influence on the part of the general public. Now, one of the things the general public will find out, if it does not withhold its influence in assisting the brotherhoods in getting more money, is that the cost of transportation will be much higher, and part of it will be on the passenger rates. When passenger rates commence to go up, then the public will find out that it is carrying part of the burden.

We do not understand why it is the Interstate Commerce Commission does not know whether the carriers are making money or losing money. We have read the commission's report for several years, and we always supposed that we could tell from these reports how the carriers were getting along. Does the commission admit, in sending out the circular, that it can not tell whether the carriers are entitled to an increase in freight rates or not? That it can not tell whether the railroads are making money or losing money? Our contention has always been that it was unfair to make rates that would apply to all the roads, because the cost of the service, etc., is hardly the same in any two cases.

It is our judgment that if the Interstate Commerce Commission believes the carriers should have the 5 per cent increase it should give it to them at once and not quibble. Bold, decisive action is the kind of action that is necessary to restore the prosperity of this country, and the question of the advance in freight rates is only one feature.

—

[From the Manufacturers' News, January 8, 1914.]

SHIPPERS, ATTENTION!

Wire President Wilson, wire your Senators, wire your House Member to signal the Interstate Commerce Commission to go ahead. A 5 per cent advance in rates at this time will put business over the hill. A slow down means a rear-end collision.

The track ahead is the track to watch, not the track behind.

Call in the rear flagman and run to the next station. There is freight on the platform ahead and there are loaded cars on the sidings. The industries can not move if a danger signal is set against the carriers. Telegraph at once. Do not delay.

The directors of the Illinois Manufacturers' Association at their regular monthly meeting Friday, January 2, passed a resolution indorsing the horizontal increase of 5 per cent in freight rates and have requested the members to take the matter up at once with their Senators and Representatives.

ILLINOIS MANUFACTURERS' ASSOCIATION,
1227 American Trust Building, Chicago.

—

[From The Factory, March, 1914.]

We indorse the "raise," for reasons stated below—they need it badly.

It will improve business.

Manufacturers, a 5 per cent raise in railroad freight rates is imminent.

Increased wages, increased taxes, a greater expenditure to insure safety, etc., have so increased operating expenses of the railroads in general that a 5 per cent increase in rates is predestined to come. And many manufacturers favor it—some have put themselves on record to the effect that shippers can better afford to pay a uniform advance of 5 per cent now than suffer any future impairment of railroad service.

GRAVES SHALE PAVING BRICK CO.,
FREDERICK GUNSTER, *General Manager.*

—

[From the Manufacturers' News, January 8, 1914.]

THE ACTION OF THE ILLINOIS MANUFACTURERS' ASSOCIATION.

At the meeting of the board of directors of the Illinois Manufacturers' Association held in Chicago, Friday, January 2, the report of the special committee submitting resolutions in favor of a 5 per cent horizontal advance in freight rates was concurred in. The resolutions promulgated by the committee were unanimously adopted.

The action of the organization was somewhat unlooked for because the Illinois Manufacturers' Association took the initiative in 1908 and in 1910 in opposing the proposed advance. At that time the carriers wanted an advance of from 10 to 20 per cent. The association also opposed the advance a number of years ago of 20 per cent, which was undertaken through a shifting of the uniform bill of lading. The controversy at that time was very fierce and resulted in the adoption of a uniform bill of lading with the freight rate question eliminated. It was through the influence of the association that the Attorney General applied for and obtained the temporary injunction at Hannibal that brought the carriers up with a quick turn and astonished the entire country. The Taft administration afterwards weakened and had the injunction dismissed and an agreement was entered into with the shippers and the carriers that the matter would be thrashed out before the Interstate Commerce Commission.

Regardless of the merits of the other controversy and the attitude of the association at that time, the directors believe that this is not a time to squabble about a raise of 5 per cent. They believe a 5 per cent raise will help restore the business confidence which has been destroyed and will materially help the railroad situation if the money is properly expended in service and improvements. If the railroad unions undertake to grab the increase by demanding another increase in wages the country will be justified in starting a civil war. It is simply ridiculous the amount of wages some of the unions have forced out of the carriers while there are certain employees in the railroad service that have not been advanced in 20 years. The richest men in the railroad business to-day are the engineers. This surprising situation was demonstrated through the number that come within the jurisdiction of the income tax law.

The committee reporting the resolution to the board was composed of Charles Piez, P. A. Peterson, and John E. Wilder, probably the three most aggressive members in opposing the advance two years ago and four years ago.

MAKE BUSINESS BOOM.

Wire the President, wire your Senators, wire your Representative, to use his influence for a 5 per cent horizontal raise in freight rates in official classification territory.

Do not suggest selfish exceptions as to lake-and-rail rates. Closed plants mean idleness and suffering to the entire country. With the industries shut down all business will be at a standstill.

Act and act promptly. The Interstate Commerce Commission should be impressed with the importance of a quick decision.—From a bulletin of the Illinois Manufacturers' Association, January 3, 1914.

—

[From the Manufacturers' News, Jan. 15, 1914.]

FAVORS RATE INCREASE—JOLIET MERCHANTS' ASSOCIATION GOES ON RECORD FOR 5 PER CENT ADVANCE.

Resolutions favoring the 5 per cent increase in freight rates, asked for by the railroad systems of this country, in petitions pending before the Interstate Commerce Commission, were adopted last week, at the January meeting of the board of directors of the Merchants' Association of Joliet.

Pursuant thereto, Secretary Schager sent telegrams to Illinois Senators and to Congressman COPLEY, urging their influence in bringing about the proposed increase. A telegram also was sent to the Interstate Commerce Commission.

There was not a dissenting voice among the merchants on the proposition. F. C. Eckman, of the J. & S. Traction Co., who was one of a number urging favorable action in Joliet, was present at the meeting to explain, but no one asked for explanations.

WILL STIMULATE BUSINESS.

One Joliet merchant declared that the increase would immediately stimulate business at least 25 per cent. Another authority states that in the case of the Elgin, Joliet & Eastern belt line, which is a vital factor in the industrial activity of this city, it would benefit $666,000 in added revenues in the course of one year, through this increase, making it possible to largely augment its working force. In the same way, it is pointed out, there will be a revival of work in steel plants, due to the increased purchasing powers given the railroads, for they need material, and are merely holding off to await the decision of the commission. The Joliet News, commenting on the recent action of the Illinois Manufacturers' Association, said:

"For a number of years the Illinois Manufacturers' Association has fought these petitions for freight-rate increases, but now it is announced that the association, through a committee which has been investigating, has decided the rates are proper and should be allowed. This will be a big influence in the movement.

"Joliet, because of its large railroad and other industrial interests, has a vital interest in the outcome."

—

[From the Manufacturers' News, Feb. 12, 1914.]

RAILWAY PURCHASES MAKE BUSINESS.

What is the matter with general business? What can be done to restore activity? There are conclusive grounds for believing that the largest single factor in the present interruption and rapidly approaching business depression was and is the enforced and continued curtailment of railway purchases. No factor which could now be introduced into the situation would do more to stimulate general business out of its present and impending condition than a vigorous resumption of railway expenditures. This conclusion, while applying to the state of affairs at this moment, is based upon a careful study and comparison covering many years, showing the relation between railway purchases and general business.

If the conclusions drawn from past experience are correct, and if even the small advance in freight rates *now asked for* by the eastern railroads would enable and encourage them and other roads to make considerable outlays at once, such an outcome would directly result in a decided restoration of general business activity.

REMOVE ARTIFICIAL RESTRICTION.

It is not for a moment proposed that railways shall be permitted advances in rates in order that unnecessary purchases may temporarily benefit the railway supply industries or even the whole country. Waste never permanently benefits anybody. It is not unnecessary purchases which are under discussion. Railway facilities are insufficient to meet any considerable increase in tonnage. The proposition is not to overstimulate, but to remove an artificial restriction, in the shape of rates too low.

The greatest danger at this moment is delay. It is well recognized that it requires a greater force to start from inertia than to continue a momentum already established. The sooner the Interstate Commerce Commission can issue a favorable decree the more certainly will the influencing power of railway purchases be effective in the restoration of general business.

RAILWAY PROSPERITY MEANS GENERAL PROSPERITY.

Not many years ago, comparatively few business men, aside from those directly selling to the railways, realized that railway prosperity meant general business prosperity.

The past few years, however, have witnessed a steadily growing recognition of this fact on the part of business men generally, until to-day it is substantially an accepted doctrine.

There is widespread confusion, however, as to what constitutes "railway prosperity," often the result of the popular error of accepting the increased earnings of some particular railway, or the naturally growing gross earnings of railways generally as proclaimed by the public press, as being indicative of "railway prosperity." Much is now being written regarding decreased net earnings and the many other evidences that the railways generally are by no means prosperous in the true sense of the word, or as determined by the true tests applicable to all business enterprises.

RAILWAY PURCHASES MEASURE PROSPERITY.

It is believed that the watchword "Railway prosperity means general business prosperity" should be changed to read: "Railway purchases measure general business prosperity."

Inasmuch as the railways of this country constitute its greatest industry next to that of agriculture; with but one thing to sell—transportation—the ultimate consumer of everything they buy, their purchases extending substantially through almost every department of business, many of them on a tremendous scale, it must be obvious how potent a factor they are in general business conditions.

As the iron and steel industry has long been recognized as being the truest index of general business conditions, and as the statement has been reliably made that the railways consume, directly and indirectly, between 40 and 50 per cent of the iron and steel production of the country, it is manifest that the expansion or restriction of railway consumption must vitally affect this barometer.

The ramifications of railway purchases make it impossible to classify them in the aggregate. But few of the more important items, such as rails for example, are made the subject of public information and statistical compilation. However, the conditions under which rail purchases are made are not believed to be such as to reflect the railways' prosperity, or their purchasing ability in a broad sense.

EQUIPMENT PURCHASES AN INDEX.

Many years of observation have led to the belief that of those items officially compiled, tabulated, and made public, perhaps no one so clearly and typically reflect the railways' general purchasing ability as that of new equipment. When the railways are buying freely of new equipment, they are generally likewise buying freely of all other articles essential to maintenance and operation. Within the past few years the purchasing of new equipment has had a greater influence upon the iron and steel industry because of the transition from wooden to steel construction.

—

[From the Manufacturers' News, February 26, 1914.]

Attorney Luther M. Walter was engaged to go down to Washington and appear before the Interstate Commerce Commission to-morrow and Saturday and oppose the amazing plan of Louis D. Brandeis to make the shippers of the country pay for every item of service rendered by the railroads whenever a car of freight leaves the main lines of the carriers.

This service—car spotting, trap cars, lighterage, tunnel switching, amounting to anywhere from 50 cents to $2.50 a car handled, it was explained to the shippers—would represent an increase in freight rates amounting to much more than the 5 per cent asked by the carriers. In some instances, it was stated, it would represent an increase ranging from 10 to 20 per cent.

ADVISORY COMMITTEE OF TWENTY-FIVE.

A committee of 25 was appointed to act as advisors to Mr. Walter, and from this committee the experience of several shippers who have industrial car tracks will be selected as typical. Mr. Walter understands the situation thoroughly. He has been before the Interstate Commerce Commission in the hearings relative to the subjects that have recently been in progress as representative for the manufacturing interests of the country.

Mr. Walter attended the meeting of the National Traffic League, and he warned the shippers what the Interstate Commerce Commission, directed by Mr. Brandeis, apparently contemplated. It was quite likely, he said, that the commission intended to try out the plan of charging for service in advance of any formal freight-rate increase, "to see how it would work." The commission might easily accomplish this result against the wishes of the shippers by putting the charge for car spotting and other service without the formality of an order. It was assumed that the railroads, though they had not advanced the theories that Mr. Brandeis is endeavoring to saddle upon the shippers, would be willing to avail themselves of the tremendous increase in compensation when backed by the Interstate Commerce Commission. In the absence of a formal order, the shippers would be without the recourse of injunction proceedings.

ADVICE BY MR. WALTER.

"If you don't present some facts in support of your position and in your own protection, you'll have these service charges saddled upon you," Mr. Walter told the league members. "We should be in a position to show that the carriers have invested more in team tracks than the value of this service for which the commission proposes to charge you. Mr. Brandeis has investigators who have presented certain information, and they should be brought before the commission and submitted to cross-examination."

Hal H. Smith, attorney for the Michigan Manufacturers' Association, said that in his opinion the National Traffic League made a big mistake when it failed to go on record in support of the railroads' request for 5 per cent advance, as the Michigan Manufacturers' Association and other industrial organizations (including the Illinois Manufacturers' Association) had done.

WHERE LEAGUE MADE ITS MISTAKE.

"If this action had been taken," Mr. Smith ventured, "we would not now be confronted with this charge for special service, which in Detroit alone will amount to more than $4,000,000 a year. It would have been much better if we had all favored a railroad freight advance. Our greatest Michigan railroad is bankrupt and has not been able to secure any higher rates, and a serious condition confronts us on account of inadequate and run-down equipment. We think this charge for car service is discriminatory. Not a single shipper in Michigan objected to a 5 per cent advance in freight rates. Mr. Brandeis should be told that the 5 per cent horizontal advance is much more popular than his scheme for increasing the revenue of the railroads."

President H. T. Wilson, of the league, said he couldn't agree with Mr. Smith that the league had made a mistake. His advice had been that the league should assist in bringing out the facts as to whether or not the railroads were receiving adequate compensation. The league, he believed, should use its efforts to see that the Interstate Commerce Commission granted further time in which the shippers would be enabled to present a vast amount of evidence that the industrial tracks were not the important economic feature that had been represented. Mr. Wilson contended, and he said the courts had upheld this view, that carriers could not charge for a service that was clearly a part of transportation.

H. C. Barlow, traffic manager for the Chicago Association of Commerce, who opened the discussion, forcibly described the gravity of the situation.

H. C. BARLOW'S VIEWS.

"It is a question," said he, "whether we are prepared to add to the regular transportation rates a charge for every type of service that is performed by the carrier after the car leaves the main line. Every carrier entering this city—every station in America—is involved. It will not be limited to the shippers east of the Mississippi. Whatever is charged for here for car spotting, trap-car service, or other service, will be broad enough to include every switching service in every part of the country. This is the time for you to have something to say. If you go down to Washington and sit in the audience you simply acquiesce in this additional charge for transportation.

"The traffic committee of the Association of Commerce has employed Walter L. Fisher as its legal representative before the commerce commission, and we intend to fight."

On motion of Mr. Barlow, the members of the league present agreed to an assessment amounting to the equivalent of the annual dues, and President Wilson appointed a committee to engage an attorney. This committee, consisting of Mr. Barlow; O. F. Bell, secretary to the league; and C. A. Jannings, of the American Cotton Oil Co., went outside for a few minutes, and on their return announced that Mr. Walter had been engaged as attorney. Mr. Bell is chairman of the advisory committee appointed by Chairman Wilson.

SHIPPERS ARE WARNED—$5,000 FINE OR IMPRISONMENT FOR EVADING COMMERCE LAW.

Five thousand dollars' fine or a two-year term in the penitentiary, or both, may be imposed upon the shipper or carrier who attempts to evade the law by false billing, false classification, false weighing, or false representation of the contents of a package or the substance of property for the purpose of securing transportation of such property at less than the regular rates.

A. S. Dodge, superintendent of the Western Weighing & Inspection Bureau, calls attention to the new law, which goes into effect March 1, in a circular notice he has sent out to the shippers and railroad companies. The bureau, which has its offices in suite 1822, Transportation Building, Chicago, is charged with reporting such violations of the law to the Interstate Commerce Commission.

SIXTY PER CENT USE "SPUR" TRACKS.—ILLINOIS MANUFACTURERS' ASSOCIATION TELLS INTERSTATE COMMERCE COMMISSION WHY IT OPPOSES CHARGE FOR CAR SPOTTING.

In reply to a letter from the Interstate Commerce Commission, asking for information relative to the concerns connected with railroads by private spurs or sidings, or who are furnished ferry or trap-car service, the Illinois Manufacturers' Association, under date of February 24, has stated:

"We are securing the information you desire, but owing to the wide distribution of the 1,200 industries included in the association, it will be impossible to have it in Washington by March 2.

"Sixty per cent of the membership have private spurs or sidings, consisting of one or at most two short spur tracks.

"We estimate 40 to 50 per cent of our members take advantage of the trap-car service.

"It is the evident intent of your commission to authorize the railroads to make an additional charge for services which have always been included in the freight rates. We respectfully protest against any such action, as we consider it unfair and unjust discrimination against shippers who have supplied themselves at their own expense with additional terminal facilities of which the railroads secure the benefit.

"Our protest applies particularly against the proposed charge for spotting cars. All cars, even those carrying material for industries not equipped with spur tracks, must be delivered at some point, and must be spotted whether that spotting is performed at the railroad's freight terminal, at its teaming track, or on the privately owned spur tracks within the enclosure of an industrial plant. This service is, and always has been, as much a part of the regular freight service as the actual carrying of the material in case. It is and always has been a part of the cost of the freight service, and as such is covered by the rates. To superimpose an additional charge for this service is not only unscientific but unfair. It is manifestly unfair as between two industries, one of whom has at its own expense introduced its own siding, and the other of whom employs the siding built at the railroad's expense, to make against the former a charge for spotting a car, and not to make a similar charge against the latter.

"So far as absolute justice to all is concerned, we believe that the shipper who employs the railroad's facilities at the terminal should be charged more than the shipper who has provided his own facilities, for the former certainly employs relatively more of the railroad's capital in addition to enjoying like service.

"We do not believe that such a charge as the commission proposes can be fairly made, without attacking the entire structure of rates, for there are certainly glaring inequalities, which, under a minutely accurate and fair system of rate setting, would justify widespread changes.

"For instance, in all of the industrial centers of Illinois, railroads have been compelled to abolish grade crossings, and the enormous expense involved constitutes one of the important reasons cited by the railroads for an advance in freight rates. Yet it is the universal practice to charge a shipper located outside the zone of track elevations exactly the same rate as one located in the very center. In the case of a shipment from Chicago to New York City, a shipper located at Indiana Harbor pays exactly the same rate as a shipper located in the heart of the loop district, yet the 15 miles of track from Indiana Harbor to Van Buren Street, Chicago, probably represents more of an investment than the 130 miles to Fort Wayne.

"Why should a man who receives L. C. L. shipments in an outlying and inexpensive freight house be charged as much as a man who receives shipments in a centrally located and costly freight house occupying expense ground?

"If the spotting of a car is shippers' service and not a part of the regular transportation service, then the question of imposing a charge therefore is properly a question for the Public Utilities Commission of Illinois to decide and not a question on which the Interstate Commerce Commission can rule. So far as trap car and similar service is

concerned we feel that this service is a legitimate extension of the terminal facilities of the carriers, open to all shipers, reciprocal among railroads, and that it is properly included in the through-line charge. We feel most decidedly that it should be maintained as at present.

"The Illinois Manufacturers' Association, after years of effort and through the cooperation of other organizations and railroads, succeeded in bringing about a fairly equitable arrangement as to the handling of cars in the industrial centers in Illinois. The results of these conferences has been that in Chicago probably the most intricate these conferences has been that in Chicago, probably the most intricate ing district receives the one Chicago rate, thereby removing all discrimination, and by this adjustment the carriers received a very substantial increase in their switching charges above any ever received before. This district is now operated under very satisfactory conditions, there being practically no complaint from any side. If this situation were disturbed, it would bring on a condition of contention and discord which it would be impossible to readjust without years of effort.

"Such readjustment as the commission has in mind should certainly not be made without a complete and thorough investigation of the entire *rate structure*. It would be infinitely better if the commission finds that the railroads are not receiving sufficient compensation to advance all rates horizontally than to introduce, without the most searching investigation and careful consideration, a new set of charges that may prove less equitable and more burdensome than the conditions they are intended to correct.

The letter was prepared by a committee consisting of Charles Piez, John E. Wilder, and P. A. Peterson.

"SECRETARY."

[From the Manufacturers' News, March 5, 1914.]

HANDING IT TO THE SHIPPERS.

Protests against imposing charges, amounting to many millions of dollars, upon the shippers of this country, for car "spotting" and other service that always has been included in the cost of transportation, were made before the Interstate Commerce Commission this week.

Unless the shippers become thoroughly aroused and make a mighty protest, it is the apparent intention of the commission to fasten these enormous charges upon them.

The talk in Washington is that the commission will permit the railroads to charge $1 for every car that is "spotted"—switched upon a siding.

This charge will apply to every industrial track in the country. It seems to be the intention to make an exception in favor of team tracks alone.

The fight in which Illinois and Chicago took the lead was a fight for every shipper in the United States. The service charge will be saddled upon every shipper, large and small, both urban and at crossroads junctions.

The shippers were represented by Colin C. H. Fyffe, general counsel for the Illinois Manufacturers' Association; Luther M. Walter, attorney for the National Industrial Traffic League; and Walter L. Fisher, attorney for the Chicago Association of Commerce.

Commissioner Harlan heard the complaints against the additional charge for car service whenever a car leaves the main line of a carrier, but apparently did not change his mind. In Illinois alone it is estimated that annual burden upon the consumers will represent $20,000,000 and throughout the entire country it will be equivalent to an advance in freight rates running from 10 to 20 per cent, although the railroads have asked but 5 per cent.

COMMISSION APPARENTLY UNMOVED.

Those who have attended the hearings before the commission, beginning last Friday, are of the opinion that the commissioners will allow the railroads to impose the charge for car spotting, trap cars, lighterage, and tunnel transportation.

It is believed the commission will proceed in accordance with the original plan of Louis D. Brandeis, its special counsel, which contemplates allowing the railroads to charge shippers for car service without entering a formal order that can be readily attacked in the courts by shippers. It is understood that railroads already are preparing tariff charges with this additional charge included and that the tariffs will go into effect April 1. These charges will be based upon the action taken by the railroad traffic and general managers at their meeting in Pittsburgh on February 10, when they proposed a rate of 7½ cents a ton for setting cars upon private tracks with a $2 a car minimum.

An idea of the enormous sum that will be wrung from the shippers by this extortion may be gathered from the fact that there are around 25,000 private car tracks east of the Mississippi River.

QUESTION OF PUBLIC POLICY.

It is believed in Washington that the Interstate Commerce Commission if it persists in the course that Mr. Brandeis has mapped out for it, it will run against congressional opposition which will view the imposition from the broad ground of public policy. There are at least 80 influential shippers—not counting hundreds of smaller shippers—in each of the 300 congressional districts. These shippers will make themselves heard to their Congressmen in a manner that will admit of no doubt of their earnestness and Congress can not afford to ignore them.

Mr. Fisher said that the conditions in that city were different from those in any other city in the country. He said that congestion would result if charges were assessed.

"The railroad systems of this country radiate from Chicago," he said, "and the congestion there is worse than in any other city. We must have the help of the commission, the railroads, and the shippers in solving the problem as how best to expedite shipments."

Clifford Thorne, State railroad commissioner of Iowa, spoke against any increase in rates. He presented protests from the shippers of Davenport and Cedar Rapids against "spotting" charges. Mr. Thorne, however, indorsed the position of Louis D. Brandeis that there should be no special services performed free and that there should be no favored shippers.

LINE HAUL CHARGE SUGGESTED.

E. L. Ewing, of Grand Rapids, suggested that a line haul charge from point to point be placed in the rates and graduated zone terminal charges for each particular terminal filed with the tariffs on rates, with the greater burden on shippers in congested districts.

Through J. C. Lincoln, of New York Merchants' Association, former president of the Industrial Traffic League, Mr. Fisher brought out clearly that the railroads profit by having gateway cars loaded on private sidings and that the ferry or trap car service has been developed as a substitute for freight houses in particular localities.

"There are two classes of trap-car service," Mr. Fisher said, in arguing the advantages of this service to the carrier as well as the shipper. "One is from the public station and the other from the private industry. We can easily conceive of the condition and we have it in Chicago, where the railroads find it is more economical to use trap cars on private sidings than to establish new team tracks or receiving stations for the purpose of getting business. The ferry or trap car service is but another feature in the development of competition for business.

ONE SERVICE OFFSETS ANOTHER.

"As between the railroads themselves, if the services performed by one road in hauling cars from one district equalize those of another for like service, that is merely the washing of one hand by the other.

"Also, as has been developed here, it is a distinct saving to the carriers to have a shipper load a gateway car on his private siding and then have the carrier call for it and haul it to the yard, where it is put into the through train. In such a case the service to the shipper is offset by the service to the road by the shipper."

A. B. Caswell, representing certain Milwaukee tanning interests, said the proposed increase in rates would cost his concerns from $7 to $8 a car without any return to them. On the other hand, he said, a fair spotting charge would result in increased efficiency in spotting, and more particularly in highly increased efficiency in the handling, packing, and hauling of cars.

W. G. Tompkins, representing the salt shippers of Ohio and Michigan, said he had concluded that a charge for special services would be ordered by the commission, and to prevent inequalities and discriminations he suggested that a board to consist of representatives of the Interstate Commerce Commission, shippers, and carriers should assess the charges at each terminal.

SERVICE WILL RETROGRADE.

If the rates of car service are established it is expected—formal order or no formal order—shippers will contest them in the courts and years of litigation will follow, during which service will retrograde.

The average cost of "spotting" in Chicago per car, according to Mr. Brandeis's statistics, is 44 cents. The cost on the way sidings between Chicago and Elkhart averaged 19 cents a car. At eight terminal points the cost on six roads varied as follows:

City.	Number of cars.	Average cost.	Minimum cost.	Maximum cost.
New York	25	$0.65	$0.31	$1.03
Buffalo	29	.88	.62	1.84
Baltimore	33	1.57	.86	3.29
Philadelphia	23	3.67	2.11	7.06
Detroit	38	.48	.21	1.46
Cincinnati	17	1.04	.56	2.55
Chicago	16	.44	.30	.76

The rural figures were taken from four roads and were as follows:

State.	Number of cars.	Average cost.	Minimum cost.	Maximum cost.
New York	6	$1.26	$0.45	$2.08
Pennsylvania	14	.67	.45	1.42
Maryland	3	1.88	.48	4.03
Illinois-Indiana	74	.19	.15	.38

LUNCH-COUNTER CAR.

Travelers will soon have an opportunity to witness an innovation in the manner of serving meals to passengers on the Illinois Central line between Chicago and Omaha. A lunch-counter car has been ordered and will probably be put into service between the two cities mentioned some time next month. The Pennsylvania road has been using these cars with great success for some time past, but they are a decided innovation in the West. The new type of car finds especial favor with commercial travelers. It will cost in the neighborhood of $20,000.

THAT BUSY MR. BRANDEIS—MANUFACTURERS DREAM OF DOING THEIR OWN CAR "SPOTTING."

If the "conspiracy" entered into by Louis D. Brandeis, the Interstate Commerce Commission, and some railroads get by without a shippers' revolution, we will see some strange motive devices in the railroad yards of our industries.

Mr. Brandeis wants to charge manufacturers for "spotting" or "kicking" cars around the yards.

Every time a railroad shoots a car a foot or two beyond the main line the manufacturer is asked to dig down and produce anywhere from 50 cents to $2.50 a car for the service. "There's millions in it," as Col. Sellers would say—but not for the industries.

Some big shippers were talking of the Brandeis stand-and-deliver project for turning into the treasuries of the railroads all the money in the country. They lounged in the capacious, easy leathern chairs in the Traffic Club, on the nineteenth floor of the Hotel La Salle. But they were not so easy as they looked.

"Every time we get a car from a railroad we'll have to move it ourselves," complained one shipper.

"You've described it," replied another. "Or else you'll have to pay for the service."

"I'll get an electric engine and move 'em myself," the shipper answered.

"We can 'spot' ours with a wire rope," was the hopeful observation of No. 3.

"I guess an old-fashioned crowbar would do if we didn't have to move 'em too far," said another.

"Gasoline engines might work," remarked a nervous manufacturer, biting off the end of a large cigar.

"In England," described a tile maker, who had traveled, "they use horses or mules."

"Yes; but this is not England," came a chorus of several voices.

ILLINOIS TERMINAL RAILROAD—ITS STATUS MAY AFFECT FREIGHT RATES IN ALTON DISTRICT.

Unless the Illinois Terminal Railroad, which was started as a private switch road for the Illinois Glass Co. some years ago, can prove to the satisfaction of the Interstate Commerce Commission that it is no longer an "industrial road," increased freight rates which will

affect factories in the Alton industrial district probably will go into effect April 1.

The commission recently handed down a ruling doing away with a division of rates by railroads with short lines, called "industrial roads," by which their charges must be added to the present freight rates. The manager of one Alton factory estimates the ruling will mean an additional cost of $2,000 a month in freight rates to his factory if it applies, as is threatened.

The Terminal does switching for several factories now, and operates a passenger train, and is vigorously opposing being thrown into the class of industrial lines. Examiner Bell, of the commission, is in Alton, gathering facts in the case.

CHICAGO MUST BE EASY.

Volume of commerce considered, Chicago is the most discriminated against city in the United States. I refer especially to rates which Chicago shippers must pay for goods sent westward by rail. Under the present arrangement of rates all places east of the Mississippi River must pay the same rates to Denver, San Francisco, and other western cities. Chicago has to pay the same rate to San Francisco that New York pays—and we have an interstate-commerce law that provides against unjust discriminations. But that law provides merely that the charge for the shorter distance shall not be greater than the charge for the longer distance. Thus, the commission is not specifically required to prohibit the discrimination in favor of the East and against Chicago, but if the railroads were to make rates from Chicago to trans-Mississippi points based somewhat on mileage the commission could not prevent them. The existing discrimination against Chicago—for that is really what it should be called—arose when C. P. Huntington completed the Southern Pacific to Gulf of Mexico ports. Thereupon he established a line of steamers from New York to his Gulf railroad terminals, and the roads to the northward of the Southern Pacific were compelled to adjust their transcontinental rates according to the Southern Pacific rates. The proposition to pass American coastwise trading vessels through the Panama Canal free of toll charges is another attempted discrimination against Chicago. Chicago shippers, forever angry and hot faced about small railroad shipping charges and restrictions, are deaf, dumb, and blind to the great injury that is being done to them by the present Pacific coast rates.

—

[From the Manufacturers' News, March 12, 1914.]

WILL CHARGE FOR CAR SPOTTING.

Railroads in the territory east of the Mississippi and north of the Ohio River—official classification territory—will impose a charge for car spotting, beginning April 1.

This charge will apply only, at first, to industrial or plant railroads for work "beyond a reasonably convenient point of interchange."

The tariffs, now being prepared, will establish a charge for spotting of 5½ cents per ton, with a minimum of $2 a car.

The proposed service charge will amount, it is estimated, to many millions of dollars annually. It will be equivalent to an advance in freight rates, according to many traffic experts, of not less than 20 per cent. This in spite of the fact that the railroads asked but 5 per cent advance in freight rates—an amount that the Illinois Manufacturers' Association and other industrial organizations were willing to consent to in the interest of the general prosperity of the country and avert business depression.

The purpose of the railroads to charge for car spotting beginning next month is set forth unmistakably in an official notice sent out on Monday by the Central Freight Association through its chairman, L. Morris. This notice is as follows:

CENTRAL FREIGHT ASSOCIATION,
Chicago, March 9, 1914.

Subject: Proposed charge for "spotting cars at points on industrial and plant railroads."

IMPORTANT.

To the General Freight Agents:

GENTLEMEN: Following is received from Mr. George F. Randolph, chairman executive committee:

"It has been decided to establish a charge for the work 'beyond a reasonably convenient point of interchange' on industrial railways, commonly known as 'spotting,' of 5½ cents per net ton, with a minimum of $2 per car, and in view of the cancellation of the allowances and service to such industrial railways, effective April 1, it is imperative that such tariffs become effective on that date. It will therefore be necessary to secure permission from the Interstate Commerce Commission to publish such tariffs on less than statutory notice.

"Chairman McCain, of the Trunk Line Association, has requested the carriers involved to file with him a list of industrial railroads, but it will not be possible to get these lists in time for use in applying for the permission above mentioned.

"After conference with Commissioner Harlan, and with the tariff bureau of the Interstate Commerce Commission, this morning, it has been decided that the roads involved should at once make application in the form provided on page 91 of tariff circular No. 18–A for permission to publish these tariffs on 10 days' notice, the applications all to be in the hands of the commission prior to March 14.

"It is expected that each road will cover this matter by one tariff, in which, when issued, will be specified by naming the tracks on which it will be effective.

"As these points can not be given in the space provided in the blank form, for points of origin and destination, the applicant can insert: 'For spotting cars on industrial plant railways at points on the _____ railroad, where it has been customary for the railroads to perform such service.'

"Will you please, without delay, promulgate this notice to all interested, and ask that immediate attention be given it, as haste is important?"

We take it for granted that you will act at once in conformity with the foregoing, so that it will be possible to file your tariffs to take effect April 1, as it is apparently absolutely necessary that this be done.

Yours, very truly, L. MORRIS, *Chairman.*

Before this notice had time to reach wide circulation among shippers, the impression became almost general in the West and in New York that Commissioner Harlan had signaled the railroads to go ahead with the universal car spotting charge—for every car on every kind of track—regardless of future hearings before the Interstate Commerce Commission. The Illinois Manufacturers' Association, to clear up this point, wired Commissioner James S. Harlan at Washington, as follows:

"Reported here and in New York commission has tentatively approved spotting tariffs of 5½ cents per ton with a minimum charge of $2 a car, effective April 1, notwithstanding further hearings are to be held later. Information to this effect has been disseminated by the Trunk Line Association. Please let us know if this is correct."

In reply came this message from Secretary G. B. McGinty:

"Your wire date to Commissioner Harlan. The matter of spotting charge on the ordinary private siding has been set down for further hearing March 12, and for argument March 30 and 31. It may be that the charge which you cite has reference to the service on plant railways beyond the point of interchange, the free performance of which was condemned by the commission in the Industrial Railways case."

How much further the railroads and the commission will go in the matter of charging shippers for car service is conjectural. A good many shippers apprehend they will go the limit, and that the burden will be greater than can be borne.

At the same time that the notice in regard to car spotting charges was sent out by the Central Freight Association a notice was sent out to general freight agents asking for a list of all plant railways. This notice follows:

CHICAGO, *March 9, 1914.*

Subject: Names of plant railways.

IMPORTANT.

To the General Freight Agents:

GENTLEMEN: Following is received from Mr. George F. Randolph, chairman executive committee:

"We are desirous of obtaining a list of all the plant railways served by the various railroads, parties to the application before the Interstate Commerce Commission.

"Heretofore in endeavoring to make lists of this nature difficulty has arisen on account of the differences of opinion as to what constituted a plant railway.

"It has been suggested that in such lists should be included in the class of plant railways covered by the Terminal Railway decision all those which are essential to the manufacturing process rather than merely incidental to shipments in and shipments out.

"A commissioner thinks that if we render a spotting service over rails which are made use of for an intramill service, which is a part of the operation of a plant, a charge should be made therefor.

"With this definition in mind, I think that most roads can make up a list such as is required, and which will soon be needed.

"Will you please take the necessary steps to have this information compiled by each one of the roads and sent to your office for compilation into a general statement as rapidly as possible?"

It is necessary that this matter receive your immediate attention, and you are respectfully asked to promptly send the desired information to Mr. C. C. McCain, chairman Trunk Line Association, New York City, and at the same time forward a duplicate to this office.

The information is to be furnished Chairman McCain direct, because it will be needed at the earliest possible moment.

Yours, very truly,

L. MORRIS, *Chairman.*

An idea of the type of railroads that are considered industrial may be gathered from the supplement to L. A. Lowry's tariff No. 20–E, just issued and applying to the Chicago district. This eliminates the following industrial railroads from the list of participating carriers: Calumet, Hammond & Southwestern; Chicago and Calumet River; Chicago & Illinois Western; Chicago Short Line; Chicago, West Pullman & Southern; Illinois Northern; Manufacturers' Junction; Pullman Railroad.

This means that the railroads named will be treated as sidetracks and charged a demurrage for keeping cars over 48 hours.

PRAISE TOLLS STAND—DIRECTORS OF ILLINOIS MANUFACTURERS' ASSOCIATION WIRE ASSISTANCE.

The directors of the Illinois Manufacturers' Association last week sent telegrams to President Wilson approving the administration's position on the Panama canal tolls issue and promising assistance in the effort to have the toll exemption provision repealed.

The directors urged support for the 5 per cent railroad freight advance and asked for further Interstate Commerce Commission hearings in the Middle West, so that shippers might present their arguments against the proposed charge for "spotting" cars.

The telegraph messages sent to President Wilson were as follows:

CHICAGO, *March 6, 1914.*

To the PRESIDENT, *Washington, D. C.:*

The directors of the Illinois Manufacturers' Association, at their regular monthly meeting to-day, asked me to wire you as follows: "We are opposed to a charge for spotting cars and other service which is already covered by the tariffs of the carriers and respectfully urge you to use your influence with the Interstate Commerce Commission for further hearings and that these hearings be held at some convenient point in the Middle West so that the small shippers as well as the large shippers may have an opportunity to be heard. We also respectfully urge you to use your influence with the Interstate Commerce Commission for the proposed 5 per cent advance, except in such instances where such proposed advance would seem unfair, and that the tariffs in these cases be suspended for future hearings. We believe the advance will generally improve conditions and think prompt action is desirable."

H. G. HERGET, *President.*

CHICAGO, *March 6, 1914.*

To the PRESIDENT: The directors of the Illinois Manufacturers' Association, at their regular monthly meeting to-day asked me to wire you as follows: "The Illinois Manufacturers' Association most heartily commends your position in the matter of Panama Canal tolls and assures you its influence in securing a repeal of the toll exemption provision of the Panama Canal act."

H. G. HERGET, *President.*

CONSUMER PAYS THE FREIGHT.

Manufacturers' News: Can you tell me why the Interstate Commerce Commission is trying to increase the cost of living by enormously adding to the cost of transportation, when the prices charged for most of the necessities of life are greater than they have been at any time since the Civil War? (W. D. G.)

There is considerable food for reflection in the foregoing inquiry.

It is undoubtedly true that the consumer ultimately will have to pay for the advance in the cost of transportation now contemplated by Commissioner Harlan.

Some high traffic authorities assert this increase will amount to 20 per cent. The railroads will be satisfied with a horizontal advance in freight rates amounting to 5 per cent.

This additional charge to be saddled upon the manufacturer, the grain dealer, the food merchant, the business man, big or little, as now proposed, will embrace every service performed by the railroad companies in connection with every car after it leaves the main track. It means that car spotting, which now is considered a legitimate part of transportation service—as much as the delivery of groceries is a part of the service to a household consumer—must be paid for by the industries and commercial interests.

But who will pay the bill in the end, people are asking. The consumer will, as a matter of course. It will be passed along to him as a part of the expense of production and delivery.

PASSED ALONG TO CONSUMER.

J. C. Maddison, traffic manager for the great mail-order house of Montgomery Ward & Co., made this point plain enough in his testimony last week before Commissioner Harlan. Louis D. Brandeis, attorney for the commission, asked Mr. Maddison how much more the increase in freight rates would cost his firm.

"Not one nickel," replied the traffic expert. "The whole thing would be passed along to the consumer."

It is certain this circumstance will be taken into consideration by the commission as a whole when it assembles to hear arguments on the car-spotting question on Monday and Tuesday, March 30 and 31.

The commission, it is assumed, is in harmony with the general proposition to which the national administration is committed, that the cost of living in this country should be reduced as much as possible. When every other department of the administration is seeking to whittle down the cost of living it does not seem reasonable that the Interstate Commerce Commission will saddle so great an additional burden upon the ultimate consumer.

It is by no means certain that the other six members of the commission will take the same view of the car service situation that is held by Commissioner Harlan and Mr. Brandeis.

LOS ANGELES SWITCHING CASE.

It is pointed out that the commission already has gone on record in the Los Angeles switching case, when it decided last October against a charge of $2.50 for car spotting. The Southern Pacific and Santa Fe Railroads undertook to make shippers pay this charge for switching in the yards of Los Angeles, San Francisco, and San Diego. The commission held that it had no right to impose an extra charge upon the owners of industrial spurs when it did not charge for similar service on switch tracks.

Luther M. Walter, attorney for the National Industrial Traffic League, presented figures before Commissioner Harlan in support of the contention that industrial tracks or terminals were of immense value to the railroads and that this value would more than offset the value of the service performed by the carriers in delivering cars from the main tracks to the sidetracks of the industries.

VALUE OF SWITCH TRACKS.

Mr. Walter showed that the Baltimore & Ohio Railroad had 10 team tracks in the inner zone of the Chicago terminal, and that the value of one of these team tracks was so high that the space occupied by a single car was worth $25,885. For each 10 cars the value of the space occupied amounted to $66,700, and that was equivalent to an interest charge per car of $3.25.

"This is an indication of what the railroads save by using the industrial tracks," Mr. Walter told the commission.

If the commission decides that the railroads are entitled to charge for car spotting and other transportation service, it is practically certain that the shippers will present a counterclaim for the use of their tracks.

It was brought out before Commissioner Harlan last week that the figures submitted by the investigators employed by Mr. Brandeis to secure data as to the expense of car spotting could not be relied upon implicitly. One of the instances cited by Mr. Brandeis as a "horrible example" was of a car switched to the plant of Ryerson & Son, of Chicago. The investigator had figured that the expense of spotting this car amounts to from 40 to 60 per cent of what the carrier received for the freight. It was shown by Ryerson & Son, however, that the car weighed more than the investigator stated, and that the freight rate was so much higher that this particular instance was cast into the discard.

WILL TAKE MATTER TO CONGRESS.

As stated by Manufacturers' News last week, the shippers of the country are not going to quietly acquiesce to a service charge that will boost the cost of transportation 20 per cent, even if the consumer ultimately has to pay the bills. It is a question of public policy, into which the cost of production and the cost of living enter so intimately that the whole question will be be brought before Members of the Senate and the House of Representatives, both in their individual and collective capacity.

Official notice of the future rate question hearings sent out by the commission is as follows:

"First. A further hearing on proposed charges for spotting and ferry car service will be held at Washington on Thursday, March 12, at 10 a. m., at which representatives of Philadelphia, New York, and Boston will be given special opportunity to be heard.

"Second. The hearings heretofore assigned for March 16 and 17 for oral arguments concerning spotting service have been canceled in order to afford all parties in interest further opportunity to present written statements or briefs. Such statements and briefs will be accepted at any time prior to March 24. The oral arguments will be heard by the full commission on Monday and Tuesday, March 30 and 31. These arguments will be confined to the so-called spotting service.

"Third. Further hearings to be announced later will be held concerning ferry car service, after which the date for oral argument on that question will be fixed.

"Fourth. Separate hearings will also be held later relating to the Chicago Tunnel service and to the lighterage services at New York and Chicago, the dates for which shall be fixed soon."

FLOUR TRADE WORRIED.

The Interstate Commerce Commission has thrown a bombshell into the New York flour trade in a proposition to require the railroads to reduce the free storage time of flour after arrival from 10 days to 4 days. The flour trade is a unit in declaring that it would work incalculable hardship if the reduction were ordered.

A hearing will be held on the subject in New York at an early date.

DISCRIMINATION THREATENED.

The car-spotting case now pending before the Interstate Commerce Commission presents some curious features, both in its origin and in its apparent tendency. As is well known, the railroads demanded a 5 per cent increase in their rates. In this demand there was a general acquiescence by the shippers of the country, including the Illinois Manufacturers' Association. The necessity for the increase seemed to be recognized on all sides. Then the Interstate Commerce Commission, acting through Commissioner Harlan, took a hand in the proceedings. The theory was evolved that in many directions railroads were giving gratuitous service to the shippers. This came up principally in the trap-car and ferry service and in the matter of spotting.

CAR SPOTTING ABSORBED IN RATE.

In the last-named case it might be easy to drop into error in supposing that the judgment of the commission allowing the railroads to exact pay for this service is the abolition of a discrimination. It is really very much the other way. The commission is more likely to create than to end a discrimination. As things stand now the car-spotting service is absorbed in the rate. It is granted to shippers who have built their own sidings and to those who use sidings built or paid for by the railroad company. It is quite true that another shipper may have built his industry away from any sidetrack or any railroad connection. He gets no siding service from the railroad of any kind. Such an industry has deliberately declined to use facilities which were as open to it as to any competitor. For this attitude there may have been excellent reasons. For the choice of location the character of the shipments might render the use of teams preferable to the use of a siding. Economical reasons touching the value of the property might have weight and bearing. All these things are individual matters of such complexity that no general rule could ever hope to adjust them fairly. A far better adjustment is to trust to the equilibrium which must be attained naturally without artificial action as the resultant of all the combined forces. The moment, however, a charge is made for the car-spotting privilege discriminations of a stupid, unreasoning sort will be inevitable.

NO CAUSE FOR COMPLAINT.

It is a pretty fair guess that where no complaint has been made no cause for complaint exists. The industries who have used team tracks in their shipping and receiving activities would have had their say long ago if they had been pinched by any unreasonable discrimination. If, however, an excessive tax such as $1 a car is exacted for spotting service, there will be not only a gross discrimination between the industry on the siding and the industry using team tracks, but there will be no end of unfairness as between industries using railroad connections. It is practically impossible for a particular rate to be made for each industry based on the cost of the service. Such a process would be unwieldy to the last degree; but if that is not done, and the same charge for the service is made to all without regard to cost, there will be a discrimination incomparably greater by the order of the commission than ever existed before the subject was taken up.

—

CALLS COMMISSION A MENACE.

MANUFACTURER SAYS SHIPPERS ARE NO LONGER PROTECTED BY INTERSTATE COMMERCE BOARD.

"Any merchant or manufacturer who thinks he is going to bring his rate troubles before the Interstate Commerce Commission and have them handled in a straightforward, prompt manner, in accordance with customary business methods, has another guess coming."

This bold criticism of the important official board that is supposed to mete out justice to the shippers of this country is contained in a letter to Manufacturers' News from a leading manufacturer of Chicago.

The letter was a comment upon the views expressed in relation to the "Socializing of the Interstate Commerce Commission" in an article in Manufacturers' News on February 19. Louis D. Brandeis and his revolutionary, socialistic ideas were criticized in that article. The commission was referred to as being influenced by "a combination of Socialism, paternalism, and despotism."

In a letter to the editor of Manufacturers' News the manufacturer, whose name is withheld for obvious reasons, says:

"I have been interested in reading the opinion you have formed of the efficiency of the Interstate Commerce Commission as at present constituted.

"I had wondered if anyone besides myself could have received the unfavorable impression which the recent handling of company's affairs by the commission has made upon me. I note that your views and mine practically coincide."

The manufacturer, after the statement that appears at the beginning of this article, then continues:

"This statement seems surprising in view of the high personal character and the engaging and gentlemanly bearing toward complaints of all the members of the commission, and I will leave it to some one besides myself to conjecture as to why this situation should be.

PROTECTS THE RAILROADS.

"It is the impression of most people that the commission was created in the interest of the shippers, receivers, and people generally who use or are directly or indirectly served by the transportation companies, to protect them against any form of overcharging or other injustices on the part of the transportation companies. This impression is absolutely wrong (if the present attitude of the commission means anything,) for the commission is apparently operating only to protect the railroads against themselves and to protect the railroads against the encroachments of the public and to so tangle and mix up existing commercial practices which have been the outgrowth of decades of honest and practical commercial endeavor, that the commission has become a menace to commercial free movement instead of a benefit.

"Possibly it is too much 'science' and too little common sense. At least, the muddle which was created in the milling-in-transit rate cases (in which the commission finally had to throw up its hands and acknowledge that it was way off the track and could get no further along the lines it had been following and dictating) might help toward establishing such an opinion.

"I would not be surprised, in view of my own experiences, to learn that the members of the commission and its executive subordinates get to the nearest street car by some method of triangulation, or of great circle sailing, instead of asking the office boy.

"In the interest of everybody whom the commission was formed to protect, I hope that you will continue the public agitation which you have started, for the fault lies within the commission and not with the law."

VALUE OF SWITCH TRACKS.

MANUFACTURERS PAY BIG PRICES FOR SITES NEAR RAILROAD TRACKS.

[By P. H. Combes, General Traffic Manager Prestolite Co., Indianapolis, Ind., in The Traffic World.]

There is one angle to this controversy which I have not as yet seen dwelt upon by anyone who has expressed his views, but which seems to me to be an important factor. Not in a single case have we been able to buy the ground necessary for our purposes in any one of these cities where we are located directly on railway tracks, where we have not paid a price of from 100 to 1,000 per cent more for the land because of its location where switch-track facilities could be had. This property was increased in value to the point which we were forced to pay by virtue of the existing switching arrangements which are in force by the carriers throughout the country, and the investment necessary to buy these large pieces of property represents a large amount of money, and we doubt very much the wisdom of the commission in upsetting the present switching arrangements enjoyed by industries located on switch tracks when any such action as is contemplated will destroy a very large percentage of the legitimate investment here represented.

Being personally in control of all transportation expenses of this company throughout its 35 branches, 22 auxiliary plants, and our main manufacturing plant in this city, including drayage charges, transfer charges, and, in fact, every charge arising out of the transportation of our commodity, and feeling that I am able to analyze the situation in view of my wide experience over the wide territory covered by us, I can see no sense in any argument against giving the carriers the 5 per cent increase in freight rates which they have demanded; but neither can I see any sense to any argument which will destroy tens of millions of dollars in property values of the corporations located all over the United States who have gone to tremendous expense in providing facilities with which to do business.

RAILROADS LACK SIDE TRACKS.

In the majority of cities in this country the railways have nothing like adequate freight facilities. The L. C. L freight facilities at many points are so congested that it is almost impossible to transact business through them. In many of the cities team-track facilities are just as bad, and I can say to you that I believe thoroughly that any action which would make away with trap and ferry car service and the so-called free industry switching service in the United States would not only precipitate a freight blockade, but would make it almost impossible for the smaller shipper to do business, as it is my experience that where we have not switch-track facilities, and where we have to buy drayage over the public streets, in whatever city this drayage is bought, the price which we must pay for it is governed almost entirely by the terminal railways at that point, it being almost an absolute rule that where terminal facilities are congested, the charges of the drayage companies are from two to three times what they are otherwise; for the drayage companies realize very well that the teams standing around freight house doors are losing time that costs them money. I think there is little doubt but that any action on the part of the commission that would tend to destroy the advantages of the use of private switch tracks would immediately precipitate a condition of congestion in many of the cities of this country, the effects of which will be considerably more far-reaching in the high cost of living and the high cost of commodities than even a 10 per cent increase in freight rates could be possibly held accountable for.

[From the Manufacturers' News, March 12, 1914.]

CONTRACTING BUSINESS—FORMER TELEGRAPH AND TELEPHONE PRESIDENT DEPLORES LEGISLATION.

Frank P. Fish, of Boston, former president of the American Telephone & Telegraph Co., appeared before the House Judiciary Committee last week and said that it has failed to see the present industrial situation in its true perspective.

The pending bills, said the witness, will open the way to a revival of cutthroat competition. He advised the committee to do nothing at the present time and asserted that business is now suffering at a 40 per cent contraction because of the club the pending legislation holds over it. Mr. Fish said that no complete monopoly exists in this country and that business attitudes have changed. He maintained that the only way business can be conducted sanely is by allowing proper trade agreements.

"I see indications that small business is to be dealt with in the same hostile way you are dealing with big business," continued Mr. Fish. "I believe the Sherman law is sufficient, although I am not sure it has ever done any good. It certainly raised the price of oil and tobacco for all time."

The witness said that business is so complicated that no general legislation can deal effectively with it. Incidentally, he asserted that the Government is financing the mail-order houses. He declared in favor of an investigation to determine what effect the parcel post, second-class mail rates, and rural free delivery are having on the gradual wiping out of the retailer, jobber, and small country merchant.

SAVING OPERATING EXPENSES.

The Chicago, Milwaukee & St. Paul Railroad Co. expects to save $2,500,000 in operating expenses this year by adding 2 tons to the load of every one of the freight cars. At the present time only a small portion of the earning capacity of a car is available, owing to inefficient loading and other causes. A loading record shows that for the year the average tonnage carried by the cars was about 60 per cent.

LAKE MARINERS HOPEFUL—LA FOLLETTE SEAMEN'S BILL PROBABLY WILL BE MODIFIED.

Owners of vessels on the Great Lakes, whose financial existence has been imperiled by Senator La Follette's seamen's bill, are hopeful that the measure will be modified materially before it is submitted to a vote in the House of Representatives.

In its present form, as passed by the Senate last October, the bill specifies that lake passenger vessels must carry sufficient lifeboats for all the passengers. This would be utterly impossible, it has been pointed out, as there would not be enough space on the largest vessels to accommodate that number of lifeboats. A boat like the Christopher Columbus that makes daily trips to Milwaukee and never out of the sight of land would be compelled to carry more than 100 lifeboats.

The bill now is being considered by House Committee on Merchant Marine and Fisheries. It is believed that the requirement of lifeboats for all passengers will be modified so that life rafts will be provided in sufficient number instead of lifeboats. This was the decision of the safety at sea congress recently held in London, and it is not considered likely that the congressional committee will be so unjust as to impose impossible burdens upon the lake steamers that have not been insisted upon in the case of seagoing vessels, where the theoretical danger is so much greater.

Congressman Alexander, of Missouri, chairman of the committee that is considering the bill, was one of the delegates appointed by President Wilson to the safety at sea congress. Lake vessel owners have faith that he will be reasonable, in view of his experience upon the larger commission.

The requirement that each lifeboat is to be manned by two able-bodied seamen probably will stand, but the qualifications of the sailors will be determined by examination and test rather than by the term of service.

President Albert W. Goodrich, of the Goodrich Transit Co., has been in Washington this week attending the final sessions of the committee at which some of the labor representatives have been heard.

WAS IT A MISTAKE?

It is a serious question whether, as a mere matter of policy, the commission should ever have undertaken what is known as I. and S. No. 333, that is, the query as to whether the revenues of the carriers are sufficient, and if not, how may they be increased. Commissioner Clements and the late Commissioner Marble, at the time the commission decided to initiate that hearing, pointed out that, in their view, it is no concern of the commission, as an initial proposition, whether the revenues of the carriers are or are not sufficient. That is for the consideration of the carriers. By their application for permission to increase rates 5 per cent they decided that the revenues were not sufficient. The only duty of the commission was then to hold hearings to determine whether the revenues might be increased by an advance in rates, without making those rates violative of the first section decreeing that rates shall be just and reasonable. The further this inquiry into the cost of spotting cars and other of the so-called free service goes, the stronger becomes the impression that the commission made a mistake in thus proposing to tear up the whole system of stating rates at a time when the carriers were asking for an early decision on the main proposition. The collateral issues are interesting, but they are not helping either the railroads or the shippers. The theory that there is a third party, small shippers who are being discriminated against, is about as untenable as anything that has been presented to the public for its consideration in recent years.—The Traffic World.

[From the Manufacturers' News, March 19, 1914.]

SPEAKS FOR THE RAILROADS—PRESIDENT WILLARD SAYS CARRIERS ARE NOT BACK OF PROPOSED CAR SERVICE CHARGE.

President Daniel Willard, of the Baltimore & Ohio, who is at the Congress Hotel, last Tuesday gave the Daily Railway Age-Gazette an interview regarding the eastern rate advance case, in which he urged especially the need for an early decision by the commission. Mr. Willard is chairman of the committee of presidents of eastern railroads that is handling the case of the eastern lines for a 5 per cent increase in their freight rates.

"The railways have no criticism to make regarding the course which the commission has thus far adopted," Mr. Willard said, referring in particular to the commission's course in considering together the questions of advances of rates and of extra charges for the switching of cars, etc. "The situation is simply this: We contend that we need an increase of net earnings, and we have suggested a general advance in freight rates as the best means of securing it. We have, therefore, filed tariffs that would increase our freight rates an average of 4 or 5 per cent. The commission and its attorney, Mr. Louis D. Brandeis, evidently have thought that it might be feasible and desirable for us to get the additional revenue by ceasing to pay certain allowances for switching cars and other services for which we now pay shippers, and to begin to charge for certain services which we now render to them free. As the commission thought thus it was its right, and perhaps its duty, to investigate the merits of this plan. But from the time that this plan of the commission's was suggested it has been met by the shipping public with vigorous and even bitter opposition. The shippers contend that the practices which the commission considers causing to be abolished have been in existence for many years; that entirely to change them would be very harmful to many concerns; and that, therefore, no complete change in them should be made without a comprehensive and thorough investigation.

RAILWAYS MARKING TIME.

"The railways have taken no active part either for or against the extensive changes in practices which have been suggested. If the commission shall become convinced that their adoption will be the best means of increasing the carriers' revenue the carriers will undoubtedly accept its view. From what has developed already, however, it would appear not only that the extensive changes in transportation practices which Mr. Brandeis appears to favor would meet with the most widespread and determined opposition from the shipping public, but also that there is merit in the shippers' contention that such action should be taken only after a thorough investigation. But the eastern railways should not be required to wait for an increase in their revenues until such an investigation can be made and concluded. They believe that they have introduced testimony which should convince and has convinced the commission that their financial necessities are real, immediate, and pressing. This 'being the case,' any action that may be taken to relieve those necessities should, in the interest of all, be taken at the earliest practicable date; and the longer it is deferred the more serious the consequences to the railways in particular, and to the business of the country in general, must be.

INCREASED RATE SHOULD BE GRANTED.

"It would seem, therefore, that the wise and fair course for the commission to take—the one which would be best for the business interests of the country as well as the railways—would be to grant the increases in rates which are provided for in the tariffs which the eastern roads already have on file. After this had been done the commission could go on with its investigation of transportation practices, and give the shipping interests the full hearing which they demand. If the commission's final decision regarding these practices should result in further increases in the carriers' net revenue and the commission should feel that these increases, together with those due to the advances in rates, were too great, it could, of course, make such reduction in rates as it might consider justifiable."

—

BACKED ILLINOIS GLASS CO.

"Car-spotting" charges contemplated by the Interstate Commerce Commission were discussed at a meeting of the traffic committee of the Illinois Manufacturers' Association last Friday. Traffic managers from a number of the largest industries in the State were present. It was

decided to approve officially the action brought by the Illinois Glass Co. in the Federal court in St. Louis to restrain the Wabash Railroad from filing tariffs imposing upon the shippers charges for service that always has been included in the cost of transportation.

—

[From the Manufacturers' News, March 26, 1914.]

IS MR. HARLAN THE COMMISSION?

Shippers in Illinois have appealed to the public utilities commission of Illinois for protection from the Interstate Commerce Commission, which always has been considered an impartial body. It developed at the hearing before the commission Monday that those railroads interested in the Lowrey tariff had had a private conference with Interstate Commerce Commissioner Harlan and that he had told them, according to the story, to file tariffs eliminating certain terminal railroads from participating in the rates in official classification territory. This was done, notwithstanding the fact that the rates under which these railroads are operating are fixed by the Interstate Commerce Commission.

It is our suggestion that Mr. Harlan get in harmony with the rest of the members of the commission, or to put it the other way: It would be a good thing if the majority of the members of the Interstate Commerce Commission would line up Mr. Harlan. He seems to be under the impression that he is acting for the entire commission.

The companies owning plants on the Illinois Northern Railroad filed a petition with the commission, asking protection from the injustice of eliminating the road upon which they were located from participating in the tariff. The Illinois Northern Railroad is 5 miles or so long and it collects the products of a hundred or two industries and turns them over to the other railroads. Mr. Harlan, according to the statements made before the utilities commission Monday, would abrubtly terminate the existing arrangement and force an enormous tax on the industries being served in this way. When the case was called, practically all the other industrial roads affected, as well as every association and many individual plants, intervened. At another, the meeting Wednesday, the commission suspended the Lowrey tariff.

The commission has also been asked to protect the shippers of Illinois against the cancellation of rule 10 of the official classification. This rule permits mixing of various commodities from one consignor to one consignee, taking the highest class of all the articles in the car. This rule has been in effect some 20 years. Just what the object is in canceling it at this time no one seems to know, unless it is that the classification committee is trying to see how much trouble it can make and how much annoyance it can cause the shippers.

[From the Manufacturers' News, March 26, 1914.]

CRITICIZES THE CAR SERVICE CHARGES—COLIN C. H. FYFFE SPEAKS BEFORE ROCKFORD MANUFACTURERS AND SHIPPERS AT THEIR ANNUAL DINNER—NEW OFFICERS ELECTED.

Rockford's interest in industrial conditions was indicated by an attendance of over 200 persons at the annual dinner of the Rockford Manufacturers and Shippers' Association at the Hotel Nelson last Saturday night.

Newly elected officers were as follows:

President, P. A. Peterson.
Vice president, C. S. Brantingham.
Treasurer, T. D. Reber.
Secretary, C. S. Bather.

Executive committee, A. S. Ruhl, G. C. Purdy, T. F. Hopkins, W. A. Brolin, George D. Roper, Charles Andrews, jr., A. T. Barnes, and H. Severson.

Colin C. H. Fyffe, general counsel for the Illinois Manufacturers' Association and Henry S. Hanchen, cashier of the State Bank, of Chicago, were the speakers.

COLIN C. H. FYFFE'S ADDRESS.

Mr. Fyffe struck a popular subject when he criticized Louis D. Brandeis for his present attitude on the railroad-rate question.

"Some time ago," said he, "Mr. Louis Brandeis was appointed special counsel for the commission to conduct some investigations on the railroad-rate questions, the railroads having demanded a 5 per cent increase. For once the majority of the shippers were with the railroads. They, too, asked that the railroad rates be raised. The association with which I am connected expressed itself strongly to the commission in favor of the raise. The belief was that the increase in rates would prove a great stimulus to business at large, that it would yank us out of the slough of despond in which we have been floundering the last two or three years.

COMMISSION ROILED THE WATERS.

"That was back in January and things at once responded. The market boomed. Even some bankers were known to smile. Then at this happy moment the Interstate Commerce Commission put its fingers in the puddle and roiled the waters. It was discovered that the railroads had been giving the shippers various services gratuitously for past years. Everybody had supposed that these were part of the transportation and ought to be absorbed in that; but the commission seemed to see a chance of taking off their own shoulders the responsibility of allowing the raise in rates. The way now suggested by Mr. Brandeis is to make the railroads charge the shippers for these services, in particular for car spotting. In other words, he advises the commission to duck and pass the buck. The thing means in the first place millions upon millions out of the pockets of the shippers every year. In the second place, it is a disruption of a state of relations between shipper and railroad with which nobody found any fault. Every shipper will be affected. The majority will have to undergo expensive alterations, if the car-spotting charge goes through. That the commission will ultimately allow itself to administer a quack remedy of this sort, I can hardly believe.

CONDITIONS IN EUROPE.

"All these things, including the administration of other commercial legislation of the last 10 or 15 years, make one see the enormous difference between the business man's situation here and abroad. I don't believe that the German or the English or the French merchants and manufacturers are any more honest or more law-abiding than ours are, but when a French or English or German business man gets to his breakfast table and looks at his paper, he can say to himself: 'Let me see, what has the good Government done to help along business for me since yesterday,' and he finds that his paternal Government has in a most paternal way aided him to beat his neighbors. When the American looks at his morning paper, he says to himself: 'I wonder what's the last crack the Government has taken at us.'

MANUFACTURERS' GOOD RECORD.

"I believe the manufacturers of the State can claim credit for the best part of the progressive laws in regard to employment which have been passed since 1907. All along the line a distinct advance has been made. The relations of the employer and employee have become much closer. Their interests have been brought into line instead of being made to separate. In some cases the action of the manufacturers as represented by their various committees and officials has been merely a watchful waiting, without any serious attempt at intervention. But in the most important cases the manufacturers of this State have been forceful in directing beneficial legislation, no matter how new or radical it might seem. The great instance of that is the workmen's compensation act. The chairman of the State commission appointed by Gov. Deneen was Mr. Piez, president of the Link Belt Co., and for two years president of the Illinois Manufacturers' Association. The result of their labors was a fair and rational piece of modern legislation, which bids fair to ameliorate wonderfully the conditions of labor; to remove friction between the workman and his employer; and last, but not least, to extinguish, extirpate, and abolish to a great extent that member of the legal profession known as the ambulance

"SAFETY FIRST" MOVEMENT.

"The greatest work, however, that you and the manufacturers of Illinois are doing to-day is what we know as 'safety first.' In that there is a really great awakening. There is in this a taking over of a burden of responsibilities which the law even does not put upon our shoulders. The effort in the safety first campaign is not merely to comply with the law in matters of protection, but to go beyond the law, to get as near absolute safety as human contrivances will permit. In this the saving to the workman, but cutting out injury and its inevitable consequences of poverty and misery, is incalculable. If the motive of the manufacturer in the safety first agitation is selfishness, then it is certainly the most enlightened selfishness that you can find.

A large number of railroad freight officials were present. Among them Ben Harris, Freight Traffic Manager Waffles, and Rockford Agent H. M. Page, of the Chicago, Milwaukee & Gary; Traveling Freight Agent Davies and Division Freight Agent Turner, of the Erie; A. S. Hinman, eastbound freight agent of the Delaware; General Agent W. C. Staley and Traveling Freight Agent Lanigan, of the Missouri Pacific and the Iron Mountain; Traveling Agent Craig and Commercial Agent E. H. George of the Wabash; J. S. Brown, general freight agent of the Illinois Central.

RAIL-RATE HEARINGS—APRIL 20–22 SET FOR TAKING TESTIMONY BY COMMERCE COMMISSION.

An official announcement issued Tuesday by the Interstate Commerce Commission, indicating the likelihood of the taking of additional testimony in the eastern advance-rate case as late as April 22, was accepted as making it quite certain that a decision of the case would not be expected before some time in May at the earliest, and probably not until a short time before the commission adjourns for the summer, late in June.

The railroads have requested the commission to afford them opportunity to present additional testimony as to their need of increased revenues and also to offer evidence in rebuttal of the testimony introduced by those opposed to an advance in rates. The commission announced that it would begin to take the additional testimony on March 30 and 31, and that, if necessary, the hearing would be completed on April 20, 21, and 22. As Clifford Thorne, chairman of the railroad commission of Iowa, representing eight Western States in opposition to the proposed advance, is to present his views on March 30 and 31, it is hardly possible that the hearings can be concluded until late in April.

What is regarded as one of the most important of the "special service" hearings in connection with the application for the rate increase will be held on Saturday. This hearing will take up free warehousing and free loading and unloading services performed in some of the larger cities, particularly Chicago, Philadelphia, and New York.

—

[From the Manufacturers' News, April 2, 1914.]

UNPROVEN STATEMENTS.

If Clifford Thorne, the Iowa railway commissioner, who camps in Washington most of the time, would present some figures and facts to the Interstate Commerce Commission as to the conduct of the railroads he might be of some value to some one. For a number of years he has made statements which have often been unsupported by facts and has published sensational figures in the newspapers which have never been proven and which have never taken him anywhere.

He is now industriously engaged in ridiculing the statement that the Pennsylvania Railroad has laid off 15,000 men and that the New York Central Railroad has laid off 25,000 men. Can not he read the figures the Interstate Commerce Commission gives out every month? Mr. Thorne is not in business. He is a lawyer. If he had a mill or two that was on the ragged edge or any kind of a plant that was paying out more money than it was taking in, he would not be in Washington all of the time pounding the other fellow. He is trying to make a reputation by tearing down, and it looks like he is getting away with it.

—

ROADS LAY OFF THOUSANDS.

A few months back the conductors, engineers, and trainmen of eastern railroads held up their employers at the muzzle of a strike gun and secured, through the aid of an arbitration board, several millions of dollars a year in increased pay.

Now the railroads, forced to economize by decreasing business and by the increased cost of operation caused by boosting the wages of the aristocrats of labor, as well as by the superfluous train-crew bill and other adverse legislation, have been compelled to greatly reduce their working forces.

The Pennsylvania, the New York Central, the New York, New Haven & Hartford, and other well-known railroads have laid off thousands of men in every department and put thousands of others on part time. Through trains and local trains have been eliminated from schedules and freight trains by the score. As a consequence, managers of rails, cars, and other equipment have been hard hit. In many cases their working forces have been reduced to 70 per cent.

Since the beginning of the year, it is announced, the Pennsylvania Railroad, which probably was the greatest sufferer from the superfluous crew bill—which provides that trains shall carry around extra and unnecessary trainmen, so as to give additional employment to union workmen—has been compelled to lay off 15,000 men in order to meet

changed financial conditions in the operating department. Forty thousand more, or one-third of the entire working force, have been put on part time.

The estimated number of men laid off by the New York Central is 25,000.

It looks as though the labor unions and their willing servitors, the legislatures of Eastern States, have been robbing a great many Peters to pay higher wages to a few Pauls.

—

WHY SUCH IGNORANCE?

It is announced in the newspapers that the Interstate Commerce Commission will suggest to the Pennsylvania and the New York Central Railroads and other eastern lines that, instead of laying off men, the carriers put the men to work improving the physical equipment of the roads.

Are the railroads taking in more money than they are paying out? Is there sufficient margin of difference in the receipts and expenditures to warrant retaining the men or placing the men at work improving the physical equipment of the roads? Can not the railroads produce the figures to show their financial condition? Does not the Interstate Commerce Commission know the financial condition of the roads?

It seems ridiculous that the Interstate Commerce Commission, which has had jurisdiction over the books of the carriers for a number of years, does not know the financial situation of the roads. Is it possible that the system the commission has forced upon the railroads is one that will not give the result? Is it such a complicated system that the commission itself can not tell whether the railroads are making or losing money? It is easy enough for a schooner captain to foot up his receipts in one column and his expenditures in the other after he has made a trip, and he knows whether he has lost or made money.

The railroads have claimed for some time they need a 5 per cent advance in freight rates to make both ends meet. Is it true, or is it not true—and the Interstate Commerce Commission ought to know, if it is competent and efficient, whether it is true or not, and it ought to tell the public. The commission has allowed itself to become a freight bureau for collecting claims which ought to be collected through the courts, if they are in controversy, and a machine of such detail that every time a sheaf is thrown the insides get clogged up.

—

FLOUNDERING FOR FIGURES.

At an enormous expense, the Interstate Commerce Commission maintains a statistical bureau and gives out a lot of figures about the operation of railroads and how much they are earning and how much they are losing. We have followed these figures for several years with a more or less indefinite idea as to what they meant, but we supposed, of course, that everybody else understood them. It seems now that even the Interstate Commerce Commission does not understand them. It seems that the railroads do not understand them, and the only man in the United States, so far as we have been able to figure out, that can understand them is Clifford Thorne, and he explains them his way. We do not know where he gets his knowledge as to figures, but if he knows much about finances, he is very different from the general run in his profession.

It seems a crime, after spending all the money that has been spent looking after the finances of the railroads, that the commission now has to put inexperienced, so-called "experts," like Clifford Thorne, on the stand and explain their own figures, and it also seems a crime that the railroad people can not stand up and show, in the simple method of a corner grocery-store man, whether they are making money or losing money. It looks to us as if they have too much college business in the statistical department of the commission. If the books were kept the way the people thought they were being kept, it ought to take about 10 minutes to find out which railroads are making money and which railroads are losing money.

F. A. Delano has been on the stand, and he is the last man in the United States that the railroads ought to put forward. He is receiver for the Wabash; that ought to be the best-paying railroad property in the United States. There is no railroad in the world that compares in any way with the Wabash as to the fertility of the fields it taps. It goes into the coal territory of West Virginia, and it gets it talons at the Pittsburgh district, which is the greatest tonnage producing district in the world. It taps the Great Lakes at several points, and gets a crack at the lake and rail. It also gets a haul out of the peninsular iron ore, and it goes into the great coal field of Ohio, Indiana, and Illinois. It reaches to the wheat fields of Kansas and crosses the corn belt half a dozen different ways, and enters two-thirds of the leading industrial centers of the Mississippi Valley. What was the matter with the Wabash road? What was the reason it did not bring a handsome return? We would like, in all sincerity, to ask how George Gould got so much money? Did Mr. Gould let the car contracts himself? If Mr. Delano wants to answer some questions and wants to get on the front pages of the newspapers, let him answer the foregoing.

—

[From the Manufacturers' News, April 2, 1914.]

FAULTY SPOTTING TARIFF.

The first unmistakable spotting tariff filed with the Interstate Commerce Commission is of such kind that the commission will probably have to hold it illegal without going into the merits of the question as to whether a charge for spotting is proper, says the Traffic World.

The Chesapeake & Ohio, which files the tariff, defines the spotting service proposed as the service "beyond a reasonable convenient point of interchange" between its railroad and the tracks of the shipper.

It is thought that the tariff will be held illegal because it does not definitely locate the point to which the rate named shall apply.

—

SPEEDING RATE CASES.

The Interstate Commerce Commission hastened disposition of the freight-rate case Tuesday by announcing that the railroads would be allowed to finish their evidence this week. The commission previously planned to hold further hearings from April 20 to 23 if they did not finish to-day. The roads now hope to conclude by Thursday evening, after which the last protest against the increase will be heard. It involves the part-lake and part-rail rates.

—

TAP LINES FILE BRIEF.

Protesting that Interstate Commerce Commission orders prohibiting the granting of joint rates and other concessions by interstate railroads is costing tap lines $1,500,000 annually, attorneys for these interests have filed a brief in the United States Supreme Court urging that the orders be set aside. It was asserted that railroad commissions in Louisiana, Arkansas, Alabama, and Mississippi have protested the orders.

—

[From the Manufacturers' News, April 9, 1914.]

FREIGHT-RATE ADVANCE—BELIEVE COMMERCE COMMISSION MAY COMPROMISE WITH RAILROADS.

On the possibilities in the freight-rate case the New York Journal of Commerce publishes the following:

"There is more or less general disposition in the Wall Street district generally to believe that the Interstate Commerce Commission will grant the application of the railroads in part instead of allowing the full 5 per cent advance in rates desired. If this is to be the result it will have to be secured in the form of indirection. The question before the commissioners is whether they will approve or refuse to approve certain specific rates that have been filed by the railroads for the transportation of merchandise. The prerogative of the commission is not to make the new rates in the event of those filed not being satisfactory. Therefore, if the commission believes that the advance is not fully justifiable it has no other alternative than to throw the entire schedule out.

—

200 EMPLOYEES DROPPED OUT.

At the close of the first two months of the administration of W. G. Bierd, president of the Chicago & Alton, he has placed economies in effect which will aggregate $250,000 per annum. His first action was to drop 200 employees, whose combined salaries aggregated $20,000 each month.

—

LIMIT OF ABSURDITY.

Senator LA FOLLETTE's bill to prevent outsiders from "influencing" the Interstate Commerce Commission's action represents the extreme limit of a kind of absurdity of which the Senator has been repeatedly guilty, and which is the essence of what is foolishly termed the "Wisconsin idea." This is that legislation can wholly cure or correct economic, political, and personal evils. In the case of the Commerce Commission, the attempt to "influence" that body has proceeded largely from the commission itself, which has ordered hearings both public and private in great numbers, and has repeatedly sought to get the ideas and views of shippers and railroad men alike. There was nothing reprehensible in this; on the contrary, the commission has often shown a disposition to get real data and to decide questions on their merits. The fact that many unsolicited letters have come to the commission is not one that Congress can control or ought to want to control.—(New York Journal of Commerce.)

—

[From the Manufacturers' News, Chicago, Ill., April 16, 1914.]

IOWA'S WORST HANDICAP.

Senator CUMMINS undertook to incite the Senate a few days ago by charging on the floor that a persistent and widespread campaign was being conducted to arouse public sentiment for the request of a 5 per cent advance in freight rates in eastern railroads. The Senator expressed confidence that the Interstate Commerce Commission would decide the question on its merits.

Manufacturers' News concurs in the view taken by Senator CUMMINS in his hope that the question will be decided on its merits, but Senator CUMMINS and Senator LA FOLLETTE should not take exception to the shippers writing letters to the commission and expressing their views as to conditions. The shippers are interested in the railroads only from the standpoint of service and low rates. There are some roads in this country that are managed better under receivership than they are by such families as the Goulds, for instance, and if the Interstate Commerce Commission had the courage that it ought to have, and if Senator CUMMINS had the courage he ought to have, he would demand an investigation of the causes which led up to the receivership of the Wabash road. But Senator CUMMINS has not the courage. Senator CUMMINS does not know the business situation in this country. Senator CUMMINS does not know the reason that many shippers favor the advance in freight rates is an interested one; that it is their own protection, and that in their judgment it is the best thing that can happen to save the business of this country. The are for the general good.

Senator CUMMINS should inform himself. Senator CUMMINS should examine the books of the Interstate Commerce Commission. Why does not Senator CUMMINS attack the brotherhoods that are filching so much money from the coffers of the carriers? Why does not he attack the bankers? Why does he stand up in the Senate and make a speech that contains no facts? Iowa has been going backward for 15 years and it will continue to go backward as long as it has such representatives as Senator CUMMINS and Senator KENYON.

—

[From the Manufacturers' News, Chicago, Ill.]

THERE IS PRESSURE.

There has been an insinuation or charge on the part of some of the pay roll patriots of the Senator LA FOLLETTE brand, that pressure—some diabolical, indecent pressure—was being exerted upon the Interstate Commerce Commission in an endeavor to make it raise railroad freight rates.

Undoubtedly there has been pressure.

The New York Journal of Commerce analyzes this pressure and sees it coming from the following sources:

"The demands of labor organizations, who repeatedly have indicated that the carriers should have higher returns in order that they may meet the demands of increases in wages.

"Shippers who have been convinced by the curtailment of railroad purchases, the reduction in the working forces of the railroads, and the reduction in service that the carriers are entitled to consideration.

"Government influences, chiefly parcel-post administrators who feel that if there should be no concessions to the roads managers will be more insistent upon fair pay for parcel-post service."

The more the public is informed of the kind of pressure that is being exerted and the reasonable nature of nine-tenths of it the better for the railroads, the shippers, and business.

We very much fear that it will take more than the advice of Louis D. Brandeis to make organized labor consent to introduction of efficiency methods in those shops where it can be prevented.

[From the New York Journal of Commerce.]

HURTS HIMSELF.

Senator CUMMINS has obviously hurt himself with the public by his open and unrestrained attack upon the railroads of the country in connection with the rate increase. The argument he adduces is reminiscent of the time when the roads were practically regarded as common enemies and were treated as such by legislative bodies. That time has passed by, and conditions now call for a larger statesmanship which shall not content itself with merely attacking and "regulating," but shall show some power of constructive thought sufficient to meet the needs of railroad policy to-day. The older abuses practiced by the roads have passed, and a new era has supervened in which the demand is for joint or cooperative work, enlisting the powers of the Federal Government and of the States in developing the best possible railroad service and in allowing the lines a fair compensation that will permit them to furnish the increased facilities that the public now requires.

—

[From the Steel and Metal Digest, New York, April, 1914.]

WHY IS THE RAILROAD RATE IMPORTANT?

While the cultivation of the soil is our greatest industry, that, thank goodness, is removed from legislative control, and depends on mother earth, rain and sunshine, and human industry; but our next largest industry is the railroads, the largest buyer of manufactured commodities and a buyer who does not resell anything but service, and dependent on its power to buy by its ability to pay. Affairs with the railroads have reached a crisis. We are starving ourselves by refusing the railroads the rate increase, and demoralizing not only the transportation service on which we are dependent but every other line of business which depends on normal railroad buying. Washington is not smashing our plutocrats; they saw trouble coming and hoid to-day smaller interests in railroads than any time in our history.

It is not the $50,000,000 that the rate increase is estimated would benefit the railroads; the business of the country is losing much more than this every week in paralyzed business and unemployment. It is for a settlement of the question whether the Government can hold up the natural laws of trade, in this case the right of capital to get a fair return for its investments.

NEARING A LOGICAL AND FAVORABLE DECISION.

It does not seem possible that the demands and interests of business and the entire wage-earning community outside of the farming interests can much longer be paltered with.

We are witnessing a rising flood of protest, which is now finding expression not only in the ranks of business but of labor under the lash of unemployment that will serve to make the Interstate Commerce Commission realize how imperative it is that they render an early decision in the freight rate case. A few weeks ago it seemed to be the intention to defer the decision until September, but the present outlook is that the matter will be definitely settled within one month.

OUTLOOK PORTENDS GREATER ACTIVITY.

It is because the disturbed condition of business is largely a mental one that we feel optimistic about the future. It is in the power of Washington to change this condition in almost a moment. The granting of an advance in railroad rates and the abandonment of further efforts to regulate business would result in a change in sentiment that would sweep the entire country into the greatest business activity, and there would be a rush to make up for the months of delayed enterprise. Surely it is not possible that we have delivered ourselves into the hands of servants who can not be made amenable to the will of their masters, the public, which at present is so clearly expressed.

—

[Frank A. Munsey in Munsey's Magazine for April.]

STARVE THE RAILROADS AND WE STARVE OURSELVES.

The railroads are structurally a part of our national life—fiber of our fiber. They are the arteries of our very being through which courses the life-blood of the Nation. We can not do them harm without doing ourselves harm. Starve them and the pinch of poverty grips us.

The railroads were built by private capital and are owned by private capital, and yet they have little of the inherent freedom of private property. Their charters constitute them common carriers, public service concerns, and as such they are in a sense owned in common by the public and by private capital—no actual public ownership in them, dollars and cents ownership, but in the outworking the "senior partner" influence and dominancy of the public makes it amount to about the same thing.

Such a partnership between the public and private capital, the latter putting up all the money and taking all the risks, is a soft thing for the Government, arrogating to itself, as it does, absolute control. Of course, it wasn't this way when railroads were built, when capital risked itself in these venturesome undertakings. If it had been—if the Government's attitude toward railroads had been just what it is now, the same narrow picayune policy in force—we should have no railroads to-day except Government built and Government owned.

Private capital in any measure worth while would never have gone into the upbuilding of railroads, knowing in the outset the extent to which it would be fettered and hampered and harassed, as it knows it now.

I have no fault to find with Government control as such. It is the kind of Government control we have with which I am finding fault. As a matter of fact, there is nothing else for us but Government control or outright Government ownership.

With strong, able, wise Government control—a kind of control that embodies constructive cooperation with railroads—we should have a far better railroad service than we could well hope for from Government-owned and Government-operated railroads. I don't believe there is any doubt about this.

Though capital went into railroad construction with the idea that railroads were private property, the change that has come about, putting them so completely under Government control was inevitable. Neither the Government nor capital foresaw this change in the early days of railroad development. Indeed, it was the very vastness of this development and the incomparable power railroads had come to be that compelled public control and gave rise to the present conception of the proper relations of the railroad, common carrier that it is, to the public.

The Government, therefore, can not be charged with luring capital into railroads under former railroad freedom with the knowledge that this freedom later on would be taken away from them. Until within a little more than a decade ago there was no serious conflict of opinion between the Government and the railroads.

At the outset no one ever dreamed of the power the railroad has come to be and the part it plays in our daily lives, to say nothing of its inconceivable contribution to the opening up and development of the country.

It follows naturally that changes in our laws must be made suited to this new development—a development so vast in its power that, unchecked and uncontrolled, it would in time contest for the mastery with the very Government itself.

So Government control had to come, but in the exercise of its control it has frightfully crippled and maimed the entire railroad business of the country. Capital has lost heart and would get out if it could do so without too great a sacrifice. Dividends on railroad shares have dwindled until they have no appeal to fresh capital. The Government stakes out the lines within which capital must work, fixes its rates of income, and then says to capital, "Give us the best railroad service in the world."

All this would be well enough if the Government's conditions were such as to make this possible, which is not the case. The fact is the railroads can not give us the service we demand, pay the wages and taxes they are paying, and live on the income to which the Government is grudgingly holding them down.

But the chaotic condition of the railroad business is only a little worse than that of business generally throughout the country. There is no snap and go to anything, and everything is in a blue funk. In view of these conditions, what are our chances of having good times? We hear the question all the while. It is on everybody's lips. The answer is vital. It affects our entire population—100,000,000 human souls. No one is beyond the sphere of its influence. Our expenditures, our incomes, the scope of our undertakings, the scale of our living—our necessities, our comforts, our pleasures, our luxuries, our savings, and our very future—all depend upon it.

We are a temperamental, impressionable people. When we have good times we hurl ourselves on enterprise and sweep everything before us. When we have hard times and feel the pinch of poverty and see idle cars, idle factories, and idle labor, we get a fit of the blues which makes us distrust our institutions, distrust ourselves, and look upon life as one weary grind.

We have wallowed in the slough of despond since the beginning of 1910, and to-day our securities, battered and tattered, find little favor with European investors. Every enterprise has felt the lack of confidence, the lack of courage, and has perforce squared itself to that grim, ill-shapen thing—the thin pocketbook.

But human nature, and particularly American human nature, can not be kept down forever. We have had enough of the valley, with its fogs and chills, and want to get away from it all and once more look out on the world from the sun-swept heights. And, too, we want to hear the old, old story of what a wonderful country we have, of the vastness of our resources, the colossal measure of our undertakings, the bulging of values and the song of opulence and wealth and riches—enthralling music to our ears.

Starving the railroads and hostility to capital are responsible for our business depression and industrial stagnation. The Government has overplayed its hand in humiliating capital and breaking up our big enterprises. Its obvious worry lest somebody, somewhere, somehow, might make a dollar has been overdone. Continue the policy of starving the railroads and we shall continue to starve ourselves, and shall have no good times. Let the railroads make a decent living, and the wheels of enterprise will leap into activity.

But Wall Street says good times are here. Wall Street may be right and may be wrong. Things have been deadly dull down there for so long that everyone clutches at the very suggestion of hope. Hope in Wall Street is perhaps father to the wish. It looks to me as if it were in this instance. Wall Street is amazingly elastic in its conclusions. When it comes to shifting its opinions it puts a lightning change artist out of the running.

I am not writing as a pessimist. I am an optimist through and through, but optimism must take cognizance of facts. And what are the facts on which to base the hope for business activity, with our new low tariff, unless we get a gigantic impetus from some source or other?

It is clear that with our high wage we can not get this impetus from such exports as come into competition with the products of the low wage of the rest of the world. And if not from exports, whence shall we get the quickening influence? The new currency law won't bring it. The new currency law will perhaps make money easier, but money is already easier than need be, both at home and abroad.

The lower price of money will no doubt benefit the farmer and perhaps stimulate him to wider activities. This will be good in itself, and may have some effect in lowering the cost of living, and then again it may not. But cheaper money to the farmer can not and will not prove the impetus to revive business.

The lower rate of money will make it easier for borrowers, but in itself it will not be sufficient to impart activity to a dead calm, to break the grip of paralysis. Unless it so happens that the new currency bill proves to be a measure of inflation, it won't have the dynamic force to create energy, overcome inertia, and start things going. If, on the other hand, it brings about inflation we shall have a short hurrah run for our money, followed by such a reaction as will make the whole Nation cry to heaven from the very hurt.

A great international war might set business going, and so might a change in our tariff—the kind of change that gives courage and confidence to home industries. But we have just had a revision downward, so there is no probability of an immediate revision upward; and there are no instances on record where revision downward, or low tariff, or no tariff, has ever reenergized anything here at home. On the ground of precedent, therefore, we haven't much to look for from our recent tariff legislation, and we are not now at war with any nation; so just what is there in sight, when we get down to the raw cold facts, to justify a belief in an immediate onrush of good times?

Agriculture can not bring it about; war is not likely to bring it about; our new tariff is certain not to bring it about; the iron and steel trade can not bring it about; the textile manufactories can not bring it about; mining in all its different phases can not bring it about; and all the scattered, smaller manufactories can not bring it about.

It may well be doubted if anything can bring it about, as matters stand to-day, except the railroads, and the railroads can bring it about if they are allowed freight rates and passenger rates that will enable them to do business at a rational and fair profit—such a profit as will give place and value to their securities in the markets of the world.

This is what we want at this juncture to give us good times, temporary good times at least, and good times for a long run, if the policies of the Government with regard to business, the tariff, the currency, and in other respects are right. If these are not right it is

pretty safe to assume that we, as a people, have the good sense and the patriotism, irrespective of politics and politicians, to make them right.

But just why can't agriculture give this impetus to business, and why is it that railroads alone can give this impetus to business? Briefly, the answer is this: Agriculture is a producing and selling industry. If we were growing a vast surplus beyond our own requirements and could sell it abroad, the new money flowing across the ocean would give us the impetus we need. But unfortunately we have no such surplus and are not likely to have.

The steel and iron industry, vast as it is, in the aggregate, and well concentrated as it is, can not in and of itself revitalize business. Like farming, it is a producing and selling industry. This is equally true of the countless scattered enterprises of one kind and another. Merchandizing doesn't even produce anything. It has to do merely with barter and sale. Banking, likewise, produces nothing. It is parasitic in its very nature.

THE RAILROAD HAS NOTHING TO SELL BUT SERVICE.

The railroad, unlike these others enterprises, has nothing to sell but service. It buys, buys, buys, and all the while buys. It is a purchasing and consuming business, which ranks next to farming in its vast scope. The wages of railroad employees have so far increased that now they call for practically one-half of the gross receipts of railroads. The sum total paid out to labor by the American railroads is greater than that paid to labor by any other enterprise in any country of all the world. The railroads hold the key to the present business situation. Give them a chance and they will set the wheels of industry going. But they can do nothing for business and nothing for themselves, impoverished and starved as they are by the Government.

With a chance to live and to earn enough to make their securities safe and attractive to investors the world over, they could sell them like a shot.

What we need and must have at this juncture is new money and lots of it. The railroads alone can find this new money. But it is up to the Government to decide whether they shall find it or not. So far the Government, in its nonconstructive, or if you will, destructive policy has refused the railroads a chance for their lives.

THE SPIRIT OF COOPERATION.

If the Government would get back of the railroads and give them a lift, the railroads would get back of business from one end of this country to the other and give it a lift—would get its great broad shoulder under business and heave it into action. Assure investors that our railroads have back of them the great American people, the good feeling and spirit of cooperation of the American people, and have back of them as well the strong, helpful hand of the Government, untold money would flow into this country from abroad and vast sums of sleepy money tucked away in odd places here at home would straightway come out of its hiding and go into railway securities.

And what wouldn't this money mean to us—all this vast aggregate of new money in the coffers of the railroads to be spent for labor, for betterment, and for new undertakings? The railroads must have new rails, new cars, new engines, new ties, new bridges, new stations, better roadbeds, and a thousand other things. They must add to their sidings, double their trackage, and extend their roads into new territory. All this means work for idle men and full envelopes on Saturday nights.

Indeed, the railroads would begin buying on so tremendous a scale that our steel mills and other concerns having to do directly and indirectly with railroad supplies would be taxed to their capacity and beyond their capacity, and the high pressure activity in these lines would electrify the whole country and set every spindle spinning and every wheel of industry bounding into action. And there would be no idle men, no idle cars, no shuttered factories, no depression, no blues. Activity and enterprise and achievement would grip the country from ocean to ocean and from the Gulf to the northern border.

This is not an idle fancy. It is the very thing that would happen, and such a happening is the very thing we all want. And if we all want it, why shouldn't we have it. We are the Government; the Government is the thing of our creation, the servant to do our bidding.

The question, then, is this: Shall we give the railroads a square deal, or shall we continue to punish them for the sins of a former period, when the relations of railroads to the public were not understood as they are now? In the old days people held to the idea as a matter of course that railroads, owned by private capital, were private property. We didn't know much about public-service concerns then. We accepted the theory as a matter of course that the biggest shippers should get the lowest rates. Wholesalers bought at lower prices than retailers, so why not wholesale rates to big shippers?

But once the public-service conception was fixed in our minds we saw the railroads in an entirely different light. Naturally railroad managements fought for the independence they had always had, and doubtless fought honestly, influenced by their interests. But all this has changed now. Ten years of discussion has brought capitalists and public, the fair-minded men among each, to a common understanding of the relations of capital to the people, of trusts to the people, of the railroads to the people, and of the relation of telegraph, telephone, and all other common carriers to the people.

FALSE ECONOMY.

We ought to have, and I am satisfied that the American people demand the best and safest railroads in the world. It is a certainty that we can not have them without paying the price—railroads with every new device, every improvement that means safety and better service—and we can well afford to pay the price when the failure to do so means inferior railroads, dangerous railroads.

Forcing railroad managements into a position where they have been compelled to squeeze paltry dividends out of half-fed, half-nourished properties that they might keep their roads out of bankruptcy is a rotten policy.

Legitimate economies are fundamentally necessary to honest, able management, and whatever the Government has accomplished in the way of cutting out waste and introducing first-rate standards of economy is, of course, very much worth while. But to starve railroads into other economies, such, for instance, as skimping on roadbeds, skimping on bridges, skimping on rails, skimping on rolling stock, skimping on safety devices, and skimping all along the line, is quite another matter. They are costly savings to the people, dearly bought savings.

I hold no brief for the railroads; I am not speaking for myself, as I hold no railroad stocks, and don't wish to hold any under present conditions. Neither am I speaking for those who do hold railroad stocks. I am speaking for idle men, speaking in the interest of better business, speaking for a square deal for the railroads, for safe railroads, sound railroads.

For the Government to stand back of railway labor, morally sustaining it in its demands for shorter hours and better wages, as the Government has done, at the same time denying railroads the right to increase their incomes sufficiently to meet the increased cost of operation is of the nature of confiscation, and no honest citizen of this country believes in any such thing or would himself, with full realization of the facts, be a party to it.

Let us have peace. Let this bitterness against the railroads cease. There is nothing in all this warfare for you or for me. Give the railroads a chance to prosper and we prosper with them; starve them and we starve with them.

—

[From the American Metal Market and Daily Iron and Steel Report, New York, December 19, 1913.]

THE BUSINESS SITUATION.

There are two ways for one to form an individual opinion as to the business situation and prospects, each involving the use of judgment.

One is to gather all possible facts at first hand, taking no one's opinion on anything and then reach conclusions from these facts.

The other way is to gather as many opinions as possible, from different sources, and then use judgment in appropriating the opinions.

The first method is good in proportion to the extent to which absolute facts can be gathered. As to the extent of facts, it must yield to the second, in that one can multiply the collections of facts by the number of authorities consulted. The second is open to the objection that the individuals consulted may be making errors of judgment in reaching their conclusions. The more people one consults, the less likely is he to find facts incorrectly stated, but multiplicity of counselors does not equally increase the trustworthiness of conclusions, because the judgment of each may be warped in the same manner.

We have gone through a course of investigation and study along the second line indicated and have reached some conclusions which may appear rather radical. We find that the conclusion of the majority of men consulted is that business is going to be very poor next year, in the first half at least. Inasmuch as our method was not to get a composite of the opinions, but rather to get a composite of the facts upon which the conclusions rested, in order that we might make allowance, if necessary, for any general tendency in opinion to be warped in a particular direction, we pursued our inquiries further, to get at the facts upon which these unfavorable conclusions rested. Here we were treated to an uncomfortable surprise. We found the opinions much more clearly defined than were the facts. We found men fearing the tariff who had not studied the October returns of imports, which are plain statistical facts. We found men insisting that "business can not be better until conditions are better abroad" who did not know that the latest reports from abroad are relatively favorable. We found men who insisted that the railroads ought to get their increase in rates who had not the faintest idea how railroad earnings had been running of late. They had no idea that the September gross (the latest returns available) per mile of road was the largest for any September on record, and the net the largest with two trifling exceptions. Apparently their view was based on what they had read in the suburban station. And finally, we found men who criticised the administration currency legislation, which is outlined, in the same breath with which they criticised its trust program which is not outlined, and then let out the fact that they were down on the administration because of the income tax.

We had undertaken this course of study because we wanted to get a larger collection of facts than we had, but what we found was opinions rather than facts, and strong indications that the opinions were based upon sentiments rather than upon facts.

We have not found that there is anything wrong with the country. There are 95,000,000 people. The faces one sees on the streets are those of busy, happy, and contented people. There is no impending calamity. Everything under the sun that could happen has already been predicted and the subject has been thoroughly aired. Had it been possible for the calamity to occur, it would have occurred already. Business at the moment is stagnant, relatively, though on the whole it is not as bad as it is pictured. When there is any business at all, with sentiment so unfavorable, the fact constitutes a favorable indication.

If men became convinced overnight that the country is all right, business would begin booming in the morning. If they take counsel of their fears the recovery will be relatively slow, but perforce it must come. A prevailing sentiment which is wrong, and we believe we have definite and concrete reasons for regarding the present sentiment as wrong, can not last long. It is not in human nature that it should.

—

FINANCIAL NOTES.

The Lehigh Transit Co.'s report for November and for 12 months ended November 30 shows:

Gross earnings	$191,199.01	Inc.	$6,347.04
Operating expenses	57,261.91	Inc.	3,458.51
Net earnings	133,937.10	Inc.	2,888.53
Interest, charges, taxes, etc	71,338.72	Inc.	26,056.90
Balance	62,598.38		
For 12 months ending November 30:			
Gross earnings	$1,764,997.47	Inc.	$238,220.60
Operating expenses	740,280.67	Inc.	90,201.72
Net earnings	1,024,716.80	Inc.	148,018.88
Interest, charges, taxes, etc	578,144.18	Inc.	75,888.39
Balance	446,572.62	Inc.	72,130.49

Construction and equipment expenditures for November, 1913, $37,276.72.

[From the Daily Traffic World and Traffic Bulletin, Chicago, February 4, 1914.]

PRIVATE TRACK SERVICE.

THE TRAFFIC SERVICE NEWS BUREAU,
Colorado Building, Washington, D. C.

In the estimation of practically all the men who heard it, the announcement of Commissioner Harlan, made on Tuesday morning at the advanced rate hearing, that the commission at an early day will hold a hearing on the propriety of carriers making reasonable charges for the service of spotting cars on private spurs and switch tracks is the most revolutionary pronouncement that has come from the regulating body in recent years. To them it seemed a notice that the commission is prepared to hear suggestions that it reverse itself on the Los Angeles

switching case, in which the industry tracks of the carrier there involved were held to to be a part of the terminal system of the railroad company. The carriers in that case undertook to impose a charge for switching cars to the industries located on what they called private spur or switch track.

This suggestion is made by way of answer to the commission's own inquiry, "What general course may carriers pursue to meet the situation?" The situation there referred to is that alleged by the carriers to exist of revenues inadequate to meet their expenses. The commissioner in his announcement said that the report in the Industrial Railways case shows that the allowances and free service made by the carriers to large industries are a fruitful source of unlawful discriminations against the small shipper and also a heavy drain upon the revenues of the carriers, estimated to be not less than $15,000,000 a year.

"Action should clearly be taken by the carriers forthwith to abolish all such illegal allowances and free services," says the statement made by Mr. Harlan. He supplemented what has been said in the Industrial Railways case by saying that the commission has also found other services performed by the carriers for the shippers which result in a large depreciation of their revenues. Among such services is the so-called tap or ferry-car service, by means of which the carriers collect and deliver the traffic of many large shippers at their store doors, saving them the expense of cartage which other shippers under the same rate must pay. Drayage to effect store-door delivery is also cited as one of the drains. The commissioner took pains to make it clear that when he mentioned them as free services he did not mean that they are unauthorized by tariffs, but only that they are available only to a relatively small number of shippers without any addition to the rate which a mass of shippers have to pay.

The announcement created a sensation among the attorneys representing the big shippers who are protesting against the 5 per cent increase, because, if the carriers are permitted to make charges for setting cars at the doors of industries a situation unlike anything now existing will be created. Many of the spur tracks were built at the expense of the industries, some at the expense of both carrier and shipper, and only a very few at the expense of the railroads. In fixing charges, therefore, for such services allowances must be made, it is believed, for these different forms of ownership.

EXHIBIT B10.

FINANCIAL JOURNALS AND OTHER FINANCIAL PUBLICATIONS HAVE STRONGLY URGED THE RATE ADVANCE.

[From the Capitalist, Boston, April 4, 1914.]

RESULTS FROM FIGHTING RAILROADS.

For years past there have been the warnings against the wild insanity of fighting the railroads. It was pointed out that as surely as two and two made four, the results must follow from the causes.

The railroad man had worked veritable miracles in building up and improving from the first crude ideas of the little carriages, with the strap-iron rails on wooden stringers to the splendid construction and equipment for freight and passenger service with the modern conveniences, and all at lower cost for the people.

To carry on the work of railroading and railroad development combinations of the original little lines were necessary and capitalization in amounts never before thought possible. But these big figures are something that small brains can not understand. Most men can count up to a thousand, but when it comes to millions and hundreds of millions the average mind is dazed.

When it is said that the capitalization (including bonds) of the railroads of the United States totals up to nearly $20,000,000,000, the amount seems so vast that the common understanding assumes there could be no limit to the paying out. Then come the demagogue politicians, yellow journals, the professors, and all who pander to ignorance, with the suggestion that as the railroads are so rich, why not soak them in every way possible?

Following this suggestion there has been a general onslaught against the railroads by Congress, State legislatures, city governments, town meetings, and in fact all kinds of Government officials from President down to constables. For the past 20 years hardly a single newspaper or a single officeseeker has dared to say a good word for the railroads or to advocate any measure that was supposed to favor the railroads.

It is one of the miracles of railroading that the railroad managers have been able to continue their progress in spite of the fact that the existing government, which was supposed to promote general welfare of all industries, including the railroads, was turned against them.

Could anything more vicious and destructive be imagined than the drastic way in which national and State railroad commissions, with a pretense of protecting the public interests, have absolutely taken the control of railroad management away from the owners, ordering vast expenditures, not warranted by the conditions, and cutting down the income by reducing the rates?

Well, the people are now getting the exact returns for their folly. The railroads have hoped against hope for returning reason, or at least lucid intervals in the official insanity, and have yielded when they should have fought, only to find that yielding encouraged more destructive attacks.

There is the mathematical certainty that percentage measure of gains or losses works exactly the same for big totals as for small amounts. A 10 per cent increase or decrease on $100 means only $10; but many do not realize that a 10 per cent reduction on $1,000,000 means $100,000. With a continued percentage of losses the billions disappear exactly the same as the hundreds. If the railroad investments of billions can not show a profit, the business must stop as surely and certainly as the business of a peanut stand with the same showing.

When the railroads protested that they were being plundered at both ends by forced increase of expenses, largely for labor, on one hand, and reduced rates on the other, the scoffing answer was that the railroads had billions and could stand it. But the billions are disappearing by percentage measures, and the values as represented by reduced dividend or nondividend paying stocks are decreasing.

Only one course remains for the railroads, since further investments which might bring increased business and increased income are practically prohibited by the commissions, even if the investors could be found. If the people, as represented by their officials, do not want railroad service and are not willing to pay for it, then the railroads must cut down the service.

Railroad enterprise has always aimed to provide facilities a little in advance of the actual demands, and have heretofore been warranted in this policy by the increased business developed for more income. But this policy has been practically condemned by the railroad commission destroyers, who have told the railroads that they should cut down their expenses or live within their income.

Well, this is just what the railroads have at last been forced to do. They can not cut wages or cost of equipment, so they must perforce reduce the service.

The Pennsylvania road is to drop 25,000 of its men, the New York Central system will do pretty much the same, and smaller roads will have to make corresponding reductions.

A New York Central official is reported as saying that falling off in the freight business had made it necessary to cut down the number of freight trains and drop hundreds of employees. "How far we must retrench we do not yet know; but it looks as if we shall have to slash tremendously if we are to keep from going heavily into debt."

The same story comes from all the roads, and is proved by the figures of receipts and expenses. It is the result that has come from stupid Government-official interference and their blundering idiocy. The railroads represent nearly 500,000 stockholders, who find their property confiscated without law, justice or reason by the Government they are taxed to support.

The policy of economy enforced on all the railroads means discharging employees. Usually the railroads employ about 1,700,000 men. A 15 per cent reduction therefore means 255,000 out of employment without earnings and a burden to be carried somehow by the other workers. The greater part of all the suffering from this condition is needless and due absolutely to the stupidity of official obstinacy and blundering.

The Roosevelt, "half savage, half child," with his Attorney General Bonaparte, led off in the war on the railroads and big business generally. Taft complacently followed with his insolent Wickersham, and President Wilson has his McReynolds, who is trying to outdo his predecessors in pulling down the "criminal rich."

And how have the common people, the wage earners, prospered under the progressive ideas which promised them so much of new freedom when the rich robbers were trimmed?

Go ask at the soup kitchens, the bread lines, the marching armies of unemployed, and at all places where men talk of business conditions.

The boy with the gun "didn't know it was loaded," but the results were none the less fatal for the victim.

What is the next great industry marked for destruction for the benefit of the dear common people and the increasing army of unemployed?

[From the Capitalist, Boston, April 4, 1914.]

BRANDEIS BENEFITS FOR SHIPPERS.

"And Satan came also." Attorney Brandeis is being paid by the Interstate Commerce Commission railroad destroyers to hunt up reasons—or rather excuses—for denying the 5 per cent advance in freight rates asked for by the railroads, and Brandeis is trying hard to earn his money as a good attorney should.

Brandeis has made a report that is a model in its way. He finds that the railroads have been trying to favor their customers at the big terminals by expediting deliveries with free services for unloading, lightering, warehouse accommodations, and sundry other practices which the saintly Brandeis says are dissipating revenues and wasting the income of the railroads.

He cites a number of examples which his Hawkshaw detective ability has discovered, showing how in some cases the estimated cost of such extra services was more than the total freight charges received. He particularly notes the methods of the Pennsylvania road which operates storage warehouses as subsidiary companies, and which allows a storage of four days with free deliveries to the consignees of package freight, while shippers of carload lots are ordinarily entitled to only two days free use of cars for unloading at their own expense.

Mr. Brandeis also reports that New York and Brooklyn are favored by getting free lighterage service at the same freight rates as for Jersey City and Weehawken, which rates, by the way, are fixed by the Interstate Commerce Commission rulings. "Why should the railroads throw away money for this extra service?" asks Mr. Brandeis, and while not specifically saying so, clearly gives the impression, from the columns of cases detailed, that if the railroads would collect for such extra service they would not need the 5 per cent increase asked for.

That is quite clever, but Brandeis evidently has some lingering qualms of conscience, for after detailing the cost for a certain shipment of 6,000 carloads of flour on which it was figured that there was nothing left for the road, he naively adds:

"Of course all transactions in New York are not as unprofitable as shipments of ex-lake flour, but they are similar in character."

Now suppose that we take the Brandeis report as he intends it should be taken, without the little obscure qualifying sentence. Suppose we admit that the railroads are giving too much free service at the terminals, what then?

The great and good, high-minded and altogether excellent Interstate Commerce Commission has as the reason for its existence the protection of shippers and consignees against railroad extortion, and Brandeis is paid to help them in the good work.

Now the brilliant Brandeis in his hatred of the railroads and his vengeful desire to slam them going and coming and on both sides, actually reports that the railroads are giving free service for the accommodation of the shippers.

According to the Brandeis double-barreled argument this must be a hundredfold worse than overcharging or the extortionate rates that the Interstate Commerce Commissioners are paid to prevent.

The railroads say they must have higher rates in order to exist.

The commissioners answer that the shippers must be protected whether the railroads exist or not. It is not their funeral.

Brandeis comes along with his plan for forcing the shippers to pay the extra cost for the terminal service now furnished free by the railroads.

Then, in the name of all that passes for common sense, where do the shippers get off?

Brandeis proves that in the cases cited the railroads get little or nothing for their freight service. If that is true, then the extra terminal service if discontinued must mean an increase of 100 per cent in the cost of the service for shippers or consignees.

The railroads ask for an increase of 5 per cent, and Brandeis, as the attorney for the commission proves (?) in the Brandeis way how the railroads can soak the shippers for 100 per cent. The wise commissioners must be so flabbergasted that they will have to take another year to figure out who Brandeis is working for or who is paying him for his last opinion.

But there you have a flashlight of the only Brandeis, his mentality, his ingenuous candor, his business acumen, his legal ability, and his common honesty.

Brandeis was more than anyone else responsible for the action of the commission in refusing the increase in rates previously asked for. He then had another kind of a fairy tale about the poor management and how a million a day could be saved in the railroad expenses by high-grade efficiency, the details of which he would not disclose.

The gullible commissioners acted on the Brandeis assumed wisdom, and the railroad conditions have been going from bad to worse ever since.

Now that Brandeis is not employed or self-appointed to represent any shippers' organizations, he turns his back on these interests and indicates how the railroads can make the shippers pay twice as much for the service.

Of course the proposals are thoroughly misleading, because only a few of the larger terminals would be affected. But Brandeis hopes that the railroads will jump at this chance and withdraw their request for the 5 per cent increase.

He assumes, also, that the railroad men lack sense enough to understand that changing their terminal service and doubling the cost would demoralize the whole system, and bring chaos or ruin to industries depending on the railroad service. He assumes further that the railroad men are silly enough to be hostile to mercantile interests on which the railroads depend for business and possible profit.

But there stands Brandeis, and there is the cold-blooded contribution for more railroad smashing and industry destroying.

—

GOVERNMENT REGULATING.

The measures now pending in Congress for the purpose of regulating commerce and trusts certainly offer little encouragement to business initiative. The prospect, for example, of an interstate trade commission, having "complete access to all records, minutes, accounts, books, and papers" of corporations doing an interstate business, is not looked upon with relish by men who might otherwise put their money into the formation of corporations—with a fair chance that subsequent legislation would give to this commission the power to fix prices of commodities. In fact, there is a widespread conviction among business men that the proper governmental function of regulating commerce comes, under modern interpretation, dangerously near being irresponsible management of other people's property Irresponsible, because the Government can not be held to account for the mistakes and losses due to the incompetence and poor judgment of its political appointees.

The railroads, and through them all lines of business, are suffering from this very condition. There is scarcely a railroad in the country whose earnings do not show a diminishing tendency because of increased costs of labor, materials, taxes, etc. While expenses are steadily rising, however, revenues are not, owing to the restriction that rates can not be changed without the consent of the Interstate Commerce Commission.

—

[From The Capitalist, Boston, April 18, 1914.]

SENATOR CUMMINS STILL FIGHTING RAILROADS.

Senator CUMMINS, of Iowa, was elected to the Senate of the United States as a Republican on a clearly defined platform of national issues.

Senator CUMMINS, however, wants to be considered progressive, which means taking up with all the fads and fancies leading up to the wild-eyed Socialist fanaticism of destroying capital and capitalists.

Senator CUMMINS is something of a Hawkshaw, the detective, for he finds out things and sees things that no one else would suspect. His latest exploit is to discover that there is a persistent and widespread campaign being carried on by the newspapers and magazines of the country to influence the public mind in favor of the railroad claims for an increase in freight rates.

But Senator CUMMINS knows a thing or two, and he asserts that the movers and managers of this vast campaign (whoever they are he does not hint) "are trying to mislead and pervert the judgment of the people. They are trying to deceive the country with exaggerated cries of suffering and distress in order to escape the control which experience has demonstrated should be imposed upon all corporations which undertake a public service.

Senator CUMMINS has much more of the same kind, showing lamentable misinformation or a perverse desire to make more trouble.

Senator CUMMINS knows that ever since the Roosevelt destroyer, with the aid of Democratic votes in Congress, succeeded in putting through his railroad-regulating measures, there has been a constant war on the railroads by the railroad commissioners, who usurped more and more authority for dictating and interfering.

In Congress to-day there is hardly a single individual who will dare to stand up and say anything in favor of railroads. It is the stock in trade of all the demagogues to slam the railroads at every opportunity, because the roads are supposed to be rich and all under the domination of that awful Wall Street.

Up to about two years ago there was hardly a publication of any kind in the United States that was not joining in the crazy chorus of damning the railroads. When Mr. Mellen, as president of the New Haven road, wanted to answer the pages of attacks on his management he had to pay for advertising space to publish his statements.

Now, because some publications are waking up to the disastrous results from railroad smashing, the smug Senator CUMMINS can see only the evidence of an extraordinary campaign for misleading the public by false pretenses.

The facts are, as Senator CUMMINS must know if he uses his powers of observation, that the 10 years' persecution of the railroads by all the powers of national and State Governments have resulted exactly as everyone with a knowledge of the conditions knew must be inevitable.

For the first time in the history of railroading in the United States there was a forced halting of progress. All investors and would-be investors in railroad property were warned in so many words that the Governments and the commissions recognized no rights for railroad owners that the Governments—national or State—were bound to respect.

At present the railroad officials are not free agents for managing the property of their stockholders in any particular except paying the bills. From issuing and selling stocks or bonds for capital needed for improvements or extensions for better service to making rates to provide income to cover expenses and give dividends, providing suitable rolling stock and road bed, signal systems, train loads, train crews, wages paid, and hours of service, down to brakemen and track walkers, there are special laws and commission regulations at every turn to hamper and obstruct all efforts for more efficient service.

For a time the railroad smashing was popular because lower rates and almost free service were promised. Then Government ownership was argued, which was taken to mean that if the railroads were owned by the people, of course the people would be free to use them without cost as free public highways.

Well, time brings its revenges. After 10 years of railroad smashing, where are the promised results?

The people are asking the questions, and what can Senator CUMMINS and his reforming destroyers answer? Instead of the great improvements shown during the preceding 40 years there has been a retrogression. Fast trains slowed down, other trains taken off, all expenses increased. Instead of planning and building for the future it is cutting down present service.

Senator CUMMINS says that the Interstate Commissioners will not be influenced by the extraordinary newspaper campaign; but he knows, and the commissioners know, for they give out the figures, that the forced increase in expenses without chance for increased income can mean nothing but bankruptcy for the railroads.

The people of the country are not all idiots though they may do idiotic things at election time. There are few so idiotic as not to know what the results must be from impairment or suspension of the railroad service. The extraordinary campaign, which Senator CUMMINS calls false pretenses, means that the people, the business interests, and the newspapers are waking up to the realities of the situation. They are realizing how they have been humbugged by the reformers.

It is the handwriting on the wall for the whole brood of pestiferous, self-canonized saints who have taken upon their shoulders the burden of instructing and regulating all business men and all business affairs. The ignorance, stupidity, and cheap demagogy of this style of reformers has been tried and found wanting.

Senator CUMMINS, like all of his kind of politicians, is 10 years behind the times. Railroad smashing won 10 years ago, so why should it not win now? But then there were promises, while now there are results; and it is a question of dollars and cents for all the people. The Roosevelt idea, as championed by Senator CUMMINS and magnified by President Wilson, to the effect that the common people and the management of all the great industrial activities of the country need guardianship and control by a lot of cheap political derelicts of the down-and-out grade, is proving to be a horrible example of misdirected zeal.

Senator CUMMINS said further:

"The railroad property devoted to the public service is more valuable at this moment than at any other moment since railroads began. We ought to understand that we are dealing with the most perfect and complete railroad system that this world has ever seen, prepared to render more and better service than it has ever rendered before, and all the declamations about railroads passing into decay and becoming unsafe or insufficient is the rankest, boldest nonsense."

Well said, and very good, and all true. But suppose that an Iowa legislature should order a gag padlock into the Senator's mouth and should confiscate his salary, what would be the effect on the usefulness of Mr. CUMMINS as a Senator?

If the railroads have shown the results as stated, why in the name of all that is honest, honorable, or sensible turn the whole control over to the self-confessed imbeciles of the Interstate Commerce Commission, who have to call on Attorney Brandeis for instructions as to the best way of beating the railroads?

For more than two years The Capitalist has been protesting against the insanity of railroad smashing, and was sneered at as being in the pay of the railroads. We simply maintained that two and two could not make six, and that results must follow from causes.

Now Senator CUMMINS finds an extraordinary campaign in newspapers and magazines, and with all his assurance he dare not intimate railroad influence because he knows that the railroad finances are in no condition to pay for such a campaign, even if the roads could come to an agreement and the publications could be bought over.

Politicians who fancy they are leaders can not understand popular movements. They fail to get the meaning of "weighed in the balance and found wanting." So Senator CUMMINS tries to support the Interstate Commerce Commission destroyers, who actually persuade themselves that smashing the railroads means benefit to all the people and all the industries that depend for existence on railroad service.

The prophet Daniel interpreted the additional writing to Belshazzar as meaning that "Thy kingdom shall be destroyed."

Would it not be well for Senator CUMMINS, President Wilson, and the Interstate Commerce Commissioners, all good politicians anxious to hold their jobs, to get some prophet Daniel (and it need not be much of a prophet) to interpret the meaning of the "extraordinary campaign" that Senator CUMMINS has discovered?

Senator CUMMINS should put his ear to the ground again, and by making another lightning change he may dodge the destruction that is coming for bogus reformers.

—

[From the Capitalist, Boston, April 25, 1914.]

HOW COMMISSIONS ARE RUINING THE RAILROADS.

The beauties of regulation of the great railroad industry, including the express company service, by a collection of experts (?) known as the Interstate Commerce Commission are well shown by a communication published in the Boston News Bureau.

It appears that a Boston merchant wrote to Chairman Clark of the commission saying that the responsibility for further delay in allowing the 5 per cent increase in freight rates asked for "is squarely up to the commission, and that they will be held to account for the disaster which is surely approaching, and which even now may be too late to avert."

Chairman Clark made a prompt reply, at length, telling of the great responsibility which rested on the commission and of the necessity of a thorough investigation to have the decision right. He said further that "we are not unaware of the propaganda which has been pursued to press us from as many quarters as possible to grant this increase."

Further he added: "Whatever the transportation charges may be, the consumers of the country in the end pay them, and we do not and can not lose sight of their interests." Then further:

"There is also an important far-reaching precedent involved. We are told, and without doubt correctly, that if this increase is granted it will be immediately followed by a like request from the railroads of the West and Southeast.

"About three years ago we considered a similar request from the railroads in the East and those in the West, and an accurate analysis of the financial conditions of the railroads, according to their own sworn reports, showed that there was not justification, and the railroad managers have frequently admitted since that time that they did not make a case that would justify granting the request."

It is stated that the Boston merchant took exceptions to the inference that his letter was the result of a "propaganda," and this called for a second reply from Chairman Clark, who, after explaining what he meant by the alleged propaganda, said:

"My attention has been called to a newspaper article a day or two since in which it was boldly stated that this question of increased rates had now been before the commission for two years. The facts are that the tariffs carrying the proposed increase of rates were filed with the commission to become effective November 15 last."

We may have been rather free in commenting on the bumptiousness and general slowness of the Interstate Commerce Commission, but we never put it quite as strong as Chairman Clark naively discloses.

The Capitalist, for one newspaper, said that this question of increased rates had been before the commission for two years, and Chairman Clark says that it was only since last November.

But he forgets or chooses to disremember his statement in the first letter, as quoted in the foregoing, that, "About three years ago we considered a similar request from the railroads of the East and those of the West." Hence the question has been before the commission for three years instead of two years.

What would you call that kind of thing? Is it prevaricating or equivocating or quibbling or a plain attempt at deceiving?

Of course, The Capitalist is not interested in this phase of the matter only in so far as the first-hand testimony as to the character and standing, the judicial pose and fairness of the chairman and his commission.

The letters in full give evidence of the open hostility of the commission against the railroads, with the pretense of devotion to the interests of the consumers. There is the narrow-minded bigotry which can not understand that the interests of the railroads, the shippers, and the consumers are identical.

How can railroads prosper if the wealth producing interests they serve can not or do not make the shipments? Conversely, how can the business interests prosper unless the railroads can furnish prompt and efficient service? The monumental obtuseness that could imagine a benefit to shippers or consumers from smashing railroads or forcing them to work at a loss is something appalling when the inevitable results are considered.

The Interstate Commerce Commission gives out figures from its own reports showing that the increased expenses of the railroads for increased wages, increased taxes and other items have cut down the margins for dividends, and in some cases caused deficits. What would any intelligent peanut peddler advise in such conditions except increasing the selling prices or the rates for more income?

But Chairman Clark, for his commission, says that:

"We have taken testimony almost continuously and we have had a large number of statistical and accounting employees at work analyzing, marshaling, and assembling the statistics and financial figures that have been filed in numerous and voluminous exhibits."

Here is more evidence of commission methods. Who pays for all these voluminous exhibits? Chairman Clark will answer that the railroads have to furnish them.

Does it cost the railroads anything? Well, rather. The New Haven road, for one, reports an increase in cost of accounting from $190,000 to $500,000 in 10 years to meet the demands of commissions. Multiply this by the number of other railroads and you get some idea of the benefits of commissions.

But who pays for it all? If the railroads do not go into the hands of receivers—and even if they do—these voluminous reports are part of the operating expenses, and, as Chairman Clark says: "The consumers of the country in the end pay them, and we do not and can not lose sight of their interests."

Oh, you dear consumers and lovely common people! How you would suffer if you did not have Chairman Clark and his commission to pile up the expenses and make you pay them! And this takes no account of all the State commissions, which must show their authority and pile on more expenses.

Chairman Clark and his Interstate Commission have set the pace by confiscating the whole express company business—that is, making rates which may or may not be ruinous. If ruinous, Chairman Clark will probably apologize and say "he didn't know it was loaded."

Merchants may lose millions because they can not get the goods they want for sale on time, but how can that interest Chairman Clark, who, as one of the rulers of the people, draws his salary from the enforced contributions of the common people as taxpayers? What are the common people for, anyway, except to jolly and make them pay?

When Chairman Clark and his commission succeed in bankrupting all the railroads of the country, as they are evidently trying to do, and destroying the railroad service, the dear common people may be content to go back to the good old ox-team service. But they may, on the other hand, rise up and send the whole industry-destroying outfit, including Chairman Clark and his commission, back to the bushes, where, with their wings clipped, they may be appreciated.

—

[From the Capitalist.]

SOME HOPE FOR THE RAILROADS.

Our legislators have been tobogganing on the down grade so long that it is a cheering indication to find a spasm of common sense. This indication comes from the United States Senate.

The New York World has been running a lot of sensational trash about the management of the New York & New Haven road, trying to make it appear that millions had been practically stolen by the directors. The chief criminal, it was clearly intimated, was the great banking house of J. P. Morgan & Co.

It appears also that a couple of western popeyed Senators read these charges and swallowed them whole, without taking the trouble to make inquiries or even to read the previously published reports. Naturally, the Senators were shocked and started in with blood-and-thunder denunciations to right the wrongs of the poor plundered New Englanders.

Senator Norris, of Nebraska, and Senator Clapp, of Minnesota, rushed to the front with resolutions calling for a special investigation and prosecution. The Attorney General was called upon to inform the Senate as to any agreements that had been made that might give immunity to officials or fiscal agents of the road from prosecution or bar suits for recovery to the stockholders for dissipation of New Haven funds.

The discussion on the resolution brought out some facts showing the gullibility of the heroic Senators. Senator Lodge, of Massachusetts, soon made it clear that the frenzy of the Senators was not warranted and that their championship was not needed, because it would only pile up more trouble for the road and the stockholders.

Senator Lodge further explained that as far as the purchase of the stock of the Boston & Maine road was concerned the transaction was lawful and authorized by special act of the Massachusetts Legislature. Also that there had been no decision or ruling of any court which would show that the purchase was in any way in conflict with the Sherman law.

It was also shown that the New Haven road had advanced large sums of money for improvements on the Boston & Maine and that much more was needed. Also that the onslaught of Government investigations had paralyzed the work and interfered with raising the money needed for finishing the improvements.

Senator Works, of California, remarked that he could not see what right the Government of the United States had to interfere with the question of trustees or management, and no other Senator could find a reason for such action.

Senator Norris read into the RECORD a telegram to him signed by William T. Haines, Mayor Curley of Boston, George P. Washburn, and others stating that 1,000 business men, representing boards of trade and chambers of commerce in New England, had assembled in Faneuil Hall, February 24, and enthusiastically indorsed the Clapp amendment.

It would appear from this that our enterprising Mayor Curley does not hesitate at exaggeration and that while working to bring industries to Boston he is willing to take a hand in railroad smashing to leave the industries without service.

Senator Lippitt quoted from Commissioner Prouty's report the opinion that the first remedy needed was "rest and opportunity for constructive work. There was much truth in the claims of the railroad management that they have been so much occupied with investigations that they have been given no fair opportunity for the operation of their properties."

—

And if anybody should ask you about the New England roads you can say with truth that they are doing the best they can under the burden of Government official prosecutions and persecutions.

Finally Senator Reed, of Missouri, Democrat, followed with a speech in which he denounced the resolution as ineffective and impertinent. If the Attorney General had power to act, he said, the Senate had no right to interfere with him. If he did not have the power his action could bind no one. The proposed action was therefore "pestiferous interference."

Senator Works moved to table the resolution, which was done by a vote of 33 to 23, and ended the farce.

It looks a little as though the tide had turned and that the flood of vicious vituperating and blackmailing had spent its force.

—

[Ticker of New York News Bureau, Apr. 6 1914.]

LOSSES IN VALUE OF RAILROAD SECURITIES.

Newman Erb to-day issued the following statement:

"Any great catastrophe that would wipe out the assessed valuation of the property of a single State would shock humanity the world over, and yet, the shrinkage in market value of railroad securities since 1906, when the Interstate Commerce Commission was vested with authority to fix dates, aggregates now upward of $3,000,000,000, an amount greater than the assessed valuation of real and personal property, including public service corporations, in the States of Mississippi, Alabama, Louisiana, Florida, Georgia, and South Carolina combined; more than the assessed valuation of all kinds of property within the States of Minnesota, North Dakota, and South Dakota, and greater than the assessed valuation of all forms of property in the States of Montana, Nebraska, Nevada, New Mexico, Utah, Wyoming, Idaho, and Colorado combined. This almost unthinkable loss has fallen upon investors, principally of this country, and the public fails to realize its important bearing upon our prosperity and further progress.

"The loss in the aggregate exceeds the entire circulating medium in gold and currency of the country. If distributed it would amount to more than $30 per capita of our population. A loss so enormous must necessarily be world-wide in its effect, and we must not expect to recover from its serious influence for years to come.

UPTOWN SENTIMENT.

"With the European markets closed and with a considerable number of local interests out of town, it was assumed this morning that tradings on the Stock Exchange would be on a very small scale, and almost entirely professional. Some members who were opposed to closing on Saturday suggested the possibility of developments that would bring about considerable activity during the two hours' session. Inasmuch as nothing out of the ordinary happened over the holiday, a continuance of the recent lack of interest in the speculative market is predicted. Those who are most disturbed because of this condition admit their inability to predict anything except the granting of an increase in freight rates that would lift the market out of its present period of lethargy.

"It is taken for granted that from now on special attention will be given to the agriculture outlook. Holders of railroad securities were cheered by the report this morning that the low temperatures had not done special damage to the winter wheat in the southwest. It is expected, however, that in some sections of the south the fruit crop has been hurt considerably. Those who are particularly interested in the crops yet to be put in the ground are attaching great importance to the unusual amount of moisture and the large acreage that was plowed last fall.

"The decrease in the unfilled orders of the United States Steel Corporation did not cause special surprise."

EXHIBIT B11.

FINANCIAL MARKET LETTERS, REVIEWS, AND FORECASTS.

Bankers and stock brokers have flooded their publications with statements, arguments, and statistics looking toward a rate advance. These printed letters, reviews, and reports have been mailed to the Interstate Commerce Commission and to the individual members at their residences to make sure apparently that they would be taken notice of and digested. Following are some typical examples:

[From the Bache Review, November 15, 1913.]

ADDED RAILROAD BURDENS—STOCKHOLDERS SHOULD ACT—MEXICO—THE GERMAN GOVERNMENT AND GERMAN BUSINESS—CURRENCY DISCUSSIONS—DEBTS AND THE COURSE OF COMMODITY PRICES—THE SITUATION.

ADDED RAILROAD BURDENS.

The arbitration board's award of an increase of 7 per cent in the wages of trainmen and conductors on the eastern railroads will add to

the expenses of these roads about $6,000,000 per annum. The amount asked for would have amounted to $18,000,000. The workers also asked for overtime pay at the rate of time and a half and double time for work on trains hauled by two or more engines. These latter requests were denied. Adding the $4,000,000 increase, which it is estimated the railroads will have to pay out in keeping full crews under recent State laws, there is added to their yearly expenses $10,000,000. Nearly 100,000 trainmen and conductors will divide up the $6,000,000 award—$60 each, or $5 per month extra—with over a month's back pay, as the award is effective from October 1. No one should envy them the pleasure they feel at receiving this advance. The award is probably just, as far as the men are concerned, however grinding upon the roads further burdens of expenditures may be.

The arbitration board had, of course, no control over freight and passenger rates, but in its report it presents an argument for increase. It says:

"At the present time a ton of freight is moved in the eastern territory more than 3 miles for the value of a 2-cent postage stamp. This is the cheapest railroad service to the shipper to be found on the face of the globe. In the face of such a fact it would be unjust to say that railroad employees must continue to be satisfied only with what can be paid from freight rates as low as this."

It also takes occasion to emphasize the necessity for increased safety, steel cars, etc., and says:

"This board wishes to call the attention of the country to its belief that railroad accidents can be reduced almost precisely in proportion to the modernizing of the railroads and the improvement in their equipment. * * * All of these things cost in the aggregate an immense sum of money. Any policy that would make it impossible for the railroads to command this money would be a profound misfortune to the whole Nation."

That policy exists and is operative. The railroads can not command this money while their credit is restricted by unjustly low charges for their services.

In view of the prospect of these increased expenses, the stock market broke several points on Monday, and the eastern roads affected showed marked effect in quotations. On that day Baltimore & Ohio could have been bought for 91, Pennsylvania for 107, New York Central for 94, New Haven for 77⅜, Chesapeake & Ohio for 55½, and Reading for 156¾. Sympathetically the western and southern roads declined—Southern Pacific to 83 and St. Paul to 96¾, etc.

STOCKHOLDERS SHOULD ACT.

Railroad stockholders have not yet organized. They should do so and bring their influence to bear upon the Interstate Commerce Commission. In the aggregate they are a great army, and their political influence would be paramount. Howard Elliott says:

"There is one force that has not yet been used to protect the railroads of the country, and that is the force of the stockholder. He has apparently been rather quiet, but his property is now being threatened, and he ought to take action and use his influence to show his member of the legislature, his Senator, his Representative, his governor, his railroad commission, that rate reduction has gone too far."

The suggestion of the arbitration board virtually, that the control of wages should be in the power of the same board which controls rates, is a logical one. One arbitration board after another increases the burdens of the railroads, while the Interstate Commerce Commission refuses to advance, and frequently reduces, their source of income. One board should have both problems to meet, as one is directly related to the other. As matters stand now, the railroads are being ground between the upper and nether millstones.

THE GERMAN GOVERNMENT AND GERMAN BUSINESS.

The attitude in the United States toward big business is the wonder of the world. One of our partners, who has recently returned from abroad, tells of conversations with prominent Germans, who expressed amazement that a country with resources like the United States and with every reason for the greatest prosperity, should have its great industries under constant attack from its legislators. In Germany, they said, everything possible to encourage business, great and small, is done by the lawmakers, and the Government itself is widely interested in industrial operations. A man of importance in the Government stated that in an interview with the Kaiser, which lasted over an hour, the one subject discussed was business and business interests, and the Kaiser would talk about nothing else. Germany has made greater industrial strides in the last 10 or 20 years than any other country in the world, and this is largely due to the substantial and helpful encouragement of their Government, which has done everything to keep its working class employed and to advance Germany industrially. In some cases, when the administration has seen it to be to the interest of the people and the country, the Government becomes a partner in the enterprise.

In this country politicians sit up nights to devise schemes to harass the railroads and to hamper successful business. The greatest industrial corporation in the world is under prosecution and every stone is being turned by the Department of Justice to obtain evidence against it which will aid in destroying its corporate existence. And yet the Steel Corporation has to its credit an undeniable record for encouraging trade conditions, has not arbitrarily shut out competition, and has done more, probably, than any other great American business organization to favor workmen's compensations and old-age pensions, to install safety devices, and otherwise to better the condition of its employees.

Five hundred representative citizens of Wheeling, W. Va., bankers, business men, professional men, and iron and steel workers, at a mass meeting this week, memorialized the Department of Justice in protest against the dissolution of the Steel Trust. If business declines materially here, and with lowering prices come lowering wages, vast numbers out of employment, and finally hard times, we shall have protests of this kind all over the country. And they will be indignant protests, filled with maledictions. Because there is no excuse for hard times in the great United States, overflowing with resources. If hard times come they will have been brought on, first, by railroad bankruptcies due to the Interstate Commerce Commission's obstinate refusal to raise rates, which has been operating adversely since 1910 and is mainly the reason why we are not now in this country unusually prosperous; and, second, by the destructive campaign of politicians against business, which has been going on for some years and which shows as yet no signs of abating.

When the workmen of America begin to feel, as they will then, the point of the knife which is being thrust into the great business body, they will rise in sullen hostility against the legislative class, which for its own selfish ends has pursued business destructively so many years.

CURRENCY DISCUSSIONS.

It was rather a superficial argument, that of Senator OWEN at the Economic Club, against this country's adopting a central bank, which had been proven by the experience and history of the whole world to be the better form. He said that while Germany had a central bank and France and England, nevertheless these were small countries, whose areas would not more than cover one of our large States; that this was a great country extending 3,000 miles across, and that, consequently, it needed divided responsibilities to meet divergent business tastes. Some one at the Economic Club dinner is said at this juncture to have asked in a low tone, "How about the Supreme Court?"—which is quite apropos. A central banking power, with branches everywhere, would fully meet the needs of the largest country in the world—much more efficiently, in fact, than a number of scattered controls; and the larger the area the greater the need in banking of unassailable strength at some head center.

Representative GLASS is a very interesting talker and his arguments the same evening were quite ingenious, but many of his premises were wrong and it is easy to reach the conclusion one wants under such circumstances.

The good work of the Senate committee in changing the House bill for the better, so suddenly halted by threat of a caucus, will not be entirely lost, as the committee is to send in two reports, and that of the Democratic side will include at least some of the improvements adopted by the committee during its enlightened progress previous to the split.

DEBTS AND THE COURSE OF COMMODITY PRICES.

The governments of the world owe $42,000,000,000. Their debts have doubled in 40 years and have increased 20 per cent in the last 10. A financial writer abroad says:

"What we are suffering from is too rapid destruction of goods—by war and by extravagance, national and individual. Debts are thereby created faster than new capital accumulates and the result is that never-ending depreciation in existing securities which puzzles and disconcerts the investor and keeps him out of the markets. When will it come to an end? Nobody can tell, only that a fall in the value of money would turn the current."

Sir George Paish thinks that the big rise in the last 20 years has helped the farmer, but not the wage earner. He looks now for a fall in prices which will reverse these benefits. He says that "many countries are experiencing great difficulty in satisfying their need for capital and very little new work is being undertaken anywhere in the world. This means that for a time, at any rate, the demand for goods and the consumption of many countries will be reduced, and there is a probability that the supply of goods will be in excess of the demand. The price of commodities will fall therefore.

"It is, however, highly improbable that prices will fall to anything like the level they reached in the nineties.

"As far as can be seen the reaction in the world's trade will be a moderate one, and the great accumulation of gold which will probably result will soon tend to restore confidence and make for expansion in trade and consumption after a relatively short period of rest and recuperation."

THE SITUATION.

The Bank of England's statement shows up stronger than ever and there is now no expectation of the rate there being raised above 5 per cent. The Bank of France shows an increasingly strong report for the week and the German position is heavily fortified. Toward the end of the year, and after December 1 is passed, money should work visibly easier. The demand for steel is declining, and in Pittsburgh men are being laid off by hundreds. The business recession is on its way. The disposition of the independents is to reduce pay, but the Steel Corporation does not favor any cut in wages. Railroad purchases are limited, as they must necessarily be, and labor is already beginning to feel the adverse influence of the stubborn refusal to advance freight rates.

As affecting the securities market important problems like the Mexican situation, the currency bill, and the effect of the tariff, have yet to be solved, and above all, the scarcity of capital throughout the world is keeping the investment movement down. All this will probably work for a continuation of an irregular market, in which we may get some sharp dips. Irrespective of this, however, prices are now very low, and we believe each of the problems mentioned is working toward favorable solution.

Accordingly, for investment, we advise buying of carefully selected securities at the present time to the extent of a part of what it is intended to finally purchase.

J. S. BACHE & Co.

—

[From the Bache Review, April 4, 1914.]

THE TOLLS CONTEST—RATE PROGRESS—THE RIGHTS OF PREFERRED STOCK—RESERVE BANKS—THE MARKET—LOCATION OF RESERVE BANKS AND BOUNDARIES OF THE DISTRICTS.

THE TOLLS CONTEST.

The success of President Wilson in carrying through the repeal of the toll bill as far as he has, marks perhaps high water thus far in the record of his achievements as Chief Executive of the Nation. The question was one which was buried in a fog of misrepresentation, and had been given, perhaps, little study by the great mass of American citizens. Consequently, the pettifogging appeals to patriotism found the minds of the people befogged and unsettled. There has never been any question about what was the right thing to do. Every consideration of national honor, and of national honesty, was on the side of living up to the letter of the treaty. President Wilson had an exceedingly difficult situation to deal with. With the weight of the Presidency upon him, his mind turned with unprejudiced view to the rights in the matter. He saw at once that there was nothing to do except to repeal the exemption. It was a peculiarly difficult situation, because the Democratic platform had been "landed" with a thoughtless voicing of what was supposed to be a popular call for the provision. He had also to face his preelection speeches of commendation of the measure. These were composed under the hurried pressure of a hot campaign. He did not hesitate when the course became clear to him to ignore both of these obstacles, and to advocate what maturer consideration made him believe to be right. That the country is with the President is shown by the passage of the bill through the House. The Senate will now take up its consideration with perhaps more deliberation, but with, it appears, and it is to be hoped, the same result.

It may do no harm now to repeat the words of the treaty, which are contained in five lines, and are direct and unmistakable. They are as follows:

"The canal shall be free and open to the vessels of commerce and war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such charges shall be just and equitable."

The United States has never before violated treaty obligations, and the repeal will help to restore us to a position where, as has heretofore been the case, the faith of other nations in our integrity will be absolute.

RATE PROGRESS.

The New York World says: "The commission could decide a case of rate reduction in 30 days. It is ridiculous to suppose that over 7 months, as now, are needed to dispose of a case of rate increase one way or the other. Government fixing of railroad rates through such a body can stand much, but it can not stand in each case, being made worse than a tariff bill in its repression of industrial activity. What the commission has been engaged upon is a diagnosis, but a diagnosis may easily be prolonged until it becomes of necessity an *inquest*."

The Interstate Commerce Commission's somewhat sudden readiness to hear the carrier's representatives can not be dismissed without the thought that they must appreciate the gravity of the general situation. The carriers have had the burden of proof on them; there is practically no dispute regarding the validity of the case as they have presented it. The increase will probably be granted in some shape, but it does not look as though the advance would be strictly horizontal, but would vary in the order of demonstrated necessity. The personnel of the Interstate Commerce Commission may be changed by the appointment of Mr. Winthrop M. Daniels as a member whose name is now before the Senate for confirmation, but the opposition of Senators LA FOLLETTE, CUMMINGS, and BRISTOW is illuminating at this juncture, because it is based upon criticism of Mr. Daniels' utterances regarding the basis of valuation of railroad properties. In a way the objections urged will indicate in a measure the sentiment in the Senate on the process of valuation. If Mr. Daniels' nomination is confirmed, it will mean substantially that a majority in the Senate does not favor the physical basis as the correct one upon which adequately to predicate railroad values.

—

[From the Bache Review, April 25, 1914.]

CAUSES OF TRADE DEPRESSION.

The events pertaining to Mexico and the decisive action at Vera Cruz have drawn attention temporarily from our own internal situation, but the Mexican entanglement, except from the humanitarian standpoint and considered only from the economic side, as far as its results can be measured, is of less importance than the distressing situation of the railroad industry. The Interstate Commerce Commission has unnecessarily spent many months deliberating whether or not to make a small increase in freight rates, and while its cogitations have produced no beneficial result, the situation of the railroads as a whole has been drifting nearer to bankruptcy for some of the roads and depression for the whole country. It is true that the condition in the steel trade indicates that an overcapacity for the manufacture of pig iron has been developing in the last year or two, and that with the present demand or lack of it this overcapacity was bound to bring reversal of prosperous conditions in the iron and steel business. The production of pig iron in the latter months of last year reached the highest figure on record, and with the railroad market practically wiped out, the natural result is following. Iron is selling below cost, and this state of things will probably continue for some time, until furnace after furnace is blown out and production once more dips to the level of demand. This may take many months, and inasmuch as the Interstate Commerce Commission's action now has been too long delayed, may take some years. In the meantime men are being discharged and the army of unemployed is growing daily. This in itself cuts down the volume of consumption and will tend to curtail all trade. While primarily this setback in business may be laid to overextension in creating iron-making capacity, its severity could have been materially lessened and possibly the whole reaction tided over if the Interstate Commerce Commission had done its plain business duty in December, when the rate hearings were over with, by raising rates and correcting any excesses thereafter, because, as has been repeatedly said, it is to the benefit of the country, and not against its best interests, to have the railroads earning large surplus amounts, which can be used in lean years for a continuation of extensions and betterments. The verity of these statements will impress itself upon business people throughout the country as time goes on, and the ill effects of the commission's action become more and more evident. In the meantime, harassed by unprofitable results in their own business, the thinking part of the country is beginning to criticize political agitation against business, and the Members of Congress are getting evidence of this from time to time.

DISCONTENT WITH POLITICS.

There is coming to be a more bitter feeling against the political control, and criticism of the legislative endeavor to harass business with further trust legislation. The effect of tariff changes, too, is being watched with considerable solicitude and any unfavorable results here would be visited upon the administration. The great good done by President Wilson in forcing through a sound banking law is being temporarily discredited by the unfortunate action of the organization board in its partition of the reserve districts, which is coming more and more to be recognized as political and not good business, as we indicated when the decision was first announced. The effects of this action, arbitrarily forcing out of place established banking channels, will find its sequence in considerable discomfort in the conduct of the banking business of the country; and while no permanent harm will follow, because the laws of trade are eminently powerful and the operations will push their way through artificial obstructions, it is still a pity that so brilliant an outlook should be marred at the start by any error of this character.

The New York Times says that the Adams Express Co. is reported to be ready to discontinue its express operations the moment it is found that under the Federal reduction in rates and the parcel-post competition the business does not pay. The Interstate Commerce Commission will then have the credit of abolishing still further facilities for business operations.

The results upon the business of the country of the operations of the Interstate Commerce Commission are demonstrating that commissions must be made up of the highest grade material, expert and efficient in the business which is intended to be controlled, or that otherwise their blundering progress will cost the country millions in money and years of depression. As it has seemed impossible thus far to have commissions appointed of this character, it would seem better if the creation of any new bodies of this kind, like the trade commission, be postponed indefinitely.

EFFECT ON LABOR.

The long-deferred liquidation of labor is now taking place, not through reduction of wages, which is the usual method, but by reduction in number of employees, making it necessary for those still holding places to do all the work. Efficiency is thus increased and an economic result is reached, the same as if wages had been reduced and the larger force retained. While other things have been liquidating in the last few years, labor has never permitted itself to take part in this by reduction of wages, but on the contrary, wherever possible, as with the railroads, has insisted even on increases. But the laws of trade are immutable and have forced the result in another way. The fact that so many are out of work has inclined those still in place to vigorously exert themselves in order to hold their positions—something that labor refuses to do in prosperous times.

A continuation, however, of the present depressed trade conditions will bring about general reduction of wages throughout the country.

The labor leaders should make an investigation of the acts of the Interstate Commerce Commission and conditions brought about thereby as they are affecting and will still further affect labor and its employment. In February the gross earnings of all the larger roads reporting to the commission fell off $22,054,000, compared with February a year ago, and the net fell off $20,275,000. Net earnings for the eight months of the current fiscal year to March 1 dropped $97,386,000.

POWERS OF THE COMMISSION SHOULD BE RESTRICTED.

This loss of nearly a hundred millions in a few months in the greatest business in the country, upon the success of which more than any other, except agriculture, all prosperity depends, should receive the thoughtful consideration of everyone. The effect upon the whole country is stunning and is proving disastrous. Let it be further reflected that the terrible responsibility for this situation rests upon a small board at Washington, composed of politicians or men inexperienced in railroading, whose failure to act is the direct cause of the railroad predicament.

Let us suppose that a commission could thus control the welfare or destruction of the great industry of agriculture. The situation would not be allowed to exist for a moment.

The fact is that too much power has been granted the Interstate Commerce Commission in allowing them to arbitrarily control rates.

Since they were accorded this power in 1906, and more especially since 1910, when the injunction against a 10 per cent raise was issued, the railroads, as a whole, have been almost steadily going backward, with resulting bad times throughout the country. The commission should be divested of this unrestricted power, and for the protection of owners of railroad property a nonpolitical advisory board appointed to hear appeals and render prompt decisions. In addition, some of the present board should be replaced by experienced business men.

All this would go far toward restoring confidence in railroad investments.

—

MIDDENDORF, WILLIAMS & CO. (INC.),
Baltimore, Md., April 4, 1914.

SENTIMENT IS MORE HOPEFUL.

Sentiment in business and financial circles was buoyed this week by the decision of the Interstate Commerce Commission to drop all other matters and concentrate its work on hearing the railroad freight case. There is no question that a crisis has been reached in the affairs of the carriers and quick action is required to avert serious consequences. Every day adds testimony to the need of the railroads for more revenues. The belief is growing that the advance in rates asked will be granted, and granted, too, without any further unreasonable delay.

DANIEL WILLARD SIZED SITUATION CORRECTLY.

As Daniel Willard, president of the Baltimore & Ohio Railroad, pointed out in his statement to the commission, the 1910 argument in favor of higher rates was based upon tendencies which were then clearly manifesting themselves, while to-day the demand for higher rates is based upon those same tendencies reduced to cold facts. So sure is it that relief will be granted that the financial community is considering scarcely at all the possibility of a refusal of the rate increase, or of the granting of only a disappointingly small part of the 5 per cent for which the railroads have asked.

RAILROADS FORCED TO CUT DOWN EXPENSES.

A study of recent earning statements, and particularly of those which have most lately come to hand removes all reasonable doubt that the railroads were under necessity to cut down their expenses. Unfortunately, this involves hardship upon a great many, and upon many, too, other than those most directly affected, for along with the laying off of men goes a reduction in the amount of supplies purchased by the railways.

The showing of the New York Central made public this week was one of the most disappointing in many years. The gross earnings for February showed a decrease of 14 per cent as compared with the same month of last year, while the net earnings showed the startling shrinkage of 82 per cent. Operating expenses reached the astonishing ratio of 86 per cent. Unless conditions improve, the outlook for the dividend is rather unfavorable, but there is a very general impression in financial circles that the railroad situation has reached its most acute stage, and the dispatches from Washington apparently confirm the belief that relief will be afforded in a substantial way before the end of the present quarter. The discouraging earnings statements for February, following on the heels of the announcement of drastic economies put in force, have disturbed business men in all lines of trade. When pay rolls shrink, the stores, next to the workers and their families, are the most immediate sufferers.

FUTURE PRESENTS MORE FAVORABLE PICTURE.

Taking a long-range view of the situation, a more favorable picture is presented, assuming, of course, the rate increase is granted. The belief that a part, perhaps a large part, of the retrenchment which the railroads are now engaged in would not have been necessary if they had some months ago been allowed an increase in rates adds very materially to the grounds for regretting the long delay which has attended the effort of the railroads to restore equilibrium in their accounts through an advance in rates.

DELAY IN FREIGHT-RATE DECISION BRINGING US NEAR A CRISIS—NOT PANIC OR STAGNATION, BUT GENERAL SLOWING DOWN ALL ALONG THE LINE FOR LACK OF IMPETUS AND A GROWING WANT OF CONFIDENCE.

UNDERLYING CONDITIONS NOT BAD.

With so much depending on the forthcoming rate decision of the Interstate Commerce Commission, it is to little purpose to urge upon investors specific issues at this time. Everyone believes, we think, that underlying conditions are sound. Nearly everyone is convinced by this time, we think, that the low tariff is not going to bring about business stagnation. In much the same way practically everyone is convinced that for the next few years, anyway, tight money is a thing we will not have to reckon with, for whatever may be the final working out of the new currency bill, it should make funds plentiful for the first few years of its operation.

DELAY BRINGING US NEAR A CRISIS.

But investors are not disposed to give much thought to these facts at this time. They do not care to look beyond the freight-rate decision, and they choose to neglect the strong points in the situation because of the dominating influence of this question. We do not wish to minimize it, for it is a big question, a big vital question, and the delay in solution has brought the country very close to a crisis. When we say crisis we do not mean in any sense of the word panic or stagnation. But we do mean a crisis in which things in general are coming to a standstill for lack of impetus and for lack of confidence, for, after all, confidence is at the bottom of everything and begets impetus.

PRESIDENT WILLARD'S DEFINITION OF A CRISIS.

Possibly it would be better to quote from the testimony before the Interstate Commerce Commission on Tuesday in order to show just what we mean by crisis. President Willard, of the Baltimore & Ohio, was on the stand, and he was asked whether he agreed with Mr. Clifford Thorne that there was no crisis in railroad affairs. Mr. Willard, with due deliberation, replied:

"I must first define what I believe a crisis to be. I should consider a crisis to exist if the carriers no longer earned a return on additional capital invested, and therefore found no longer any incentive to raise new capital to handle the business offered. It has been found necessary for the Baltimore & Ohio to spend $15,000,000 or $20,000,000 a year to provide facilities to take care of the traffic.

"If conditions should now make it unattractive or unwise to put additional money into the property, place additional facilities at the disposal of the people along the lines of the Baltimore & Ohio and the public should be deprived of needed facilities, I should say that was a crisis for the people who look to the Baltimore & Ohio to handle their traffic.

"Again, I should say a crisis was approaching when net earnings from railroad operation were so small that the ability of the companies to continue to maintain fair returns upon the properties jeopardize the future of railroad securities.

"Those who hold our securities would certainly consider that a crisis. It would also be a crisis for workingmen to be deprived of their positions, not because of the lack of need of their services, but because of employers' inability to pay.

"As I conceive it, all these conditions of crisis, or approaching crisis, are at hand in full measure to-day. Three years ago, we based our application on what we considered to be a tendency. To-day it is not a question of tendency, but a question of fact."

IF RAILROADS DO NOT GO FORWARD, THEY MUST GO BACK.

This is very brief, clear, and to the point. Mr. Willard did not use a lot of words to conceal his thoughts, which with a great many people is the chief use of words. He made a simple statement that the railroad business has come to that point where it is unattractive to new capital. Yet if we look facts squarely in the face, without new capital the railroads are helpless for reason that the railroad business in this country is still a constructive business; and if the country is to be developed as it should be developed, the great systems must spend millions each year to keep pace with the territory it serves. If the railroads were to stand still, be content with their present mileage and their present equipment and their present terminals and their present facilities, make no effort whatsoever to add to their mileage or their equipment, the result would be a slow, steady stagnation, and the country would stagnate more or less with them, for when all is said and done the great red-blooded arteries of our national system are the railroads.

A PARALLEL IN ORDINARY BUSINESS.

The railroads are up against very much the same thing that an ordinary business is up against in a like situation. We will take for instance the case of a mill or a combination of mills doing a vast interstate business in a certain manufactured article. The profits are good, and each time the mill wishes to make an extension new capital is forthcoming. But one day it so happens that the National Government steps in and prohibits any further increase in the price of the article. Well and good for the time being. The company is making a satisfactory profit and is content. But by and by wages work to a higher level in the factory, materials and supplies of all kinds work higher; the price of the selling product is the only thing that fails to go up. And, too, by and by the country needs more and more of this manufactured article and clamors for it, needs it; the factory can do no more with its present equipment and so the country can not have more. If the demand is there, why not get in fresh capital and build extensions, one naturally asks. Just there is the problem, and the same problem is the problem of the railroads to-day.

CRISIS NOT OF PANIC BUT OF STAGNATION.

The public is demanding better service all the while, more adequate facilities, better equipment, greater efficiency; all this requires expenditure of new capital and where is the capital coming from with the Interstate Commerce Commission sitting on the lid and refusing to allow the prices of the commodity that the railroads have to sell to go up as wages and material costs and everything else have gone up. This is the kind of crisis which Mr. Willard has in mind, a crisis not of panic but of stagnation. For it is the law of progress that nothing but inert, dead matter can stand still; there must be progress or there must be decay.

BONDS MUST INEVITABLY SELL ON HIGHER LEVEL.

While, as we have said, investors are not disposed at this time to enter the market, preferring to hold back until the Interstate Commerce Commission gives its final decision, at the same time we feel that we should continue to urge upon investors high-grade bonds at present prices. If we reason aright, bonds must inevitably go up, it matters not which way the cat jumps. We know that we have a currency bill, and we know the currency bill will make for low money rates. If the railroads do not get their rate increase, then general business will be hopelessly bad and funds will turn largely to the high-grade bonds which in the opinion of investors can weather virtually any storm. Should the rate increase be granted in its entirety, bonds will naturally benefit from the widespread impetus given to investment, for it can not be denied that the investment public has held aloof for some time past awaiting a return of confidence. If the rate increase is not granted, they will turn to bonds because they promise best for hard times; on the other hand, if the increase is granted, there will be heavy buying of bonds on the theory that with good times in sight and low interest rates in sight under the currency bill, bonds must necessarily sell higher in order to be on a fair parity with interest rates.

ATTRACTIVENESS OF CONVERTIBLES.

We also feel that we should continue to direct attention of investors to the convertible issues for reason that they, too, must necessarily fare well in either event, though naturally they would fare best if the rate increase were granted, for in that event, if shares make a sudden advance the convertibles would give a call on shares at a certain price thus protecting the investor against a rising market and giving him an adequate interest return on his investment at one and the same time.

MIDDENDORF, WILLIAMS & CO. (INC.),
Baltimore, Md., April 18, 1914.

INVESTMENT SECURITIES.

HARMFUL POLICY OF I. C. C.

Inability of the railroads to earn a fair return on the money invested in them and the dilatory policy of the Interstate Commerce Commission in deciding whether the railroads are to continue to be thus handicapped, or be permitted to increase their revenue through an advance in freight rates, overshadow everything else in fianance and business.

VARIOUS EXCUSES FOR DELAY.

The commission has seized first upon one excuse and then another to delay deciding this question, which means so much to the prosperity of the country, and the result is that the carriers are confronted with the most serious situation for many years, and progress in other directions is halted. And the worst feature of this disagreeable situation is that the commission is not consistent. It runs away from its own rulings, and confidence in the fairness of this semi-judicial body is being weakened every day.

YEARS IN DECIDING THE QUESTION.

The question of an advance in freight rates has been before the Interstate Commerce Commission in one form or another for several years. A mass of testimony pro and con has been submitted, and if the commission is unable to arrive at a decision on the data filed with it it is difficult to see how further testimony will enlighten it. The public has become sick and tired of the whole business and now demands action. If the commission doubts that its policy of delay is working havoc on interests other than the carriers, then it is because that august body is not as well informed on conditions in the business world as are the masses of the people.

ARMY OF UNEMPLOYED TELLS THE STORY.

Output of the steel industry is smaller than it has been at any time for several years. The army of unemployed is large and increasing. Industries allied with steel and iron are sending up loud complaints. And why all this unsettlement in business and railroad circles? The failure of the Interstate Commerce Commission to grant relief to the railroads which would enable them to raise additional capital to be used in increasing facilities. The railroads are out of the market for material, not because they do not need rails, cars, engines, etc., but because they are not in position to equip themselves as they should be equipped because their credit has become impaired, and their credit has become impaired because they have been used as footballs by designing politicians, labor agitators, and the Interstate Commerce Commission itself.

CHANGE WILL COME SOME DAY.

Some day the people will realize that the railroads are real factors in promoting material prosperity and will demand fair play for them. Some authorities hold to the view that the commission has been so long in deciding whether or not railroads shall advance freight rates that even if a favorable decision is handed down within six weeks the good effect will have been largely minimized. We do not subscribe to this view; on the contrary, we believe that if the full advance asked is granted the effect will be very beneficial and will quickly start the wheels of progress.

WAR SCARE FELL FLAT.

The attempt to work up a war scare on account of the tension in our relations with Mexico—a crisis now happily averted by Huerta coming off his lofty perch and agreeing to the demands of the American administration that the United States flag be saluted as reparation for repeated indignities—proved a flat failure. As a matter of fact, the Mexican situation was a negligible factor in the movements of values. The Wall Street market displayed a great deal of resiliency after each sharp attack by the raiders.

London, which had previously been very much more sensitive to Mexican developments than the New York market, was unaffected by the Tampico incident. Wall Street had expected that it would sell stocks freely, but there was practically no liquidation for the Lombard Street account.

SALE OF NEW YORK CITY BONDS.

While there was some disappointment in investment circles because the number of bids in the city of New York bond sale was less than half of that of a year ago, much satisfaction was expressed over the high average price, and the offering was generally voted a success. It was admitted that many prospective bidders had been deterred by the rather ominous character of the Mexican developments on Tuesday from sending in their subscriptions. It was said that at least two syndicates that had intended to apply for a large amount of the bonds had at the last moment decided not to assume such an important commitment at this time.

HANDSOME PROFIT FOR PRESENT.

It is estimated in bond circles that the bankers who secured the new issue of $65,000,000 New York City bonds may clear up a handsome profit. Their bid was 101.45 for all or none. At 101.45 the bonds net 4.18 per cent on the investment. That is much more than outstanding city of New York bond issues return on present market prices.

Thus the old 4½ per cents are selling at a price to net only 4.12 per cent; the 4½ per cent bonds of 1957 yield 4.14 per cent, but as they sell at a high premium they are not as marketable a security, even though they return a better income on the investment. Investors are loth to buy bonds at prices far above par.

The stability of the bond market is one of the sturdy facts in the present situation which is smoothing the way for clearing up many obligations now represented by temporary securities. Much advantage will later flow from the financing of permanent character which is made possible by the existing money situation.

OUTLOOK IN STEEL TRADE.

One of the hopeful signs of the week was the evidence of a faint improvement in certain lines of the steel trade. The Iron Age in commenting on conditions said that most steel works had been able to maintain the same rate of operation as at the beginning of the month. This was cited as an indication that the country's consumption is better than might be judged from the smallness of new orders. It is, of course, well to bear in mind that the decline in the steel trade became pronounced before the recession in other lines went very far. It would cause no surprise, therefore, if the turn for the better in the steel trade should come in advance of any widespread indication of another upswing in business at large.

LOCAL MARKET DULL.

The same influence responsible for the semistagnant condition of the New York stock market is felt on the Baltimore exchange, with the difference that there is no liquidation in progress here and holders of securities are content to await the outcome of the railroad rate case. Quotations as a rule show little change from those ruling a week ago.

INTERSTATE COMMISSION CONTINUES QUIET.

The business doctors who preside over the destinies of the Interstate Commerce Commission continue to withhold their decision as to what treatment the patients in their care should have, and meanwhile these patients are growing weaker and there is what might be termed a sympathetic suffering throughout the entire business world. First of all and as an absolute precedent condition to any general improvement in trade or commerce or industry or the security market, we must have a definite decision making known whether the railroads of the country are to be allowed to live and grow and prosper, or whether they are to be throttled by an excess of zealous governmentalism.

AWAITING THE MAGIC WORDS OF LIVE AND LET LIVE.

The country is not fundamentally in such bad shape. Only it can be said that each day conditions become slightly worse. With good crops in sight, with the time drawing near when a new currency system goes into effect, with an entire absence of anything in the nature of overproduction with our great industrials, with the railroads at the lowest possible ebb with respect to equipment—surely everything is waiting for the magic word that the Government believes in a square deal for the great transportation companies which have made this country the world's greatest market place.

THE BUSY BEE AND THE BEDBUG.

Why this decision is being delayed no one knows save those who are delaying it. But it is only necessary to look abroad to see the vast harm that is being done to the Nation's business. The patient is getting sicker and sicker, and the more vitality one loses the longer time is necessary to regain it. The sicker the patient the more the political bedside watchers howl. It is not a very delicate saying, but none the less Fra Elbertus never said a truer thing, namely, that "no good, sensible, working bee listens to the advice of a bedbug on the subject of business."

—

[Issued by The Commercial National Bank, Washington, D. C.]

Preliminary reports show railroad gross earnings for August one-tenth of 1 per cent above August, 1912. For the first eight months of the year these same roads showed an increase of 8 per cent in gross earnings. July showed a gain of 5 per cent in gross and a decrease of 5 per cent in net. The August net report, when available, will probably show a somewhat similar condition. Gross earnings continue satisfactory and idle cars are practically nil; but few of the leading lines have been able to show a proportionate gain in net earnings. The new freight schedules of the eastern roads, showing an average increase of about 5 per cent on all shipments, except coal, grain, etc., will receive consideration at the hands of the Interstate Commerce Commission during the coming month. The commission has retained the services of Mr. Brandeis, of Boston, to advise with it after hearing the arguments of counsel for the railroads. The contention of the railroads is that the cost of materials they use is higher, the average wage is higher, and freight rates lower than formerly. All of this is true, but it remains for the commission to decide whether the railroads are entitled to additional gross revenue per ton-mile, or whether the same result can be accomplished by further curtailments and economies by the railroads themselves. If these economies are to directly affect safety and service, the public will oppose them instead of opposing the increased rates which the railroads claim they need and must have in order to increase the efficiency of the service and pay the interest and dividends on their outstanding securities. In the last analysis the public at large pays all the freight and the same public owns the railroads' securities. A careful comparison of interstate rates with intrastate rates would indicate to the layman that intrastate rates are appreciably higher in proportion to the service rendered than are the rates charged on interstate shipments. A general readjustment of freight rates would benefit the entire country could it be accomplished, and would, at the same time, benefit the railroads and their owners. The railroads also insist that they are entitled to $15,000,000 more from the Government for carrying the mails than they are being paid because of the tremendous addition to mail tonnage brought about by parcel post.

—

[From Ridgely's Financial Forecasts.]

20 BROAD STREET, NEW YORK,
Thursday night, April 2, 1914.

A subscriber asks how there can be a bull market with railroad earnings so poor and getting worse all the time.

To which I will repeat for the "steenth time" that if there is one way surer than another for a speculator to lose money it is by reading the newspapers and studying conditions. Things are not what they seem. Conditions are distorted so that the public will think what insiders want them to think, which usually is opposite to the facts.

I am very much inclined to believe there is a concerted arrangement by which all the railroads are "doctoring" their books and that their statements showing poor earnings are faked for the benefit of the Interstate Commerce Commission and to gain the sympathy of the public at large. In fact, I feel quite sure of it. These faked poor earnings, backed up by throwing 100,000 or more men out of a job, is bound to have its effect. The railroads have got to get a raise. There is no help for it. The invisible government, whose capital is Wall Street, is all powerful and holds the country in ransom. The commission has got to surrender. It has no alternative.

Let it sink into your mind that 90 per cent of all you read in the newspapers is inspired by the big interests.

—

[From the weekly market letter of Hayden, Stone & Co., mailed by the Virginia Railway Co., Norfolk, Va.]

The Mexican trouble has drawn attention away from the railroad-rate question. This will be coming up again very shortly, and on the outcome depends largely whether business is really going to pick up again or continue to sag.

When the situation seems almost hopeless and it is next to impossible to interest anyone in securities, the market is apt to be near the turning point. We are inclined to think that this point is not far away. It is by no means a time to incur extended obligations. Sentiment, however, is apt to change very suddenly, and we still maintain that given a favorable rate decision many of the clouds which now seem to lower will be quickly dissipated.

* * * * * * *

DO RAILROADS NEED HIGHER RATES?

It has been intimated in certain quarters that the railroads have been padding their expense accounts in order to receive favorable treatment. While we think this contention without substantial foundation, there is one item which shows the way the wind is blowing to which no exception can be taken—dividends. No railroad management cuts its dividend rate until and unless it has to.

The latest addition to the ranks of reduced payments is Missouri, Kansas & Texas. This company has now passed its preferred stock dividend. This occasioned little or no surprise, as it was foreshadowed some time ago by the decline in the company's net earnings. Since the first of the year five large roads have found it necessary to reduce or pass their distributions to stockholders, as a result of decreasing business and increasing costs of operation.

We show below the total loss which shareholders in these companies have had to suffer through such reductions just within the last four months:

Road.	Reduction.	Stock outstanding.	Loss.
Missouri, Kansas & Texas pfd	4%—passed	$13,000,000	$520,000
St. Louis Southwestern pfd	4% to 2%	19,893,700	397,874
Nickel Plate com	4%—passed	14,000,000	560,000
Norfolk Southern	2%—passed	16,000,000	320,000
Pittsburgh, Cincinnati, Chicago & St. Louis pfd	5% to 4%	27,478,400	274,784
Pittsburgh, Cincinnati, Chicago & St. Louis com	5% to 3%	37,174,000	43,480
Total			2,815,133

Be it noted that this is a loss not of principal, but of income alone. Capitalized at 6 per cent, it represents a loss of principal of $47,000,000.

We have not included the New Haven, Boston & Maine, and St. Louis & San Francisco preferred dividend, all of which were passed in 1913, and which would add considerably to the total loss of $2,816,138.

While the roads in the above table, with the exception of the Pittsburgh, Cincinnati & St. Louis, have not a great deal of stock outstanding, and from an investment point of view have generally been ranked among the second-grade systems, the fact that they have found it necessary to resort to dividend reductions is significant of the trend of railway earnings and offers additional testimony that unless relief is afforded soon, either through an improvement in business or an advance in freight rates, some of the older and stronger companies, whose securities have long been regarded as high-grade investments, may have to follow the example of their weaker sisters.

* * * * * * *

CHICAGO GREAT WESTERN.

Some measure of strength in Chicago Great Western preferred shares, contrary to the recent tendency in other low-priced railroad stocks, is a development that appears to reflect comparatively good earnings and beginning of application of the cumulative feature on the preference for 4 per cent dividends to which these shares are entitled.

This is one of the very few roads that appears likely to show no decrease in earning power this year as compared with last. Its gross earnings have been increasing steadily, with no advance in transportation expenses, all the increase in operating expenses being in maintenance. The increase in maintenance for the first seven months of the current fiscal year amounted to $498,000, equal to over 1 per cent on the $44,137,400 preferred stock outstanding.

The cumulative provision in regard to the preferred stock will be effective beginning July 1, 1914. Earnings on the preferred stock for the year ended June 30, 1913, were equal to 3 per cent. The relatively good results secured this fiscal year to date would indicate that with larger crops and greater business activity in the year beginning July 1 next the probability of earning 4 per cent or more is favorable.

The report for the year ended June 30, 1913, showed capital expenditures for additions and betterments from September 1, 1909, when the company was reorganized, to June 30, 1913, amounting to $16,157,310. The report also stated that the property was in excellent condition and that it is now capable of the most economical management. This appears to be confirmed by the reduction in freight-train miles from 3,814,296 in 1909 to 2,973,434 in 1913, resulting in an increase of the trainload from 283 tons in 1909 to 449 tons in 1913.

The last annual report also stated that in the opinion of the board, if the gross earnings could be brought up to $15,000,000 per annum, payment of the preferred dividend would be justified. Gross earnings reached $14,000,000 for the year ended June 30, 1913, so that a year of good business conditions would probably bring gross earnings up to the amount mentioned.

EXHIBIT C.

LETTERS REFERRED BY THE PRESIDENT TO THE COMMISSION.

Nearly 200 communications addressed to President Wilson have been turned over to the Interstate Commerce Commission. Some of these were acknowledged from the White House before being sent to the commission. Most of these letters call upon the President to use his influence to secure a prompt and favorable decision, giving the railroads the 5 per cent advance asked for by them.

President WOODROW WILSON.

DEAR MR. PRESIDENT: Just a word in your busy life from one of many of your admirers (Republicans), who admire the calm and sensible way you are conducting the affairs of the country.

For the sake of the general prosperity of the country, pray help our railroads; it will help the masses as well as others. While you may not want to interfere with the Interstate Commerce Commission, at least do what you can. You are gaining warm friends and supporters from many of us.

Very truly,

HENRY E. SMITH.

[Telegram.]

ST. PAUL, MINN., *February 17, 1914.*

The PRESIDENT:

Call the Interstate Commerce Commission and pass the 5 per cent increase. It will be the crowning glory of your administration and give us the most prosperous year this country has ever known.

R. G. MACKAY.

FEDERAL TRUST CO.,
Boston, Mass., March 27, 1914.

J. P. TUMULTY, Esq.,
Washington, D. C.

MY DEAR MR. TUMULTY: Pardon me for bothering such a very busy man as you, but I know you are interested in the success of the party, and I want you to believe that I have no other object in writing. I have written Judge Clements and Secretary McAdoo, urging them to do something to hasten the case of railroad rates. In my opinion, anything would be better than nothing.

It is impossible to blink at the fact that slowly but surely business is getting to a standstill. For the first six months of the administration business was first class; for the second six month it was fair, but to-day it is dragging. One of the oldest machine shops in New England, down in Biddeford, Me., laid off 250 men; the New Haven shops at Readville have shut down, throwing 1,500 men out, and the Boston & Maine shops at Billerica, in this State, which have a capacity of employing 6,000 men, will not open. Now, these two latter may, of course, be blamed to local railroad conditions, but that is not true in the case of the Biddeford shop, nor in the case of the Pennsylvania Railroad Co., which has recently thrown out 15,000 men, 8,000 of them east of Pittsburgh. The Sturtevant Blower Works here has just let 250 men go. My information is that this is true pretty generally throughout the country.

For the past 30 years I have believed that the nub of any question in this country was the railroad situation; that when the railroads were prosperous the country was prosperous. While I admit that the railroads have done many, many things for which somebody should go to jail, I do not see why the present generation should be punished for the faults of those who have gone before. A 10 per cent increase in freight rates, as I pointed out to Judge Clements, on a case of shoes shipped from Boston to San Francisco would mean an additional cost of 1 cent per pair, but this 10 per cent increase in freight rates would mean $3 a week in the pockets of hundreds of thousands of men who would have to buy shoes, because it would give them work.

As I wrote Mr. McAdoo, I think in regard to many corporations, they ought to adopt the old Chinese custom, and when crimes are committed by corporations some heads should be lopped off and dropped into the basket—be cut close off to the shoulders. But we are facing a condition to-day, not a theory. Now, mind me, I do not own a share of railroad stock, and do not know that I ever shall, but I am writing you as one who can put in a word at the right place close up, and as you are a practical man, like myself, and know conditions as I think I know them, from practical experience, I hope that you will do your best to see that something is done, and done at once.

Should the roads not be allowed to increase their rates, then they must face bankruptcy or make a reduction in wages. I am opposed to a reduction in wages—radically and unalterably. Wages are none too good now. If it may be claimed that the railroad capitalization is excessive, I will admit it, but I do not think that the workingman, working for his day's wage, should be the one to be punished; rather give them a fair wage, a chance to live, and punish the fellows who have put the water into the road and arranged to squeeze it out. This is not a difficult thing to do, although it may take some time.

Now, I take the liberty of writing you on account of the friendly spirit you showed when I met you with Congressman MURRAY, and also because I believe you to be a practical man, who realizes, as I do, what these facts mean. Do this thing, and, in my opinion, the Republican Party need not nominate a candidate against us in 1916; do not do it, and I do not think there is the least necessity of our nominating one.

I may be in Washington some time next month, and, if so, I shall take the liberty of calling on you to say "How are you?"

With kindest regards, I am,

Yours, very truly,

J. H. O'NEIL.

BALTIMORE, MD., *April 6, 1914.*

WOODROW WILSON, Esq.,
President of the United States, Washington.

DEAR MR. PRESIDENT: Will you permit one of the "enemy" to say a word. I say one of the enemy, but that is only partially true, as I am being fast converted, if not to your party at least to the ranks of your supporters. I have come to believe that when you spoke of justice in your inaugural address, and courage later on in a speech in Pennsylvania, you were not using empty phrases. I trust sincerely that your Mexican policy will prove successful, now that you seem committed to it, but I regret that Huerta was not recognized. However, I hope that I may be wrong in my ideas thereon. You certainly deserve the thanks of the country for your expressed desire to do justice to the railroads. In this connection I wish to call your attention to the fact that the shippers are in most cases artificially aided in keeping up their prices by the tariff. Not satisfied with this, some of them (the short-sighted ones) ask that their expenses be artificially reduced by the control of freight rates. Simply another case of special privilege. It is useless to refer to the fact that the country will soon be crippled by the want of railroad facilities unless increases are allowed in freight rates such as will create confidence in investors' minds. The Interstate Commerce Commission has said more than once that investors' interests are safe in their hands, but the Interstate Commerce Commission has said many other things that have not come to pass, and many investors are now asking themselves if those statements were not and are not that form of political promise which is generally classed with Lovers' vows. That the investors (to speak plainly) no longer trusts the fairmindedness of the Interstate Commerce Commission is hardly open to doubt. The difficulty the railroads have in raising money and the high rates they must pay therefor is sufficient proof of the fact. So far it would seem that overregulation has satisfied no one. First, the public, as may be seen from the different papers, is very uneasy over the plight of the roads, affected as it is directly by the many ramifications of the matter and indirectly by fears for future facilities. Next, the investor is on a prolonged strike and full of bitterness. Then, the railroad equipment companies of all kinds are barely keeping going, with many, many thousands out of work and families suffering. Who is satisfied and who is gaining by this throttling of an industry that represents one-sixth of the total wealth of the country? Is the Interstate Commerce Commission satisfied? To judge by the tone of their occasional philippics it would not seem so. The owners of railroad securities have been fed for some years on the promises of the Interstate Commerce Commission. Now they want the facts, i. e., the execution of some of the promises. It is superfluous to remind you that if the Interstate Commerce Commission allows the process of destruction of railroad values to go much further, the power of that commission for good will be very seriously diminished. If the public's confidence in the commission is destroyed, of what value is that same commission? If things go much further, it will be only a question of time as to when many persons will think that members of the commission find it to their advantage to drive down railroad securities. Personally I do not think such is the case, but it would not be truthful for me to say that it did not frequently occur to me as a possibility. I do not desire to be offensive to anyone in so writing, but you, Mr. President, would be the last to deny that "History repeats itself," or to state our official life had been free from financial scandals. And it is only by a policy of justice that such misfortunes can be avoided. If the public arrives at a state of doubt with reference to an official, it is disastrous, even if unjustified. As I have followed closely your attitude with respect to the railroads, I believe you wish to be entirely fair, and I also appreciate the delicate position in which you are placed with reference to the Interstate Commerce Commission. Would that it were judicial, or even semi, as you must of course consider it. There is one thing you can do, and I imagine you are waiting for the opportune moment, and that is see that the roads are compensated for the parcel post. As the contracts are made by the Post Office Department, your authority is not out of place in the matter, at least in the way of recommendation. The abuse is flagrant at present, and must be offensive to that sense of justice which you have convinced me you possess by several acts of this past winter. I hope you may find time to read the inclosed editorial, especially the phrase underscored [italic]. Should you see fit to forward this letter to the Interstate Commerce Commission I would be highly pleased. I am sorry that I have not the pleasure, as have some of the family, of knowing you personally.

Very respectfully,

EDGAR R. DAWSON.

THE SMALL STOCKHOLDER.

Between the Department of Justice, the Interstate Commerce Commission, and the public-service commissions, to say nothing of the wise men in Congress and State legislatures, there will be a large shrinkage in the number of small railroad stockholders this year.

Every flaring headline based on bald assertions unsupported by facts leads more and more of them to sell out their holdings and put their money into something else.

Without in any respect attempting to condone the management of the St. Paul, if it has violated knowingly any law, the incident of last week is a case in point.

Interstate Commerce Commissioner Harlan, who reminds one so strikingly of his honored father, the late Justice Harlan, of the United States Supreme Court, the resemblance being entirely in the fact that he is so different from the elder Harlan in speech and temperament, gave out a statement in which he accused the St. Paul of juggling its figures to deceive the public and the commission.

It was not a statement from the Interstate Commerce Commission, but only from an individual member. Mr. Harlan did not claim that he spoke for the commission, but his words were taken as coming from that body. We have had such instances before in the case of Mr. Prouty.

The financial transactions and bookkeeping of St. Paul which Mr. Harlan condemned were matters of common knowledge several years ago to every one who took the trouble to look into St. Paul's position, and they were not just discovered by the Interstate Commerce Commission, unless that body knows less than the ordinary student of railroads.

This being so, the question then arises as to why they were put before the public in such a sensational way just at this time, unless it was to influence sentiment against the current petition for an increase in railroad freight rates. Had anyone less than a member of the Interstate Commerce Commission made the charges in such a way, he would have been accused of doing so for its effect on the stock market.

However, it did have its effect on the stock market. St. Paul shares broke several points on the announcement. Some one sold out at prices which could have meant nothing but a loss.

Who sold? Not the large stockholder, who knew already what trailed along down near the end of Mr. Harlan's statement, namely, that no reflection is made upon the financial condition of either the St. Paul or its subsidiary, and that the results of their operations "must be regarded as favorable."

The large stockholder knows as much or more about St. Paul than the Interstate Commerce Commission, and he knows that unless all the railroads of the country are going into a receivership St. Paul is a buy around par or below for a long pull, and so he is ready to buy the stock which the frightened smaller holder throws on the market as a result of the sensational statements of an interstate commerce commissioner which find their way into newspaper headlines.

The net result of the incident, then, is that that portion of the public which takes its cue from Brandeis is given another stone to throw at the railroads, some small stockholders have been frightened into sacrificing their shares in a property whose financial condition has not been criticized and whose results "must be regarded as favorable," the large holders of St. Paul, who know the property and also know the tactics of the Interstate Commerce Commission, have had an opportunity to add to their holdings at bargain prices, some shorts have undoubtedly covered with a good profit, and an interstate commerce commissioner has once more shown a lack of judicial temperament.

Is it at all strange that the investing public is growing more and more chary of railroad securities when members of the Interstate Commerce Commission stoop to the level of the yellow journals in arousing public sentiment against the railroads of the country?

If the St. Paul is guilty of violation of the law, it can be punished; but it is entitled to a hearing in court before its case is prejudiced by an *inflammable* statement in the public press by an official who must sit in judgment on the company.

Business men have a right to be alarmed when the President and leaders in Congress talk of a trade commission modeled on the lines of the Interstate Commerce Commission. That would be the last straw to break the back of the business of the United States.

—

CHICAGO, *April 6, 1914.*

Hon. WOODROW WILSON,
President, Washington, D. C.

MY DEAR MR. PRESIDENT: Will you be kind enough to read this letter from one who acted as the western treasurer of the Republican national committee during the last presidential election, from one whose respect and admiration you have won, because he, like most citizens, believes your sincerity? You have won a high place in the estimation of all classes. Republicans, Democrats, and Progressives have been won to your side because they like what they believe to be sincerity of purpose, combined with strength to accomplish.

There is now before the country an issue upon which most of the business world is waiting, and that is the proposed increase of freight rates asked by the railroads east of the Mississippi.

Recently I happened to meet in New York, for the first time, Mr. D. I Roberts, president of the United States Express Co., and an expected interview of five minutes lasted more than an hour. The United States Express Co., as you know, is going out of business and is to liquidate. Mr Roberts for many years was a railway rate official, and it is his firm belief, as well as that of his directors, that the express companies can not operate successfully under present rates; and thus we see a great corporation, in effect, driven from business by the Government of the United States.

The railroad companies have for many months shown a decrease of net earnings while also showing an increase in gross. The stricture of various laws under which they must operate has made it impossible for them to show profits required for success. It seems to have become a habit of all classes of legislators—National, State, county, and city—to make the railroads pay excessively for anything they may require. The railroad business is the greatest business in this country, and also of the world. We can not compare it to farming, as that is not an organized business, but an individual industry; and when the railroad business is menaced it threatens all classes of people and all kinds of commerce.

It is the impression everywhere that the Interstate Commerce Commission is not handling the situation fairly, but is, on the other hand, looking for the plaudits of the great public, with its widespread voting power.

Mr. Roberts told me that the Hon. Mr. Burleson refused to talk with the representatives of the United States Express Co., giving them no consideration and dismissing their representatives with the statement that he was "for the people." Whether or not this is correct, it brings up the question, "What is the best for the people?" Is it best for the people that the great corporations conducting the greatest business should be so restricted by legislation that the people whom they employ shall lose their positions or serve at reduced wages because of profitless operation, or is it best for those in power to fairly look at all sides of the question in order to keep business upon an even keel, thereby making all the people prosperous?

When you were in Chicago you said in your speech before the Commercial Club, after you had been elected, that you were not a business man and called upon the business men to frankly give you their views and to help you whenever possible. Remembering that and having the greatest respect and admiration for your course so far, I am induced to write you now that a grave business crisis confronts this country. Everywhere business is slow and dull, it is in a halting mood, waiting to see what will be done by the Interstate Commerce Commission. I am inclosing a few clippings, all of which happen to be from the New York Times, but when I was in the South recently I noticed editorials in papers printed in Atlanta, Augusta, and Charleston, all calling for the increased freight rates asked for by the railroad companies. I believe there is universal demand for this increase in rates, and I think it is time for a great conscientious, sincere public official like yourself to boldly insist that the situation be met in a business way, as it should be.

I shall not further undertake to criticize the Interstate Commerce Commission, because if I should attempt to recite all that I have heard about it in the past five years I would seem to be prejudiced, and I do not want to be such. I am writing from the standpoint of one who is practically uninterested and beyond the point of influence to any great extent by either good or bad business.

In respect to politics I am free to say it is best for this country to have a man like yourself continue as the head of our Government, but please don't forget that it is perhaps your duty to warn the officials under you that in using their great power they are not considering the people when they make such restrictions regarding business operations as will result in poor business and hard times for the people.

This is still a young country, the railroad business is still new to us; it is less than 20 years ago that the Government sold out, under foreclosure, the Union Pacific Railroad at public auction; meanwhile the railroad companies throughout the West have built and extended to meet the demands of the public to open up new territory to so great an extent that new business communities almost unknown a decade or two since have become thriving, prosperous, well settled, and demanding.

But nearly everyone in the railroad business is blue and discouraged and, of course, that condition of mind is reflected in business almost everywhere.

Because a man like Mellen got the big head and overreached in the case of the New Haven Railroad, and because of the Frisco financial fisaco, the great railroad business as a whole should not be misjudged or handled with a club.

But I must stop. For many months I have been thinking of writing to you, yet I dreaded to intrude upon so great, so good, and so conscientious a President. I could go on and on, but I shall close with the statement that I believe it is your public duty to use your influence with the Interstate Commerce Commission to act in this present great case in a whole-hearted way, granting the full 5 per cent asked for, and not to handle it piecemeal or in a half-hearted manner.

With my warmest personal regards, permit me, please, to remain,

Sincerely, your friend,

WALTER H. WILSON.

—

DETROIT, MICH., *November 18, 1913.*

Mr. WOODROW WILSON,
President United States of America, Washington, D. C.

DEAR SIR: Has the Interstate Commerce Commission been empowered by Congress to impose taxes upon the people of this country?

If the above question was submitted to Congress for an answer the reply would come clearly and emphatically in the negative.

The proposed 5 per cent advance in railway tolls is absolutely and essentially an additional tax upon the people which the consumer will have to pay, and when the members of the Interstate Commerce Commission undertake to give consideration to a proposition calling for a blanket advance in rates they are assuming the functions of the Government, which alone has the right to impose taxes upon the people.

The boards of commerce and kindred organizations throughout the country are not offering organized opposition to the proposed advance in rates because of the fact that it makes little difference to the shipper what tolls are charged, as the consumer must pay the additional expense, whatever it may be.

The press is either prorailway or indifferent, and the individual citizen who is vitally affected by the proposed advance in rates is unable to have his views properly placed before the people or before Congress.

In the circumstances, should not the power of the Government intervene to protect the individual against an increase in taxes which is indefensible and can not be justified.

There are railway rates that require modification, either upward or downward, but a 5 per cent blanket advance in rates is absolutely unwarranted, and the writer is ready to debate the question either publicly or privately with any railway official or officials who will undertake to defend the proposition, and I am speaking from a personal acquaintance with the business of transportation covering a period of almost 40 years.

This letter is written with the hope that the Government will see its way clear to suggest to the Interstate Commerce Commission that they are exceeding the powers conferred upon them by Congress when its members undertake to give consideration to a proposition that means an increase in taxes to the citizen.

Yours, very truly,

J. H. DUTHIE.

—

PITTSBURGH, PA., *February 24, 1914.*

Hon. WOODROW WILSON,
President of the United States.

DEAR SIR: I noticed in the paper recently that letters addressed to you are not sidetracked, and relying on this I write you this letter.

In one part of your last message you stated that "the prosperity of the railroads and the prosperity of the country are inseparably connected." You are absolutely right, and in this connection would it not be possible for you to hurry up the Interstate Commerce Commission to grant the railroads the 5 per cent increase in freight rates which they have been fighting for, and thus turn on the wheels of business progress promptly, which have been stopped all over the country and resulted in thousands of idle men everywhere and untold suffering.

According to reports the Interstate Commerce Commission will not render their decision until next fall, as they seem to doubt the testimony of the various railroad officials as to the importance and necessity of increasing freight rates to partially offset the great increases in taxes and wages which have been granted employees, and have asked the railroads to answer 78 questions, many of which are unnecessary and have no bearing whatever on the important question at issue, as you will find after reading them over for yourself.

One of the officers of the Pennsylvania lines told me that the correspondence and statements they have prepared in answer to these questions would make about 4 cubic yards and will cost the company about $60,000, and this is only one railroad. It would take a large trainload to carry the correspondence from the various other railroads in this country, and of course it would be a physical impossibility for the Interstate Commerce Commission to go through it properly and render a decision for a year or more. In the meantime business is held up waiting for the railroads, who are the largest buyers in the country to buy, for when they stop buying it affects all lines of trade, as "the prosperity of the railroads and the prosperity of the country are inseparably connected."

Many chambers of commerce and business organizations throughout the country, including the New York Chamber of Commerce, have placed themselves on record as being in favor of the railroads receiving a 5 per cent increase in freight rates, and, as stated by Mr. Samuel Rea, president of the Pennsylvania Railroad in the inclosed letter, the various organizations of business men "rightly feel that whatever tends to the betterment of the financial situation of the railroads is reflected in improved conditions generally," and the firms I as an ex-railroad man represent here also favor it, as they know it will mean a great improvement in business, and this improvement will not take effect until the railroads start to buy again. The Pennsylvania Railroad has just announced that they will take off 14 passenger trains on account of the depression in business, and other roads will no doubt take similar action.

In 1909 the railroad securities issued at the New York Stock Exchange amounted to 65 per cent of the total, while in 1912 they had dropped down to 19 per cent. A few years ago our railroads had no trouble selling their 3½ per cent bonds at par, but now they can not sell 4½ per cent bonds at par, and they are certainly not being treated in such a way as to induce new capital to seek investments in their securities. The railroads should share in the prosperity of their own making, but, as a matter of fact they only pay about 5 per cent, while the manufacturers pay an average of 12 per cent on their investments.

The earnings of the railroads in 1911 and 1912 increased $11,054,000, but the expenses and taxes increased $98,544,000, leaving a less net revenue in 1912 over 1910 of $87,490,000. The railroad taxes alone

have increased over 150 per cent since 1890, and they paid in taxes last year over $120,000,000.

Is it any wonder that the railroads want a slight increase in freight rates? They now receive an average per mile of 7½ mills for hauling freight, and less than 2 cents per mile for carrying passengers. If this could be increased 1 mill, or the price of a postage stamp for 20 miles of service, it would extricate the railroads from all their present financial troubles.

The public demand fast and luxurious passenger trains, and let the railroad officials know that they want to ride in nothing but steel coaches when traveling, and they want to be provided with suitable freight cars when shipping, which are to be moved promptly to destination, and the public also demand proper station and terminal facilities, but all these things are very expensive, and can not be furnished unless the necessary money is available.

The railroads of this country pay the highest wages of any country in the world. They haul freight cheaper than any other country. They also pay more to the support of the Government, in taxes, in proportion to the capital invested. The taxes alone paid in three years, if paid into the United States Treasury, would more than reimburse it for the entire cost of the Panama Canal.

One prominent railroad president said that the railroads of this country should spend $1,700,000,000 each year for the next five years, or a total of eight and one-half billion dollars, in replacing obsolete equipment, the elimination of grades and curves, double tracking, safety appliances, increased station and terminal facilities demanded by the public, and if allowed to spend it every mill and factory in the United States would be working on double turn, and millions of dollars which have been locked up in safety deposit vaults and banks since the panic of 1907 would be seeking new investments. Why not then grant the railroads the slight increase in freight rates which they actually need, as the great increase in business resulting therefrom would bring on such an era of good times as this country has never seen.

I would be glad to see you, Mr. President, bring what influence you can bear on the Interstate Commerce Commission to hurry up their decision; and, if favorable to the railroads, there is no question but that there will be such a wonderful revival in business all over the country, like there has been in religion here recently, which has stirred this city up as it has never been before, and all we need now is a great business revival, which you, Mr. President, can bring about by taking the matter up with the Interstate Commerce Commission, having them bear in mind that part of your last message, that "the prosperity of the railroads and the prosperity of the country are inseparably connected." The business firms everywhere who are patiently waiting for the return of prosperity would no doubt be very glad to see you corral the entire Interstate Commerce Commission crowd in your private office, and give them a heart-to-heart talk about their vacillating and dilatory manner in dealing with the railroads, and give them about 48 hours to settle this very important rate increase question.

I sincerely hope that you can bring this business revival about like we had before the panic of 1907, and you thus receive the thanks of the business men and their employes all over this country, as your policy so far has been most excellent, and I feel sure that nothing would please you better than to see a general revival in business everywhere.

Yours, very respectfully,

GEO. W. MINGUS.

—

Resolutions adopted by Scranton Central Labor Union.

To Woodrow Wilson, President of the United States, and members of the Interstate Commission:

Whereas a group of railroads known as the Eastern Railroads, through their officers, managers, legal advisers, and other factotums, have made a request for the privilege of increasing the freight rates 5 per cent on the pretense that it is necessary to charge more for the transportation of freight if the railroads continue in business and are saved from the quagmire of bankruptcy; and

Whereas it has been charged open and above board, contradiction of the allegations being challenged, that this movement for an increase in rates has been and is urged by all the special-privilege-serving crew, including subsidized periodicals, trade organizations, flunkies controlled by railroad influence, for the purpose of coercing, intimidating, and terrorizing the members of the Interstate Commerce Commission to compel them to grant the unreasonable demands despite the fact that evidence is at hand to prove that an increase in freight rates at this time can not be sustained either by fact or pursuasive argument; and

Whereas Congressmen are enlisted in the campaign of misrepresentation, some of them boldly writing to the commissioners in behalf of the railroads' plea, while trade publications, commercial associations, banks, and other organizations and associations of influence and affluence have joined in the clamor for the granting of unreasonable requests of the railroads without first permitting the members of the Commerce Commission to make a thorough and unbiased investigation of the facts for the purpose of ascertaining if the demands are just and reasonable and supportable by the conditions that exist: Therefore be it

Resolved, That we, the delegates of the Scranton Central Labor Union in convention assembled, Sunday, April 5, 1914, representing 75,000 wage earners, protest with all the power at our command against the unfair methods resorted to by the railroads and their "Friday men" in the interest of special privilege and denounce the campaign as unfair, un-American, and maliciously misrepresenting the conditions: Be it further

Resolved, That the President, Woodrow Wilson, be requested, in the name of 90,000,000 Americans, to keep his hands off the Interstate Commerce Commission, and not to urge, as has been reported, a decision before the commission has had ample time to dig out the facts which appear to have been submerged under an ocean of verbal brash and asinine drivel, so that justice may be meted out to the wealth producers of the Nation who have been robbed, exploited, and persecuted by the criminal machinations of the plunderbund in this country which seems to have gripped the Government by the throat and is striving desperately to shake tribute from an already overburdened people: Be it further

Resolved, That in view of the evidence at hand, of double dealing, alleged prostitution of the legislative halls and some of those who have been clothed with the toga of authority, that we call upon the 90,000,000 Americans, regardless of creed, color, or nationality, to arise and cooperate in this protest against the onward march of the plunderbund, and that we request the President of these United States to maintain his usual composure and not to become unnecessarily excited over the reports which have been sent out by the minions of greed who have sucked the very blood of the Nation in order that the goal that they are striving to reach may be attained through misrepresentation: Be it further

Resolved, That in view of the fact that the sick man of the railroads in this country, the Erie, which has been hobbling on crutches for the past quarter of a century, issued orders some time ago that a reduction of 5 per cent in freight rates had been decided upon, but was forced to countermand the order and recall the announcement slips when the plunderbund got after it, we are of the opinion that this company, joining in the request for the privilege of advancing the rates now, is but one of the many instances that can be cited to prove that the clamor raised in behalf of the water-soaked railroads is not sincere, and that to grant the privilege craved for would be to impose hardships upon the people of the country, who have groaned under the weight of imposition too long: Be it further

Resolved, That a copy of these resolutions be sent to the President of the United States and the members of the Interstate Commerce Commission, and that we call upon all the people of the United States who are affected by the freight rates to protest against an increase until such time as it has been shown that the conditions justify an increase. Where greed is king and special privilege the ringmaster it is necessary for the people to speak out in such tones that their plea for justice shall be heard.

OTTO E. MUSSELMAN,
Secretary Scranton Central Labor Union.

—

ROCKWELL HOUSE,
Glens Falls, N. Y., March 15, 1914.

Mr. WOODROW WILSON,
President of the United States, Washington, D. C.

MY DEAR MR. PRESIDENT: I am a Democrat, and have voted the ticket for the last 35 years, and am a great admirer of you and your administration, feeling you have accomplished more for the country at large than any Pres dent during my lifetime.

As a business man, I wish to urge upon you how important it is that the railroads should receive the 5 per cent advance in freight rates that they are now asking for from the Interstate Commerce Commission. I feel that if you could induce them to grant this request it would be the crowning triumph of your administration, and save the business of this country from continued depression. We, in this locality, are experiencing the worst business depression that we have had in the past 10 years, and an increase in freight rates would act like magic

I am inclosing you an editorial from one of the leading Albany papers—Republican—which, I think, voices the views of everyone in this locality.

I am proprietor of the largest commercial hotel in northern New York, and my patronage is mostly commercial men, and when I write as I do I voice their sentiments to a man.

Trusting you will use your good efforts to accomplish an increase in freight rates, I am,

Your obedient servant,

GEO. M. TAYLOR.

—

[Telegram.]

LA SALLE, ILL., *March 28, 1914.*

The PRESIDENT:

The Portland cement industry depends upon railroads as largest consumers; diminishing orders during last few years now stopped entirely, account financial difficulties of railroads; numerous cement mills down for lack of business, with others to follow. Other industries similarly affected. To relieve present conditions and prevent entire demoralization of business, immediate action granting of 5 per cent raise respectfully urged.

GERMAN-AMERICAN CEMENT WORKS.

—

DECEMBER 4, 1913.

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

MY DEAR SIR: I submit to your superior wisdom the query: Would it not be advisable for you to use your influence to have the Interstate Commerce Commission grant a temporary increase of 5 per cent on freight rates to railroads, to take effect at once, subject to revision and modification at the termination of the hearing on that question before the commission? Neither I nor any of my family or relatives were ever interested, financially or otherwise, directly or indirectly, in railroads to my knowledge or belief.

Such a course would give great confidence and business to the various manufacturing industries, on which the prosperity of the country largely depends.

You are aware that all hard times, especially at the present time, are laid at the door of the Democratic administration, and this has its effect even in the small town and State elections now taking place.

The great difficulty in revising the tariff, however wisely and justly done, has been the universal distrust and doubt created thereby. The difficulty has seemed to me almost insurmountable.

The greatest wisdom and the wisest discretion is necessary to prevent hard times and the inevitable revulsion of public opinion in favor of a high tariff.

I admire the various measures you have taken at the crop-moving period to prevent a stringency in the money market and the assurance that has been given by the Secretary of the Treasury that there would be no stringency at the time of the change in our currency system under the proposed law.

One thing more is inexorably required to prevent the present stagnation of business, timidity of capital, the lack of funds for improvements in the railroad situation, and to prevent paralysis of business, which naturally grows upon itself, and that is some measure to instill confidence in the money interests and in all the industries and manufactures, so that they will have courage to go on.

Every little panic produces a greater, and it increases constantly, like a run on the bank.

It seems to me that the temporary allowance of the freight increase would do more than any other measure to prevent these evils, and the whole country feels that it is up to you.

This whole letter is so bold and presumptuous that I will refrain from signing my name. Let it be weighed for what it is worth. "What I have writ is writ; would it were worthier." At least this opinion is shared by me universally with all thinking classes with whom I have talked.

Respectfully.

THE CASE FOR INCREASED RATES—SUMMARY OF THE ADDRESSES OF MR. DANIEL WILLARD AND MR. F. A. DELANO, ON BEHALF OF THE RAILROADS, BEFORE THE INTERSTATE COMMERCE COMMISSION.

WASHINGTON, D. C., *November 24, 1913.*

"The immediate and all-important question is, How shall these railroads obtain the new capital necessary if they are to provide the needed facilities and furnish the high-class service which the public demands and to which the public is properly entitled?"

In this sentence Mr. Daniel Willard, president of the Baltimore & Ohio Railroad, set forth the problem which the railroads east of the Mississippi and north of the Ohio are seeking to solve with an increase in freight rates of 5 per cent. Mr. Willard made the first address on behalf of the railroads in opening the case to-day before the Interstate Commerce Commission.

In presenting the main facts upon which the railroads will rely to prove the necessity for the increase in rates, Mr. Willard stated that during the past three years the railroads in the territory affected had spent in property investment some $600,000,000, or at the rate of $200,000,000 per year. Nevertheless, because of the fact that operating expenses had increased faster than operating revenues, these railroads earned in the year ending June 30, 1913, less by $16,311,321 than for the year ending June 30, 1910.

"These companies," said Mr. Willard, "apparently not only failed to earn any return whatever upon the new capital invested, but saved even less from gross earnings, as return upon the original property investment, than they were able to show before this large additional expenditure was made."

In this three years the Pennsylvania, New York Central, and Baltimore & Ohio systems increased their property investment over $422,537,000. While their combined gross earnings increased $109,000,000, the net operating income was $8,573,507 less in 1913 than in 1910, notwithstanding the expenditure of $422,000,000 for betterments, additional equipment, etc.

"In brief," said Mr. Willard, "it appears that the new capital invested in railroads in official classification territory during the last three years has earned little or no return; in fact, these properties generally are actually earning less net, after paying operating expenses and taxes, than they were earning at the beginning of the period and before the $600,000,000 had been spent."

Mr. Willard continued: "The result, as might be expected, of this constant tendency toward diminishing net returns has been to seriously check, if not altogether stop, the normal development of railroad facilities in the territory affected. During the 10-year period these railroads found it necessary to increase their property investment approximately $2,000,000,000, an average of about $200,000,000 per annum, and it is certain that an equal if not greater amount per annum will be necessary to meet the requirements of the future.

"While the carriers fully recognize and acknowledge their obligations to the public and are alive to the responsibilities so imposed, they are helpless to fulfill these obligations unless the financial result of their operation is such as to inspire the confidence of private capital and encourage the support of private enterprise, and the result of operation during the last three years is not such as to inspire the one or encourage the other."

In setting forth the conditions which have produced the present railroad situation, Mr. Willard pointed out that "the cost of conducting the business of the carriers has been, and is being, steadily increased by increases in capital charges, increases in wages, in taxes, by burdens imposed by legislative enactments, such as extra-crew laws, employers' liability and compensation acts, by the elimination of grade crossings, either in part or in whole at the expense of the carriers, and in various other respects."

Mr. Willard called attention to the fact that since 1910 wage payments by the railroads affected had greatly increased—largely as a result of mediation and arbitration proceedings—and that the award just announced by the arbitrators would give the conductors and trainmen $6,000,000 per annum additional. The effect of the so-called full-crew laws alone has been to increase the expenses of these carriers more than $4,000,000 per annum.

The railroads affected paid $54,494,171 in the shape of taxes for 1913, this being $11,579,187 more than for 1910. The three larger railroad systems paid in taxes $31,216,000 in 1913, this being $7,854,000 more than for 1910.

"In short, the railroads have felt the burden of the increased cost of living, like all other enterprises or individuals, but, unlike all others, have not been permitted so far to raise their prices or adjust their charges in recognition of that burden.

"The public," added Mr. Willard, "demands to-day a higher standard of service than ever before—all of which is reflected in the cost of operation. Further, the freight rates in effect in 1910 have not in the aggregate been maintained, but are in fact lower now than they were then.

"In addition to the actual reduction in rates," continued Mr. Willard, "the continuous decline in the value, that is to say the purchasing power, of money for a number of years past has had the effect of diminishing still further the burden of the rate to the shipper, while at the same time increasing the burden of the carriers. This influence, reflected in the higher cost of operations, has been world-wide, and has been recognized by rate advances recently made in England, Italy, Switzerland, Belgium, Denmark, Russia, Austria, Hungary, and other countries.

"Tendencies, which have been operating over a period of at least 10 years, have resulted in such steadily diminishing net returns that money invested in these railroads, because of the low average rates prevailing in so-called official classification territory, and for other reasons, does not earn the same return as money invested in other enterprises of similar kind or character.

"As a matter of fact money so invested during the last three years, taken as a whole, has earned no return whatever, and during the whole 10-year period under consideration has earned approximately but 2½ per cent.

"In view of all this, those responsible for the management of these properties would not be justified in continuing large expenditures of new capital for additional facilities and equipment, even if such capital were available at reasonable rates of interest.

"The problem in a broad and true sense affects all interests, and the outcome of this particular case—whichever way it is decided—will mark an epoch, because it will, in effect, very largely determine whether we shall as in the past continue to look to private capital and private enterprise for our transportation requirements, or be compelled finally to accept the only alternative possible."

Mr. Willard concluded by saying that he thought that the answer to the question of how the railroads were to obtain the new capital necessary was to be found in these words of the report of the commission in 1910, which he had already quoted:

"We should allow such rates which will yield to this capital as large a return as it could have obtained from other investment of the same grade. If rates formerly in effect have become insufficient, then higher rates should be permitted. Commerce and industry can not afford to wait on transportation facilities."

MR. DELANO'S REMARKS.

Mr. Frederick A. Delano, receiver of the Wabash Railroad, spoke for the railroads west of Pittsburgh and Buffalo, and east of the Mississippi River. He contended that the "whole situation" in the Middle West "is the fair measure of the reasonableness of rates in that territory, and calls for a very substantial increase in rates."

Mr. Delano accordingly directed particular attention to the case of a group of railroads with an aggregate mileage of 23,167 miles, among which were embraced the Big Four System, the Vandalia, the Nickel Plate, the Chicago & Eastern Illinois, Grand Trunk Western, Grand Rapids & Indiana, Pere Marquette, Chicago, Hamilton & Dayton, Illinois Central, Chicago & Alton, and Wabash. Referring to this group, Mr. Delano said:

"If this mileage is not influential in determining the reasonableness of rates, the prosperity, commerce, and development of the whole territory will be placed in jeopardy."

Mr. Delano pointed out that there were great differences in the conditions prevailing respectively in New England and also in the territory between New York and Buffalo, as contrasted with the Middle West. He stated that whereas in New England, including New York City, there were 1,389 people for each mile of railway and 889 for the territory east of Pittsburgh, but only 506 in the Middle West. The rural population in the Middle West was 46 per cent, as compared with 17 per cent in New England.

"This territory," said Mr. Delano, speaking of the Middle West, "was created largely by physical conditions and natural development and growth of population. Its numerous lakes and rivers, some of which form its boundaries, attracted to their borders the early settlements and cities, and in time came Chicago and St. Louis, its two chief centers of population. The territory is comparatively level, which facilitated railroad building, and as population increased railroads were constructed in all directions, the objective points being, naturally, lake and river cities.

"It is a well-known fact that in the development of that territory water competition has always been an important factor and that the railroads have promoted the growth of population and industrial developments by low rates. Again, railroad building at times has been in excess of the growth of the country, and caused abnormal competition, resulting in lower rates.

"This great network of railroads," continued Mr. Delano, "during the year ending June 30, 1910, earned $239,000,000, and during the year ending June 30, 1913, $275,000,000, or a gross increase of about $36,000,000; but in the former year the operating expenses and taxes were $182,000,000 and in the latter year $227,000,000, or an increase in expenses of about $45,000,000, resulting in a decrease in net revenues, after payment of taxes, of over $9,000,000, and in net corporate revenue of more than $16,000,000.

"These same roads during the year ending June 30, 1908 (which will be remembered as a panic year), earned $212,000,000, and during the year ending June 30, 1913, $275,000,000, or an increase of $63,000,000; but during the year ending June 30, 1908, the operating expenses and taxes were $165,000,000, and the year ending June 30, 1913, $227,000,000, an increase of about $62,000,000.

"Now, despite the fact that during that same period more than $175,000,000 were put into additions and betterments, the net income, after deducting operating expenses and taxes, showed an increase of only $800,000, while the net corporate income actually decreased about $8,000,000."

The figures for the first two months of the present fiscal year were even less encouraging, Mr. Delano said. The roads, too, were now confronted with the necessity of expending millions of dollars in the near future in the mere separation of grades in various cities, on which they will receive no adequate return.

"This circumstance, in view of the present conditions of the roads, presents a serious situation, which calls for prompt relief.

"It will be obvious from the evidence," Mr. Delano concluded, "that a 5 per cent increase in rates will not be adequate to meet the demands of the territory. As I have said, the rates in that territory, both freight and passenger, are the lowest rates prevailing in the United States, and the interests of the people of that rapidly growing and developing section of the country, to say nothing of the railroad companies, require in the near future a readjustment of the rates, both freight and passenger, to a basis which will enable that territory to have good railroads and the people to have efficient and adequate service and to progress measurably with the other sections of the country."

NEW YORK, *February 18, 1914.*

DEAR PRESIDENT WILSON: The business of the whole country is hanging in a balance waiting for its cue from the security market, which in turn is looking to the Interstate Commerce Commission to increase freight rates on the eastern railroads and thereby help to restore the credit of the latter which has been so greatly impaired. The railroads have a lot of notes to meet presently and a decision by the commission six months hence might as well be six years. Speedy action is necessary and a favorable decision most important and will be popular. Capital is very timid, but came out from its hiding very fast last month after your fine message. This month has witnessed a retreat, due to unnecessary hot-airing by one or two of the commissioners. Is it expedient for them to quibble with a few small shippers over minor details when the majority are waiting for relief? A favorable and prompt decision would start business booming, and if you can bring it about, you will make an awful hit. Until a decision is rendered business will continue in a state of lethargy.

Very truly, yours,

H. PRESERVED SMITH,
Republican, Montclair, ex-shareholder in New Haven, but a Wilson-Democrat Rooter.

OKLAHOMA CITY, *March 21, 1914.*

Hon. WOODROW WILSON,
President, White House, Washington, D. C.

TO THE PRESIDENT: I am writing you this letter in behalf of the steam railroads. Judging from all the financial journals, and also the commission's journals, it is time that the steam railroads of the United States got some attention in the way of an increase in freight rates. I believe that every interest, even including the shippers, would be benefited, for as soon as this is done confidence will return to the investors that must furnish money to the railroads, and that will simply mean that all the industries that are dependent on the railroads will be benefited, for the railroads must have money to get new equipment and sufficient money for betterments. I am satisfied that by and by this matter will receive attention and that the commission is satisfied that this increase should be made; but why do they hesitate? And I, among others, feel that it is up to you to make a suggestion that this matter receive early attention.

I am writing this letter strictly on my own initiative, and I do not own a single dollar's worth of steam railway securities, either stocks or bonds, but I write this letter simply to do what little I can to get this matter settled.

With best wishes for your success and the success of your administration, I am,

Yours, respectfully,

ANTON H. CLASSEN.

—

CHICAGO, ILL., *February 24, 1914.*

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

MR. PRESIDENT: In his talk here yesterday before the Union League Club, Secretary Daniels said that the people believed in you because your policies were right. There's no doubt about that, because they are more and more realizing the truth of that statement. But won't you keep up the good work and agitate with the Interstate Commerce Commission an immediate decision with regard to freight rates, please? As I see it, no other one thing means more to the prosperity of this country at this time. Besides, think of the tremendous number of people, employees, who are directly affected. The lawmakers can not continue to run the railroads as they should be run to best benefit the people, but the business men can. Give them the necessary breathing space and they'll make things hum.

Yours, truly,

F. J. MAXEY.

—

THE HARTFORD TRUST CO.,
Hartford, Conn., December 10, 1913.

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

MY DEAR SIR: You have doubtless forgotten the writer, but nevertheless we dined together, when you addressed the Twentieth Century Club in this city some years ago, at the time you were about to install a system of special tutors at Princeton, and we listened with great interest to your plans as you outlined them.

Just now the exigencies of the railroad situation in New England urge me to write you, calling attention to the critical state of affairs on behalf of the small investors, who are frightened at the outlook for their railroad investments and the business situation generally speaking, and are really selling their railroad stocks at great sacrifice because of what is considered to be the unjust attitude of the Interstate Commerce Commission toward the railroads. Urged to raise wages in order to avoid threatened strikes, and with promise of relief to be afforded by a slight increase in freight rates, they have been repeatedly disappointed and now face a situation desperate indeed.

It was hoped that your message to Congress might have contained some allusion to the crying need of the railroads in the East; but while it was a very scholarly production and gave a clear idea of your policy as regards Mexico, your opinion of the currency question, and some other important matters we looked in vain for a reference to the serious railroad rate problem which is so vital just now all over the country and especially in New England.

Almost without exception every important estate which has come into the trust companies hereabouts has contained some of what have been considered "first-class" investment railroad stocks, and in some cases trusts have been established with the distinct provision that these stocks must be held, if possible, until the termination of the trust. The result is that beneficiaries, in many cases widows, are suffering greatly reduced incomes, causing real hardship for people of no earning power. For many years such stocks have been held closely in families, and have been regarded by them as their choicest asset.

At present the railroads seem to be between the upper millstone of increased wages, which they have been forced to grant, and the lower millstone of the requirements of the Interstate Commerce Commission in reference to maintenance of equipment, improved signal devices, steel cars, enlarged terminal facilities, upkeep of roadbed, all properly for the safety and comfort of the public, but without permitting the railroads to obtain the necessary money to pay for these required improvements by a small advance in freight rates. This would be no hardship to the general public in view of the advantages gained, and would at the same time afford the investor a reasonable return on his money to which he is in equity entitled.

We have entered a period of business depression. A recession of the prosperity we have enjoyed is quite apparent, and, as a student of history, you must know that in the past the first impulse toward a better state of business in the whole country has been the resumption of the purchasing in volume of all sorts of needed supplies by the railroads. At the moment their lessened net receipts deprives them absolutely of the power to carry out the demands of the Interstate Commerce Commission, and has taken away their large purchasing power. The situation is, indeed, serious.

It seems to me that it is distinctly up to you, Mr. President, to urge the Interstate Commerce Commission to promptly grant relief before it is too late; and this may be the only thing which will prevent widespread and serious disaster in New England.

Will you not pardon this letter, which is of a personal character? And can we not hope for some sort of relief from your initiative in the matter which I have ventured to bring to your attention?

With sincere regard, and hoping you will be so good as to give me a personal reply, believe me,

Very truly, yours,

RALPH W. CUTLER.

NEW YORK, *March 25, 1914.*

Hon. WOODROW WILSON, *President.*

DEAR SIR: As an old New York merchant, retired from business, a lifelong Democrat, and supporter of the present administration, although taking no active part in politics, it seems to me not unfitting that I should write you in regard to the present condition of business. As I spend a good deal of time in traveling for pleasure, I come in contact and have opportunities for conversation with men in nearly all branches of business, and have a fair knowledge of the general condition. The New York Herald and other newspapers, prompted, doubtless, by patriotic motives, are endeavoring to create the impression that business at the present time is prosperous and satisfactory. This is true in some instances, but they are exceptional. There are, of course, some concerns that are prosperous even in dull times, and others that are unfortunate even when prosperity is general, and the aggregation of these cases and ignoring of all others makes a strong but misleading showing for the optimist or pessimist, whichever he may be. Now, the fact is that at the present time general business is very dull and unsatisfactory. Honest men differ as to the cause of this, radical protectionists attributing it to the reduction in the tariff, financial monopolists to the new banking bill, and business men almost unanimously to the nonaction of the Interstate Commerce Commission on the railroad-rate question. It seems to me that the latter view is the correct one, and, if I have correctly understood the published statements, your view is in the same direction. The basic conditions of the country are sound. The new tariff is in force, the new banking bill soon will be, and the country and business will quickly adapt themselves to the new conditions; but it is reasonable that merchants should hesitate about placing orders for large quantities of goods while the important question remains open, as to whether the railroads, with whose prosperity the general prosperity is so closely connected, shall be allowed to make reasonable profits I believe that you have the power and sincere desire to correct the existing evil which, if it continues much longer, will certainly result in serious disaster. A word from you will do it. The wheels of manufacture and commerce will be started on a new era of prosperity, and a Democratic President and a Democratic Congress will receive the credit that they will deserve.

It may be proper for me to add that my holding of railroad stock is too small to be of any consequence to me.

Yours, truly,

HENRY MARTIN.

14 WEST TWELFTH STREET.

—

THE PIEDMONT,
ATLANTA, GA., *March 7, 1914.*

HON. WOODROW WILSON,
President, Washington, D. C.

DEAR SIR: As an ardent admirer of our broad-gauged, liberal-minded President, who knows no East, West, North, or South, but one country, I am dropping him a line or two gathered by a very close-observing traveling man on the present railroad situation. My chief piece of information is that an impression is rapidly forming among traveling men, especially those who know the railroad business, that our Interstate Commerce Commission, if not checked, will bankrupt every railroad company in the United States, and along with them every company making railroad equipment. This commission is given credit for being honest, but it mistakes entirely the object of its creation, and honesty without ability where such vast interests are concerned is little better than ability and a disposition to graft. Ninety per cent of our deep-thinking, patriotic population favor the very best service in this country that it is possible to furnish in any other country, to both freight and passenger patrons, and they also emphatically favor increased rates to prevent our railroads from suffering in this respect by comparison with these in other countries, for since the organization of this above commission we have been going back rapidly. It is also a fact that Bull Moose and G. O. P. adherents are gleefully watching the balking, dilatory, narrow-minded actions and views of this above-mentioned body.

Yours, very truly, M. W. PRATT.

—

Mr. J. P. TUMULTY,
Secretary to the President, Washington.

MY DEAR SIR: Please accept my thanks for your very courteous letter of February 20. I also beg to inclose editorial from to-day's Commercial taking same position I did in my letter published February 19, which I send you, and my later one regarding "high cost of living" in issue February 21, copy inclosed.

My object in bringing this to the President's attention is twofold. Apparently no one has spoken for the railway employees, and the point I make, which is indorsed by editor of New York Commercial, is that cost of service and a reasonable profit to railways must be granted, not only in justice to the railways as well as employees, but because public service needs good and increasing facilities, which must be paid for out of earnings.

As the President is known to be striving for equity in all things and the railway interests only ask for this, I hoped my presentment of case might appeal to his sense of equity.

A few of my former contributions to press will show that I have always been trying to do public good, as he was and is doing. We railway men feel that we ought to be on an even keel with any others who are in public service.

Respectfully, H. S. HEYDON.

—

THE CHAZY MARBLE LIME CO.,
Chazy, N. Y., February 25, 1914.

Secretary TUMULTY,
Washington, D. C.

DEAR SIR: I beg leave to call your attention to the inclosed copy of letter written the New York Tribune to-day in reference to the rate question and the action of the Interstate Commerce Commission. If you will be good enough to say to President Wilson that the shippers are very much in earnest as to not allowing the railroads to increase their rates, I would be obliged to you.

As proof positive that the stock exchange and what they stand for are the parties most interested, you only have to glance at what happened there yesterday when it was supposed that the President had allied himself with the railroads in their demands for an increase in rates. The incomes from the carriers have been diverted to other uses

than revenues, and we do not believe it is necessary for their further income to have more money to divert, which they will of course do. There never will be an end to asking for more, and an increase of rates has been an annual thing up to 1911 for many years, and this increase now they ask they do not treat in a candid way, but come out with tariffs advancing from 5 per cent to 17 and ask them to be allowed. Higher cost of living must be the outcome of an increase in freight rates, and to have the speculative world dictate this is not right. Business that produces should have the first and last say. Actual facts as to rates are not brought out to the public as they should be. Newspapers pervert the actual facts. They should not be allowed to influence.

Yours, respectfully,

C. H. JONES.

—

CHAZY, N. Y., *February 19, 1914.*

EDITOR NEW YORK TRIBUNE,
New York.

DEAR SIR: I notice your editorial in the Tribune of the 17th, in which you seem to rant over the fact that the Interstate Commerce Commission has acted in good faith with the shippers and further suspended a lot of tariffs that the carriers wished to advance.

You do not mention that a number of tariffs that the carriers did wish to change, and been so allowed. Were you in error in this, or was it intentional to mislead your readers?

If you do not have the list of these tariffs, you can get them by applying to Secretary George B. McGinty, and you will find that, with few exceptions, that every road has been allowed a number of changes. The New York Central, for instance, has seven tariffs which they desired to change allowed, and so on.

The New York, New Haven & Hartford has none, for the very obvious reasons, no doubt, that they now have the highest rates per mile of any railroad in the East; so much so that their rates are ridiculous as compared with other roads.

I do not believe you should place before your readers statements unless you give both sides, and if there are any roads that need more revenue, why not say revenue, and why not ask the people to stand for an advance in passenger rates? The freight business has been advanced and advanced, and it is time business was let alone and allowed to settle down. Bankers, and also brokers, are asking for advances in rates, as they are peculiarly interested. Do you want to see higher prices? If you do, say so, and then you give a reason for the advance in rates of freight.

Just be fair and give the news as it comes out of the mill—all of it.

Respectfully,

C. H. JONES.

—

MARKS TAILORING CO.,
CHICAGO., *November 26, 1913.*

The President the Hon. WOODROW WILSON,
Executive Mansion, Washington, D. C.

DEAR SIR: I beg to submit the inclosed copy of a letter forwarded to the Interstate Commerce Commission. The writer is and has been a traveling salesman for the past 18 years and has never found business so stagnant as it is at present. Every merchant that I call on tells me that business would at once pick up if the railroads were allowed a raise in freight rates. Every citizen from the smallest country village to the greatest city profits when the railroads are prosperous, and they suffer when the railroads retrench. I pray you to use your influence in giving the railroads what they want; a 10 per cent increase would not be too much.

I can clearly show in a hundred different ways that it is the shipper who is robbing the consumer and certainly not the railroads; on the contrary, the latter are the greatest friend the consumer and the farmers have. Remove the railroad tracks from the farmer, and his cattle and farm produce and his land are worthless. I cite some cases in point in the inclosed copy.

A thousand thanks in advance for any considerations, I have the honor to remain,

Yours, truly,

SIG. NIEDERBERGER.

—

CHICAGO., *November 25, 1913.*

The honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I wish to call to the attention of your honorable body the importance of granting the railroads a substantial increase in freight rates. This country is at present suffering the greatest kind of a setback due to the fact that the railroads, which are the great upbuilders of the country, are being discouraged and stifled by your constant refusal in permitting them to raise their rates. If it were not that our railroads are managed by the greatest brains the United States possesses, they would all be bankrupt long before this. No business could ever withstand such hardships and such constant increase of expense caused by arbitrary legislation without being permitted to raise the only merchandise they sell, namely, transportation. If a wholesale concern advances the price of a suit of clothes 50 cents per suit, being forced to do so through paying more for labor, or rent, or taxes, or any other item (but never on account of freight rates as they are the very least to be considered) the retail merchant at once raises the price of that same suit $2; mind you, the latter is already making from 50 to 100 per cent not counting the $2 raise in addition, yet the freight charge does not enter into this at all, as he does not pay it, i. e., in the city of Chicago there are some of the greatest wholesale and retail establishments in the world; the retail merchant receives his merchandise delivered from the wholesale house in said city without freight or even cartage charges, yet he marks the price according to the attractiveness of the style and pattern, not even thinking of the freight charge, as it is too infinitesimal. Come with me and visit the largest retail establishments which made a net profit of $17,000,000 last year, and I will demonstrate to you that some of their merchandise is sold at a hundred per cent profit where no freight or even cartage enters into the transaction. I will take you into the wholesale houses incognito and we can follow the merchandise right into the retail establishment in the same city on almost every commodity where the latter pay no freight or even cartage charges, yet they charge just as much or even more for the merchandise. I quote these instances solely for the purpose of showing that the freight charges play no part whatever so far as the consumer is concerned and the innocent are forced to suffer through a misunderstanding of the other.

Railroad employees are, on an average, the best paid in the country, and the railroads are willing that this should be the case, but they can not maintain this standard of wages much longer unless they be permitted to raise their rates in order to keep up with every other demand made upon them. It has been proven that the very retail concern which made a net profit of $17,000,000 last year has grown-up persons in its employ at $4.50 per week. I dare anyone to discover such an appalling poorly paid person of a similar age and class employed by the railroads.

What about the investors, the thousands of the investing public who furnish the money with which to build the railroads and who have every right to expect a reasonable return on their investment—say, 7 per cent per annum? Some of the private mercantile companies make from 33 to 400 per cent, and they are of no benefit to the country whatever. We could get along without the merchant, if we had to, but we could not get along without the railroads; yet the merchant is allowed to charge what he pleases, while the other, the railroads, are driven to pay the advance on everything they use and are prohibited from raising their rates. When the railroads are prosperous everybody is prosperous, from the humblest section hand up to the richest citizen, and that embraces the entire American people; but when the railroads are hit everybody along the line is hit with them.

The railroads promise new stations, better roadbeds, heavier rails, double tracking, special safety devices, paying their employees higher wages and giving them shorter hours, steel cars, additional trains, electric-lighted trains, and the investor might receive some benefit through increased dividends, and all these expenditures find their way back directly to the laboring classes. They will be the greatest beneficiaries if the increase in freight rates is granted. Do you find any such promises from the shippers? No; not a single one; they promise nothing. Why, then, stifle the wheels of progress so beneficial to every rank and file and allow the shippers to have things their own way, which is detrimental, from the humblest to the highest, who promise nothing in return. I therefore petition your honorable body to at once grant a substantial increase to the railroads, thus restoring prosperity for all time to come and give the railroads a fresh start in life. You will quickly see the rest of the business houses will benefit greatly through the railroads' prosperity.

Most respectfully submitted.

S. NIEDERBERGER.

—

CLAY, ROBINSON & CO.,
Chicago, January 16, 1914.

President WOODROW WILSON, *Washington, D. C.*

DEAR SIR: I have met a great many people, including bankers and stockmen from all over the western country, during the past three months. Of course, as you are aware, our connection with bankers and stockmen all over the country gives us a chance to get in touch with a great many people, and while I have met a few that are in favor of holding the railroads down as much as possible, a great many of the leading bankers and business men have expressed themselves as saying that they thought the railroads should have a show. As you are aware, they build up the country and give employment to thousands of men. If the railroads are throttled, we all know what that means, and as you know, we can not very well do without them.

We are not interested in railroads, and the object of my letter is to place before you as far as I know the actual facts.

In the past railroads have had very little show with the Interstate Commerce Commission. Everything they have asked for has been sidetracked. Personally I believe that they have been treated very badly.

Most of the gentlemen I have talked to are highly pleased with your administration and believe that you are going to serve the people well. Of course, as you know, I hear many things that would never reach your ears, and have taken the liberty of sending you this letter for your personal consideration.

We have about 25 houses and banks scattered all over the West, and, as said above, are in a very fair position to feel the pulse of the people.

Just the other day I was in the Chicago Club, which is one of the leading clubs, and heard some very complimentary remarks about you which pleased me very much.

Hoping the new year will bring you and yours much happiness and continued prosperity, and with kind personal regards, I am,

Yours, truly,

CHARLES O. ROBINSON.

—

DEEMER STEEL CASTING CO.,
New Castle, Del., January 21, 1914.

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

DEAR SIR: In the interest of idle humanity, I take pleasure in writing you to use your personal influence to secure an increased rate for the benefit of our railroads.

I feel confident that they should be allowed at least 7 per cent increase to enable them to improve and equip their roads as necessity demands. Now that they can not float water and blue sky, they should be allowed to legitimately charge sufficient to meet their coming requirements.

Their roadbeds are in deplorable condition. They need thousands of tons of new tracks and other necessary supplies.

Their freight cars in a great many instances are fit for the scrap pile; railroad ties, even along their main lines, are so rotten that the spikes will not hold, and it is only due to Providence that we do not have more serious wrecks.

For your information I attach actual data, showing the working condition of a few steel-casting plants located between Harrisburg, Pa., and New Castle, Del. This condition exists due to the falling off of railroad-equipment orders.

From this comparison you can readily see that it is only a matter of time, unless conditions change, which is impossible until the railroads begin to place orders, and when they do you will see, inside of three months, spasmodic jumps, and all metal industries, north, south, east, and west, will be hustling again, and other lines will naturally follow suit, and Democracy will be given credit that is due.

Thanking you in advance for careful consideration,

Very truly, yours,

S. S. DEEMER.

ORANGE COUNTY, N. Y., *January 6, 1914.*

MR. TUMULTY.

DEAR SIR: You being a man of sense, may I ask you to call the President's attention to the slowness of Interstate Commission in regard to the request of the railroads in regard to allowing the railroads to charge 5 per cent more on freight. They really should be allowed 10, as the increased cost of all they have to buy and increased wages of their men is more than that. If not acted on soon, some of the roads will have to go into the hands of receivers. That will create a very bad state of things, if not a panic, and won't be any credit to the administration. The present commissioners are fossils, and I hope the President will find a way to get rid of them. I am not interested financially in the railroads, but as a decent citizen want to see justice done, as I go on the roads often and see their needs. Every business man I meet agrees with the above, and please read this to the President soon as he gets back to Washington. I am an old Democrat.

Yours, truly,

AYMAR VAN BUREN.

—

CHICAGO, *January 6, 1914.*

Hon. WOODROW WILSON, *Washington, D. C.*

MY DEAR SIR: As a business man I wish to congratulate you on the recent legislation, namely, the tariff bill and currency bill.

On the assumption that the views of business men all over the United States will be of assistance to you, I take the liberty of expressing the hope that you will continue the good work, and as speedily as possible assist in granting the railroad companies a reasonable advance in rates. Such action will tend to start things moving more rapidly than anything else which could occur.

The railroads are certainly entitled to some consideration, and a 5 per cent advance over present rates will not tend, in my opinion, to work a hardship upon anyone, nor should it tend to increase the cost of living, as the actual increase in the value of any article, due to a small advance in freight rates, will be so slight that it should not affect the present selling price to the consumer. The manufacturer, jobber, or retail dealer can absorb the slight difference in freights without feeling it or affecting the selling price at all if they will do so.

On the other hand, a 5 per cent increase would enable the railroads to purchase equipment which is necessary and to better maintain their present equipment and lines.

All that is now needed in the business world is to "set the wheels moving," and this will accomplish it, as I have before stated, in my opinion, more rapidly than anything else. I also believe this is in accordance with your policy.

Before closing I desire to say frankly that I am a Republican and always have been, and I am equally frank in saying that the conservative course and policy which you have inaugurated is highly satisfactory to the majority of business men, whether Republicans or Democrats; in fact, I have heard any number of "dyed-in-the-wool" Republicans express the statement that if there was an election to-morrow you would have their support.

Thanking you in advance for your consideration and apologizing for having taken up so much of your valuable time, I am,

Yours, very respectfully.

NORTH WESTERN EXPANDED METAL CO.,
HOWARD W. FOOTE, *General Manager.*

—

DENVER, COLO., *February 12, 1914.*

His Excellency President WILSON.

MY DEAR SIR: As owner of 15 shares of New Haven Railroad I receive no dividend. As I understand it, this is because the Interstate Commerce Commission will not let the road increase its freight rates.

I notice Commissioner Prouty, with the Massachusetts railroad commission, did not grant the Boston & Maine Railroad but a part of the increase of rates they found it needed.

I consider the settlement, by Government direction, of the Delaware & Hudson strike a disgrace to the United States.

As a citizen, taxpayer, and voter I very respectfully demand that my rights as a small investor be protected along with unionism by appointment of men who have guts to enforce as well as brains to see. I ask that freight rates be increased.

Very respectfully,

ROBERT W. JOHNSON.

—

[Telegram.]

CHICAGO, ILL., *January 10–11, 1914.*

The PRESIDENT:

We respectfully ask that you use your influence in securing prompt and favorable action by the Interstate Commerce Commission on the subject of increase in railroad rates now before that body. By granting this increase railroads can start the work of rehabilitation of their properties, which will restore conditions of activity in all industries where dullness and absolute shutdowns are existing to-day.

SELLERS MANUFACTURING CO.

(Normally employing 450 men per day, operated November and December 20 per cent.)

—

[Telegram.]

CHICAGO, ILL., *January 12, 1914.*

The PRESIDENT:

Respectfully urge that you use your influence toward accomplishing early action by the Interstate Commerce Commission favoring a uniform advance of 5 per cent on all railroad rates in order that the urgently required program of rehabilitating railroad properties may be undertaken and activity in all industries thereby stimulated. We normally employ at our Chicago Heights (Ill.) plant 675 men. We are now employing at reduced hours 550 men.

EDGAR ALLEN AMERICAN MANGANESE STEEL CO.

—

[Telegram.]

CHICAGO, ILL., *January 10–11, 1914.*

The PRESIDENT:

Most respectfully urge that you use your kind influence in bringing about an early action by the Interstate Commerce Commission in favor of an advance of all railroad rates uniformly 5 per cent so that the much-needed work of rehabilitation of the railroad properties can be undertaken and restore conditions of activity in all industries where now dullness and increasing recessions exist. Normally employing 400 men fifty hours per week, now working 230 forty hours per week.

AJAX FORGE CO.

[Telegram.]

NEWCASTLE, DEL., *January 12, 1914.*

The PRESIDENT, *Washington, D. C.:*

Respectfully urge that you use your influence toward accomplishing early action by the Interstate Commerce Commission favoring a uniform advance of 5 per cent on all railroad rates in order that the urgently required program of rehabilitating railroad properties may be undertaken and activity in all industries thereby stimulated. We nominally employ at our Newcastle (Del.) plant 270 men. We are now employing at reduced hours 160.

EDGAR ALLEN AMERICAN MANGANESE STEEL CO.

—

[Telegram.]

ELGIN, ILL., *January 13, 1914.*

The PRESIDENT, *Washington, D. C.:*

The Elgin Commercial Club, with a membership of nearly 500, and representing the manufacturing and mercantile interests of Elgin, Ill., by a unanimous vote of its board of control, indorses the proposed uniform advance of 5 per cent on business originating or destined to points in official classification.

E. D. HOWELL,
Secretary of Elgin Commercial Club.

—

NEW YORK, *February 15, 1914.*

To the Hon. WOODROW WILSON,
President, Washington.

SIR: I take the liberty of suggesting that while Federal commissioners haggle with the railroads over an insignificant advance, which even the shippers admit is justified, and ex-commissioners defend a useless waste of public funds almost equal to the sum the commission is quibbling over, the United States is drawing toward a crisis in its transportation affairs.

It would seem that nothing short of our President's strong hand can correct in time the small-caliber procrastination which must sooner or later spell untold discomfort and losses to his constituents, who are all patrons of the emaciated railroads.

Our Federal Government, including the Interstate Commission itself, is still far from perfect; but would any sane man suggest the holding up of necessary appropriations until perfection is reached?

Respectfully, yours,

JOHN A. HULL.

—

BRIDGEPORT, CONN., *March 22, 1914.*

President WILSON, *Washington, D. C.*

DEAR SIR: Mr. B. C. Forbes, in the Sunday American of 22d, as much as says that his words have influenced you to the extent that

you now favor, or, rather, will exert your influence with the Interstate Commerce Commissioners in behalf of the railroad companies to permit the increase of rates as per their request.

Now, Mr. President, I do not believe everything I see in the newspapers; however, the statement has been made several times in the past that you have taken this attitude.

No doubt a great deal of influence is being brought to bear to influence you in favor of the railroads, while we who will have to bear this extra burden at this time have no one to speak for us. We exerted what influence we had, the past national election, hoping that the same would be sufficient to prevent further gouging by the large corporations in favor of their stockholders.

The railroads complain that they will not be able to pay dividends. But the man in the street is damn glad if he can meet living expenses.

Yours, truly,

F. A. POST.

—

LEESPORT FURNACE CO.,
Philadelphia, February 16, 1914.

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

MY DEAR SIR: We hear this a. m. that the Interstate Commission has put off the consideration of an increase on freights to the railways until next September. While the iron furnaces have to pay freight on 5 to 6 tons of material for every ton of iron we make, we are willing to pay an advance in freights, for there will be no resumption of business unless railways have relief in the way of income. You or the Interstate Commerce Commission or any of your Cabinet can buy our furnace at 50 cents on the dollar for what it costs to build, if railways do not get immediate relief.

Yours, respectfully,

LEESPORT FURNACE CO.,
P. W. KIEFABER, *President.*

—

OGDENSBURG, N. Y., *February 17, 1914.*

WOODROW WILSON,
President, Executive Office, Washington, D. C.

DEAR PRESIDENT: As a delegate to the Baltimore convention I did what I could at the proper time to bring about your nomination. Subsequently I joined the committee of which Mr. Morgenthau was at the head, and during the canvass paid my share of the expenses and gave such time as I could toward bringing about your election. This is no more than any good citizen or Democrat should do, and I merely mention it in this letter to indicate to you that I do not feel I am impertinent in writing this communication to you.

I am very glad to be able to inform you that the people of northern New York, irrespective of party, are well satisfied with your administration, and that the Democrats unanimously commend your action in the great work of enacting into law the tariff and currency bills. There is no doubt but that such legislation caused considerable uneasiness in the commercial world and I believe business has slowed down to some extent. It is clear to my mind that if the Interstate Commerce Commission would grant the petition of the railroads and allow them to raise freight rates the wheels of industry would be humming and prosperity would set in at once. They cover the entire continent and everybody knows that the greatly increased cost of labor and material of one kind and another which it is necessary for them to use, has caused many of them to extend their credit to the limit. I feel that just at this time a little encouragement should be given, and even if it should turn out later on that here and there freights should be cut down, it is very easy to accomplish what is right in that direction. What we want now is to remove the hesitation which exists, and in my opinion 24 hours after an order is made allowing them to increase their freight rates thousands of orders would go forth to the various manufacturing houses of the country. I sincerely hope you may be able to bring about this much needed action.

Hoping you may soon recover from your severe cold, I am,

Very truly, yours,

THOMAS SPRATT.

—

PITTSBURGH, PA., *February 18, 1914.*

Hon. WOODROW WILSON,
President United States, Washington, D. C.

MR. PRESIDENT: Again, may I, an old, life-long Republican, congratulate you on the stand which you have taken in regard to hastening decision on freight rates, and I do hope that you will urge the granting of an advance, for while I do not wish to defend the railroads, their stocks have gotten into the hands of widows and orphans, and it does not seem fair to have their income so depleted.

In time the law will no doubt reach some of the rascals, but I think the higher law of their own feelings will hasten many a crooked financier's death, and I think we have enough safeguards to feel that the future financing of the railroads will be done on a just and honest basis.

I am frank to say, with a great many other Republicans, we hope you will keep your splendid work up, and that we may have the honor of voting for you at the next election.

Again wishing you every success in straightening this dear, old country of ours out and getting it on a good basis, I have the honor to remain,

Very truly, yours,

C. A. PAINTER.

—

CHICAGO, *February 18, 1914.*

To the PRESIDENT, *Washington, D. C.*

I am simply writing to you as an humble voter in the Democratic Party and as one who has long been one of your ardent supporters since you first drew public interest and attention as president of Princeton University.

I have no influence whatsoever, save in my group of young men friends and acquaintances (am a young man myself of 29 years), and am no politician, but am anxious indeed to see you and your administration succeed and continue your brilliant record of constructive work which has marked your first year as President.

I think you will agree with me that the first thing vitally necessary is to hasten the return of prosperity, which has already started to return, and the thing which will hasten that return more than anything else at present is the granting of the increase in freight rates to the railroads. Millions of people and workers were given a bitter jolt yesterday in the announcement of the postponement of the commission's decision until September 12. Now, I take it that either the railroads should have the increase or they should not, and the quicker they and the country know the fate of this rate case, the quicker all business will adjust itself to conditions, be the decision for or against. If the railroads are not to have the increase, for goodness sake tell them so soon, for nothing hurts business like uncertainty.

What is to be gained by a postponement of the decision? In fact, yesterday's announcement of same is already working damage to business.

The country and public opinion is with you, Mr. President, and I am sure that the country hopes and expects that the railroads may be given this increase, small as it is.

We want to see you have another term as President, and I hope that you will not commit yourself as accepting the one term plank in the party's platform. A platform is not binding.

As soon as you can, don't you think you had better make a few trips out West and let the people see you? Chicago was greatly disappointed on hearing yesterday that you are not coming here next Monday and have declined the Union League's invitation. I think it would have been to your interest to have come.

With best wishes for your success in everything, and with the hope that you will take a hand in this freight-rate question.

Respectfully,

E. V. COMRAY.

—

WARRENTON, VA., *March 21, 1914.*

To His Excellency WOODROW WILSON,
President of the United States of America,
Executive Mansion, Washington, D. C.

MR. PRESIDENT: I have been a Democrat all my life and have been active on the firing line for 40 years; always in every battle in the front rank; and I have never taken the liberty before to write to a President on any question, but I do consider conditions are such that I am justified in writing you now.

I wish to urge upon you the necessity and demand from a business standpoint that the 5 per cent increase in freight be allowed the eastern railroads as soon as it can be done. I think they are entitled to it, and I think people at large, eliminating a few fanatics and some laboring people, will be very glad to see the rate granted.

I am not a railroad attorney, and never have been; I have never owned a railroad bond or a share of railroad stock in my life; I am hardly ever out of a case of some sort against the railroad; I am under no obligations of any kind to any railroad on earth or any corporations, or anybody else, as for that; but I believe in fairness and justice, and I think railroad corporations are entitled to it as much as anybody else, and a great deal more than some of these confounded labor unions, which are gotten up for the purpose of holding up corporations.

Recall the strike or threatened strike of the engineers and conductors of western railroads last fall. These men get from $200 to $300 per month, according to work done, and yet they demanded 20 per cent increase in wages, saying they could not live unless they had it; and when the railroads ask that this increase of 5 per cent or something similar be presented at the same time to the board of arbitration, they objected, and the objection was sustained.

Now, the idea that the conductors and engineers could not live on the $2,500 or $3,000 is not true, and it is a plain case of holdup, and same was granted.

The bricklayer, the plasterer, the carpenter, the painter all get from $5 to $8 per day, according to their ability, yet they have the audacity and cheek to go on a strike demanding increase of wages upon the ground that they need it. It is not true.

Now, in this contest between labor and capital, representing about 30 per cent of the United States, no consideration is ever given to us, the 70 per cent of population, which is known as the middle class and conservative. We catch it both ways. Take the coal operator, for example; he strikes for higher wages. It is granted. The coal-mine owner raises the price of coal to meet the increase of wages of the coal miner, but we, the middleman, representing 70 per cent of the population, have to pay for this increase without any increase in our wages.

Now, as one of the middle and conservative voters of the United States, I ask that this 5 per cent increase in freight rates be granted the eastern railroads. I know I am voicing a large per cent of the conservative people in this country (not radicals). It is upon those people that you have got to depend upon and look to to protect the Constitution and preserve what is right and proper and high and honorable. In my opinion the radical is a fanatic, practically crazy, just as I think the real old ironside standpatter is a fossil and imbecile.

I am a conservative progressive. I am a Wilson Democrat, because he is always guided by high and honorable motives and with the love and the interest of his people at heart and in view.

I came out for you as President in November, 1910, just after you were nominated for governor of New Jersey and elected, but before you took office, and I have been for you ever since. I write this so that you may see that I am not trying to curry favor with you.

This letter may not be given any weight by you, as you may not know who I am, but if you wish to know, Hon. Gov. Henry C. Stuart, Senator T. S. MARTIN, Hon. CARTER GLASS, Hon C. C. CARLIN, in fact, any man in the State of Virginia over 45 years old knows me and knows who I am.

I preceded you at the University of Virginia just two years. I left there in 1876, and I think you went there in 1878. My college mates and friends were Gov. Stuart; Hon. Thomas Nelson Page; Charles Dabney, president of the Cincinnati University; Alfred P. Thom, general counsel for the Southern Railway Co.; Armistead C. Gordon, of Staunton; and a host of others, and they are all still my intimate friends.

Respectfully,

GRENVILLE GAINES.

—

THE L. B. SOUTHWICK CO.,
Boston, Mass., March 20, 1914.

Secretary TUMULTY, *Washington, D. C.*

DEAR SIR: I hope it will meet your approval to allow President Wilson to receive the inclosed.

Have talked with many business men, and they all allow that if anything costs more you have got to get more for it or go out of business, and there is no question about the cost of running a railroad at the present time.

Yours, very truly,

M. C. HALLETT.

THE L. B. SOUTHWICK CO.,
Boston, Mass., March 20, 1914.

President WILSON, *Washington, D. C.*

HONORED SIR: Inclosed letter, received by me, expresses the opinion of all thinking business men.

Railroads have all been paying more for equipment, salaries, supplies, and for general expenses, and their income is no larger, owing to the fact that they are not allowed to charge more for freight. They should be allowed at once to have the privilege of at least a 5 per cent increase—this to apply to all roads.

The above increase in freight rates would change the entire complexion of business conditions in this country and put to work hundreds of thousands of idle men.

The tariff and currency bills were of great value to the country, but this allowing the railroads a just advance in freight rates will do more good than both the others.

Yours, very respectfully, M. C. HALLETT.

—

PICTORIAL REVIEW,
New York, February 19, 1914.

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

YOUR EXCELLENCY: I take the liberty of inclosing herewith the editorial page of Leslie's Illustrated Weekly of the 19th instant, and respectfully call your attention to the article entitled "Can it last?"

In my opinion, the substance of this article is gospel truth. Personally I am not interested in railroads or in their management or control, but as a publisher and business man, and with a knowledge of present business conditions throughout the country and in touch constantly with nearly 10,000 merchants, am firmly convinced that unless the much sought for relief is granted the railroads by the Interstate Commerce Commission, and that without further delay, a business crisis is inevitable.

I know and feel that the commercial world have faith in your good judgment and sincerity of purpose; yet they demand that you should compel prompt action.

This commission can determine the question now as later. You are earnestly asked to lend your influence toward a speedy settlement of a question that involves not alone the railroads but the industrial corporations as well. With highest esteem,

Yours, very truly, WM. P. AHNELT.

CAN IT LAST?

We are a hopeful Nation, but "can it last?" The army of the unemployed grows larger every day. The murmurs of discontent increase. Every report of the reopening of a factory is hailed with joy. Business drags in every line of industry, excepting in our legislative halls, where demagogues are working overtime. The splendid optimism of the American people sustains them in this trying hour.

The Federal Government has taken possession of the railroads. It fixes their tariffs, it decides what appliances they must use, and what wages they must pay. State public-service commissions pass upon the securities that can be issued, so that the stockholders have nothing to do excepting to elect the directors and foot the losses.

Everybody knows that the halt in the iron industry and allied branches of trade is due to the lack of orders customarily received from the railroads. The increase in the cost of labor and material, coupled with the slackening in business, has crippled the railroads everywhere. Dividends are being passed or reduced, economies of the strictest kind are being enforced, yet net earnings continue to show an alarming decline. In this crisis the failure of the Interstate Commerce Commission to act is an outrage that capital and labor should resent at once.

The railroads ought to spend, and would spend, $3,000,000 a day for new rails, cars, and other equipment if they had the money. They should spend a billion dollars a year for the next five years. Three-quarters of this would go to labor. Do the workingmen of this country realize what this would mean to them? Do shopkeepers realize it? Do our manufacturers comprehend it? If the Interstate Commerce Commission will not act, let us have a commission that will. The exigency is urgent. The country demands it. Let President Wilson act.

The railroads have been brought to the verge of bankruptcy. Must they repeat the painful experience of 1893, when three-fourths of them went into the hands of receivers? Worse still, the politicians and demagogues who are responsible for this crisis in the affairs of the railroads now propose to try the same tactics on the industrial corporations.

We repeat, "We are a hopeful Nation, but can it last?"

—

NEW YORK, *March 22, 1914.*

The PRESIDENT OF THE UNITED STATES,
White House, Washington, D. C.

Mr. PRESIDENT: The continued depression in business is making the opportunity for the dangerous elements in our large cities to draw into their ranks great numbers of the "employable unemployed," who are becoming desperate.

I understand that in all the large cities there is increasing activity among the would-be overthrowers of the Government, their numbers becoming greatly augmented.

The imperative need of the situation suggests that as the pressing needs of the railroads are the greatest present deterrent force to the prosperity of the country, the 5 per cent increase asked for be granted without further parley or delay.

If later consideration, when all conditions favor it, shows that revenues can be adequately increased from other sources, let the commission then reduce the rate.

Very respectfully, yours,

J. GRANT PEASE.

N. B.—I inclose a clipping from to-day's New York Times.

—

ANARCHISTS SPREAD ALARM IN FIFTH AVENUE—ONE THOUSAND STRONG, THEY MARCH UP THAT THOROUGHFARE SINGING THE "MARSEILLAISE"—CURSE HOMES OF THE RICH—CARRY A BLACK FLAG INSCRIBED "DEMOLITIONE," STOP TRAFFIC, AND JOSTLE SHOPPERS—NO ARRESTS.

With a black banner waving at the head of their column a thousand anarchists, men and women, marched up Fifth Avenue from Madison Square to One hundred and seventh Street late yesterday afternoon. Alexander Berkman, who served a prison term for attempting to kill Henry C. Frick in Pittsburgh some years ago, led the march with a woman on each arm. Behind him came Emma Goldman, Carlo Tresca of the I. W. W., and others, who had aroused their followers to frenzy by attacks on law and order at an open-air meeting in Union Square.

Flaming red letters on the black banner spelled the Italian Anarchists' slogan, "Demolitione." From this word, which expresses the spirit of destructive revolution, the anarchist marchers took their cue. Keeping in a compact mass they jostled all other pedestrians from the sidewalk on the east side of Fifth Avenue, sending shoppers, club members, and other afternoon walkers on Fifth Avenue scurrying into doorways or into the street.

They defied the traffic regulations at important crosstown streets, pressing forward through lines of trolley cars, automobiles, and trucks. At Forty-second Street Berkman and some of those with him stepped directly in front of a trolley car to whose motorman a traffic policeman had given the order to proceed, and held it back, shouting threats at the motorman. The whole line of anarchists, more than a block long, passed before traffic could be resumed. At Eighty-fourth Street a motor car turned east from Fifth Avenue. Berkman barred its way, and one of the women with him spat three times at one of the women in its tonneau. Men and women in the marching column jeered at those in the automobile as they passed.

CURSED THE HOMES OF THE RICH.

As they marched the anarchists sang revolutionary songs. These were punctuated with maledictions upon the homes of the rich that they passed. Their wild cries alarmed servants who had gathered in the windows of Fifth Avenue mansions, including those of ex-Senator W. A. Clark of Montana and Andrew Carnegie, two of the most conspicuous homes fronting on Central Park.

Just ahead of the column, watching for some outbreak of violence which would call for police action, marched Detectives Gildea and Gegan, who had been keeping the revolutionary elements under surveillance since the beginning of the Tannenbaum demonstrations against the city's churches. At Sixtieth Street the detectives learned that the marchers were on their way to the quarters of the Francisco Ferrer Association, at 63 East One hundred and seventh Street, and then telephoned to police headquarters to have a cordon of police waiting for them there.

The mob had gathered in Union Square early in the afternoon. A park policeman, to whom they applied for permission to use the square for holding a meeting, asked Berkman and Miss Goldman for their permit. When they could show him none, he ordered them out of the square.

Lincoln Steffens, a magazine writer and president of the Free Speech League of America, interceded for them, and the policeman finally said he could not interfere if the meeting were held north of the curb line at the uptown end of the square. Steffens then left and the speaking began.

EMMA GOLDMAN STIRS THEM UP.

Miss Goldman not only outdid her own reputation as an incendiary speaker but went further than the I. W. W. agitators in urging her hearers to take what they needed for a living. The hoarse yells of men mingled with the shrill screams of women as she declaimed:

"Your toil made the wealth of the Nation. It belongs to you. The rich are keeping it from you. The officials do nothing to help you.

"March down to the mayor. March down to the police. March down to the other city officials. Make them tell you what they are going to do to give you food and shelter.

"Go to the churches, go to the hotels and restaurants, go to the bakeshops and tell them they must give you something to keep you from starving."

Tresca and Berkman spoke along similar lines, and worked the crowd up to a high pitch of excitement.

Although they had no permit to parade the anarchist leaders called on their hearers to fall in line behind them and march to the rooms of the Ferrer Association, where they would receive food on the proceeds of a collection which some of the agitators had taken up from passersby. The paraders started up on the east sidewalk on Broadway, elbowing the home-going crowds out of their way, and at Twenty-third Street Berkman led them into Fifth Avenue.

"MARSEILLAISE" IN MANY TONGUES.

Up to that time the crowd had been singing and shouting in a half hysterical strain, but when, at Thirtieth Street, a man stepped up to the head of the column and unfurled the black banner pandemonium began. The straggling column, which had been reinforced by benchwarmers in Madison Square Park, gathered itself compactly together, locking arms and driving all other persons from the sidewalk. A woman started to sing the "Marseillaise" in a high key. Other women took it up. The men joined in, singing the words in half a dozen foreign languages. From then on the column never ceased singing or shouting.

When the marchers arrived at the Ferrer Association they found a dozen policemen from the East One hundred and fourth Street station awaiting them. They filed in and soon the Ferrer Association attendants spread a meal for them. In addition to food, the Ferrer management passed out beer, cigars, and cigarettes. The association announced that 250 of the party would be sheltered in the building over night. The overflow moved away from the association quarters in groups of 10 to 20 during the evening.

Max Appel, Percy Marmor, and other I. W. W. lieutenants of Frank Tannenbaum, who have been holding nightly meetings in Rutgers Square since their leader's arrest for invading St. Alphonsus's Roman Catholic Church, were with the marchers. They said that the anarchistic demonstration had not been organized by them and that few of their followers were in the column which had marched up Fifth Avenue. During the parade a number of the Ferrer Association workers distributed anarchistic literature.

Detective Gegan said: "It is evident that the men downtown do not recognize the seriousness of this movement. We who follow them from day to day see that they are gaining strength, and unless they are checked serious consequences may result."

—

NEW YORK, *March 30, 1914.*

Hon. WOODROW WILSON,
President United States of America,
Washington, D. C.

DEAR SIR: It is very comfortable to be able to believe that because things have gone along in a certain way for many years they are likely to go on in the same way for many years more, or for so long as anybody need look ahead, and that it is better so than to bother with change. Thus we are continually counseled to compromise with things as they are. But there is an end at last to compromise. Things as they are become intolerable; they can not go on any longer in the old way. Correction follows.

We are now in that corrective period, and, among other things, the railroad situation has got to be corrected. First was the Interstate Commerce Commission, created expressly to represent the people against the railroads and to regulate rates, and, of course, to regulate rates by keeping them down. That was what the people wanted. The railroads protested; and it was awkward for them, because the regulation of rates began at a point where rates, by reason of excessive competition, were already very low. But they protested in vain. Then they made the best of it; that was in the spirit of compromise.

Then the public declared itself a third party to every dispute between the railroads and their employees over wages, and said strikes should not occur. A law was passed to provide for arbitration. Railroad strikes did cease, but at the same time the railroads lost control of the most important single factor of cost in the production of transportation, namely, the labor cost. Every threat of the employees to strike for higher pay brought about a call for arbitration under the auspices of the Government, and arbitration in every case meant "something for the men." The railroads protested, but again in vain, and went on making the best of it. That was again in the spirit of compromise.

Obviously two diverging lines must run ever farther and farther apart. It was impossible for one arm of the Government to continue keeping rates down and another arm of the Government to continue putting wages up without bringing the railroads face to face with a crisis in which compromise would be no longer possible. Everybody who does not employ labor wishes to see wages rise, thinking it makes for prosperity; everybody who does not own railroad shares wishes freight rates to stay low. In between are the railroads, unable to control their costs, their service, or the selling price of their product. It is for them a desperate situation.

Nobody at any time wishes to see a "liquidation of labor," either by wage reductions or unemployment. It is the one commodity of all that has not yet been touched by liquidation. However, it now is clear that one of three things must happen. Either the Interstate Commerce Commission must allow the railroads to raise their rates, or the railroads must liquidate labor, or the Government must take over the railroads at last and tax the people to support them. They are not now self-supporting.

Unable to wait for the Interstate Commerce Commission to finish its deliberations, the railroads have begun to do the only thing left for them to do; they have begun to liquidate labor, not by reducing wages, but by cutting down forces. The New York Central and the Pennsylvania Railroad lines have reduced their forces more than 50,000 men in four months. Some of this unemployment, of course, is owing to the reduced amount of tonnage to be hauled, which has nothing to do with rates; but a great deal of it is directly owing to the fact that the railroads have not, on their present margin of profit, enough borrowing power to engage new capital for new works. It is the correction least to be desired, because unemployment converts just so many men from productive units into social liabilities; but there was no other way to meet the situation. If it does not convince the Interstate Commerce Commission, then we shall be compelled to say that the final solution will be for the railroads to sell out to the Government. The alternative is bankruptcy for many of them, and that is simply unthinkable.

Yours, faithfully,

A. A. HOUSMAN & CO.

—

THE PICTORAL REVIEW CO.,
New York, March 9, 1914.

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

HONORED SIR: I take the liberty of inclosing editorial from Leslie's Illustrated Weekly Newspaper under date of March 5, 1914, relative to the action of the Interstate Commerce Commission.

Your recent message to Congress, in which you are reported as stating "that we can not postpone action in this matter without leaving the railroads exposed to many serious handicaps and hazards," has struck a universal chord, and echoes the sentiments of thousands of our small investors in railroad securities.

Permit me, Mr. President, to say that it is the duty of the present administration to aid the present forward movement toward prosperity. Delay in the decision on the part of the Interstate Commerce Commission as regards the proposed freight increase by the railroads is causing the public to become pessimistic as regards the condition of the country, and is causing business in general to become stagnated, and causing a lack of confidence in the present administration.

May I, on the behalf of thousands similarly situated as myself—small investors—request that you lend your best efforts toward expediting the determination of the Interstate Commerce Commission?

With highest regards,

Yours, respectfully,

CHAS. W. NELSON.

—

[Telegram.]

HOOPESTOWN, ILL., *January 7, 1914.*

Hon. WOODROW WILSON:

Would respectfully request that you use your influence for a 5 per cent horizontal raise in freight rates in official classification territory.

THE ILLINOIS CANNING CO.

—

[Telegram.]

LA SALLE, ILL., *January 6, 1914.*

The PRESIDENT, *Washington, D. C.:*

We respectfully urge you to use your influence toward obtaining a 5 per cent horizontal raise in freight rates in official classification territory, impressing upon the Interstate Commerce Commission the importance to act promptly.

GERMAN-AMERICAN PORTLAND CEMENT CO.

—

[Telegram.]

CHICAGO, ILL., *January 5, 1914.*

The PRESIDENT:

We believe that to serve the best interests of all the people in this country the railroads should have the 5 per cent horizontal advance in freight rates which they ask, and trust you will kindly use your influence toward that end.

GUTTMAN & CO.

THE HOLT MANUFACTURING CO.,
New York, N. Y., December 12, 1913.

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

DEAR SIR: Don't you consider that the moral effect of an announcement from you at this particular time that you are in favor of and recommend granting the railroads a 5 per cent increase in freight rates in consideration of the advanced cost of labor and increased expenses that they have had to meet would do more to benefit the poorer classes, who are the ones who do the real hard work, than anything else at this time?

It is a simple stimulus and easily injected, resulting in great good to the most people.

Railroads and industries affected by the railroads' activities are laying off men in the face of a cold, hard winter, due to the fact that many heavy interests are apparently taking advantage of the situation to "whip" you over the defenseless shoulders of those who are unable to protect themselves.

Those who pay the freight charges can afford the slight advance, and the immediate effect of an announcement of this kind from you would be that railroad securities would instantly be marketable and railroad extension and improvements would commence in every direction, which starts the steel industries to work, and when steel moves everything else follows suit.

I wrote a friend of mine, who is a heavy producer of leather, explaining my opinion that the real demand would within the next six months regulate industrial conditions, and I absolutely believe it to be a fact, but the period of six months is the serious point to be considered. I quote you my friend's opinion, as follows:

"I agree with you perfectly the real demand will expose the manipulators, and there is no question about the fact, in my mind, that certain markets have been and are being manipulated. About the only industry in our State that is appreciably dull at the present time is the brass and copper industry, which, as you know, is very large in the Housatonic Valley. Their mills are running three to four days a week, but I believe it is solely for the purpose of affecting the price of copper. I think they have orders enough in hand to run full time if they cared to; certainly by the accumulation of a very moderate stock they could run full time, but my theory is that they feel by curtailing all they possibly can, even if they do make their customers wait for deliveries, they will affect the price of their raw material, which is copper.

"We none of us place any orders in December if we can help it, particularly those of us who inventory 1st of January, and I do not think that so far as our business is concerned that the falling off is any greater at this time than it is usually."

You are, in my opinion, moving in the right direction, and as soon as enough time elapses for the effect in real good worth to be felt the country with its currency reform and tariff reduction a settled, definite fact and operative we will commence upon a new era of lasting prosperity that will not be attended by the pitfalls in the past.

This is merely a suggestion, due to my observations in different parts of the United States during the last six months and is an effort to try and influence you to urge the Interstate Commerce Commission to act promptly on the proposed 5 per cent advance in freight rates, the effect of which will benefit those who can not protect themselves, and the strong should protect the weak.

Won't you, Mr. Wilson, do the one thing that will do the most good at this particular time for the greatest number of people? Help restore confidence by reassuring the people in this simple way. General conditions can not be very bad on top of good crops.

Yours, very truly,

BEN. C. HOLT.

—

GREEN ORCHARD,
Winchester, Va., March 14, 1914.

President WILSON, *Washington, D. C.*

DEAR SIR: The conscience of the country is waking up to the fact that the United States Government is acting dishonestly in making the railroads carry the parcel post without paying them a just recompense for it. As one of your sincere admirers, I urge you to do your best to see that this scandal is stopped.

Also, it is certainly clear that the Interstate Commerce Commission should grant the 5 per cent increase in rates asked by the roads. The demand certainly seems a just and moderate one. Its granting will be followed by great business prosperity. Its refusal will produce such a depression as this country has not seen since Cleveland's day. It is needless to say what the result would be to the Democratic Party. But it is a bigger question than that. It is one of right and wrong, and the railroads have right on their side. If the present commission is made up of men so prejudiced or so small in caliber that they can not do justice to the railroads, why, then, the commission should be remade.

I urge you to act to the best of your ability to see that both justice and the prosperity of the country are served by doing justice to the railroads in both the above matters.

Also push the law giving the commission complete power over the issue of all securities by the railroads. Push a law providing for compulsory arbitration in railroad labor disputes under supervision of the commission.

Lastly, and most of all, as you love our country, oppose all extension of Government ownership in the continental United States to railroads, telephones, or telegraphs. When we start on general Government ownership in this country it will mark the beginning of the end of our beloved country.

Yours, very respectfully,

MELVIN GREEN.

—

ORANGE COUNTY, N. Y., *March 13, 1914.*

President WILSON.

DEAR SIR: Allow me to urge you to push on the Interstate Commerce Commission to do justice at once to railroads in regard to freight rates and also as to parcel post. In the latter case the Government has taken a dishonorable course and is setting a bad example, making railroads carry double what was agreed on in way of mail. Let me add that the parcel post is a fake; letters are the important thing, and mail now is delayed by parcel post. Let us get back to common sense and check this craze for changing old, common-sense ways. Radicalism and socialism are ruining our country, which is sadly in need of rest and justice to the railroads.

Yours, sincerely,

AYMAR VAN BUREN.

BELLEVILLE, ILL., *March 19, 1914.*

Hon. WOODROW WILSON,
President of United States, Washington, D. C.

In re spotting cars.

DEAR SIR: Members of the Manufacturers' Association of this city, as well as the individual manufacturers, are opposed to the charge of "spotting cars" by railroad companies, or any other service already covered by their tariffs, and respectfully urge you to use your influence with the Interstate Commerce Commission to grant further hearings, and that such hearings be held at some convenient point in the Middle West, enabling the small as well as large shipper to be present and be heard.

We further respectfully ask your influence with the commission to grant the proposed 5 per cent advance in freight rates, except where such proposed advance seems unfair, and that the tariffs in such cases be suspended for further hearing.

We believe the advance will generally improve business conditions, but think prompt action desirable.

Thanking you in anticipation of an early reply to this letter, we remain,

Yours, very truly,

MANUFACTURERS' ASSOCIATION,
C. T. MULLEN, *Secretary.*

—

SAN FRANCISCO, *April 7, 1914.*

President WOODROW WILSON,
Washington, D. C.

MY DEAR PROFESSOR: It is to be hoped that the inclosed clipping is not true, as the demand for the increased freight rates is solely for Wall Street or those associated with Wall Street. Honest and efficient management of the railroads does not require any increase in freight rates.

You surely know the country is growing and the increased traffic alone would more than offset any increased cost of operation. The decline in such stocks as Rock Island and Wabash was only natural. Those stocks cost nothing and they are only seeking their level like many other stocks will do. The sincerity of some of the presidents of some of the larger railroads, who lately have given very pessimistic reports before the Interstate Commerce Commission, should be questioned, as personally I know some of those same gentlemen hover over the stock ticker, and even in the last 60 days, they have issued very strong personal tips to their personal friends to buy the stocks. This is evidenced again by the fact that their stocks are up from 10 to 20 per cent.

To saddle the public with an extra 50 or 100 million dollars yearly now would be an extra addition to the high cost of living. You probably know the dividends on Wall Street's watered stocks alone added to the cost of living 18 per cent for 1912.

Yours, very truly,

W. O. MANSON.

"President Wilson made an informal statement recently, virtually declaring in favor of the proposed advance in freight rates."

—

NEW YORK, *March 16, 1914.*

Hon. WOODROW WILSON, *Washington, D. C.*

DEAR SIR: It is very evident that Messrs. Harlan and Brandeis are retarding the progress of this country by the attitude they have assumed in the "rate case." The writer has talked with more than 100 business men in this city on the subject, and all are substantially of this opinion.

The commission has done good work, but there is such a thing as overdoing. Can not something be done to show Messrs. Harlan and Brandeis their error? Will you not kindly use your influence in the matter?

Very truly,

ANDREW A. RUSSELL.

—

ERIE, PA., *April 13, 1914.*

Hon. WOODROW WILSON.

DEAR PRESIDENT: In 1907 the big banking interests caused a panic out of a clear sky. They would of done so again had you not issued your warning to them.

Now, the present depression in business is being caused by this same bunch of pirates in another way—discharging men. They have two objects in view, one is to make the voters believe it is due to the Democratic administration; the other, to get a 5 per cent raise in freight rates. If these roads had been built by their money, there might be some legitimate excuse for the raise. But the present owners of our railroads have been built and paid for by those who are not now the owners. These roads have been thrown into the receivers' hands time after time, and bought in by the Wall Street exploiters at one-fourth their value, after which these money pirates opened up their money bags to business and reaped in return millions in the rise of stock values. Then they began selling watered stock for a living. The only proper thing to do is to find out just what the present owners have paid for those roads, and then establish rates accordingly, or the Government to buy or build parallel lines. I believe in that old saying, "Either the Government must own the railroads or the railroads will own the Government." Which will it be?

Sincerely, yours,

E. B. WILLIS.

—

LETTERS FROM HERALD READERS.

[The Herald invites letters from its readers on current topics. The letters should be short and to the point, and free from offensive personalities. The proper name and address of the writer must accompany each letter, but will not be printed if publicity is not desired.]

TOLLS AND FREIGHT RATES.

Editor of HERALD:

In a recent speech Walter Wood, iron manufacturer, says free tolls through the Panama Canal would not reduce freight rates to manufacturing industry, and contends that vessels of any nation doing a coastwise trade should be allowed free tolls. He says in that way only will freight rates be reduced. He reasons that American vessel owners would combine to establish rates to suit themselves. Granting that is sound logic, then if we let all vessels doing a coastwise trade through free and freight rates should be reduced, is there anything to stop the association of manufacturers who would have a monopoly on the coastwise trade from doing the same thing he charges the American vessel owners would do, namely, "Combine on prices." Certainly not. The best and fairest competition would result in all vessels paying the same tolls. Not only would vessel owners be treated fairly, but the great public, which is bonded to build, pay for, and maintain it, be treated fairly. This is everybody's canal, and everybody should receive the same treatment who use it or who benefit by its usage. This free-toll business is a subsidy for a few, very few, men engaged in water transportation, which, if allowed, could only result in direct benefit to them. Such favoritism should not be thought of by any fair-minded person. Casting aside that international treaty on the tolls question, the only just and sane solution is "Equal rights to all and favors to none." Let's have it.

E. B. WILLIS.

—

ALBANY, N. Y., *March 28, 1914.*

SECRETARY TO PRESIDENT WOODROW WILSON.

DEAR SIR: Please pardon me for taking your time.

I am anxious that business be revived, and wish to ask if the Interstate Commerce Commission can or has power to grant the railroads their requests for a period of one or two years as trial to see what they will do.

This time will give the said commissioners ample time—needs for further and complete investigation, without further retarding business.

Surely business needs stimulating, and the Interstate Commerce Commission can start it.

I thank you for your time, and trust you will place this idea, if you deem advisable.

Truly,

E. J. WEEKS.

—

HOW MUCH LONGER?

When, a few days ago, the New York Times demanded to know who was holding up the business of the country and intimated that the information might be found at Washington, where more antitrust legislation is pending, the Evening Journal called attention to a few causes tending to produce business depression which the Times had neglected to suggest. Among them is mentioned the Interstate Commerce Commission's attitude toward the railroads.

Yesterday the Times made up for that omission with an article in which it subjected the commission to somewhat severe criticism. In particular there was censure for the commission's eager willingness to hear a representative of railroad commissions of Western States, who came to argue against the granting of a rate advance. Here is part of the article, in which our Democratic contemporary in part answers its question, Who is holding up the business of the country?

"If the Interstate Commerce Commission has any confidence in itself, or in its accounts of the railways' condition, it is in a better position than any other authority to decide for itself forthwith, asking for no arguments. The official figures show that the commission has heretofore misjudged and acted in error upon the reports to it. That is the substance and the merit of the railways' appeal. The railways now are suffering one of the most serious reverses in their history. Their suffering is so severe that it is reflected among industrial investments. It can not be long before the country in general must suffer from the reduction of dividends in both railways and industrial corporations. The Supreme Court itself has flinched from the results of the rigor of its law, and has reconsidered judgments which were impolitic. The Interstate Commerce Commission need not fear the country's reproaches for a retreat from its untenable position that it is infallible, and must refuse advances of rates because it has been accustomed to do so."

"Just now new evidences have appeared of the serious reverse that afflicts the railroads. On Wednesday a subsidiary of the Pennsylvania system had to reduce its dividends. Yesterday it was made known that the Pennsylvania has been compelled to lay off 15,000 employees. And that system is conceded to be well managed. Reports from the steel and iron trade tell of almost complete stoppage of orders.

"It can not be long before the country in general must suffer," says the Times. The country is already suffering.

How much longer will the Interstate Commerce Commission persist in withholding from the railroads the necessary means of sustenance?

Do its members really believe that for such destructive work it was created?

—

PITTSBURGH, PA., *March 27, 1914.*

Hon. WOODROW WILSON,
President United States, Washington, D. C.

MR. PRESIDENT: With general business all over the country waiting for the decision of the Interstate Commerce Commission, can not something be done to hurry this body along and get them to grant the increase in freight rates? Otherwise I am afraid we will see dull, hard times in your administration. I know you have worked with this end in view, and only hope that possibly a little extra effort may bring us the desired end, and thus hope you can.

Wishing your administration every success, and hoping that this will be a most prosperous year for the country, I have the honor to remain,

Very truly, yours,

C. A. PAINTER.

—

PICTORIAL REVIEW,
New York, March 27, 1914.

His Excellency WOODROW WILSON,
President of the United States,
White House, Washington, D. C.

SIR: Might I venture to call your attention to an editorial in the New York Times of March 26 on the railroad-rate situation? Can not something be done for the good of the country at large to expedite that decision, so that business, large and small, may see some light ahead? I do not know of a single enterprise that does any considerable shipping business that is not in favor of an increase in rates. Why, therefore, this killing delay upon the part of the commission?

Believe me,

Respectfully, yours,

ARTHUR T. VANCE.

—

[Telegram.]

NEW YORK, *March 27, 1914.*

The PRESIDENT:

Won't you please say or do something to stop the suspension of railroad employees before it spreads, or we will be out of employment all summer?

F. H. JOHNSON.

SOCIETY OF AMERICAN DRAMATISTS AND COMPOSERS,
New York, March 24, 1914.

DEAR MR. PRESIDENT: The theatrical world, like the commercial world, ask you to do what you can to help the railroads, not only for sake of the roads but it will help the general prosperity of the country, as per clipping herewith from to-day's New York Herald.

That Interstate Commerce Commission are really holding back this great country in a way that no small body of men should have the power to do.

If a vote of the masses were taken, the great majority—a very great majority—would surely say, "Grant the increase." As the clipping says, "Every thinking man" is in favor of helping the railroads.

The theatrical world ask it of you, and we will thank you.

Respectfully,

H. E. SMITH.

PROSPERITY AWAITS RATES—JOHN CLAFLIN SAYS IMPROVEMENT WILL FOLLOW GRANTING OF ADVANCE TO RAILROADS.

John Claflin, president of the United Dry Goods Cos., when asked his opinion of the business outlook yesterday, said:

"I'll have a good deal to say about prosperity if the railroads get the 5 per cent increase in freight rates for which they have asked. *If they obtain* that advance, there will be immediate improvement in business."

Asked if he thought the merchants of this city generally were supporting the request of the railroads for higher freight rates, Mr. Claflin replied:

"Yes; I think they are doing so now. Practically every thinking man now realizes that the country can not be prosperous if the railroads are not."

—

AMERICAN GYPSUM CO.,
Rochester, N. Y., April 3, 1914.

Hon. WOODROW WILSON,
President, Washington, D. C.

DEAR SIR: Recently the Rochester Chamber of Commerce voted 491 for an increase of 5 per cent in railroad freight rates and only 37 voted against it. This shows how public opinion is running in behalf of the railroads.

There is no question but that this country is suffering hard times, newspapers to the contrary notwithstanding. At this time of year there should be no idle labor, yet there are thousands of men out of employment.

Notwithstanding the fact that you have passed laws you thought were for the best interest of the people, if those laws bring on hard times or you fail to pass others which will restore good times, then your administration has not been a success.

Trusting the railroads will get fair treatment and a justifiable increase, I remain,

Very respectfully, yours, HARRY C. NOBLES.

—

ENSLEY, ALA., *April 3, 1914.*

Hon. WOODROW WILSON,
White House, Washington, D. C.

DEAR SIR: From such statements as I have seen in the press about the information you have been receiving regarding business conditions in this country I am led to feel that the facts in the matter have not been brought to your attention, but I believe that you are interested to learn the actual conditions and that it would be desirable to get the information first hand, hence I am writing you what I know about the matter.

There has been a marked falling off in railroad and industrial business within the past few months, and a more rapid decline within the past few weeks, which has intensified the unfavorable sentiment of business interests, and there is a hesitation on all sides and a doubtful feeling about the ultimate outcome. Continued legislation and agitation toward business interests, including the action of the Interstate Commerce Commission in deciding the railroad-rate question is undoubtedly accountable for this, and the only hope of relieving the unfavorable conditions, I believe, is a favorable action on the part of the Interstate Commerce Commission to the railroads and discontinued legislation to give us an opportunity of working out the new laws that have been enacted, and I earnestly request your consideration of these matters.

Respectfully, yours,

A. F. HILLEKE.

—

APRIL 1, 1914.

DEAR PRESIDENT WILSON: Although this letter may never reach your hands I am taking the liberty of addressing you personally, as I had the pleasure of knowing you while at Princeton, and spent one of my most pleasant hours with you at Prospect, when you autographed one of your photographs for me.

The purpose of this letter is to endeavor to call the attention of the administration to the unwarranted persecution of the railroads of this country by such bodies as the Interstate Commerce Commission and the Parcel Post System.

I have never speculated, but have invested all my hard-earned capital in supposedly standard railroads, among others New York, New Haven & Hartford, New York Central, and the Pennsylvania Railroad. On these three railroads alone I have lost thousands of dollars.

While I believe in reforms in railroads, the stock exchange, etc., I feel the prosperity of the country is being greatly impaired by the cut-throat legislation enacted in the last decade against the railroads.

The administration will be blamed, as it always is, for any mistakes happening during its régime. As just one of those who constitute the people, I appeal to your well-known sense of justice and regard for the welfare of the country to aid in the agitation now on foot for an increase in the railroad freight rates.

Trusting that you will pardon any intrusion this letter may seem, and assuring you that it is not written in any spirit of faultfinding, but one in which I felt it my duty to try to express to you and your associates the feelings of the people on this subject, I am, with greatest confidence and sincerity,

Most sincerely, yours,

HAROLD FLAMMER,
Class of 1911, Princeton University.

E. M. GERSTEL & CO.,
Chicago, Ill., March 5, 1914.

To the Hon. WOODROW WILSON,
President of the United States.

DEAR SIR: Possibly you are not aware of the awful conditions in this great steel district and mills. The working classes have passed through the hardest winter they have ever been called upon to endure, and the signs portend to the worse, if anything. Why, is not altogether hard to tell. The railroads and others have not furnished the mills with any work. We contend that if they are unable to do so it is up to the Interstate Commerce Commission to help them out. I know for one that the shippers are all willing to pay an increase if it will help the classes and all others indirectly concerned in this neighboring country. Therefore we pray that you will see the way clear to be of great help to all.

Certainly it will benefit you and your administration; of that there can be no doubt. I beg to remain, honorable sir,

Your very obedient servant,

E. M. GERSTEL,
President and Secretary.

—

CLEVELAND, OHIO, *March 26, 1914.*

The Hon. WOODROW WILSON,
White House, Washington, D. C.

DEAR PRESIDENT WILSON: As a Princeton man, class of 1896, living here in Cleveland, superintendent of Semet-Solvay Co. (by-product coke-oven plant), I am taking the liberty of writing you personally.

I am in daily contact with many business men connected directly and indirectly with the iron and steel industries, the majority of whom feel a lack of confidence in the general business of the country because of the uncertainty of congressional legislation. Personally, I feel that the 5 per cent rate increase, if allowed now by the Interstate Commerce Commisison, to the railroads will bring about a quick and healthy return of business, such as has not been seen in the United States since the summer of 1907.

The prospects are that the winter wheat crop will be a good one. Apparently there are no signs of trouble for industry or commerce which can be attributed to the weather or its consequences.

Trusting that you will accept this from one of your old pupils in the true Princeton spirit, and with very best wishes for your success now as always,

Yours, sincerely,

TALBOT E. PIERCE.

—

LITTLE ROCK, *November 26, 1913.*

Hon. WOODROW WILSON,
President United States.

UNITED STATES RAILROAD COMMISSION.

GENTLEMEN: I have watched with interest the fight that has been and is at the present time being waged against our railroads, and it is plain to be seen what is awaiting us in the future, unless such antagonistic legislation is stopped. I say antagonistic, because some of our State legislatures are enacting laws that are just simply killing the railroad industry; and I do not know of another one industry that is at present or have in the past proven themselves to be more beneficial to our country than our railroads. Illustrations of the benefits of the railroad are numerous. One only has to cast a glance over our country and see the many different ways the railroads have been an essential factor in bringing it up from a wilderness to a Nation of wealth, dotted with thousands of cities and towns, and farms without end. Lands that at one time, being so remote from markets, were of small value have increased in value as if by magic, caused by the opportunities afforded them by our railroads building into them and giving them an outlet to the markets of the world. And we have a great lot of territory yet to be opened up and put in a state of usefulness.

As much benefit as our railroads have been to our farmers, merchants, manufacturers, laborers, our people and country in general, I can not see why it is our State legislatures want to be continually legislating against them. I do not see why it would not be a better and wiser policy to give our railroads encouragement and inducement to build and improve, instead of entirely throttling them.

The one fight that is being waged now against our railroads and doing more injury than all else is the freight-rate case. This fight when sifted down will be found to be agitated by a combine that are proving themselves every day to be the most powerful trust we have, a combine that is at the present day more detrimental to our people and the future safety of our Republic than any other corporation or trust within its boundaries, and they are urging this kind of legislation for their own profit.

By illustrating the case as it is in my State I hope to make plain to you that such is a fact. The combination I have reference to is the wholesale merchants', retail merchants', and manufacturers' associations, more especially the wholesale and retail merchants.

I do not take sides with the railroads from any interest I have in them, for I have none; am just a plain, everyday laboring man. But from an interest every taxpayer should have, and also everyone should have at heart—a prosperous, peaceable future for our country—I do not think it is right to appropriate people's money to fight a legal battle between trusts or corporations and to use our money by appropriations to assist a corporation that is as detrimental to us as the merchants' association and against one that so much good can be said of and benefit derived from as the railroad corporation. We have good combines, and we have bad ones. I consider our railroad the most beneficial corporation we have, and the wholesale and retail merchants the most detrimental to the future welfare of our country and its people.

Who wants to see our country, that has in the past flourished quietly and peaceably, now be driven to strikes and turmoil, as some of our European countries have been.

Our State legislators and railroad commissioners probably have not looked far enough ahead into the future and seen the end they are bringing things to, and to whose gain?

Just and fair legislation to all alike is essential, but partial and antagonistic legislation is detrimental, and when it is against an industry as necessary to all of us as our railroads it is detrimental to all of us; and, likewise, what is detrimental to all of our people is detrimental to our country.

Useless and antagonistic legislation by our States, unjust decisions by our supreme courts, should be retracted before our whole United States

is paralyzed by results of it, and the course our legislatures, etc., are pursuing is surely going to do it.

The two great factors in the freight-rate agitation being fought in our supreme courts and legislatures is one we all know, the railroads, and one that have kept themselves in the dark, that are standing in the background, urging things on, getting the people's money appropriated to fight their battle, and, as has been the case in this State, stand ready to receive all profits derived from it. This is the wholesale and retail merchants' association.

The railroads, trying to protect their investment and make some profit, which is due everyone on their investment, whether it be labor or money, and the merchants' combine, in an underhanded way, their attorneys, using the word "consumers" to get State appropriations to take rate cases to the supreme courts, to get the railroad revenue cut and apply it to their own profit.

Mr. President Wilson, now let's see if that is not a fact, and also which is the most essential to the building up of our country. Let's compare the two. Let's see if the freight rates we had in the past hurt the "consumer." I use the word "consumer" because Judge Joseph W. Hill, in his plea to our Gov. Donaghey and last State legislature, to get the people's money appropriated, used the word "consumer," making the assertion he would save an enormous amount of money to the consumer if they would make this appropriation for him to take rate cases to supreme court. State legislature would have no right to make an appropriation to take a case to the supreme court for the merchants, hence the word "consumer." And now, then, this appropriation was made, cases were taken to supreme courts, rates were cut, merchants are now claiming millions of dollars' rebate from the railroad companies, and we, the "consumers" Mr. Hill referred to, have been left entirely out of consideration by the merchants. There has not been one cent cut on any article, and on some the price has increased.

To further prove the uselessness of such legislation, so far as the consumer was concerned, before the freight rates were cut a great many of our people formed clubs and bought from mail-order houses in Chicago, New York, and St. Louis. Why? Because they found they could buy there and pay the freight our railroad companies were charging and save a third of what it would cost out of a store here—pay the freight charges.

Farmers out through the country could do the same. Is not that proof the freight rates were not hurting us? And did not the merchants in 1910 or 1911 try in our State legislature to get a bill passed making it unlawful for mail-order houses to do business in Arkansas? And is not it a fact they were buying in eastern markets in wholesale lots and enjoying really better rates than we who were buying in small quantities?

Mr. President, when our new tariff becomes effective I feel in doubt as to the consumer receiving or sharing in the good that should come from it if the merchants' association is allowed to go on unmolested.

I hold to my opinion, based on the past and the present, that the railroads are doing their duty to our country and our people, but our merchants are not. We, the "consumer" Mr. Hill referred to, are paying more for some articles and less on none. Our money appropriated to fight the railroads and for a merchants' battle, and not a cent saved to us, the merchant putting that much more in his pocket.

And now, Mr. President, let us see who he is taking it from and what is going to be the end of such a course as is being now pursued.

You know, as all of us do, railroad companies are paying their employees good standard of wages. The representation of labor employed by our railroads runs into many, many thousands. We have noted in the past constant demands by laboring classes for higher wages. Railroad companies have always met their demands with increases in pay, and which they will continue to do so long as it is possible for them to do it.

Now, then, if we allow our railroad revenue to be cut, so they can not pay a price for labor that is required by our wholesalers and retailers to live, what is going to happen? Or, in other words, if we allow our State legislatures and supreme courts, railroad commissions, etc., to cut off the many thousands of laboring men's source of revenue, whereby they make their living, and let the merchants' association, who are bleeding the whole country, go unmolested, come up and take from the laboring men the last increase in wages they can possibly get, such a course, if pursued, will undoubtedly end disastrously to our country.

This wholesale and retail merchants' association is a great factor in our high prices and cost of living. They are making many millions out of it.

They are not satisfied with the big profits they have been making off our people. They are now getting the railroads' revenue cut to make more, and by so doing they are not only injuring our railroad industry but also hundreds of thousands of laboring men.

I do not want to see strikes, but unless the wholesale and retail merchants' associations are either broken up, or their business placed under surveillance of our Government, and then made to sell at a reasonable profit, they are going to force our labor classes and country into such a condition.

They are dealers in interstate commerce. They are engaged in a business whereby they become a public-service corporation, and why should not our Government have a right to investigate their business and see they do not exact enormous profits?

Why should we antagonize a corporation who are making 4 or 6 per cent on their investment, that pay the highest of wages, that are improving and opening up our country, that send right back into our States and put in circulation for improvements, labor, material, etc., a great portion of their proceeds; that are causing new towns and cities to be built, thereby increasing the value of our land. Why should we antagonize them, that so much good can be said of, and let a corporation like the merchants go unmolested, who are robbing the people by big profits, and even assist them in increasing their profits by cutting our railroads' revenue.

Everyone knows what our merchants are, and none better than the laboring class. They pay the lowest of wages, they have the poorest working conditions, they take all the money they can get out of circulation. And it is a plain case of freight rates cut being to no one's interest only theirs.

I hope to see the heads of our labor organizations instead of asking for any more increases of wages, with which to meet the demands of our merchants for a living, and which could only in the future meet with a refusal by railroads on account of them having gone to the limit, and their revenues being cut so they could not grant it, thus resulting in a strike and a general tie up of everything. Before things come to this status I hope to see our labor organizations place their representation behind intelligent representatives to our Government and lend their strength and assistance toward breaking up the merchants' association, holding on to the standard of wages they are getting now, and getting rid of the merchants' combine or force them to a reasonable profit, will be far greater than any raise in wages they can get. Raising wages, allowing at the same time merchants to conduct their business as they have in past, is that much nearer strikes and lockouts.

I think it is the duty of every taxpayer and everyone interested in the welfare of our country to raise an objection to the unjust legislation that is being enforced on our railroad industry. Kill the railroad industry and we kill the country.

What we need is more railroads and better railroads. It takes money to build, improve, and operate railroads, and when we allow our money to be appropriated to throttle that industry at the expense of the future of our country and our laboring classes and the benefit of the merchant, it will end up in very bad conditions. If reduction in freight rates injured no one and the benefit of it went to the consumer, of which the laboring class is in the majority, it would be a different state of affairs, but such is not the case. The reductions have never got past the merchant; he is making that much more as profit. And, Mr. President, I am afraid they will take advantage of the benefits of your tariff measure same as they have the railroads.

Very respectfully,

B. M. DEVITT.

[Telegram.]

CHICAGO, ILL., *January 15, 1914.*

The PRESIDENT, *Washington, D. C.*

As shippers of freight amounting to 6,500 carloads annually and believing an advance in freight rates is necessary on account of increased operating expenses and needed rehabilitations and extensions of facilities, we urge your favorable consideration of the request of the railroads for a uniform advance of 5 per cent in freight rates.

WESTINGHOUSE CHURCH KERR & Co.

[Telegram.]

GRANITE CITY, ILL., *January 16, 1914.*

The PRESIDENT, *Washington, D. C.*

We indorse the proposed 5 per cent horizontal raise in freight rates in the official classification territory.

Respectfully, yours,

GRANITE CITY COMMERCIAL CLUB.
W. J. COUDY, *President.*

OTTAWA, ILL., *January 24, 1914.*

President WOODROW WILSON,
Washington, D. C.

RIGHT HONORABLE PRESIDENT: It is our best judgment that the railroad companies, in what is known as official classification territory, should be permitted to advance their rates.

We know in the conduct of our own business the last two or three years there has been an increase in wages, in taxes, insurance, particularly liability, and all items of overhead expense. This increase has made advance in prices a necessity.

We believe the railroad companies need an increase in their rates to enable them to make proper repairs and extension facilities, so that the present service to the shipper may at least be maintained.

We therefore hope you will use your influence for the proposed 5 per cent horizontal increase in freight rates in the territory above described.

It is our judgment that the quicker the Interstate Commerce Commission shall make a decision on this question the better it will be for the business interests throughout the territory which would be affected by such a change.

We remain,
Yours, very truly,

SANDERS BROS. MFG. Co.

MOROCCO MANUFACTURERS' NATIONAL ASSOCIATION,
Philadelphia, Pa., U. S. A., March 20, 1914.

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

DEAR SIR: In accordance with unanimous action at the annual meeting of the Morocco Manufacturers' National Association, held in Philadelphia, March 12, 1914, I have the honor to transmit to you for your consideration a resolution, referring to plea of the eastern railroads to the Interstate Commerce Commission, asking to be permitted an advance in freight rates.

Respectfully, yours,

LAIRD H. SIMONS, *Secretary.*

Resolved, That the Morocco Manufacturers' National Association, in meeting assembled at the Bellevue-Stratford Hotel, Philadelphia, Pa., on March 12, 1914, are in favor of paying an acquiesce in the freight rate advance asked for by the eastern railroads, and feel that until such time as a decision is rendered by the Interstate Commerce Commission that business will continue in a depressed state; and therefore be it

Resolved, That the Morocco Manufacturers' National Association hereby acquiesces in the advance in rates if found necessary by the Interstate Commerce Commission, in order to provide business with efficient service and restore general confidence; and further be it

Resolved, That the Morocco Manufacturers' National Association particularly urge the members of the Interstate Commerce Commission to decide with the least possible delay the vital question before them, so that if they see fit to grant the increase asked for, general business may speedily have the stimulating influence of vigorous railway purchases and thereby stimulate all lines of manufacturing and commercial business, and likewise give opportunity to the manufacturing interests at large to reemploy a large percentage of the labor which they have been compelled to dismiss on account of the unsatisfactory condition referred to.

MASSACHUSETTS MUTUAL LIFE INSURANCE CO.,
Springfield, Mass., June 4, 1913.

Hon. WOODROW WILSON,
President, Washington. D, C.

DEAR MR. PRESIDENT: Excepting the special interests the country seems to approve your efforts to push the tariff and currency matters through quickly.

But in the meantime the financial situation has become clouded. So far the liquidation has done little damage and some good by squeezing out the water. But the country now approaches a critical condition. If this liquidation continue it will run into disaster, for the law seems to be that if liquidation once pass a certain point it can not be stopped until a business crisis develops.

When I took the liberty of writing you early in May I did not know the railroads were about to formulate their demand for that 5 per cent increase in freight rates. Conditions pointed to its necessity.

The interstate commission apparently thinks a decision several months hence will be sufficient. That will be too late, for by that time business will have so contracted that an increase in rates will not benefit the railroads to any extent. Whatever is done should be done at once.

The members of the Interstate Commerce Commission are familiar with the facts and need no extended arguments. The shippers are not opposing this increase as they did in 1910. In fact most of them are approving this increase, requiring only that it be uniform.

If this increase be granted at once, as it should be, it will restore the credit of the railroads so that they will be able to get the necessary funds. This will react on all lines of business and stop the progress of an unfortunate want of confidence that is developing. As you know, business is largely done on credit, which is the creature of confidence.

Underlying conditions are sound, and business can easily adjust itself to the tariff law if given a fair chance. But the situation in regard to credits is critical. I hope you can see your way to bring this matter before the Interstate Commerce Commission so as to get quick action.

Respectfully, yours,

WM. BOSWELL.

—

ST. LOUIS, MO., *January 28, 1914.*

To the PRESIDENT,
Executive Mansion, Washington, D. C.

MR. PRESIDENT: It may look like presumption on my part to address you on this subject, as I am only a plain business man, with 45 years' experience and still active, but one who is deeply interested in the future prosperity of this country, and therefore take the liberty to say that the pending decision of the Interstate Commerce Commission in the matter of the 5 per cent advance in freight rates asked for by the railroads is of great importance at this time. Its delay is causing a hesitation in the forward movement of legitimate business, which started right after the first of the year. I am a shipper myself and have talked with many very large shippers—none of them stockholders in railroads—all of whom believe that this advance should be granted by all means.

I attach herewith a clipping from the Wall Street Journal, which explains itself.

The railroads have had many troubles during the past 10 years with labor advances, higher cost of operating, and big advances in price of supplies, especially iron and steel, and they have gotten to a point now where nothing but deficits stare them in the face.

Trusting that you will give this matter at least a casual consideration, I am,

Your obedient servant,

WILLIAM BUBG.

[Inclosure.]

RAILROAD RATE QUESTION RESTS WITH THE PRESIDENT—RESULT APPEARS TO DEPEND ON THE TWO SELECTIONS TO FILL VACANCIES IN THE INTERSTATE COMMISSION—A FULL BOARD DECISION DESIRED.

The question of whether the eastern railroads will receive a freight-rate advance this spring or not may rest in the hands of President Wilson through his appointive power.

There are at present but five members of the Interstate Commerce Commission, which will decide on the petition of the railroads for a 5 per cent freight-rate increase. Three of these members are generally said to be favorable to a rate advance and two traditionally opposed thereto.

President Wilson will appoint two commissioners, one to succeed Mr. Marble, deceased, and one, Mr. Prouty, who is engaged in the direction of the physical valuation work. If the commission is divided as it is reported to be, the balance of power in the decision will rest with the two men appointed. It is planned that the decision will be handed down by the full board. The importance of the matter makes undesirable its decision by a board of five.

Railroad men, Wall Street, and the business interests of the country wait on the appointment by the President of the two new Interstate Commerce Commissioners. Their selection is considered in official quarters the most critical case of the exercise of appointive power that the President will have to face, with the possible exception of the Federal Reserve Board appointments.

—

BROOKLYN, *January 28, 1914.*

Hon. WOODROW WILSON,
President, Washington, D. C.

SIR: If other voters feel as provoked and angry as I do over the slow "mañana" style in which the Interstate Railroad Commission handle the business of doing justice to the railroads by raising their freight rates, your majority in Congress votes will melt at the fall elections like ice in the hot July sun. Business will slump back into inactivity if those fellows dawdle and fool away their time.

There were two small manufacturers here to-day from Canton and Orrville, Ohio, respectively. Both have to pay freight to New York on all they sell out of their pockets. Yet these men fairly cursed those commissioners.

Said one, "I'd rather run my factory and pay even 10 per cent more for freight than close it. Those damned fools ought to have their blocks knocked off."

I merely mention this to illustrate how small manufacturers feel. The same feeling is expressed wherever I go. Railroad prosperity means general prosperity. The people are sick of those Untermeyer and Brandeis theories. Bread and butter has to be earned. Both of these fellows are millionaires and can afford to talk their heads off.

But most of us need better times, not theories. Raise the railroad rates.

Very respectfully,

JERALD KNAPP,
Hardware Sales Agent.

CINCINNATI, *April 3, 1914.*

To the honorable the PRESIDENT OF THE UNITED STATES,
Washington, D. C.

DEAR SIR: We urgently petition you to grant immediate compliance with the request of the railroads of the United States for a horizontal increase in rates for freight shipments.

As shippers we realize that the increase so granted would make an additional charge upon our cost of operation and production, but it would be a burden distributed on all shippers alike without discriminating or yielding of unfair advantage.

While there have been unquestionably serious abuses in railway development and operation in the past, and while some such abuses may still exist, arising from conditions for which the Government and all the people, as well as the railroads are responsible, we believe that the revenue to be derived from the proposed increase in rates is absolutely necessary to reasonably maintain the credit of the railroads, to permit them to make the repairs and betterments necessary, to adequately provide for the growing demands of service and facilities, and to stop the enormous losses now affecting the business of the entire country.

We protest that, in our judgment, the alternative plan proposed for providing additional revenue for the railroads through the imposition of special charges for "ferry," "trap car," and "spotting" service would result in still further unsettling business conditions, and in application would bring about disastrous inequalities and discrimination among and between shippers.

We submit that the present rates, as a whole, have been based upon long-established shipping customs, and that arbitrary changes in switching and car-placing regulations would be confusing and harmful in many ways and of doubtful benefit to the carriers. The abuses which may have arisen in connection with switching and car-placing service—and we do not doubt that there are instances of this sort—can be eliminated upon investigation and order without involving all shipping interests.

Therefore we protest against any arbitrary withdrawal of switching or car-placing services, or the institution of special charges therefor, holding, as we do, that these services are wholly compensated in the building and maintaining by shippers of individual tracks, loading stations, and appliances, which greatly facilitate the transportation of all classes of freight, wherever or by whomever shipped, and prevent the congesting of traffic and storage.

The substitution of such a change would work a great hardship upon shippers, would necessitate increased prices to consumers, and would not greatly or uniformly benefit the railroads, nor give the relief for which they and we pray.

We believe that the granting of a horizontal rate increase without delay will result in the immediate stimulation of business in all lines of productive endeavor and that it will not entail serious loss or injury to any person or persons, firms, or corporations. With the losses of roadbeds, tracks, bridges, rolling stock, and equipment in the unparalleled floods of the past year, with revenues depleted by loss of business, with operation controlled by legislative enactment and exactions, and hampered by new regulations and requirements, already unable to meet the demands of shippers for adequate service even at a time of partial depression, facing the absolute necessity for rebuilding and extensions, there is no doubt—there can be no question—that the railroads need the relief prayed for and need it now; and neither is there question that a large majority of the shippers of the United States realize these conditions and join in this prayer.

Respectfully submitted.

THE ROBERT MITCHELL FURNITURE CO.,
Per W. H. MITCHELL, *Vice President.*

—

MOLINE, ILL., *March 12, 1914.*

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

DEAR SIR: I wish to join with other members of the Illinois Manufacturers' Association voicing the belief that some increase in freight rates is desirable. It seems that the prosperity of the railroads is dependent on it, and the prosperity of the country indirectly.

I am very strongly opposed, however, to making special charges for setting cars or spotting cars It is a very great annoyance to have these continual accessory charges added on for every little thing that is done. The placing of cars is a part of the regular business of the railroads. I do not pretend to understand all the ins and outs of this question, but in our own business here it is absolutely necessary for cars to be placed where our heavy machinery can be loaded on them. We have an electric crane, and load the machines ourselves directly onto the car without any expense to the railroad companies. It is as great a convenience to the railroad companies as it is to us to have the cars suitably placed so that they can be loaded by us.

I hope you will give courteous and thoughtful attention to these suggestions.

Very truly, yours,

WILLIAMS, WHITE & Co.,
H. AINSWORTH,
Vice President.

—

MARCH 12, 1914.

Mr. WOODROW WILSON,
President United States of America, Washington, D. C.

DEAR SIR: With the thought that you like to hear from the people, may I inflict on you a few of my views on some public questions?

I may preface my remarks with the statement that I am a man of modest means: that for years I have had to study securities in order to try to make my small investments bear decent interest rates and still be safe. I have not always succeeded. The pathetic thing in our economic life is the loss of principal of those who can least afford such loss through injudicious purchase of securities.

I think it a very general axiom in business life that a concern, to be safe, can only pay in dividends one-half of its net earnings, the surplus to be held for contingencies or unprofitable work or experiment. I think it was Mr. Cassatt, former president of the Pennsylvania Railroad, who once offered a very cogent argument on the necessity for this rule with respect to railroads, for the railroad especially is called upon to make vast unproductive improvements, e. g., track raising, elimination of grade crossings, etc. But the tendency of some of our legislators is to deny the justice of this idea, and the trend seems to be toward restricting earnings to legal interest rates only. This would mean that all improvements (unproductive as well as productive) be capitalized.

I understand that such a plan has been followed by some of the English railroads until they have a terrific burden of capitalization, necessitating high freight rates.

I respectfully submit my opinion that an increase of freight rates is justified (I hold some railroad stock).

I would make a similar argument with respect to the express companies (I own a little express stock). I believe if the parcel-post business is being done at a loss, as some have claimed, that this constitutes unfair competition, and that an economic wrong is being committed. If the express companies are forced out of business in consequence, it will work unjust loss on many small shareholders.

One thing more: I think magazines should be required to pay cost for postal service and that we should have 1-cent first-class postage. Why should one postal class be required to meet the losses of another?

I do not know your personal views on any of the subjects I have discussed—I simply know you are for truth and justice at all times. So you will please understand that no attempt at criticism is intended.

Very respectfully, yours,

ALFRED COCHRAN,
559 Madison Street, Brooklyn, New York City.

I inclose clippings from New York Times of March 12, 1914.

THE EXPRESS COMPANIES.

The way of Congress and the relation of the parcel post to the express companies is too thorough for the Merchants' Association of this city. It wanted the express business reformed, not ruined. Now that there is talk of the liquidation of the express companies, the association recalls how excellent was the service they rendered and how inferior, comparatively, is the commercial service of the parcel post. The express companies collect their business, give receipts for what they collect, pay indemnity for losses, with special security against them, prevent damage in transit—whereas the post office does damage in examination of parcels—and do business through a wider range of classes. These are not only the affirmative excellences of the express companies, they also are the defects of the parcel post. To the extent that one of the two services cripples the other, and to the extent that the express companies retire from the unequal competition, the field is abandoned altogether, for the law disqualifies the postal parcel service from doing what the express companies do. It is the formal opinion of the association that the postal parcel service can not be extended so as to be a satisfactory substitute for the express companies.

Congress and the Interstate Commerce Commission are racing each other in the authorization of destructive and unfair rates to please the people, and the people are not pleased with the results, after all. Those who get anything for less than its cost and worth always want more, and never can be satisfied with anything short of all there is. It is so with the I. W. W. and, it would seem, with the people themselves. They are willing to accept the Postal Service, although it is established over the prostrate forms of the express companies and supplied on Robin Hood principles. The Post Office requisitions the services of the

railways in the manner of Villa, although amid profound peace. The Post Office submits to the protest of its own staff that it is overworked and underpaid. And then Representative LEWIS in his place in the Capitol says this unpaid-for accommodation to the people "has turned a deficit in the postal revenues of $7,000,000 to an $8,000,000 or $10,000,000 surplus in the first year of its operation." The first year is not yet over, and the bills have not yet been presented or paid.

PARCEL POST DRIVES U. S. EXPRESS OUT—PROSPEROUS FOR 60 YEARS, THE COMPANY WILL LIQUIDATE NOW TO SAVE ITS ASSETS—I. C. C. RATE ORDER HURT IT—THAT FORCED A 16 PER CENT REDUCTION IN CHARGES—STOCK MOVES UP—OWNERS MAY GET PAR FOR IT.

The United States Express Co. has decided, after 60 years of continuous operation over leading railway lines of the country, to give up the fight for business with the parcel post. Impressed by the fact that profits were declining rapidly, with every indication of falling further as the facilities of the Government service were increased, prominent stockholders decided a few days ago to dissolve the company. The plans have not actually been completed, but it was admitted yesterday that the preliminary work had been done, and that as soon as the attorneys and accountants had made a final report the company would be liquidated.

All the big express companies have found the parcel post was a serious competitor in the package-delivery field, especially since express rates were lowered 16 per cent by the Interstate Commerce Commission. The United States Express Co., however, was the worst sufferer from the start, and the record of recent business told the tale of dwindling profits. The report submitted to the Interstate Commerce Commission for November, the latest month accounted for, showed revenue from tariff of $1,700,000, a decrease from the corresponding month of 1912 of $285,000. By exercising the most rigid economies the company was able to cut down operating costs to the extent of only $7,200; and operating income for the month showed a deficit of $32,000. For the five months of the current fiscal year so far reported, gross revenues of the company fell behind the same period of the preceding year to the extent of $567,000, while net income declined $185,000.

I. C. C. ORDER A HARD BLOW.

The lower rates went into effect on February 1, and income was so adversely affected by them that at the close of February the small surplus shown by the company on December 1, it was said, had been converted into a large deficit. Owing to the Christmas business, December was supposed to have made a better showing than January and February combined.

When the drift of the express business was clearly defined toward the end of last year, it is understood some of the largest shareholders of the United States Express proposed to liquidate the company without waiting for the parcel-post competition to consume the company's assets. Other shareholders thought that more favorable contracts might be obtained from the railroads, and were anxious to wait and see. In accordance with the desire of these stockowners, the plan was held in abeyance for a while.

It was soon discovered that the railroads were too uncertain about their own prospects for a general increase of freight rates to grant lower rates to the express companies, and when this situation developed most of the objecting stockholders agreed that business could not be carried on profitably, and that to continue it would mean a gradual dissipation of the company's assets.

The proposed action of the shareholding interests was first reflected in the stock market on March 2. On comparatively light transactions that day an advance from 65 to 71 occurred in the price of United States Express Co. shares, and in succeeding sessions the shares rose steadily until the highest price of 84 was touched in yesterday's market. Last year the shares sold as low as 38, and their best price was 66. In March, 1910, the shares sold as high as 131.

There are only 100,000 shares of United States Express Co. stock, and these are not widely distributed. E. H. Harriman took over 22,028 shares from the American and Adams Express Cos. several years ago at a cost of $2,250,000, and this large block, representing a quarter of the capitalization, has been added to since that time. Three of the six members of the present board of directors represent the Harriman holdings. They are Joseph W. Harriman, C. C. Tegethoff, who is Mrs. E. H. Harriman's confidential agent, and William H. Averill, a brother of Mrs. Harriman. The Harriman estate also holds a large interest in Wells, Fargo & Co., and it is expected that the latter company may arrange to take over some of the routes of the United States Express Co. when dissolution has been completed.

COMPANY LONG DOMINATED BY PLATT.

The Platt interests have been more prominent in United States Express affairs during its long history than those of the Harriman family. The late Senator Thomas Collier Platt dominated the concern for many years through a personal block of stock amounting to only about 400 shares. He was backed by relatives and business associates whose holdings aggregated something like 20,000 shares.

Until he dropped out of active business Senator Platt's name was almost as intimately connected with activities of the United States Express Co. as with national politics. He dominated the express company as he dominated the Republican politics of New York State, and it has been said that in his office as president of the express company Theodore Roosevelt was first agreed upon for governor of the State and later, much against his will, for Vice President of the United States.

The United States Express Co. is an incorporated joint-stock association. For more than 50 years a meeting of stockholders has not been held. The fight waged several years ago by minority shareholders to have a meeting called is well remembered in the financial district, a fight that was won by Senator Platt and his adherents because the by-laws called for a petition signed by 60 per cent of the stockowners and the signatures of this percentage could not be got for the petition.

The United States Express Co. at one time had contracts over 33,000 miles of railroad lines. Some of these have been invalidated by the passage of new laws and the failure of roads to turn over to it sufficient business.

—

NEW YORK, *April 13, 1914.*

Hon. WOODROW WILSON,
President, White House, Washington, D. C.

ESTEEMED SIR: As an enthusiastic and true well-wisher of your administration, I can not help expressing my regrets that your so excellent intentions regarding renewed prosperity are miscarrying.

It is indeed a fact, as far as my own experience goes, that all the hopeful signs of business improvement and renewed confidence so evident a few weeks ago have given place to discouragement and inactivity.

As the entire cause of this change is everywhere I go placed to the debit of the Interstate Traffic Commission in not promptly recognizing the urgent needs of the railroads, it seems a remedy should be found to improve present conditions. I remain,

Very respectfully,

J. NASSAUER.

THE SOUTH PUEBLO HOMESTEAD & BUILDING ASSOCIATION,
Pueblo, Colo., April 11, 1914.

Hon. WOODROW WILSON,
President United States of America, Washington, D. C.

DEAR SIR: From information I gather from the daily press I am led to believe the advice or information you are receiving in regard to business conditions is hardly borne out by the facts. If I may be permitted, I would like to call your attention to industrial conditions in Colorado, and I believe the same is true of all the mountain States.

There has been a tremendous falling off in railroad business for some time, more especially the past month; all other industries are correspondingly affected. There seems to be a hesitancy and doubtful feeling about the ultimate outcome of new legislation by Congress. Continued agitation toward business interests is having a bad effect on industrial conditions. Fair treatment on the part of the Interstate Commerce Commission to the railroads would very materially improve conditions.

Very respectfully,

J. K. DEMPSEY,
103 East C Street, Pueblo.

—

NEW YORK, *April 11, 1914.*

His Excellency the President, Hon. WOODROW WILSON,
Washington, D. C.

HONORABLE DEAR SIR: You will, we trust, indulge us in again expressing the hope that immediate decision be made relative to the granting of a 5 per cent increase in freight rates for the eastern railroads.

With a proper realization of the difficulties involved and the necessity for full and intelligent deliberation upon which to base a sound conclusion, we feel that we but reflect the overwhelmingly prevailing sentiment of the piano trades and manufacturers generally in stating that the suave and apparently unconcerned judicial ease which seems to characterize the efforts of the gentlemen having the matter in charge is a generous contribution in the havoc wrought among business in general.

We do not speak for ourselves alone when we state that conditions have never been worse than since 1893, and that this is due to the uncertainty of such matters as this freight-rate decision is so clear as to be unquestioned in business circles. It may be well for the Department of Commerce and Labor to state that there are comparatively few men out of work, but that does not take cognizance of the fact that there are thousands whose employment has been reduced to such a status that they are unable to support their families. Three days of work per week, even of skilled labor, may not be lack of employment, but it is so close to it that those who have to live on it can not appreciate the pretty refinements that statistical experts are able to make. To be perfectly frank, we feel degraded in offering men of intelligence and skill who have spent years with us the slender pittances that are made necessary through inability to operate because of the uncertainties and misgivings introduced into trade by policies that may be meritorious but are deprived of their value through delays and prognostications.

This is not a lone complaint, but it is one that the writer is sanguine, from personal investigation, is heartily indorsed alike by business and by labor.

Respectfully,

BEHNING PIANO CO.,
HENRY BEHNING, *President.*

—

PHILADELPHIA, *August 11, 1913.*

Mr. JOSEPH P. TUMULTY,
Secretary to the President, Washington, D. C.

MY DEAR MR. TUMULTY: Am sending you page taken from the Saturday Evening Post of last week on the question of railroads and overcapitalization by Alba B. Johnson, president of the Baldwin Locomotive Works. Mr. Johnson is in Europe at the present time and will not return to Philadelphia until the latter part of September. My interest in the matter is that Mr. Johnson is very much in favor of the building of our terminal to take care of the Panama and South American traffic which will follow the passage of the Wilson tariff bill. These facts are prepared in such a manner that they may be easily appreciated and understood, and I agree with Mr. Johnson that the best interests of the people of the country would be served by the Interstate Commerce Commission acting on the advance asked for by the eastern railroads in the matter of freight rates. As you are well aware, the Pennsylvania Railroad Co. will have to spend millions in New Jersey to comply with your laws and the abolition of grade crossings, etc.; and in our State of Pennsylvania the legislature which just adjourned passed a semi-monthly pay bill and a full-crew bill and a public-utilities act. Knowing your relations with the President on the matters of public policy, and wishing the national administration every success, I feel that this matter is one worthy of serious attention by reason of the good that will be done to the public.

Sincerely, yours,

PETER J. HUGHES.

—

ARE AMERICAN RAILROADS OVERCAPITALIZED?

[By Alba B. Johnson, president of the Baldwin Locomotive Works.]

Next to agriculture, transportation constitutes the largest industry of the country. Therefore the prosperity of the country depends, after abundant crops, upon the prosperity of the railroads. After the Civil War the country set about developing its great unsettled western country. For this development first railroads and then population were necessary. So great was the need for the first that extraordinary inducements were held out to capitalists to invest in railroad construction. These inducements were offered by the National Government, by States, by counties, and by individual cities and towns. Rates of interest were high and the details of capitalization were scrutinized only by the investor, for at that time there was no public authority having jurisdiction over such matters. At that time the public at large was glad to have railroads on any terms. Now, however, a careful review is being made by economists and Government bureaus, of these details of railroad finance, to determine their effect upon present-day problems.

If those who believe American railways are seriously overcapitalized would study thoroughly certain facts, it is probable that most of them would conclude that they have attached too much importance to capitalization and would feel readier to cooperate for invigoration of railway credit through reinforcing railway revenue. The certainty of increased earnings for the railroads would do more for a restoration of national prosperity than any other factor conceivable. To start the roads into robust enlargement of facilities would feed many mouths, bless many regions, do much to steady business, postpone and minimize depressions, and carry forward the widening of every man's selling area. This beneficent result is obstructed by the general delusion as to capitalization.

While President Brown, of the New York Central, was before the Interstate Commerce Commission in 1910, testifying for higher freight rates, an attorney of the shippers, Mr. James, was about to ask the witness his opinion of a statement in a book when Mr. Brown inquired, "What is that book?" Mr. James replied that it was Chapters of Erie, by Charles Francis Adams, written in 1871, the statement referred to being the passage on stock watering. Chairman (since Judge) Knapp leaned forward and remarked in surprise:

"Do you mean seriously to intimate that the New York Central is overcapitalized?"

OBSOLETE RAILWAY TESTIMONY.

Sundry railway counsel, not appreciating the obstinacy with which the Adams fiber refuses to wither, and not knowing that this identical Adams, grandson of the sixth President and great-grandson of the second, was at that moment in the prime of maturity at 75, and capable of accepting summons and holding his own with any generation of interrogators whatever, jested on the point whether counsel would "produce Mr. Adams for cross-examination," and whether he should be sought "above or below." So far back the lawyer had gone to find any competent authority to support his contention that the New York Central was overcapitalized.

The tradition of water securities is kept alive by a few classic instances. One earnest hydrophobe, who had heard that story about the New York Central, observed: "Please call Mr. Adams and ask him about ———," naming a railway company celebrated in recent times for stock jobbing.

Nothing is to be gained by issuing a clean bill of health to all roads since the discovery of the steam engine. If we are asked, "Have American railway companies issued stock as a bonus with bonds?" The answer is "Yes; because it was then necessary to attract investors and was consistent with the business standards of the time; the practice was once general. Moreover, in some consolidations securities were issued to a par value greater than that of the combined issues previously outstanding; also, directors have been known to operate construction companies and to issue stock to buy property from themselves."

Facts are facts, and converts are not to be won by denying them. Charles P. Neill, until recently Government mediator in railway labor disputes, says that whenever he found the employer indignant, with reason, and reluctant to arbitrate, he began the acquaintance by acknowledging that it was "an outrage." The belligerent was at once his friend, and inquired, "What do you advise me to do?" "Yield!" said the mediator, and compromise or arbitration followed. A frank admission of what has been done in the past with regard to capitalization, leaving judgment upon it to individual temperament and to Heaven, is the first step toward getting together and seeing what, if anything, should now be done about it.

If, then, as viewed by some, construction companies ought not to have been employed, or employed on other terms, and the stock bonuses ought not to have been given, and the consolidations should have been accomplished, if at all, without increase of capital obligations, how serious have been the results?

Receiverships have wiped out millions of the original capitalization. There were many receiverships and many drastic reorganizations of railroads prior to 1894, but during that year 210 railroads, or 20 per cent of all the railroads in the United States, were in the hands of receivers and their reorganization was later effected by the wholesale scaling down of their original capitalization. There are no statistics available to show whether in the aggregate this was equivalent to squeezing out all the water originally contained; but many of the best-informed statisticians believe this to have been the case.

AN ILLUMINATING COMPARISON.

Earnings which could have been paid to stockholders, as is the custom in some other countries, have on American roads been put into the property without increase of capitalization. The old rule of the Pennsylvania Railroad Co. was a dollar expended for improvements for each dollar disbursed in dividends to stockholders, and for years this practice was emulated by many of the most prosperous and conservative roads. In the 20 years, 1891–1910, the amount expended for terminal improvements and charged to income account aggregated no less than $459,839,061. The rigid accounting system of the Interstate Commerce Commission was not put into effect until the fiscal year 1908, and in the years before that large sums were expended on the property and charged to operating expenses which now are required to be assigned to capital account.

Stock again, instead of being given as a bonus "representing nothing but blue sky," has to a large amount been sold for cash above par. The economist, Floyd W. Mundy, cites three cases—the New York Central, Baltimore & Ohio, and Pennsylvania—which, in 1913, he estimates had a total capital stock of $934,242,088. Of this, $547,770,653 was issued since 1900, upon which the cash realized was $620,788,035. Three of our largest roads, he means, got an average of more than 8 per cent premium on at least 61 per cent of their total stock now outstanding. Among other effects of this policy it has served in the case of these companies to wipe out, many times over, any increases of capitalization through unearned stock dividends.

As a result of these two sets of forces—the sins of the fathers and the penance of the sons—is the burden of interest and dividends sufficiently excessive to require a readjustment of that situation before the matter of reinforcing railway credit and reinvigorating railway progress is undertaken?

Let us seek an answer by sweeping away the cobwebs of par value and per mile of line, which may mean anything or nothing, and applying a test, perhaps rarely used, but a test fundamental, comprehensive, and conclusive. Let us ask, Are payments to capital excessive? There happens to be one foreign country—Great Britain—which has a considerable railway system, privately owned and operated, and yielding statistics comparable with those for the United States. How does our burden of payments to stockholders and bondholders compare with the British? What share of the receipts goes into dividends and interest on funded debt? The figures are as follows:

Railway receipts and payments to capital.

UNITED KINGDOM, 1911.

Receipts (returns to British Board of Trade, p. 19)	£127,199,570
Total capital (returns to British Board of Trade, p. 24)	£1,324,018,361
Average rate interest and dividends (returns to British Board of Trade, p. 27)—per cent	3.59
Amount of interest and dividends (computed from above)	£47,532,259

UNITED STATES, 1910.

Operating revenue (Interstate Commerce Commission Statistics of Railways, p. 70)	$2,750,067,435
Net revenue from outside operations (Interstate Commerce Commission Statistics of Railways, p. 70)	2,225,455
Total receipts	2,752,892,890
Net interest (Interstate Commerce Commission Statistics of Railways, p. 69)	370,092,222
Net dividends (Interstate Commerce Commission Statistics of Railways, p. 69)	293,836,863
Interest and dividends	663,929,085

COMPARISON OF INTEREST AND DIVIDENDS PERCENTAGE OF RECEIPTS.

United Kingdom	37.3
United States	24.1

If capital had received from American railways the British proportion of total receipts, 37.3 per cent, instead of 24.1 per cent, as was the fact, the American distribution of interest and dividends in 1910 would have been $364,772,072 more than it actually was.

Does this test of whether capitalization is or is not excessive afford an overwhelming motive for staying railroad progress in this country, while returns to owners and creditors of our roads are being scaled down?

To many, like the attorney above mentioned who wanted to call Mr. Adams and ask him about a specific road, averages for all the lines of each country compared may not be conclusive. To these, perhaps, one fact in the hand is worth two in the bush. Average statistics is the bush, and the particular instance known to him is the bird in the hand. How can we tell but that a considerable number of the principal American lines are carrying too heavy a burden of interest and dividend disbursements? Let us examine for his benefit an eastern and a western road which have been most criticized—Alton and Erie. What are the figures? Here they are:

Net dividend and interest percentage of receipts.

United Kingdom (1911)	37.3
United States (1910)	24.1
Alton (1910)	25.8
Erie (1910)	17.3

These figures do not excuse wrongdoing, if wrongdoing there has been, but on the other hand, do they furnish reason for blocking American railway leadership as a whole in the development of American industry, commerce, agriculture, and territory?

Par value of capitalization should be mentioned, lest the omission be misinterpreted. Par value affords no secure basis of comparison. The usual method is to assign capital per mile of line. This is faulty, because it leaves unanswered the question, What is a mile of line? A mile of line on an average in Texas has only 58.7 per cent as many lines of track as has a mile of line in the statistical group situated in New York, New Jersey, Pennsylvania, Delaware, and Maryland, only 23.2 per cent as many locomotives and only 15.7 per cent as many cars. So of terminal cost figures; the per-mile-of-line basis means little unless we know how many miles of line there are per terminal. If two roads have each two terminals, worth $1,000,000 apiece, and one is 1,000 miles long, while the other is but 500, then the 1,000-mile line has capitalization charged to its two terminals of $2,000,000, or $2,000 per mile of line, while the 500-mile road has a capitalization charged to its two terminals of $2,000,000, or $4,000 per mile of line. Cost of road construction again may be as low as $20,000 a mile on the prairie and as high as $250,000 a mile through the mountains, or $1,000,000 a mile through the city. For this and other reasons comparison of capitalization is unsatisfactory. The facts, however, for what they are worth, are creditable to American railways by such a margin as fairly to raise the question whether any conceivable allowance for difference in conditions would offset it.

The Interstate Commerce Commission, by eliminating duplications, finds as the average net capitalization outstanding in the hands of the public a figure which is given in Statistics of Railways for 1910, page 52, as $62,657 per mile of line. This compares as follows with capitalization in the principal foreign countries, the reduction to terms of American money, in view of the amounts involved, being figured on the precise bases laid down by the United States Bureau of Standards—$4.8665 to the pound sterling, 19.3 cents to the franc, 23.8 cents to the mark—and reckoning 0.62137 mile to the kilometer:

Capitalization per mile of line.

	Amount.	Excess over United States.
		Per cent.
United States, 1910 (Interstate Commerce Commission Statistics of Railways, p. 52)	$62,657	.....
Germany, 1911 (Statistik der Im Betriebe Befindlichen Eisenbahnen Deutschlands, p. 13)	113,855	81.7
France, 1910 (Statistique des Chemins de Fer Français, pp. 334, 335)	144,083	130.9
United Kingdom, 1911 (Returns to British Board of Trade, p. 24)	275,156	339.1
England and Wales, 1911 (Returns to British Board of Trade, p. 24)	328,415	424.1

These figures, showing an excess over American capitalization ranging from 81.7 per cent in Germany to 424.1 per cent in England and Wales, are averages for all roads. "Net capitalization," on the basis used by the Interstate Commerce Commission for all the roads consolidated in one account, is not easy to compute for individual American roads,

owing to the interweaving network of subsidiary corporations. To deduct from the total for the given road the securities of other roads held in its treasury still leaves a sum higher than the "net" actually is, because there would remain to be deducted the securities held in the treasury of every subsidiary, and so on in an all but endless chain. But consider the primary elimination, deducting from the total for the parent corporation only those securities of other companies directly held by it. This shows that there is no American road of considerable size which is not capitalized at less than the British average. Of American roads 200 or more miles long, that having the highest gross capitalization per mile is the Erie. Its net figure, after making the partial deduction above defined, is $239,573. The United Kingdom shows an average for all lines 14.9 per cent higher than the Erie; England and Wales 37.1 per cent higher. The Alton net, thus figured, stands at $129,413. The French average for all roads shows 11.7 per cent higher than the Alton; United Kingdom 112.6 per cent, England and Wales 153.7 per cent higher than the Alton.

THE SHOE ON THE OTHER FOOT.

Suppose it were the railways of the United States instead of the European lines which showed excess of capitalization per mile of line 81.7, 130.9, 339.1, 424.1 per cent; would not the country visit condemnation upon our roads in good round terms? It is not good form in the United States to applaud railways. I would not suggest the indecorum of Americans throwing up hats over their impressive accomplishment in keeping down the capitalization charges on transportation; but may not one reasonably ask whether "overcapitalization," according to world standards, has really been so flagrant in the United States as to constitute a national emergency? To meet it, ought the replenishment of equipment and the building of terminals for the accommodation of freight to wait?

Is the question of capitalization, then, as related to actual investment, to be ignored and railway managers left foot-free? The problem is receiving assiduous attention. Railways operating 500 miles or more of lines which pass through States having statutes for the regulation of railway securities aggregate 198,854 miles, which is 94.6 per cent of the total in the 500-mile class. The Interstate Commerce Commission is at this moment, under mandate of Congress, inquiring into railway capitalization.

Is capitalization, in view of these elaborate and concerted efforts to regulate it, a problem which absolutely must be solved as a condition precedent to revision of freight rates, stiffening of railway credit, and provision for handling the expanding business of a great and growing country?

Even when instrumentalities for the regulation of security issues shall have been perfected, how certain is it that capitalization, or the return thereon, has very much to do with freight rates or can be made to have? The Baltimore & Ohio, the Pennsylvania, the Erie, and the New York Central operate for the most part under a rate structure the basis of which is the through rate between New York and Chicago, identical for all four. This rate was fixed by competition, but once established it has been accepted as a standard of reasonableness, and rates between points where there is no competition are automatically influenced by that rate through custom and through the long-and-short-haul clause of the interstate-commerce act. The whole population served by these roads is therefore paying for its transportation at what may be termed the same rates. Assuming that the valuation now under way shall provide a means of judging accurately the cost of the properties, what prospect is there that these roads will prove to be "worth" even approximately the same? One has enormously expensive terminals in Chicago and New York, another not; one passes through many large cities where land is valuable and where elevated, depressed, tunnel, and other costly structures have been frequent, another less so; one had to be carried over or under mountains, another traverses mainly a level country. Measuring the actual cost of the roads to the public by the sure test of the percentage of receipts paid to owners and creditors we find that the New York Central distributed in 1910 in net interest on funded debt and in dividends 11.2 per cent of receipts; Erie, 17.3 per cent; Pennsylvania, 13 per cent; and Baltimore & Ohio, 23 per cent. What, in the light of these figures, can capitalization have to do with freight rates?

JUSTICE TO RAILROADS.

The Interstate Commerce Commission, as it observed in the Eastern Trunk Line Rate Advance case, handed down through Commissioner Prouty, "is called upon to deal with rates as they exist, and in so doing we ordinarily consider them, not from the revenue standpoint, but rather from the commercial and traffic standpoint." He went on to declare, discussing the Baltimore & Ohio, Pennsylvania, and New York Central: "Under rates reasonable for these three systems there may be lines whose earnings will be extravagant, but that is their good fortune. There may be lines which can not make sufficient earnings, but that is their misfortune." The need of the average road was adopted by the commission as the test. Anxious citizens, who come to see that poverty for their railway means a handicap to those it serves, may inquire what an average road is. They will at least want the door left open for making the rate level adequate for the particular road on which they depend.

Possibly we have been splitting hairs. A new railway question confronts us requiring statesmanship for its solution. When it becomes clear to enough people that the railroads have before them, in enlargement of facilities and provision for safety, a task which must be done, and which can not be done with money now available, the Interstate Commerce Commission will have before it the demand that this work be accomplished and that conditions be made such that the roads can obtain the capital. No single adjustment for one territory or for one year will suffice. What is required is a permanent policy of protection to railway revenues.

It is to be hoped this may become a national policy. To this end business men may well study the question of capitalization for themselves. Should they perceive that it is largely irrelevant to freight rates let them frankly admit it, they and their representatives in the legislative councils of States and Nation.

—

KNOXVILLE, TENN., *March 26, 1914.*

President WOODROW WILSON,
White House, Washington.

DEAR MR. PRESIDENT: Herewith I hand you clipping from columns of New York World of recent issue, which will express the feelings of a great, great many southerners.

Sincerely, your friend,

FRANK MCBEE.

RAILROAD RATES—TIME TO DECIDE THE QUESTION.

ATLANTA, GA., *March 20.*

To the EDITOR OF THE WORLD:

The Interstate Commerce Commission is taking an awfully long time to settle the rate increase of 5 per cent, which has been asked for by the railroads and approved by a great number of shippers. The business of this country is at a standstill awaiting the decision of the Interstate Commerce Commission.

Now, if our President is able to exercise such great influence over Congress as it appears he has done in getting the tariff, currency, and tolls bills through, I think it would be wise for him to exercise some of that same influence over the Interstate Commerce Commission and get the rate question settled, so that business may be resumed and the great army of unemployed people may secure employment. The success of the Democratic Party depends largely upon immediate action on this very important question. The currency and tariff bills may do all for the good of this country that has been predicted by the party, but neither so far has had the effect of stimulating business, and I fear it will be quite some time before the predicted good that is to be derived from these bills will be felt by the unemployed.

The Interstate Commerce Commission has the right to increase freight rates, and it also has the right to decrease the same; therefore it appears to me that it would be good business on the part of the President to insist upon the granting of this increase now; and later, after the physical valuations of the railroads have been completed by the Government and it is found that the railroads can earn fair returns on the actual value of their properties, the rate may be decreased.

C. W. LANE.

—

[Telegram.]

SANTA BARBARA, CAL., *March 2, 1914.*

The PRESIDENT.

Having been a very large shipper for past 30 years and am yet, and never having received any favors or passes from any of the railroads, still I am heartily in favor of the railroads getting the advances they are asking for in the way rates. In my opinion the withholding of them at this time is doing more to check business than almost all other causes combined.

W. D. DAVIS.

—

MARIETTA, OHIO, *March 6, 1914.*

Hon. WOODROW WILSON,
Washington, D. C.

MY DEAR PRESIDENT: Being interested in your welfare and that of the Democratic Party and our country as well, I take the liberty of addressing you. Having been engaged in business for the past 25 years and a Democrat all my life, I am more than anxious to see prosperous times under our administration. And, with the best interests of the working class, and in fact all classes, in view, I believe that more good to every one can be accomplished through an increase in railroad-freight rates than in any other way.

Trusting that our good Lord will spare your life and give you the good health and strength with which to carry on to completion the good work you have started, I am,

Very respectfully, yours,

J. W. BOYERS.

—

NEW YORK, *December 20, 1913.*

His Excellency the President, Hon. WOODROW WILSON,
Washington, D. C.

HONORABLE DEAR SIR: As makers of a product peculiarly susceptible to influences affecting economic and industrial conditions, we presume to express an appreciation, which we feel is shared by other industrial enterprises as well, of the policy of your administration and of your own personal efforts with respect to the subject matter and passage of the currency bill, about to be enacted.

It is our belief, based on the reports of our salesmen, who are in constant touch with the largest piano houses in the country, as well as on the writer's own personal familiarity with the sentiment of manufacturers in this city, that this measure will have a most efficacious bearing on the restoration of financial confidence and a wholesome effect on the business world generally, which of late years has, through pecuniary mediums, been so potently dominated by inimically inclined interests.

Another matter which is pleasing to us and, we know, to business interests in general is the spirit of forbearance shown by you in regard to the advisability of granting a 5 per cent increase in railroad rates. While a short time ago all piano houses, as well as other similar interests, noted with pleasure the decreasing of transit freight tariffs, the sentiment is now thoroughly in favor of yielding the advance of 5 per cent desired by the carriers, for it now seems apparent that the enthusiasm incident to a passing expression of public opinion caused by the wrongs inflicted by the railroads has really resulted in the zeal for rectitude being borne to an extreme so dangerous as to defeat its good purposes. Prevailing conditions, of which we ourselves have lately felt the bad effect, indicate that too great harassment of the railroads is productive of ills that extend to every part of the financial world; indirectly exertive of effects that rob business in general of confidence and creative of an apprehension destructive of the growth of enterprise and the consequent stagnation of commercial activities. This condition now exists, and it may, in a sense, be said to be incipient. From personal investigation, as well as from the apparently unanimously obtaining ideas of piano dealers as a whole, the one stroke that will rehabilitate confidence and, especially in conjunction with the currency bill, cause an immediate and complete resumption of national commercial energies is the yielding to the desires of the transportation lines for the small advance sought. We and all other manufacturers and, we feel assured, the majority of the piano houses throughout the country are in favor of this, so long as the rates apply uniformly and no discrimination is practiced. This is because we are confident that an impetus will thus be given business that will prove the wisdom of your policies and their beneficent effects, not only in noncommercial but also in industrial spheres.

This letter is written simply as an expression of a business house that is face to face with the problems with which you are grappling, with the solving of which we are directly affected, as an indication of our confidence in your efforts and in the hope that your own judgment may confirm the feeling permeating business sentiments everywhere

throughout the country, recommendatory of what appears to be a just concession to the railroads in this matter of rates, and one strongly justified on the ground of sound, broad public policy at this time.

Respectfully,

BEHNING PIANO CO.,
HENRY BEHNING, *President.*

—

MASSACHUSETTS MUTUAL LIFE INSURANCE CO.,
Cincinnati Agency, December 27, 1913.

Hon. WOODROW WILSON,
President, Pass Christian, Miss.

DEAR MR. PRESIDENT: Will you pardon my breaking in on your hard-earned vacation with a suggestion that you might like to think over at your leisure.

Shortly after I took the liberty of writing you, drawing your attention to the necessity of allowing the railroads to increase their rates, some of the railroads asked the Interstate Commerce Commission to allow an increase of 5 per cent. It looks as though that increase may be granted, and it should go only to improve facilities.

But there is a quiet movement among railroad employees, looking to a demand for another increase in their wages, should the railroads get the increase in rates. The railroad unions are the strongest in the country. It is in their power to tie up traffic on any road. No railroad is in a position to altogether reject their demands, however unreasonable.

The recent practice has been to refer such matters to arbitration; the result is always a compromise with a large increase in wages.

It is very desirable that a bill be put through placing the matter of railroad wages under the control of the Interstate Commerce Commission. The railroads will not oppose this, and the employees will come to see protection in such a law.

The bill would be better if there should also be a clause providing that no interstate railroad could issue securities without the previous approval of the commission. This would stop buying up undesirable additions, as well as protect investors.

Conditions all over the world indicate trouble next year. Under your steady hand it may be hoped that this country will not suffer as much as others from the liquidation which seems inevitable, and which will, by those who do not think, be blamed on your administration.

Respectfully, yours,

WM. BOSWELL.

—

BEAVER, PA., *December 19, 1913.*

To the PRESIDENT, *Washington, D. C.*

MY DEAR SIR: Being interested in the success of your administration and of the welfare of the country in general, the writer begs to call your attention to some conditions which it seems to him should have immediate attention. The Interstate Commerce Commission, you are no doubt aware, has postponed their decision on the application of the railroads of the East for a 5 per cent raise in freight rates. The time set now for handing down this decision is March 15, 1914. It would seem to the writer that this matter should be disposed of at the earliest possible moment, say, not later than January 15, 1914.

There has been a lull in business, especially in the steel trade, and it would seem that the railroads are now taking advantage of this to raise the greatest possible business disturbance. They use directly and indirectly about 50 to 60 per cent of the steel products of the country. They have been cutting down their orders to bare necessities, and I have been informed to-day that the Pennsylvania Railroad has issued instructions canceling all unfilled orders of every character. The trade reports show that there are only 20 per cent of the rail orders on the steel companies' books that there were one year ago. A large tube manufacturer advises me that their continuous large tube orders from the railroads have been cut off entirely.

The railroads were never in better shape to make advance purchases. They have had the best business year in their history. Why all this retrenchment? It is absolutely uncalled for, except for vicious purposes. The rate question should be decided at once, one way or the other, so that the railroads would know where they stand in this respect.

It is the writer's opinion that the large business boom through which we have passed was started primarily by the railroads immediately following the decision of the Interstate Commerce Commission refusing to allow increase in rates east of the Mississippi.

They had held up orders for many months preceeding, trying to influence legislation and the commission, but when they failed and were forced to place large renewal orders, there was started the biggest boom in the steel business this country has ever seen.

There are many inquiries in the steel line, but people are waiting now to see what is going to happen. Trusting that I am not intruding and that the above statements will interest you, I am,

Yours, with greatest wishes for your success,

J. A. MCEWEN,
Member Woodrow Wilson College Men's Club.

—

RAILWAY BUSINESS ASSOCIATION,
New York, December 31, 1913.

Hon. WOODROW WILSON,
President of the United States,
The White House, Washington, D. C.

DEAR SIR: Your attention is respectfully invited to certain utterances which were made at the annual meeting of the Railway Business Association on December 11, 1913, with regard to the importance of as prompt a decision as can justly be reached in the matter of the proposed general advance in eastern freight rates.

George A. Post, president of the association, in his opening address at the morning session, said:

"If relief is to be had it should be prompt. In the past the roads have been told in hard times that they ought not to raise rates, and in good times that they do not need to. This is battledore and shuttlecock, which may never come to an end. No pains should be spared to assure the commission that the public will approve any degree of expedition compatible with justice to all concerned."

E. B. Leigh, president of the Chicago Railway Equipment Co., in an address at the same session said that "no factor which could now be introduced into the situation would do more to stimulate general business out of its present and impending condition than a vigorous resumption of railway expenditures. This conclusion, while applying to the state of affairs at this moment, is based upon a careful study and comparison covering many years, showing the relation between railway purchases and general business." Mr. Leigh's address, "Railway purchases measure general business prosperity," illustrated by a chart, and presenting statistical proof of his conclusion, is herewith inclosed. Please note on page 3 the following:

"It is not for a moment proposed that railways shall be permitted advances in rates in order that unnecessary purchases may temporarily benefit the railway supply industries or even the whole country. Waste never permanently benefits anybody. It is not unnecessary purchases which are under discussion. Railway facilities are insufficient to meet any considerable increase in tonnage. The proposition is not to overstimulate but to remove an artificial restriction in the shape of rates too low. The greatest danger at this moment is delay. It is well recognized that it requires a greater force to start from inertia than to continue a momentum already established. The sooner the commission can issue a favorable decree the more certainly will the influencing power of railway purchases be effective in the restoration of general business."

The association adopted the following resolution:

"We believe that if the Interstate Commerce Commission finds as a result of its inquiry that the railways need more revenue to enable them to provide railway service adequate to the growing needs of the public and will grant an increase in transportation rates, the effect will be to promote an immediate improvement in all lines of business. We request the president of our association to publish Mr. Leigh's address and place copies in the hands of the Interstate Commerce Commissioners and State railroad commissioners."

The rate-advance cases were also discussed in two addresses at the association dinner by Howard Elliott, chairman of the New England lines, and James M. Cox, governor of Ohio. Copies of these speeches are inclosed.

Mr. Elliot, on page 5, says:

"A continued improvement of the railways will stimulate trade, give a general steadiness to business, and minimize depression. The money the railways would spend in expanding their facilities as they should be expanded to keep pace with the growth of business in the country would percolate into every conceivable artery of trade. Can it be doubted that this would impart that wholesome stimulus to business that is so anxiously awaited at the present time?"

Gov. Cox, on page 5, says: "The development of the country makes a call on the railroads for extensions and equipment, which finds an enforced feeble response. They could advantageously to the public use hundreds of millions of dollars right now." On page 7: "We might just as well recognize at the outset that a puritanical severity with stockholders who honestly acquired their securities is not going to do any good. The thing to do is to restore the patient and then prescribe and enforce a diet and behavior which will prevent recurrent illness." On page 8. "Regulation must proceed on the theory that what society imposes on the railroads, society itself must pay for. * * * If we expect the railroads to draw from their earnings to meet the changed and developing conditions of the day, they must receive the same consideration shown to other business enterprises, or the result with them will be the same—disaster." And on page 9: "If it develops that while the gross receipts have increased, the net receipts are considerably diminished by the liberal policy of society, then relief ought to be granted, whether it be 1 per cent, 5 per cent, or 10 per cent that is needed."

With high respect, very truly yours,

FRANK W. NOXON, *Secretary.*

—

AMERICAN CAR SCREEN CO.,
Pittsburgh, Pa., January 16, 1914.

To the PRESIDENT, *Washington, D. C.*

YOUR EXCELLENCY: In justice toward all of us engaged in business which is more or less affected by railroad purchases, I desire to call your attention to a very serious condition existing at present, and more than likely to increase in seriousness if permitted to continue in an unsettled stage such as it now is.

This condition relates to the matter of "increased freight rates" now before the Interstate Commerce Committee.

All good and wise business men of this day and generation know quite well that the natural demand for supplies in all lines should not decrease as long as the Nation's population increases, for upon the increase of population depends the increase of demand. If the Nation's population was annually decreasing, naturally, the demand would follow in the same direction. As this is not the case, the question of present demand is, then, a settled fact, and those who are engaged in supplying this demand know this fact, and can not help but feel that it is only conditions that are directly responsible for a lull in this demand at the present time which undoubtedly exists.

As before stated, the freight rate increase seems to be the paramount cause, and at the same time it seems to be the general opinion that if this was once settled the present lull in demand would cease.

Now, Mr. President, why does the Interstate Commerce Commission persist in waiting until the middle of next March before rendering its decision? This is a hard, cold winter, and likely to be an extended one, and the laborer needs work worse right now than after March 1. It seems almost criminal to permit the adjustment of such a vital question to remain unsettled for no apparent good reason.

The Interstate Commerce Committee has certainly been in existence long enough to be perfectly familiar with all conditions relating to such matters to be able to render its decision not next March, but now.

Its decision will have to come finally, either for or against this rate increase, so why not settle it now one way or the other? If favorable to the railroads, then the cause for withholding their orders for structural materials and equipment will be eliminated, and should it be reverse to the roads, and they still withhold their business, then the shutting down of our mills will be up to them.

I desire to place myself on record as being heartily in accord with the policies adopted by your able administration toward good and sound business principles, and firmly believe they are right and will ultimately result in success; but "procrastination is the thief of time," and the slowness with which these policies are put into action is deplorable.

If a remedy for an ailment is considered effective, why not apply it instanter? Or, if in doubt, why not try it and watch results?

I feel quite confident that if this rate question is disposed of at once the present element of uncertainty temporarily existing will be quickly removed.

Can not this honorable commission be induced to act in this matter now, Mr. President, and let us keep our mills going at a time when work is most needed?

Respectfully,

W. A. SCOTT, jr., *President.*

LOUISVILLE, KY., *January 16, 1914.*

Hon. WOODROW WILSON,
President, Washington, D. C.

SIR: I am heartily in favor of increasing the revenue of the railroad companies by granting them an increase for carrying freight. There have been so many burdens put upon them by the Interstate Commerce Commission, in order to protect human life and property, that it is necessary for them to have money with which to do that. You can pass all the laws you want to, and they would not be lived up to unless you give them the means by which it can be done. We are very large shippers and payers of freight, and so is my brother's company, and we are both anxious to see your administration successful, and we think you should do something to offset the apparent injustice done to the railroad companies by compelling them to do something that they can not do without money to do it with. I am simply giving you my opinion as a manufacturer; it is worth whatever it is worth, and no more; but I feel called upon to give you my opinion, although no one has asked me to write you. Our company has $4,000,000 capital, and my brother's company has $2,000,000, and we do a large business, and own no railroad stocks.

Yours, truly,

MENGEL BOX CO.,
C. C. MENGEL, *President.*

AURORA, ILL., *January 17, 1914.*

WOODROW WILSON,
President the United States of America, Washington, D. C.

DEAR SIR: Referring to the controversy between the public and the railroads of the United States, would suggest that the Fox River Valley Manufacturers' Association is heartily in favor of allowing the general advance of 5 per cent on the present rates on all of the railway lines of the United States.

Faithfully,

FOX RIVER VALLEY MANUFACTURERS' ASSOCIATION.
M. C. CHAPMAN, *President.*

THE NATIONAL BUSINESS LEAGUE OF AMERICA,
Chicago, U. S. A., January 20, 1914.

THE PRESIDENT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: For your information, and by order of the president and board of directors, I inclose herewith a copy of a preamble and resolutions, recommending a nation-wide uniform advance in railway rates, unanimously adopted by the board on the 15th instant. Certified copies have also been forwarded to the members of the Interstate Commerce Commission.

Yours, very truly,

A. A. BURNHAM,
General Secretary.

[From the Inter Ocean, Chicago, Saturday, January 17, 1914.]

SHIPPERS ASK HIGHER RAILWAY RATES.

The directors of the National Business League of America, at their meeting in Chicago Thursday, unanimously adopted resolutions asking the Interstate Commerce Commission to permit the railways to make "an immediate uniform increase of not less than 5 per cent" in freight rates.

The National Business League is a nation-wide association of prominent business men, mostly merchants and manufacturers. That is, their interest is that of the shipper—the buyer of railway service. While many of its directors are residents in and near Chicago, these resolutions do not express merely a local opinion, but also that of the affiliated organizations in 30 States, ascertained through their vice presidents of the national association.

This is probably the first time that any large number of shippers has asked that freight rates be increased. The reasons for this about face on the part of so many representative shippers are clearly shown by the resolutions adopted, of which we present the substance:

"Sufficient and efficient transportation is necessary to the prosperity of the whole country. * * * We believe that the present net earnings of the railways are insufficient for the proper maintenance of equipment, extension of facilities, efficient service, and safety of life and property, resulting also in curtailment of purchases from dependent industries, which seriously cripples the general business of the country.

"Therefore the grant of permission to increase rates is asked 'as a necessary measure, imperative to the prosperity of carrier, shipper, and business interests generally.'"

The logic of this is conclusive. The reaching of a conclusion so logical is a gratifying sign of a renewed perception of the truth that in the long run all material interests of the American people must go up or down together, and of emergence from the delusion that it is possible to impoverish and pull down the transportation industry without all of us suffering in the end and paying for the folly.

Theoretical "railway economists," such as Louis D. Brandeis, will continue to argue, of course, that what the railways need is not higher rates but "more efficiency." Here and there a prominent business man will still insist on what is, under existing conditions, putting the cart before the horse. We note that John Wanamaker is quoted as so doing.

These gentlemen seem to forget that before improvements can be made there must be means, or a good prospect of means, with which to pay for them. Efficiency must often wait for income to support it. If Mr. Wanamaker will look back he will doubtless remember days when he had to get along with poorer equipment and less competent help than he wanted, because he could not yet afford to buy better.

FOR REASONABLE RAILWAY RATES.

Resolutions adopted by the board of directors of the National Business League of America, at the Hotel La Salle, Chicago, United States of America, Thursday, January 15, 1914:

Whereas the resolutions committee of the National Business Congress, held under the auspices of the National Business League of America, in the platform adopted June 27, 1912, declared that "sufficient and efficient transportation is necessary to the prosperity of the whole country," and "depending upon transportation regulation as an established fact, we believe it important that in providing regulations due consideration be given to the question of securing transportation net earnings sufficient to meet all necessary costs of maintenance and operation, and to provide all facilities required by the growth of every community;" and

Whereas we believe that the present net earnings of the railways are insufficient for the proper maintenance of equipment, extension of facilities, efficient service, and safety of life and property, resulting also in the curtailment of purchases from dependent industries, which seriously cripples the general business of the country: Therefore be it

Resolved by the board of directors of the National Business League of America, That, as a necessary measure, imperative to the prosperity of carrier, shipper, and business interests generally, an immediate uniform increase of not less than 5 per cent transportation rate be granted the railway interests: And be it further

Resolved, That copies of this preamble and resolution be presented to the members of the Interstate Commerce Commission and to the public press.

PHILITUS W. GATES,
[SEAL.] *President.*
A. A. B. MAHANY,
General Secretary.

THE CHICAGO TRANSPORTATION ASSOCIATION,
Chicago, January 20, 1914.

Hon. WOODROW WILSON,
President United States of America, Washington, D. C.

DEAR SIR:

Whereas the railroads east of the Illinois-Indiana State line have petitioned the Interstate Commerce Commission for an advance of 5 per cent in their freight rates; and

Whereas we feel that the immediate granting of this said advance would restore the confidence of trade, spur business on to greater prosperity in this country, improve commercial conditions generally; and

Whereas everything has had an advance in its price in recent years, especially labor, material, etc., which directly affect the railroads, and railroad freight rates have remained practically unchanged, the railroads therefore being entitled to this advance;

We, the Chicago Transportation Association, an association of more than 1,200 railroad and industrial representatives in the city of Chicago, have resolved, at a meeting held to-day, to impress upon you and the Interstate Commerce Commission the importance of the granting of this 5 per cent advance in freight rates, and place ourselves on record as indorsing the petition of the railroads for the good of business, for the good of the railroads, for the good of the country generally.

Yours, very truly,

C. H. SCHNIGLAU, *President.*

NATIONAL BOOT & SHOE MANUFACTURERS' ASSOCIATION OF THE UNITED STATES,
OFFICE OF THE SECRETARY,
Rochester, N. Y., January 21, 1914.

Hon. WOODROW WILSON,
President of United States, Washington, D. C.

MY DEAR SIR: At the convention of our association held at New York City January 14 the following resolution was unanimously adopted:

"Whereas the transportation system of the country is developing at a retarded pace and the consequent depression in the basic iron, steel, and other industries has become a leading, if not the determining, factor in the general business recession; and

"Whereas the eastern railroads have asked the Interstate Commerce Commission for permission to advance their rates and have made a very impressive showing of their need of additional revenue: Therefore be it

"*Resolved*, That the National Boot & Shoe Manufacturers' Association believes that railway facilities should be developed in anticipation of traffic demands, that no artificial restriction in the form of inadequate rates should be placed upon railway growth, and that the business men of the country will acquiesce without prejudice in an advance in rates if found necessary by the commission in order to provide business with efficient service.

"*Resolved*, That we urge the commission to decide the case with all reasonable celerity, so that if the advance is to be granted general business may speedily have the stimulating influence of vigorous railway purchases."

Believing that you wish to keep in touch with the sentiment of the people upon all subjects affecting the general good, I was instructed to communicate the action of our association.

Respectfully,

SOL WILE.

The following is a translation of a letter written in German, dated at Frankfurt, January 22, 1914, and signed by Henry Hoyd:

JANUARY 22, 1914.

Henry Hoyd, Frankfurt, Germany, writes to the President in behalf of many German citizens to thank him a thousand times for his action in regard to the United States Steel Trust, and also asks him to show himself favorable to the American railroads, such as the Western Pacific, Missouri Pacific, and Denver & Rio Grande, and give them higher freight rates. This will benefit entire humanity and trade in the United States will increase again. He also suggests that he should act as a real favoring genius to the hard-pressed Huerta, as the United States may be glad to have a good neighbor sometimes.

[Telegram.]

BLOOMINGTON, ILL., *January 5, 1914.*

The PRESIDENT:

This company favors the 5 per cent increase asked for by the railroads in official classification territory.

PAUL F. BEICH CO.

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK,
New York, January 9, 1914.

To the PRESIDENT,
White House, Washington, D. C.

DEAR MR. PRESIDENT: On behalf of the Chamber of Commerce of the State of New York, I beg to call your earnest attention to the inclosed copy of a resolution unanimously adopted by the chamber at a largely

attended meeting held January 8, expressing its gratification that the Interstate Commerce Commission had taken up for consideration the question of sanctioning an advance in railroad rates, and also expressing the belief that the shippers of the country are prepared for this action as an act of justice to the railroads and beneficial to the business of the United States.

This resolution was presented to the chamber by its committee on internal trade and improvements, composed of Messrs. Samuel W. Fairchild, chairman; William Jay Schieffelin, Cornelius N. Bliss, jr., Harman B. Vanderhoef, Charles E. Peck, Edward O. Stanley, and Burns D. Caldwell, all but one of whom are prominent in the mercantile trade of this city; and it was also approved by the executive committee of the chamber before its adoption at an open meeting of the chamber.

Yours, very respectfully,

SERENO S. PRATT, *Secretary.*

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK.

DEAR SIR: At a meeting of the Chamber of Commerce of the State of New York, held January 8, 1914, the following report presented by the committee on internal trade and improvements was unanimously adopted:

"Whereas the Interstate Commerce Commission is now considering the question of permitting the railroads of the United States to advance their rates, in order to cover the increased cost of labor and other growing financial burdens, without further depletion of net income and thus enable them to obtain the additional credit necessary to provide the increased facilities needful for the expanding traffic of the country; and

"Whereas in April, 1912, the chamber adopted a report urging, in the interests of shippers and of the well-being of the country as a whole, that any necessary readjustments of freight rates should be accomplished without further curtailing the revenue of the railways, upon which their borrowing capacity depends, bearing in mind, as stated by the railroad securities commission, that 'a reasonable return is one which, under honest accounting and responsible management, will attract the amount of investors' money needed for the development of our railroad facilities'; and

"Whereas since that report was adopted the financial burden of the railroads has been increased by further advances in the wages of labor and in the cost of materials, repairs, and supplies, so that their net income is now declining: Therefore, be it

"*Resolved*, That the Chamber of Commerce of the State of New York expresses its gratification that the Interstate Commerce Commission has taken up for consideration and decision the question of sanctioning an advance in railroad rates; and the chamber believes that the shippers of the country, many of the largest of whom are represented in its membership, now feel that a prompt advance would be not only an act of justice to the railroads but also beneficial to the entire business of the United States; and be it further

"*Resolved*, That copies of this action be transmitted to the Interstate Commerce Commission and to the President of the United States."

SAMUEL W. FAIRCHILD,
WM. JAY SCHIEFFELIN,
CORNELIUS N. BLISS, Jr.,
HARMAN B. VANDERHOEF,
CHARLES E. PECK,
EDWARD O. STANLEY,
BURNS D. CALDWELL,
Committee on Internal Trade and Improvements.

Attest:

JOHN CLAFLIN, *President.*
SERENO S. PRATT, *Secretary.*

NEW YORK, *January 9, 1914.*

THURMONT, MD., *February 19, 1914.*

President WOODROW WILSON,
Washington, D. C.

MY DEAR SIR: Being geographically situated where we have much felt the long-drawn-out question of increased freight rate, we do hereby appeal to your honor to give this question your very capable support. Thousands of unemployed men are idle, due to this pending question. Some definite conclusion—immediate action—would be a great relief to the situation. From a business and political standpoint we feel your action would be a great relief to the situation as well as a great boomerang, to which we of your party are interested. We beg to remain,

Sincerely, yours, for relief,

F. W. FRALEY.

NEW YORK, *February 19, 1914.*

His Excellency the President, Hon. WOODROW WILSON,
Washington, D. C.

HONORABLE DEAR SIR: Noting from reports from Washington that you are exerting your influence to the end of expediting the decision of the Interstate Commerce Commission with respect to an increase of 5 per cent in freight rates for the eastern railroads, we take the liberty to express our appreciation of anything you may effect in this way.

As is undoubtedly well apparent to you, and certainly is the prevailing conviction among all classes of commercial people, the uncertainty incident to the deferring of definite action in this matter is the most important element at this moment, maintaining a spirit of apprehension in business circles. When this cause is removed there is every reason to believe that the restoration of certainty flowing from a definite knowledge of a matter so intimately connected with commercial activities will result in an immediate resumption of business energies and add to the confidence which is generally felt in the wisdom of your administration.

Perhaps we can speak most authoritatively for our ownselves and our own trade, and our case is typical of the conditions existing in practically all of the piano factories, except that some of them are in a worse plight. Whereas at the same time last year we were seeking extra help and unable to fill orders with ordinary promptitude, our factory, which gives employment under normal circumstances to upward of 200 high-priced skilled men, is now and has been for some time reduced to a three or four day per week schedule. This is one of the few instances in the history of this company that we have reached that status, the last being in 1893. This year to date our business is but 40 per cent of what it was for the same months in 1913, indicating the practical bad effect of the uncertainties contributed to by the delays in these matters. As our case is not an isolated one, but, on the contrary, illustrative of the general situation in the piano trade, an accurate knowledge of which the writer possesses, you will undoubtedly appreciate our intense desire to see the freight-rate case settled at the earliest practicable moment. We are hoping the commission may see fit to grant an advance, but in any event a definite position should be taken.

For these reasons we feel justified in expressing our gratitude for your reported efforts in facilitating matters, which we trust will be attended with the success which we feel assured will follow the putting into effect of the admirable legislation for which you have been responsible in the form of so splendid a currency bill.

Respectfully,

BEHNING PIANO CO.,
HENRY BEHNING, *President.*

BALTIMORE, *March 20, 1914.*

To the honorable the PRESIDENT OF THE UNITED STATES,
White House, Washington, D. C.

MY DEAR MR. PRESIDENT: The practical and baneful effects of the dilatory tactics of the Interstate Commerce Commission at this time toward the railroads' application for increase in rates forms a very striking parallel to the conditions which prevailed in 1893 under the attempt by Congress to repeal the law for the free coinage of silver. It will be well remembered by men of all classes who were in business at that time that the special session of Congress, which was assembled at the call of President Cleveland on the 7th of August, was for the purpose of repealing the law requiring the coinage of $4,500,000 per month of silver, and stamping such silver dollars as of the same value as a dollar of gold, and that the actual and only question before that body was the repeal of the law and the repudiation of the fiat dollar. The most persistent argument against the repeal was by the comparatively small interests from the silver-producing districts; of course, a pleading prompted entirely by selfish motives. The passage of the repeal was on the 1st day of November, 1893, which shows a consideration of 86 days before the final action. In the meanwhile what happened? Bank after bank in the country failed; private bankers in large numbers failed, and many merchants, contractors, and other active business men were pushed to insolvency by the mere reason of the dilatory action of the Congress and Senate. Can anyone say why the delay was so great? Can any man justify the delay? The question before the honorable bodies was a very simple and direct one, and at the time of its passage had not changed one iota from the question at the date of the calling together of the two branches of Government legislators. It would be impossible to state in precise amounts the terrible wreckage of all the businesses which were affected by this unnecessary delay, and people look back and wonder how any conscientious and clear-headed body of men could have with patience allowed the troubles to swell and accumulate and burst with the terrible reckoning in so many cases. A few very wealthy people stood ready to reap the benefit in the collapse of values by buying what was thrown to the purchase of such men as could buy, and there was never a justification for the cruelty of the situation.

Now, let us come to the parallel in the present phase of the delay by the Interstate Commerce Commission in coming to the assistance of the railroads in their application for permission to charge the very reasonable increase of 5 per cent for their services to the public.

What is the position of the railroads? First of all, they are the arteries of primary development for the entire commerce of this country; secondly, they have been administered as one continuous and improving facility for the benefit of every interest coming to their uses, and all their relations to the public are perpetual answerings to the demands by individuals, legislatures, and laws enacted by legislatures, and by the State commissioners appointed in all parts of the country, together with the final supervisory board in Washington under the title of the Interstate Commerce Commission.

The efficiency of all the roads is an ever-increasing one, and the cost of efficiency is likewise an ever-increasing one. The roads have distributed increased wages almost without exception from the Atlantic to the Pacific. They have also been obliged to meet higher taxes every year of their existence, and all of their financing has been by necessity at high rates of interest and upon short terms of time and renewals. They have answered well the requirements, also some very arbitrary conditions which have been forced upon them; but truly they can not go on much further without relief. Most of the large interests of the country are wondering at the delay on the part of the Interstate Commerce Commission in deciding and granting the requests of the eastern railroads which have been laid before them.

The unanswered question and the unknown action is bringing very disturbing conjectures and halting business determinations to some of the most industrious men of our country, and there is very little objection by the large mass of people who take the broad view of the requirement, actual necessity, for an allowance of the increased compensation to the roads. It is really the broad question that the Interstate Commerce Commission should consider.

The plan of provision for efficiency and facility carries a scope that affects the whole country, and there are very few individual instances in which a hardship would be entailed that would not be greatly offset by the impetus to business and by the quick and wide-spreading confidence that would flow should the definite announcement be made that the allowance will be granted.

The present situation enforces a very locked-up state of mind on the part of the authoritative officers of the roads as to what they can undertake to inaugurate, construct, or maintain. The bankers, who must look to their security in financing the roads, are equally barred by their inability to see or prove a calculation which insures principal and interest alike for the supply of the moneys required. This also, of course, operates in a very sensitive way upon the minds of foreign bankers as to future financing and to foreign holders of American securities already purchased and for which our corporations are their debtors.

It would certainly seem that the problem calls for a very prompt solution, and the solution is to admit that the railroads have done more than their share and have not come into their own at the hands of the public. It is not as if the increased compensation to the roads would simply be a pouring into their treasuries an additional fund to distribute to their stockholders, for this is not in the least the case. The public will very quickly share in the distribution of business through increased activities brought about by an improvement in the general industrial conditions; moreover, the public will receive in concrete form the quid pro quo by the better service in all directions which would be given to them by the carriers.

The delay at Washington is not only holding up the efficiency of the roads and confronting them with anxious fears as to their future financial position, but it is bringing a very great fear throughout the country of a business paralysis by reason of the continued uncertainly

as to any permanent move forward. It is hard to understand that the gravity of the many phases of the situation should not force itself upon the judgment of the Interstate Commerce Commissioners. Let us hope that they will come to a point of view common to the railroads, bankers, commercial interests, and the big business minds of this country, and that their favorable decision may not be so far off as is feared by many who can merely view from the outside and are not advised of their private considerations and conclusions.

Allow me to conclude with sincere expression of my kindest regards, and believe me,

Most sincerely, yours,

JOHN REDWOOD.

—

RAUCHTOWN, PA., *March 21, 1914.*

Hon. WOODROW WILSON,
President of United States.

DEAR MR. PRESIDENT: I don't want to add to your burdens, but isn't it in your power, acting with Congress, to compel the Interstate Commerce Commission to act in a crisis like the present? In our little town of Jersey Shore, near here, about 300 men have been put out of work by the New York Central Railroad. This is but one case of one railroad. You know the railroads ask 5 per cent increase in rates. Isn't the Interstate Commerce Commission playing the tyrant? Five per cent would hurt no one, and if it put thousands of men to work what a blessing.

Yours, to treat the railroads right.

G. A. BROSIUS.

—

MISSOURI MALLEABLE IRON CO.,
East St. Louis, Ill., January 9, 1914.

Hon. WOODROW WILSON.
Washington, D. C.

DEAR SIR: We are writing to ask you to use your influence with the Interstate Commerce Commission, urging them to grant the 5 per cent advance which has been asked for by the railroads in official classification territory, and urging that a decision upon this important question be given at as early a date as they consistently can.

Business men all over the country seem to be a unit in the opinion that a liberal advance in freight rates is absolutely necessary to again reestablish railroad credit, in order to permit them to purchase the necessary equipment and make the necessary extensions to handle the rapidly growing commerce of our country.

The lack of purchasing power of the railroads is almost entirely responsible for the present business depression which exists, and this depression is growing from day to day more serious. Iron and steel plants are working at half capacity or less; our large cities are full of unemployed labor; and conditions are being made worse by the heavy tide of immigration into the country, for which there would be a demand under normal conditions but for which at present we can find no employment.

Trusting that you will see fit to use your good offices in the directions suggested, we beg to remain,

Yours, truly,

F. E. NULSEN,
President and General Manager.

—

PLYMOUTH FOUNDRY,
Plymouth, Mass., December 20, 1913.

Hon. WOODROW WILSON,
White House, Washington, D. C.

MR. PRESIDENT: Inclosed please find pamphlet which I intended to read at the Plymouth Commercial Club.

Same deals with the railroad efficiency. Seeing through the papers that you are at present interested in same, I am sending it for your use.

The suggestion contained therein might help for the present to restore the confidence of the people in the railroads of this country if an increase of 10 cents per ton on freight will be granted to them for handling same, and if an increase of 5 per cent which the railroads ask will be given for the revenue only, in my opinion, it would not help very much unless the service would be improved.

I would be very happy if this pamphlet would be whatever good to you it may.

Yours, respectfully,

BERNARD FELDMAN,
Chief Engineer.

—

Mr. Chairman and gentlemen, if it may please you, I shall endeavor to talk about the railroad efficiency. We are all interested in this subject. Business men of this club have certainly read in the daily papers about the case of shippers fighting all the railroads of the United States. It was Mr. L. D. Brandeis, of Boston, who, not single handed but with the help of all the interested business men of the country, waged a bitter fight against the condition of all the railroads, and Mr. Brandeis won. The increase in freight rates was defeated. A trifle of $27,000,000 every year will remain in the pockets of the shippers. I had the pleasure to help Mr. Brandeis somewhat in personally giving him some details about railroad efficiency. These details I will submit to your judgment, and you can think for yourself if the shippers have a right to fight the railroads or to consider them their best friends. It is a fact that New England or any part of the United States would be very much behind civilization if it was not for the existing railroads. They make life worth living. They put us in contact with the outside world. Through them we can exchange our ideas and our products with other States, which has made us as we are to-day—prominent in all our undertakings. But this absolute necessity has its limits. If this commodity of transportation exceeds or reduces our profits to a dangerous degree, then the railroads become the enemies of the Commonwealth. This was the reason of the shippers' fight, and the railroads had the occasion to hear arguments which if put in practice would save them millions of dollars every day. Yes; I repeat, millions of dollars could be saved every day if they would put in practice the principle of efficiency.

BREAKAGE.

I will consider first the largest waste, and that is breakage. It is surprising to know that the railroads of the United States pay every year over $50,000,000 for broken or damaged goods. What is the reason of this? Why do they pay such a sum for breakage? It is very simple. The railroads of the United States still have in use the old-fashioned system of dividing cars with the engine. In Europe a more scientific, more practical system is employed, and that is the system of gravity. The loaded or unloaded cars are divided on an incline by their own force of gravity. One switchman can operate a train of 50 cars in half the time it takes by the system employed here. Suppose a train with 50 cars leave New York for Boston and has to switch in Bridgeport, New Haven, New London, Providence, Middleboro, and Boston. In these six points of switching, if the time required would be one-half an hour with the engine, or three hours for the whole route, with the gravity system only one and one-half hours would be needed. Time is money. Instead of having the cars loaded for a longer time, you have them ready for immediate service and therefore increase the efficiency of the rolling stock. Why don't the railroads adopt such a system? It costs about $10,000 for each important switch yard, and they think it is money wasted. I think they would rather spend their money in politics and see if they can get more money for less commodities. In Europe the gravity system was not put in practice very easily. It was a bitter fight of the business men at large, and especially the freight handlers. In Europe the majority of the railroads do not handle the freight themselves. This is a special job, handled by the boss freight handler. A business man puts up a bond in proportion to the traffic of his station and he employs the labor to handle the incoming and outgoing freight. If business requires they employ more help; if it is slack the help is reduced. The boss freight handlers are responsible for the breakage and for the men. With this responsibility for every breakage and damage thrown on their shoulders, you can be assured, gentlemen, that the same freight-boss handlers have forced the railroads to employ the gravity system. It is safer, cheaper, and does very little damage to breakable goods. The freight handlers are not paid by the railroads but by the shippers. For each ton a legal fee of 10 cents is paid by the shipper, and for less-than-ton lots a fee of 5 cents is paid. They are getting some revenue from the passenger stations also. Each passenger is allowed his valise or baggage up to the door of the station. There a porter takes charge of it. He weighs same, puts on the label for destination, and gets a 5-cent fee. It means that freight rates are only from one station to another, and same does not include handling. The shippers gladly pay the small expense for handling their freight when they are assured of less liability of breakage and quick delivery of merchandise. Sometimes we ship a carload of ranges from here to Boston, and there is not one exception where part of the ranges do not get broken. Although we crate the car with heavy lumber and the freight agent is satisfied that the car is well crated, yet the handling of this freight without some breakage is impossible with the switching done in this country. They break the goods and find all sorts of excuses in paying the damage, and finally the railroads think that stove manufacturers shall not exist. They contemplate to force the foundries to crate the ranges, and also contemplate increasing freight charges on stoves. All these hardships would be all right if they would deliver the goods without damage; but you understand that if you accept a crate and sign for same the responsibility of the railroad ceases, no matter if the goods are damaged in the crate, where they could not have been seen when signing for the goods. What will this mean? The whole industry of stoves will have to put an enormous price on the goods to include the damages of crating and transportation.

Now, let us do some figuring. Suppose that the New York, New Haven & Hartford Railroad has about 5,000 stations and employs about 150,000 to 200,000 freight handlers at $2 per day. This shows a waste of $300,000 to $400,000 a day for one railroad. If you include all the railroads this will figure up in the millions. This change alone will save millions to the railroads and give better service. I put this same principle up to Mr. Byrnes, vice president of the New York, New Haven & Hartford Railroad. His letter in reply admits that it is a good idea, but in order to do this they would have to revolutionize the entire system. If it is right and efficient, why not have the revolution now and not later, when the shippers will be disgusted and ruined?

UNIFORMITY OF RAILS AND CARS.

The second important waste of railroads is the different types of rails and cars. One railroad buys a 75-pound-per-foot rail, the other a 100-pound-per-foot rail. The same is true with the type of cars. It is reasonable to admit if all the railroads would combine and have a central bureau of research and adopt the same type of rails or rolling stock they could buy these necessities much cheaper. It costs less to make only 100-pound rails or have only one set of patterns for cars. The manufacturers could stock up and sell lower. But it is easily understood that Mr. Morgan and allies are directors in the Steel Trust and in the railroads, therefore the railroads pay the combination price. Furthermore, I don't think they employ civil engineers to inspect the rails when delivered, to throw out the defective ones. I conclude this from the number of accidents which are caused by defective rails. Why, life is cheap in the United States; a few thousand killed per year more or less is of no importance. Money will settle all these unfortunate accidents. The authorities do not find fault with the railroads in case of accident. Tell a district attorney after an accident has been investigated that a defective rail was the reason, and that will settle the question. The attorney might fight the railroads to pay the damages on life. If the directors would be sentenced to jail in such cases, you would certainly hear of less accidents. But what is the use of arguing with the railroads; their strongest reply is, The trade unions are to blame. Apparently they are right. As soon as business is brisk there will be a strike of one union or another. Whatever surplus they will accumulate it will finally go to labor. I am very sorry to admit this is so, not only with the railroads but with every industry employing union labor. This labor problem is one of the greatest to take care of. In Europe they have succeeded somewhat as to the easiest way to handle labor. They have created schools for railroad employees and their children. In these schools a thorough education on railroad construction and management is given. Children of employees have preference, and when they graduate employment is provided for them by the railroads. Besides this education they are trained like soldiers. In fact, they constitute the officers of militia in case of war. For this reason the Government is supervising these schools and an army officer is training the boys and the Government shares half the expenses with the railroads for maintaining these schools.

The benefit is manifold. They educate the coming generation with practical knowledge in their profession. They train them in military discipline and thereby educate the laboring class. Besides the railroads grant pensions to every employee over 30 or 40 years in active service. Such labor will not strike. Their future is guaranteed. Their children's future is assured and there is no reason to strike. The Government gets the benefit of an educated class of citizens and gets trained officers in case of war and the entire community is satisfied. Here in the United States any man willing to work is em-

ployed by the railroads. No care is taken for their future or their children's future and there is nothing else to expect but what the men will strike any time if possible to better their position to provide for their families in case of accident. In case of war the United States has to pay good money for soldiers, and besides they can not get them when wanted, or they send to war a number of untrained men who hardly understand the principle of a rifle or the game of war. Why don't the railroads of the United States combine their efforts and together with the Government establish such schools? Why don't they make and operate jointly shops for training their skilled workingmen? A common primary course is not enough. A half-educated man is worse than an ignorant one. When the people want to educate themselves higher they have no chance unless they are rich enough to go to college. How about the mechanic? Where can he get an education? They are getting same now incomplete, working as apprentices with union men and learn hardly a part of the trade. But they learn quick to strike, to drink, and therefore the trade unions are the misfortune of the railroads and the country. The railroads have not enough competent educated men. Their traction management is wrong. The maintenance of their roads are not modern and when new constructions are contemplated they have to hire outside help. When the Pennsylvania Railroad wanted to make the New York Terminal they paid millions of dollars to McKim, Mead & White, architects. They paid millions to Westinghouse, Church, Kerr, engineers. I was employed by the latter named as engineer detailing some of the structural steel. Finally that great work of the Pennsylvania Terminal was completed and nearly $100,000,000 spent. It was shocking to me when I saw this magnificent structure without any cement footing on the steel columns. When an electric train speeds through these steel columns there is always a vacuum created between the wheels and the third rail. The electric spark passing through a vacuum is nothing else but the X ray. If these X rays are penetrating freely the footing of the steel columns the cohesion of molecules are destroyed. The resistance of the column is changed and an accident may happen like it happened in the Paris subway a few years ago. A few hundred barrels of cement with linseed oil would protect these columns, but it has been omitted. If an accident will happen, what a waste of life and how many millions of dollars will the Pennsylvania Railroad have to stand for?

Gentlemen, I believe Mr. Brandeis was right that the railroads of this country ought to employ scientific management, for their own benefit as well as for the benefit of the citizens of the United States.

B. FELDEMAN,
Civil Engineer, Manager of the Plymouth Foundry.

CHICAGO, ILL., *February 20, 1914.*

Mr. WOODROW WILSON,
President United States of America.

DEAR SIR: Reading of the request of all railroads east of Chicago asking for an increase in freight rates, beg to advise you, means an awful more expense for the poorer class of people. As soon as this request is granted it means that the merchant will raise the price of everything, so the purchaser pays for the freight rate. It would be advisable, however, if this request is granted, to request the railroad companies to increase the wages of all of their employees whose salary does not exceed $200 per month 20 per cent. I am a railroad man and I know I am not getting enough money for the work I am doing, such as fireman, and you know how hard we fought last year for a small increase in wages, and I do really believe this will settle all difficulty between railroads and their employees if such an agreement can be reached. Trusting you will be interested in same and govern yourself accordingly, I beg to remain,

Yours, very truly,

C. H. EHRMANN.

SALINA CRUZ, *January 12, 1914.*

Hon. WOODROW WILSON,
President United States of America, Washington, D. C.

DEAR SIR: Ever a Republican, yet an admirer of you and your progressive methods, I am writing making a plea for the people and their right of Government protection in the struggle now being waged between public-utilities corporations and the people. The subject under consideration and to which I would call attention is the request of railways for permission to increase rates 5 per cent. Every argument possible is being made, pressure brought to bear, and the highest talent available secured, or paid for with the people's money, with the sole object in view of adding increased burdens to a people already taxed to the limit. I've been mixed up in this game for years, and am free to say I see no reason why the railways' prayer for more money should not be refused. I really believe some departments of the service require a greater percentage of the gross receipts than is now assigned that department; at the same time think it merely requires a readjustment of affairs, which can be secured by applying what I would term commercial methods to the business in hand. I realize this is a factor railway managers are sidestepping. To do this means readjustment all along the lines; it means the officials paid with moneys contributed by those who pay the freight and the passenger must conserve and use those funds in the interest of the people; that their time and energies must be extended in making an effort to produce net results for the people, and not expend the available assets in promotion of the bond and stock holders' interests, with a total disregard for the welfare of the public. True it is enormous sums of the people's money is being used solely that the interests may subvert the will of the people. Stop, I say, this plundering of the public-utilities' treasuries for the purpose of nullifying the expressed wish of the people. Legislative representatives will talk of the labor organizations as one of the principal factors in the game that has brought about conditions which call for heavy increase in the salaries of men. Admit it. It is a fact unions have secured a just increase in salaries of the rank and file all along the line. No one denies this. On the other hand, does anyone stop for one minute to think of the improved conditions brought about by these same organizations? Were it possible to figure it out in dollars and cents, I believe it could be readily proven labor organizations are a very valuable asset. A revenue-producing instead of a destroying factor in the operations of railways, they are continually educating their members to a higher state of morality, excellence and skill in their calling, thereby making safer the lives of those traveling for either business or pleasure; hence conserving the interests of the public, at the same time reducing the losses through care and conservation of the interests intrusted to their care. Any railway manager will, if he speaks truthfully, tell you that the percentage of accidents and property destroyed through what may be termed carelessness or neglect of union men is decreasing every year. Are not our unions entitled to some consideration for this, and does one ever hear of their receiving this credit as an offset against salary increases? Now for the railway side of the question. Do they ever mention the enormous increases of officials' salaries, expense accounts, incidentals, special cars, etc.? Did labor unions cause these additional costs of operation—the increase in officialdom—a percentage basis far greater than the rank and file? Now, let us reason together and say to the railway representatives praying for this increase of rates, furnish us an itemized statement of expenditures for, say, three years; show us just how much of the people's money contributed for freight and fares has been diverted for legislative promotion, for the sole purpose of subverting the people's expressed wishes as indicated by them to those selected to represent their interests at Washington. There are hundreds, aye thousands, of reasons why this increase should not be granted. The masses should be told this, and also told the proper methods to be applied that will produce net results; surplus, not deficits; prosperity, not receiverships.

Some Senator said a brilliant attorney would tell the people where railways were expending one million per day more than necessary. Did he do so? I've often wondered what influence brought to bear to prevent this. In conclusion, beg you to keep on in the good work, save the people's assets for a future generation. Our crop of deficits is already overwhelming in a way, hence the high cost of living. Keeping up the capitalizing of the destructible means an unbearable burden for the future.

Trusting I've not bored you, I am,

Yours, faithfully,

W. S. PAGE.

HOTEL TERMINAL,
Salina Cruz, Estado Oaxaca, Mexico.

WAUWATOSA, WIS., *February 23, 1914.*

Mr. WOODROW WILSON,
President of the United States, Washington, D. C.

DEAR SIR: I have noticed in the papers that Congress is going to set aside $90,000 for an investigating committee. It seems to me all this time and money can be saved, and to bring on good times there is just one thing—to give the railroads a chance to live; give them a chance to build new lines; also the 5 per cent increase on freight rates; then we will have good times at once, because when the railroads start in a lot of new construction work, they employ thousands of men in every branch of business, and if the railroads do not do any work we will have thousands of men unemployed, which is bound to bring on hard times, and if we have good times the President of the United States is given credit for it, and good times is what we all want to see. The country is in good condition, and there seems to be plenty of money, and I can not see why we can not have good times.

I am speaking of 30 years' experience. Hoping this will meet with your approval, I am,

Respectfully, yours,

F. J. MANN.

CHARLESTON, S. C., *February 19, 1914.*

DEAR MR. PRESIDENT: I was glad to read in the papers last night and this morning that you were about to take a hand in causing a speedy decision in the freight-rate decision now before the Interstate Commerce Commission. Business here is good and improving, and the only cloud now hanging over business, from what I can gather from business men here, is the delay in giving the decision above named. All business men I have talked with desire the increase given the railroads, and as soon as possible.

Many think the Interstate Commerce Commission must be playing into the hands of the Republican Party or a favorable decision would have been rendered ere this. I was much interested in your election, and put in some good work for you in the West, especially, in 1912.

On my return home there was a long interview with me in the News and Courier, a copy of which I sent to you, and received an acknowledgment of its reception by your secretary. I am truly glad your administration, so far, is a complete success. You have accomplished wonders; not a mistake has been made.

This is the verdict given by hundreds of business men whom I have talked with in almost every kind of business. I travel a great deal, and there is no doubt about the correctness of the statements herein. Mrs. Morgan and myself stopped over a day and night in Washington about the 1st of June last year and had the pleasure of meeting you. I am a Princeton graduate of 1878, just a year before you. I have given the above facts, thinking that they might be of some interest to you.

I trust the calamity howlers will soon be routed and that your administration throughout will be a howling success.

Yours, truly,

FRANK T. MORGAN.

CAMDEN, N. J., *March 20, 1914.*

WOODROW WILSON, *President.*

DEAR SIR: The question of increase in freight rates seem to have caused a great deal of confusion. In dealing with a matter of this kind, in order to protect the interests of the people as well as the interests of the railroads, it is essential to know the facts properly. The object of the present tariff is to benefit the people's interests. The fear of foreign competition, the average price of the iron and steel products produced by the United States trust amounts to $7.50 per ton in a production of 1,000,000 tons per month. This means $90,000,000 less for this concern's products than last year. This is only one concern. The American Locomotive and Baldwin American Car Foundry, the spring steel concerns, and the endless number of other concerns that manufacture supplies for railroads have all been compelled to make reductions. The reduction in cost of supplies amounts to more than the increase in freight rates probably. Is it just the railroads should have the benefits from increased rates and reductions in the cost of supplies? This would be one of the greatest crimes committed against the interests of the people in the history of this country. Examine into the financial conditions of the various corporations that manufacture supplies for railroads and you will find that these concerns have millions of surpluses after earning dividends on securities that represent no value. The railroads, a great many of them, are suffering from these conditions. This condition of affairs has done more to injure the financial standing of the railroads than most any other

cause. The remedy seems to have been the tariff. The interests of the people should have the benefit of these conditions, and should be considered in their interest.

Yours, truly,

WM. J. MCCAUSLAND.

—

OFFICE OF HIGHWAY COMMISSIONER,
Renton, Wash., November 30, 1913.

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

DEAR MR. PRESIDENT: The railroad question seems to have forged to the front once more, and it is to give you the views of a western man on this situation that I am writing this, as railroads means more to us than tariff or currency. We are not suffering so much from the railroads we have as we are from the railroads we have not. The present transcontinental lines have reached such proportions that the heads of them feel and realize that they have all they can attend to, and this results in stagnation to the rest of the country. For instance, the Chicago & North Western Railway, one of the best western systems: Their stock is nearly always quoted at 130 to 140. They have for years had as their western terminus a little town in the sagebrush in Wyoming. They know they are doing well and are content, and to handle their coast business they have secured trackage rights and freight agreements with existing roads, instead of building through and opening up a new section of the country. The disastrous feature of the unsettled country is this: The railroads will not build branch lines or extensions until they get ready, while at the same time their control of all terminal facilities in the large cities and trade centers effectually blocks the development of a new road.

Again, where a road is collecting a 4-cent passenger fare per mile because it operates less than 100 miles of line in this State, it will refuse to extend the mileage beyond this distance, as it would then have to reclassify some of the tariffs. I could cite an instance where the railroad ties were removed from the grade to cut down the mileage below the 100-mile limit. We are now practically at a standstill in regard to new construction; there has been some new work undertaken, but, compared with the needs of the country, very little has been done. I tried to interest the governors of Washington and Oregon in an effort to make the banks of the Columbia River neutral and open to any railroad that needed to connect with them, as the Columbia River is the only water grade through the coast range, but had no success. The railroads are our greatest problem, but it seems to me as private corporations they will always be a day's march ahead of Government regulation. Since rebates, pools, water stock, etc., have become taboo with them the inside ring have been able to obtain the same financial results by paying large sums for small and imaginary competing lines. The story of the New Haven and the testimony of the bankrupt Frisco system show that the same method was pursued. Neither of these lines lost a cent on their main-line traffic. The deficit has been shown to be all in these side deals.

Mr. Samuel Untermyer, speaking at Springfield, Mass., a few days ago, thinks legislative investigation ought to cease. He admits we might uncover a great deal more rascality, but says "the evidence would be cumulative only"; then, with the innocence of a child, continues: "Let us wipe the slate clean and begin the work of so reframing and strengthening our laws that there can be no repetition of the past without the certainty of prompt detection and punishment."

In the beginning of his speech he said, "A halt should be called upon further governmental investigation into the past crimes in the looting of corporations." Perhaps Mr. Untermyer can inform us how we are to frame a law to prevent the repetition of past crimes without investigating to find out what that past crime is. His long list of suggestions is practically void, as every remedy is for external use only. The railroads know far better than we do which acts of theirs are against the public good. If they are sincere and want peace and the public confidence, let them originate a few of these reforms themselves. When they act honestly they will be treated with the fairness due honesty. The benefit of a zone system of rates would compel greater efficiency on the part of managers.

Railroads to-day are the most inefficiently run of any of the great commercial corporations and the larger the system the more true is this of them. They enjoy a monopoly and are thus able to keep going. There is a widespread clamor to raise the rates; they have big shippers like Claflin and Simmons speaking for them. It is nothing to the big shippers what the rates are, as the consumer pays the freight. I do not know just what good, or what it will lead to, this valuation of common carriers—volume of traffic and not value determines rates. Keeping the railroad up to its capacity is where the money is made.

I noticed that when I desired to take an examination for senior civil engineer on this work that railroad references were necessary. Perhaps that is well, and to an extent could not be otherwise, but it is rather a delicate question to ask a man to put his "O. K." on you to value his property.

Mr. President, there is a lot of agitation against your policy in this matter, but I hope and trust that you will stand fast. The railroads are all crying about regulation, that they can't get money for new lines, etc. The investing public are with you. The reason the railroads can not get money is because they have in many instances proven themselves unfit to be trusted, the thinking man with $50,000 to invest has read about the "New Haven" and has also seen a railroad issue notes—the Frisco 90 days before it went into bankruptcy.

People are not going to trust their money with thieves simply because they are masquerading under the names of railroad officials. They should not be allowed the 5 per cent raise at this time, but compelled to do business more along business lines. They do not need it—Union Pacific with millions of dollars of pure water is quoted at 151; the Delaware & Hudson, an eastern road, at 149; Lehigh Valley, 146. But far more serious and of more importance to us, is how are we going to build the new railroads necessary to this country; can we finance them by State or Goverment aid? I am trying to figure on that problem but see no solution at present. If any of these suggestions should prove useful, or better still, with your different viewpoint and larger store of information, suggest a train of thought to you, I will be more than repaid. This letter and article is for your personal use and information alone, if you can not use it in any way please consign it to waste. That is my only request in this matter. I know that we are pleased out here with your efforts along the lines of reform; I know that I am, and I trust that your health and strength will continue to hold up under your heavy duties.

Believe me to be with sincere regards and respect.

Yours, very sincerely,

FRANCIS W. HARRIS.

EXHIBIT C2.

LETTERS SENT COMMISSION BY MEMBERS OF THE CABINET.

NEW YORK, *April 11, 1914.*

SECRETARY INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: President Wilson ought to take a rest. He has put the country in a fine box.

"Prosperity is where? Up in a flue."

It is up to the railroads to bring prosperity here. They are the ones to start the wheels of prosperity. If they get the 5 per cent advance on the freight rate as they are asking of you, prosperity, etc., will begin to return.

I am out of a position, as many more are. No prosperity, no business, no work.

Please give the railroads the 5 per cent raise this month.

JOSEPH DANIELS.

—

MEMBERS OF THE CABINET HAVE FORWARDED A FEW LETTERS TO THE INTERSTATE COMMERCE COMMISSION.

POST OFFICE DEPARTMENT,
SECOND ASSISTANT POSTMASTER GENERAL,
Washington, March 28, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: There is transmitted herewith a communication received from Mr. Melvin Green, of Winchester, Va., addressed to the Secretary of State and referred by him to this department. That part of the communication relating to compensation to the railroads for carrying parcel-post matter has been answered.

Very respectfully,

JOSEPH STEWART,
Second Assistant Postmaster General.

—

GREEN ORCHARD,
Winchester, Va., March 14, 1914.

Secretary of State BRYAN,
Washington, D. C.

MY DEAR MR. SECRETARY: The conscience of the country is waking up to the fact that the United States Government is acting dishonestly in making the railroads carry that parcel post without paying them a just recompense for it. I urge you to exert your great power and influence to see that this scandal is stopped. The Government must be honest first of all.

Also it is certainly clear that the Interstate Commerce Commission should grant the 5 per cent increase in rates asked by the roads. The demand certainly seems a just and moderate one. Its granting will be followed by great business prosperity. Its refusal will produce such a depression as this country has not seen since Cleveland's day. It is needless to say what the result would be to the Democratic Party. But it is a bigger question than that. It is one of right and wrong, and the railroads have the right on their side. If the present commission is made up of men so prejudiced or so small in caliber that they can not do justice to the railroads, why, then the commission should be remade.

I urge you to act to the best of your ability to see that both justice and the prosperity of the country are served by doing justice to the railroads in both the above matters.

Also push the law now up giving the commission complete power over the issuing of all securities by the railroads. Push a law providing for compulsory arbitration in all railroad labor disputes under supervision of the commission.

Lastly and most of all, as you love our country, oppose all extension of Government ownership in the continental United States, both as to railroads, telephones, telegraphs, or anything else. When we start on General Government ownership in this country it will mark the beginning of the end of our beloved country.

Yours, most earnestly,

MELVIN GREEN.

—

CHICAGO, *February 18, 1914.*

To the Hon. WILLIAM J. BRYAN,
Washington, D. C.

DEAR SIR: Believing in the sagacity and sincerity of your statesmanship, and having met you years ago, when you spoke to a Norwegian-American assembly at the Auditorium, again in 1908 at Brands Park, when you so kindly presented me with a copy of your beautiful lecture, the "Prince of Peace," which I had heard; again meeting you on the train at Townsend, Mont., while you were campaigning for President Wilson's election.

Therefore I take the liberty of addressing a few lines to you on my own behalf and on behalf of two other Wilson Republicans. We all voted for Roosevelt last election, but we are Wilson Republicans now. One of them is a merchant tailor, Dick Hanson, Great Northern Building, and the other is Carl T. Newgard, teacher in an engineering school, Athenæum Building, Chicago.

We wish to respectfully request you, if it seems consistent to you, to use your influence to get the Interstate Commerce Commission to grant the increase of 5 per cent in freight rates.

Times are not very good here at present, and though none of us has anything whatever to do with any railroad, we believe that such an evidence of good will on the part of the administration would have an encouraging effect of far greater consequence in bettering things than the relatively small increase in freight charges, which certainly could not fall as a burden on the "common people" of our country.

Respectfully,

BIRGER OSLAND.

—

THE SECRETARY OF THE INTERIOR,
Washington, June 5, 1913.

Hon. JOHN H. MARBLE,
Interstate Commerce Commission,
Washington, D. C.

DEAR MR. COMMISSIONER: Permit me to invite your attention to the inclosed letter from Mr. W. D. Taylor, of Cleveland, Ohio, relative to the proposed advance of 5 per cent in freight rates on certain railroads. I have advised Mr. Taylor that his letter has been referred to you for consideration.

Cordially, yours,

FRANKLIN K. LANE.

CLEVELAND, *June 3, 1913.*

FRANKLIN K. LANE,
Secretary of Interior, Washington, D. C.

DEAR SIR: The traffic commissioner of the Cleveland Chamber of Commerce transportation department, Mr. D. F. Hurd, invited the members of the chamber to meet at the Commerce Hall and listen to a committee representing the Central Freight Association present their views in support of the 5 per cent advance in freight rates.

The writer attended this meeting yesterday afternoon, representing our company, and listened to the statements made by the committee representing the railroads. Their chairman or spokesman was Mr. Hodgson, traffic manager of the Pennsylvania lines west of Pittsburgh. The other gentlemen of the committee were one of the traffic managers of the Erie Railroad, the Lake Shore, the Nickel Plate, and all other lines that are operated in our territory.

Their principal argument was there had been so many burdens placed upon the railroads by the Government with reference to safety appliances, elimination of grade crossings, and the large advance in labor it was absolutely necessary for them to get this 5 per cent advance on all rates now in force to continue their business and make anything for their stockholders and give reasonable service to the people of the country who have to depend upon the railroads for transportation.

The writer was called upon by the chairman for his views on this subject, and we stated as far as our company was concerned we would not object to a reasonable advance if the railroads would give us better service in handling our freight.

We stated the railroads in our city had not kept pace with the growth of Cleveland with facilities for handling the freight. We told him in the case of the Lake Shore that there had practically been no change or improvement for the past 15 years. We called attention to the fact that a few years ago when private exchanges were first established, at the Lake Shore depot they had no private exchange, and if you wished to get into telephone connection with them it took from one to two hours, as the line was always busy. When talking with their freight agent on this subject we asked him why they did not install such a system and thus do away with these long-time waits which we had to make before we could get in touch with them? To this he replied he had been trying to get this improvement for over a year and wished the writer would take it up with their office and write him a strong letter and then take it up with the main office, which at that time was in Cleveland, and see if they could not do something for us. We did this, and after some work on his part succeeded in getting a private exchange, which was several years after they had been installed in business houses.

We also stated that 5 per cent seemed to us a rather large amount to advance, that in the jobbing hardware business if we could make 3 per cent net on our sales we could declare a satisfactory dividend to our stockholders and carry a portion for undivided profits, with which to take care of the betterments we have to put in to take care of our increasing business. We, however, stated there was no water in our stock.

We would like to ask, if you care to go into this matter, whether in your mind the amount asked for, namely, 5 per cent on all rates now in force, is necessary to help the railroads out. We feel whatever is necessary we are perfectly willing to pay, so they can do the business and declare a fair dividend upon the actual money invested and make the necessary improvements. It is a fact, as we said, that there has been a good deal of water in some of the railroads, and if we were compelled to pay freight rates that would pay dividends on watered stock, we would object to it.

If you care to send us an answer along these lines, we shall consider it a great favor, as we feel no one is better posted on the railroad situation than yourself.

With kind personal regards, we remain,

Yours, very truly,

THE GEO. WORTHINGTON CO.,
Per W. D. TAYLOR, *President.*

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
Washington, April 8, 1914.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

MY DEAR SIR: I hand you without comment a circular issued by F. A. Schirmer & Co., 79 Milk Street, Boston, which relates to certain matters under the care of your commission.

Yours, very truly,

WILLIAM C. REDFIELD.

BOSTON, MASS., *March 20, 1914.*

THE CRISIS IN AMERICAN RAILROADS.

It is becoming increasingly evident to the business man that if he would live and prosper he must protect himself with every available means from the application of the unbalanced theories of the political demagogue and from the malicious, insidious, and malevolent scheming and chicanery of the professional agitator and muckraker. The busines man, big and little, the investor, the capitalist, and the wage earner, to such a pass has half-baked, ill-considered legislation come, should make haste to exercise the privileges of their franchise with greater and still greater fervor if this country is to continue in the years to come what it has been in the past, namely, God's country for those willing to work and plan and struggle. Not only should this work of organization and combination be felt at the polls, but the business man should speak through his local chamber of commerce, and the investor and security holder should organize into a league which should comprise the millions of holders of American stocks and bonds. Not until this is done will the country find relief from the operations of those whose mainspring of political action is the attack on and the crippling of business and enterprise; in short, capital asks but fair treatment, failing which, it will depart in due course of time to lands and laws where its rights are respected.

Recklessness of statement and demagogy in high places are all too common, and it is this feature which the business man must fight and resist, for, after all is said and done, the present administration in Washington represents, to a greater extent than any other in our history, those whose personal stake in the country is small, and of whom too many are apt to view with a suspicious and jaundiced eye success and fortune in commerce and industry. President Wilson is able and clear-sighted, having indubitably shown that he has the best interests of the country at heart, regardless of party or politics, but may it not be said that a part at least of his official family is more of a burden than assistance?

That the country is facing a crisis which should make every business man and investor raise his voice and make himself heard at Washington is certain; it is a crisis which has been deliberately brought on by the authorities at Washington, and which can alone be composed or settled by them. We refer to the request of the eastern railroads to be allowed to increase their rates by 5 per cent. Some four years ago, these railroad companies made a similar plea to the Interstate Commerce Commission, which was denied them. Since then, with diminished credit, declining earnings, advancing wages, and advancing costs of everything which enters into transportation, they have been reduced to a position where once again they have been forced to appeal to the commission for relief. This appeal by the carriers has now been before the commission for over a year, and yet in spite of the great urgency of the case there has been no decision handed down. It does not matter that during the past year these same roads have been obliged to raise the wages of their employees (the second time in two years); to raise new capital at ruinous rates by means of the short-term note, for improvements demanded by the public, and to restrict their expenditures wherever possible for new equipment and facilities.

The crisis of free silver which the country faced in 1896 was not more serious or more far-reaching in its ramifications than the one which now confronts us in connection with our railroads, and we believe it to be the duty of every chamber of commerce in the land to petition the Interstate Commerce Commission that the prayer of the eastern roads not only be granted, but that the decision granting them relief be handed down with all possible dispatch. If free silver had prevailed in 1896, we should have had the most devastating panic in history; it would have meant national repudiation. If the eastern carriers are again denied relief, we shall witness a cataclysm in this country which will shock the world. Railroad credit will be paralyzed; roads now in smooth water will be forced upon the rocks of bankruptcy; suspicion will seize hold not only of the man with liquid funds, but of the man with good securities; the former will hide his capital or put it to work in Canada, and the latter will rush to market to sell at ruinous prices. To state the unqualified truth, every day of delay is bringing the situation to a more serious condition, increasing the number of unemployed throughout the country, who might easily grow desperate, and causing a suspension of credit; in short, the case of the railroads has been allowed to reach that stage where the alternative is increased rates or panic and paralysis of credit. Fortunately, the railroads have a good case, as expenses for wages, equipment, materials, etc., have risen much faster than earnings. No one knows better than the Interstate Commerce Commission that the only commodity which the railroad has to sell, namely, transportation, has remained stationary during the past 10 years, while everything it must buy has advanced from 20 to 80 per cent.

The investor in industrial companies, the merchant, the manufacturer, the wage earner, and the day laborer, should not lightly dismiss this crisis of the railroads as having no bearing on their own fortunes, for inextricably bound up with the railroads is the prosperity of the entire country. Not a city, or a village, or a hamlet but will feel the prosperity or the poverty of the railroad, they being the largest employers of labor, the largest buyers of manufactured materials, and the greatest factors in the development of the resources of the Nation.

Let us all get busy, then, through our chambers of commerce; let the business man and the investor realize to its fullest extent what this crisis of our railroads means to us. Act now, resolutely and decisively, and help restore prosperity and good times to these United States.

The turning point is very near: the burden to confidence and credit grows heavier each day: there is a limit which it would be dangerous to reach. The responsibility of the Interstate Commerce Commission for what may ensue is tremendous. Stop and think what would be the conditions in this country with poor crops this year coming on top of a refusal to grant the railroads increased rates. The mere thought is hideous in the extreme.

F. A. SCHIRMER & Co.

CLARKSBURG, W. VA., *January 3, 1914.*

Hon. WILLIAM C. REDFIELD,
Secretary of Commerce, Washington, D. C.

DEAR SIR: From the information that I can obtain there seems to be a concerted action on the part of the railroad companies to lay off all the help possible when there is, apparently, no necessity for it, and in fact, it is endangering both life and property in transportation. There was a gentleman in my office this week whose son is one of the foremen at the machine shops of the Baltimore & Ohio Railroad Co. in Cumberland, Md., and he tells me that his son, in effect, says that the railroad company has laid off so many of the car repair men that he has to don his overalls and help do the work himself; that there is plenty of work for the men that are laid off, but for some reason the company has not kept them employed. And last week there was a young man here, who is a brakeman on the Pennsylvania Railroad, that has a repair division at Pitcairn, near Pittsburgh, Pa., and he informs me that the Pennsylvania Railroad Co. has laid off the repair hands at that yard, and that the yard is full of disabled cars, and that the instructions were to take out every car that would possibly run, although it may be in part disabled. And that those repair hands are laid off, not for want of work to be done, but for some other reason. And from the best information that I can get there appears to be a concerted action of the railroad companies to discredit the policy of the United States Government, and, if possible, to change the attitude of the President and the Interstate Commerce Commission toward these companies. And I trust that you may be able to get the inside information and prick this bubble of the railroad companies in a way that will let the public see just why the directors of the different railroad companies are acting in unison and undertaking to control the governmental policy by throwing men out of employment, and if possible check the prosperity of our country.

I believe that the large financiers that control the railroad companies and all the other large corporations have an understanding among themselves, and that they are endeavoring to thwart the purposes of President Wilson and this administration, and if you can expose them as Secretary McAdoo did the bankers that were trying to talk panic last May and also trying to depreciate the United States Government bonds, and also trying to make money tight when the crops from the South and West were needed to be moved, you will have done another very great service for the common people of this country and also for the President.

I believe the presidents of the railroads are as helpless as President Mellen was, of the New Haven & Hartford and other roads of which he was president. That back of them are the cold-blooded moneyed men who have an inordinate desire to have money control this country instead of the people, and that they are against popular government. Nearly every railroad official that talks at this time undertakes to cast a direful shadow on the future.

Can you not prick this bubble that is filled with the hot-air of these men who see things in the wrong light and are still "blubbering" as they go down?

Very truly, yours,

MILLARD F. SNIDER.

EXHIBIT C3.

FEW LETTERS SENT TO THE COMMISSION BY MEMBERS OF CONGRESS.

SCHENECTADY, N. Y., *November 21, 1913.*

Hon. B. H. MEYER,
Interstate Commerce Commission, Washington, D. C.

MY DEAR SIR: I inclose you a clipping from the New York Times relative to the freight rates now granted the railroads of the United States. It is self-evident that an increase of freight rates is necessary in the interest and welfare of our country. The various securities of the railroads, both stock and bond securities, are held by millions of *people, many* of whom are widows and orphans who are dependent for a livelihood upon the dividends of the railroads; in fact, all business interests of the country are affected by the prosperity or adversity of railway interests. The railways are constantly being called upon for better equipment, better safety devices, higher wages for their employees, and every little town and hamlet in this great Commonwealth are gradually increasing their tax rates so that it is absolutely necessary for the railroads to have an increase in freight rates, and unless they are soon granted an increase many of the most important railways in the country will be in the hands of the receiver, which can not help but result in causing the most disastrous panic this country has ever seen. For that reason I trust that your honorable body will see your way clear to grant a fair increase in freight rates, for the future prosperity of the country demands it.

Most respectfully, yours,

H. S. DE FOREST.

—

[The New York Times, New York, Saturday, November 15, 1913.]

THE RAILROADS AND THE COMMISSION.

A condition confronts the Interstate Commerce Commission, the condition of the railroads, perfectly well known to all men. Is the commission still enslaved to its own theory that permission to the railroads to increase their rates would be unpopular?

In granting an increase of $6,000,000 in the pay of the trainmen of the eastern district the arbitrators pointed out that in this eastern territory at the present time a ton of freight is moved "more than 3 miles for the value of a 2-cent postage stamp," and that this is the cheapest railroad service on the face of the globe. The arbitrators held it to be unjust to say that employees must continue to be satisfied with what can be paid from freight rates as low as this. Moreover, the board of arbitration felt it to be its duty to call to the attention of the Interstate Commerce Commission the imperative need of better provision for the safety of the public, through the substitution of steel for wooden cars, air brakes, improved signal systems, double-tracking, and the increase of facilities. "All of these things cost in the aggregate an immense sum of money," say the arbitrators. "Any policy that would make it impossible for the railroads to command this sum would be a profound misfortune to the whole Nation." The money needed for these improvements can be had only from the rates paid to the railroads by the public for the service it enjoys.

To the increase of $6,000,000 a year in wages must be added an increased expenditure of $4,000,000 in the same district made obligatory by the full-crew law. For the entire country this increase is $13,000,000. More than a year ago we pointed out that for the 10-month period ended April 30, 1912, the railroad business of the country, though showing an increase of $32,000,000 in gross, showed also a loss in net exceeding $10,000,000. In this period the increase in taxes levied upon the railroads by the States was $9,666,827. This picture of increasing business and diminishing profits has been often repeated in subsequent periods. It is all summed up in President Willard's statement before the council of the Merchants' Association a few days ago, when he pointed out that in the fiscal years ending with the month of June, from 1908 to 1911, inclusive, the railroads of the country increased their actual capital invested by over $2,000,000,000, and yet the operations for the fiscal year ending June 30, 1911, showed an actual loss in net from operation of $8,750,000 and compared with the year 1907. The case of the Baltimore & Ohio road is typical. With a property investment increased by over $55,000,000 in the last three fiscal years, its total operating earnings available for return upon the investment were $751,000 less than the earnings prior to the $55,000,000 outlay.

If the Interstate Commerce Commission is not aware that public opinion has undergone a change in regard to the railroads, its powers of observation must be defective. The action of chambers of commerce, of merchants, and of shippers in their conferences shows that the grant of living rates to the railroads will no longer be made a subject of complaint or of resistance. It was said of some leaders and Senators of the Republican Party, who were blind to the evidences of change and of progress, unconquerable in their adherence to things as they were, that they had overstayed their time. The Interstate Commerce Commission, which has suspended for four months the proposed increase in rates in the eastern territory, may easily overstay its time in dalliance with theories of popular opinion and of public interest which are no longer true.

—

HOUSE OF REPRESENTATIVES,
Washington, March 30, 1914.

The INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: In the present consideration by the commission of the petition of the eastern railroads for permission to increase rates by 5 per cent, a material consideration, of course, is the attitude of shippers, and I assume that the commission is interested to know of any action on the subject taken by shippers.

The executive committee of the Worcester Chamber of Commerce, a body which includes all of the many large shipping manufacturing establishments of Worcester County, Mass., on March 27, 1914, adopted the following resolution unanimously:

"Voted, That the Worcester Chamber of Commerce, representing as it does the business interests not only of this city, but of the 59 cities and towns covering Worcester County, go on record as in favor of granting an immediate increase to the railroads in official classification territory of the 5 per cent increase in freight rates asked for by them."

In any record of the consideration of the petition I hope this resolution will be entered and, if possible, read at a hearing.

Very truly, yours,

SAMUEL E. WINSLOW.

—

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 24, 1914.

To the honorable the CHAIRMAN OF THE
INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Inclosed you will please find a letter from a constituent of mine and an open letter to your honorable body which recently appeared in one of the metropolitan papers, and which I trust you will consider very carefully, answer, and return.

Respectfully,

M. F. CONRY.

—

NEW YORK, *March 21, 1914.*

Hon. MICHAEL F. CONRY,
House of Representatives, Washington, D. C.

DEAR SIR: May I, as one of several hundred thousand small railroad-stock investors, ask you to kindly peruse the inclosed open letter published in the New York American, addressed to the Interstate Commerce Commission, and which is sent you for the purpose of asking your best and earnest efforts in behalf of the small investor, to urge an early determination by this commission of the question now before it as to permitting the railroads in our section of the country to increase the freight rates 5 per cent.

It is generally conceded that the prosperity of the railroads of our country is conducive to general prosperity. It is needless for me to argue, and you as the representative of the leading commercial city of the world, know that the expenditures of the railroad for operating expenses, repairs, and maintenance involve millions yearly, resulting in giving employment to hundreds of thousands throughout the land, and from personal knowledge know that the shippers would cheerfully increase their expense of transportation, feeling it is but a trifle, and that it would inure to the general welfare of all concerned.

We are approaching prosperous times in the manufacturing interests throughout the country, but are being harassed and annoyed by legislation having no valuable purpose, in addition to having the Interstate Commerce Commission delay their determination of questions of vital importance, and by so doing retarding and preventing the growth and prosperity of the country.

Won't you, as one of the Representatives of this State, do something to bring about the much desired result?

Yours, respectfully,

LEON LEWIN.

—

FACT AND COMMENT ON FINANCE AND BUSINESS.

[By B. C. Forbes, business editor.]

A knowledge of current conditions and of possible dangers impels me to address the following open letter to the Interstate Commerce Commission:

Gentlemen of the Interstate Commerce Commission:

Are you aware that, partly owing to your course of action, the country is in peril of suffering an upheaval disastrous to labor, to the railroads, to investors, to industry, to the public at large, and to the administration?

Do you realize that in your hands have been placed responsibilities comparable only with those devolving upon the Supreme Court of the United States?

You have been given control of the greatest industry in the country, its system of transportation, on whose welfare depends, directly or indirectly, the welfare of every man, woman, and child in the Union.

You are responsible to Congress alone.

You are more than a quasi judicial body; there have been reposed in you administrative functions of the gravest importance.

Now, rightly or wrongly, your actions have created the very general belief that, instead of holding the scales of justice even between the railroads and shippers, you have become an antirailroad body.

In ruling—perhaps wisely—against the increase in freight rates applied for in 1910, you gave reasons which were supported by arguments and statistics embodying serious misrepresentation of facts. Your misuse of figures on that occasion raised doubts in well-informed minds of your desire—or your ability—to be strictly impartial in dealing with large railroad and financial problems.

Since then the position of our railroads has grown distinctly worse.

The confidence of investors, both in Europe and at home, has been so shaken that many roads are to-day in a parlous financial state.

During the years 1914, 1915, and 1916, maturing railroad obligations alone will call for upward of $1,000,000,000—this without providing one dollar of additional capital for any purpose whatsoever.

How debts falling due are to be met and new capital necessary to maintain solvency is to be raised are problems now exercising grave concern in the financial and railroad world.

Whether these problems can be handled without plunging the country into general disaster depends in large measure upon the course you choose to follow. The eyes of financial Europe and of thinking American citizens are upon you at this moment, anxiously awaiting announcement of your policy.

The state of mind existing to-day in the most responsible circles is not conducive to that speedy return of prosperity which the deplorable prevalence of unemployment and discontent renders so extremely desirable.

Without overstating the facts, it can be said that those who are charged with the task of directing and managing the country's railroads are in danger, if further denied the cooperation of the Government and your body, of abandoning as hopeless all efforts to overcome multiplying difficulties.

I beg you to ponder these words uttered this week by Samuel Rea, president of the Pennsylvania Railroad:

"This statement is not made to predict calamity, but it is made to prevent calamity."

There is more need than you, perhaps, realize, for efforts "to prevent calamity."

What are you gentlemen of the Interstate Commerce Commission, you guardians of the Nation's railroads, doing to prevent calamity?

One of your number has just caused to be published, in sensational manner, charges of "serious irregularities" against the Chicago, Milwaukee & St. Paul Railway, which "irregularities"—confined wholly to bookkeeping—were committed several years ago and pointed out at that time by the financial press.

Has it taken you three years to discover what the financial press discovered immediately the company issued its annual report?

If not, why is the subject treated by you so sensationally at this unfortunate juncture, when the solvency of numbers of railroads and the position of the railroads as a whole are occasioning so much concern and militating so strongly against a revival in business which, if much longer delayed, can not but lead to unhappy consequences to Government and governed alike?

Not content to aggravate the unrest by harking back at this juncture to a 3-year-old incident admittedly indefensible, you add the alarming statement that "in many instances" similar irregularities have been perpetrated.

Why this vague, panic-breeding allegation?

Are you concealing wrongdoing by many other roads?

Is 't your intention to explode these bombs periodically, whenever your fancy, or what you may regard as expediency, dictates?

Why single out one railroad for exposure and shield many others you know to be equally guilty?

Can you not see how disquieting is the effect of your very serious allegation?

How are investors to know that the road whose securities they hold is not one of the many who have juggled their accounts to flimflam the public?

The St. Paul's shares shrank $9,000,000 in market value on your unexpected and alarmist announcement.

Are other stocks to be forced down equal amounts from time to time, whenever you see fit to expose the many guilty companies?

Gentlemen, I ask you to consider whether the time for purposeless recrimination has not passed.

I ask you to consider whether the time has not come to cease destructive action and to concentrate upon a constructive policy.

You have before you, and have had before you for many months, an application by eastern railroads for permission to increase their freight rates 5 per cent.

The railroads have cooperated with you in supplying all needful facts to judge their case.

Can you not expedite your deliberations?

An attempt has been made of late to cite other avenues of relief and the impression has been spread that the railroads have been "discovered" indulging in various practices calculated to unreasonably deplete their income.

You gentlemen know that these practices, one and all, have been done in accordance with established usage and under arrangements never once prohibited by you.

Yet I am not aware that you have put the public right in their conception of the position, although a statement from you would have clarified the atmosphere and tended in some degree to allay the antirailroad sentiment now so prevalent and so injurious to the whole Nation.

Abolition of these various entrenched practices can not be ordered or effected hastily. Exhaustive investigation will be necessary before overthrowing the status quo.

Hence no adequate relief can be obtained at this time from such sources, although later on substantial readjustments may be possible for the benefit of the railroads.

I would respectfully ask you to consider the advisability of granting, at the earliest possible moment after the conclusion of your present hearings, the increased rates petitioned for, supplemented, if need be, by a statement that if developments ameliorate the circumstances of the railroads the higher rates may be canceled at some future date.

A patient is beyond medical aid once he has died.

—

HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
Washington, D. C., March 24, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Permit me to hand you herewith letter from the secretary of the Manufacturers' Association of Belleville, Ill., in my congressional district, with reference to spotting cars, etc.

May I ask that your attention be given to his communication.

Very respectfully,

W. N. BALTZ.

—

BELLEVILLE, ILL., *March 19, 1914.*

Hon. WILLIAM BALTZ, M. C.,
Washington, D. C.

IN RE SPOTTING CARS.

DEAR SIR: Members of the Manufacturers' Association, of this city, as well as the individual manufacturers, are opposed to the charge of "spotting cars" by railroad companies or any other service already covered by their tariffs, and respectfully urge you to use your influence with the Interstate Commerce Commission to grant further hearings, and that such hearing be held at some convenient point in the Middle West, enabling the small as well as large shipper to be present and be heard.
